APPENDIX.

War Excess Profits Tax—Salaries of Congressmen not Made Exempt from War Taxes.

EXTENSION OF REMARKS

OF

HON. WILLIAM R. GREEN,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1917.

Mr. GREEN of Iowa. Under leave to extend my remarks in the RECORD I append a copy of a letter which I have written to the Commissioner of Internal Revenue:

DECEMBER 7, 1917.

HON. DANIEL C. ROPER,
Commissioner of Internal Revenue, United States Treasury.

DEAR MR. ROPER: You are doubtless aware that there has been some controversy as to whether Members of Congress were subject to the war excess-profits tax on their salaries. Articles have appeared in the newspapers and periodicals from which many have obtained the impression that Congress had, somewhere in the revenue bill, specifically exempted its Members from the payment of the income tax.

Of course you know that there was nothing in the bill which could possibly be construed as exempting Members of Congress from the income tax, which they have always paid and must continue to pay under the provisions of the law as it now stands. The only question that could possibly arise is whether their salaries are exempt from the war excess-profits tax.

The particular point involved arises upon the construction of two sections of the war excess-profits tax as provided in the act of October 3, 1917. In this connection it is proper that some reference should be made to the manner in which these sections were incorporated into the bill. The bill, as it passed the House, did not apply the excess-profits tax to individuals, but only to corporations and copartnerships. As it passed the Senate, the excess-profits tax did not apply to salaries, whether received from offices or in trade or business, or to professional incomes from a business in which only nominal capital was used. When the conferees of the two Houses met, a large number of amendments proposed by the Senate were discussed and either adopted or rejected, and in addition thereto section 209 of the excess-profits division of the law as it now stands was inserted. This section reads as follows:

"SEC. 209. That in the case of a trade or business having no invested capital or not more than a nominal capital, there shall be levied, assessed, collected, and paid, in addition to the taxes under existing law and under this act, in lieu of the tax imposed by section 201, a tax equivalent to 8 per cent of the net income of such trade or business in excess of the following deductions: In the case of a domestic corporation \$3,000, and in the case of a domestic partnership or a citizen or resident of the United States \$6,000; in the case of all other trades or business, no deduction."

It will be observed that this section was entirely new and imposed a tax not provided for by the bill as it passed either body. When the conferees' report was presented in the House there was a few hours' debate with reference to the principal points of difference between the House and Senate, but the new section, not having been in controversy and not being mentioned in the report of the conferees, attracted little attention, and there was no discussion with reference to any exemptions from its provisions. Under the rules of the House, no amendment could have been offered to the report of the conferees, which had to be adopted or rejected in its entirety, and the bill was approved without any dissenting votes.

Members of Congress are not specifically mentioned, but the excess-profits division of the revenue bill as finally enacted contains certain general exceptions which were a part of the original Senate bill. The first of these exceptions exempted from its application "in the case of officers and employees under the United States or any State, Territory, or the District of Columbia, . . . the compensation or fees received by them as such officers or employees." The question now arises as to whether the salaried Members of Congress are exempt from the excess-profits tax under this exception. My contention is that they are not.

It will not, I think, be claimed that Members of Congress are officers "under any State." It is an elementary rule that the States have no power to determine the qualifications of a Congressman. Were it otherwise, many Members who are now sitting and who have heretofore sat in Congress should not have held their office, as the provisions of the State constitutions of their respective States would have forbidden their even being a candidate for Congress. If the States have no power to determine the qualifications of a Congressman, he can not be an officer "under a State."

The point to be determined is, then, whether a Member of Congress is an "officer under the United States" within the meaning of the statute under consideration.

This question appears to me to be definitely settled by the decisions of the Supreme Court of the United States with reference to what constitutes an officer of the United States or under the United States.

In the case of the United States v. Germaine (99 U. S., 508) the court had occasion to determine this question and in the opinion quotes Article II, section 2, of the Constitution, as follows:

"The President shall nominate, and by and with the advice and consent of the Senate shall appoint, ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for and which shall be established by law. But the Congress may by law vest the appointment of such inferior officers as they may think proper in the President alone, in the courts of law, or in the heads of departments."

The court, in its opinion, says, with reference to this provision of the Constitution, "The argument is that provision is here made for the appointment of all officers of the United States." (The word "all" is italicized in the opinion.) The opinion sustains this contention in the following language: "That all persons who can be said to hold office under the Government about to be established under the Constitution were intended to be included within one or the other of these modes of appointment there can be but little doubt." This language is as precise as it is possible to make it. It will be observed that it includes all persons who hold office under the Government.

In the case of the United States v. Smith (124 U. S., 525-531), the court says an officer of the United States can only be one appointed by the President, by and with the advice and consent of the Senate, or by a court of law or the head of a department; and in the case of the United States v. Mount (124 U. S., 303), the doctrine laid down in the case of United States v. Germaine is distinctly approved, the court saying: "Unless the person in the service of the Government, therefore, holds his place by virtue of an appointment by the President or one of the courts of justice or heads of departments authorized by law to make such appointments, he is not, strictly speaking, an officer of the United States." At the close of the opinion it is pointed out that the word "officer" is sometimes used in a more popular sense, and it will be the duty of the court in construing an act of Congress "to ascertain its true meaning and be governed accordingly."

In Blount's case, Wharton's St. Trials, 200, it was held that a Senator was not an officer of the United States within the meaning of the Constitution.

These cases definitely settle the sense in which the words "officer of the United States" are used in the Constitution. Of course, the words sometimes have a broader meaning, but I think it too clear for discussion or argument that unless there is something in the statute to indicate the contrary, that it must be presumed that Congress intended to use the words in the sense that they are used in the Constitution. The two cases of Lamar v. United States (240 U. S., 60, and 241 U. S., 103) are sometimes considered authorities to the contrary of the view above taken, but when carefully considered they will be found to sustain it.

Lamar was indicted in the district court of the United States under a Federal statute making it a crime to falsely impersonate any officer of the Government of the United States, and the court held that within the meaning of the particular statute then under consideration a Congressman was an officer of the United States; but the reasoning of the court, when applied to the revenue statute, would lead to the conclusion that Congressmen were not included. In the first of the Lamar cases it is said that "words may be used in a statute in a different sense from that in which they are used in the Constitution," but obviously there must be something to show that this different sense was intended. In the second Lamar case it is said with reference to the question of who is an officer acting under the authority of the United States: "That question must be solved by the text of the provision, not shutting out as an instrument of interpretation proper light which may be afforded by the Constitution," and "not unmindful of the fact that a statute, because it is penal, is not to be narrowed by construction so as to fail to give full effect to its plain terms as made manifest by its text and its context." When this rule is applied to the question under consideration, what reason can be given for concluding that Congress intended to use these words in any other sense than as used in the Constitution? I insist, on the contrary, that there is every reason to conclude that they were used in the constitutional sense.

In the first place, as the Constitution is the law of the land, it should be presumed that terms would not be used in a different sense than employed in that instrument unless the contrary clearly appears. Any other rule unavoidably leads to confusion and uncertainty in the extreme; but it is not necessary that this rule of construction be conceded for it clearly appears from the language used what officers were intended. The statute does not use the words "officers of the United States" but "officers under the United States"; that is, officers under the Government of the United States. But Members of Congress are a part of the Government of the United States and are not under anyone nor subject to the control of any other person or body in any manner or form whatever. The officers referred to are those under the Government of the United States; that is, under the control of the Government and subject in some form to removal by the higher power of the Government.

The word "under" should be given some meaning and not simply ignored. As said by the Supreme Court, "the light afforded by the Constitution" must not be disregarded.

Applying these elementary rules for construction of statutes, it appears that, as used in the revenue act, the words "officers under the United States" must be held not to include Congressmen. In any event, it is clear that if it had been intended that Congressmen should be exempt they would have been specifically mentioned, and the law should be construed to carry out the intention of Congress when consistent with the language used, as it was in this case.

For the reasons above given, I respectfully suggest that a ruling should be made by your office to the effect that the salaries of Congressmen are subject to the tax imposed by the excess-profits division of the last revenue act.

Very truly, yours,

W. R. GREEN.

Declaration of War Against Austria-Hungary.

EXTENSION OF REMARKS

OF

HON. DAVID A. HOLLINGSWORTH,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1917.

Mr. HOLLINGSWORTH. Mr. Speaker, I shall vote for this resolution with less hesitation, fewer misgivings, and firmer faith than I voted for the initial declaration of war against the Imperial German Government. I regard this as a natural corollary or sequence of the former. The vote of April 6 last was a crossing of the rubicon for the Republic of Washington. America has in fact since then been entangled and at war with all the central powers, and just why the unspeakable Turk, still in Europe, the curse and menace of civilization for centuries, should be exempted from this formal declaration of a war fact is beyond my humble comprehension.

No doubt, however, our President—and for the time being I emphasize the word "our"—and his expert advisers have good and sufficient reasons for the distinction, and in my judgment no thought of opposition or criticism should to-day enter this House. Whatever differences of opinion may have existed among our constituents or ourselves before the war began, we now all represent a thoroughly Americanized constituency.

The world should know, now that our country is in the war, wisely or unwisely as it may have seemed at the outstart to sincere but differing minds, America has now but one aim and one purpose, that of unitedly backing the President to the limit in all war measures until victory, complete and assured, shall come to the allies.

The necessity is imperative; retreat is impossible.

As to the Turk, I confess to a little of the crusading spirit of our ancestors, and rejoice to know that our allies now practically dominate Palestine, and that the holy city of Jerusalem, under the fire of British guns, is about to pass forever from the polluting touch of the infidel, about to embrace again the holy faith of the meek and lowly Prince of Peace. The cross must replace the crescent in the land of Bible story before the upbuilding of wrecked nations begins. God is with us; let us as a Nation go forward and fear not.

Bread v. Booze.

EXTENSION OF REMARKS

OF

HON. WILLIAM P. BORLAND,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 11, 1917.

Mr. BORLAND. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter which I wrote to the Central Labor Union on the subject of the prohibition amendment.

The letter is as follows:

KANSAS CITY, Mo., November 17, 1917.

To Messrs. WINTER, NICHOLS, and RICHMOND,

Committee appointed by the Industrial Council of Kansas City, at the request of "Labor's Emergency Liberty League" of Washington, D. C., to interview Congressman William P. Borland on the subject of Senate resolution No. 17 for national prohibition.

GENTLEMEN: Your committee has asked me to state my position in regard to the measures pending before Congress for the restriction of the liquor traffic.

You are entitled to a direct answer, and I am willing to give you such an answer. I shall vote for the antiliquor measures. Whenever the issue is presented between bread and booze I intend to vote for

bread. In doing so I am confident that I shall be serving the highest and best interests of my constituents and the country, and that no class of my constituents will be better served by such a vote than the wage earners.

The cost of living is inevitably high, and foodstuffs are exceedingly scarce. The best that can be said about liquor in any form is that it is a luxury, and not a necessity. Although wages are higher than before the war, they have not kept pace with the advancing cost of living, and the wage earner's family needs every dollar that he can earn for the necessities of life. The best-paid workman has no money to waste on booze. Booze decreases the efficiency and earning power of industrial workers, and in this time of our national peril we need the full development of our efficiency and the unfettered strength of our people.

Booze decreases, also, the stock of grains and food supplies at a time when we are face to face with the necessity of food conservation. Millions of our fellow Christians are facing starvation in Europe this winter. We have an army in the field which must be fed; we have a sacred duty to the armies of our allies, and the industrial populations of the war-torn lands. We can not, with a clear conscience, ask the housewives of America to save the food grains on their tables or deprive themselves or their families of the customary supplies and then permit the stock of food material to be used for the manufacture of beverages.

The men of organized labor are loyal to the American flag, and loyal to American ideals of home and humanity. While organized labor embraces some men whose occupations are in the liquor trades, yet I have found from a very wide personal acquaintance that a large percentage, if not a majority, of the men of organized labor are dry. Their wives and children are almost entirely on the dry side. As to those men who are engaged in trades connected with the liquor interests, and who are members of various unions, I can only say this: The war has made great and necessary changes in many occupations and may of course affect theirs. There is no trade in the world so poorly paid as the liquor trade, nor in which the hours are longer; there is no trade in the world where so few men produce a product of so great a value. The number of men actually engaged in the liquor business in the United States is smaller than any other business of its magnitude.

Some of the changes made necessary by the war have affected a larger number of industrial workers than can be affected by the antiliquor legislation. Fortunately, at this time labor is scarce, work is plenty, and wages are comparatively high. Practically all of the workers now engaged in the liquor trades are in demand for other work in the community at as good or better wages. Therefore I am certain that little, if any, real hardship will result to the actual workers, the wage earners, and employees, by antiliquor legislation at this time.

However that may be, it is not difficult to read the signs of the times. This Nation is growing dry. It is no longer solely a moral question, it has become an economic one. Liquor is universally regarded as an economic waste. There is no argument in favor of liquor except greed. A very few men have made a great deal of money out of the trade; a somewhat larger number make a bare living, which they could make as well in some other occupation. Scattered here and there throughout the country are great breweries, distilleries, banks, hotels, office buildings, and palatial mansions which represent the blood and tears of countless thousands of widows and orphans. These were paid for in most part by the earnings of laboring men which should have gone to buy shoes instead of booze, books instead of beer, warm clothing instead of whiskey. The money which went into the saloons should have gone into the savings bank. I trust that from now on the wage earner and his family may get the full benefit of his earnings, and may those earnings be just as high as an honest division of the joint products of industry will permit.

In the 10 years I have been in Congress from this district I have voted for every measure in favor of wage earners and expect to continue to do so. I do not believe that organized labor as a body will ever take the side of booze against bread.

WILLIAM P. BORLAND.

Necessity for Complete Food Control.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 11, 1917.

Mr. JOHNSON of Washington. Mr. Speaker, this Government having started on food regulation must go the limit if all hands are not to be bankrupted through the upsetting of the natural laws of supply and demand. We may profit by Great Britain's experience during more than three years of war, and I have been granted leave to extend my remarks by placing in the CONGRESSIONAL RECORD a sort of digest of that part of the "Defense of the realm act" of Great Britain relating to control of food for man and beast, also acts regulating prices of clothing and other commodities.

I had in mind, when I preferred my request, to place in the RECORD a digest of British food acts. I find, however, that such a digest can not be made within desirable space limits, and therefore I shall place in the RECORD some of the more important subtitles of the act, with the request that my colleagues secure from the Congressional Library the Defense of the Realm Manual and the orders in council pertaining thereto, for the purpose of seeing how completely Great Britain has taken hold of the situation now confronting us. For it goes without saying, Mr. Speaker, that if as fast as the workmen of the United States secure increases in wages by strikes or

otherwise, the prices of everything they buy go up, nothing has been gained for anyone. It is simply an endless chain of high wages and high prices, followed by higher wages and still higher prices. The chain must be broken by suitable legislation—the sooner the better—not only for our war aims, but for our country.

The defense of the realm act consists of 588 pages and an index of more than 100 pages. Acts for the control of food embrace among others the following:

Agricultural employment, agricultural holdings, arrowroot, bacon, barley, beans, beer and beverages, biscuits, boarding houses, boots, bran bread (12 acts); buns, butchers, butcher's meat cake (3 acts); cattle, cereals (3 acts); cheese, chocolate (2 acts); chops, bran, hay, oats, straw, and other acts pertaining to the feed of animals, condensed milk (5 acts); confectionery (and, by the way, there is no candy in England), currant bread (prohibited, for there is no pastry in England), sheep, prohibition of food exports (many acts); potatoes, fats, fish, flour (3 acts); food production (13 acts); food supply (11 acts); and so on through many pages of the index covering nearly all food articles, while other pages of the index deal with hides and other articles used in the manufacture of boots and clothing.

I have named some of the laws for the purpose of calling attention to the punishments. If a wholesaler, speculator, middleman, or retailer is convicted of violating any of the food acts, his punishment is severe. In this country it might be considered extreme, but, my friends, if we are to have anywhere a square deal all around, we will have to come to heavy and extreme punishments. While in England and France, from the time of the adjournment of the war session of the Sixty-fifth Congress to the beginning of the present session, I read the English newspapers closely, and every few days I saw items similar to this one:

At Ramsgate yesterday John S. Wilson, butcher, was fined £300 for overcharging on meat sales. Four witnesses testified against him.

The following items from the Daily Mail of November 16 are also of interest:

HOTEL RATIONS—PROBABLE REDUCTION IN MEAT ALLOWANCE.

It is understood that some modification of the public meals order, in connection with the meat ration, is being considered.

Under present conditions a resident in a hotel may have 2 ounces of meat at breakfast, 5 ounces at luncheon, and 5 ounces at dinner—12 ounces in all, whereas Sir Arthur Yapp's new scale of voluntary rations allows only 4½ ounces per day.

PRISON FOR PROFITEERS—TEA AT COST PRICE.

Lord Rhondda, speaking at Edinburgh last night, said the food situation had become more serious in the last two months. We had to supply food to France and Italy, and that made the food problem all the more severe.

Lord Rhondda announced that he was going to buy up all the stocks of tea in Ceylon and India and sell them in this country at cost price. He was also going to ask the Government to provide cheaper milk for expectant and nursing mothers and for children up to a certain age at the cost of the State. The price of meat in the last two months had fallen from 15 to 20 per cent on the average throughout the country.

All magistrates should take proper action against illegal profiteering. No punishment could be too severe. He advocated imprisonment for men convicted of deliberate profiteering, and, in addition to a fine, the magistrate should make the profiteer liable to the Crown in double the amount made by his profiteering.

FOUR-RATION MEALS—A DAY'S ALLOWANCE EXPLAINED.

In response to requests from many readers, we reprint in clearer type the following from yesterday's Daily Mail. It shows how the rations under Sir Arthur Yapp's scale for a male sedentary worker may be apportioned in four daily meals. This worker's total allowance for the day would be:

Bread, 10½ ounces.
Other cereals, 1½ ounces.
Meat, 4½ ounces.
Fats, 1½ ounces.
Sugar, 1½ ounces.

This could be divided up as follows:

BREAKFAST.

Bread, 2 ounces.
Porridge, 1 ounce.
Egg or kipper (unrationed).
Fats (butter or margarine), ½ ounce.
Sugar, ½ ounce.

There would also be a certain amount of fat (uncounted) in the kipper and in the milk for his tea or coffee.

LUNCHEON.

Bread, 1 ounce.
Vegetable soup (unrationed).
Meat, 2 ounces.
Potatoes and other vegetables (unrationed).
Apple or other fruit (unrationed).

If the meat consisted of poultry or rabbit, he could have 4 ounces.

TEA.

Bread, 1 ounce.
Sugar, ½ ounce (including ¼ ounce for potato cakes or scones).
Fat (margarine or butter), ½ ounce.
Potato cakes or scones (including ½ ounce of flour, which deducts 1 ounce from the day's ration of bread).

DINNER.

Bread, 2 ounces.
Vegetable soup (unrationed).
Fish (unrationed).
Meat, 2½ ounces (including ¼ ounce for suet for pudding).
Potatoes and other vegetables (unrationed).
Pudding (including ½ ounce of "other cereals," ¼ ounce of fat, ¼ ounce of sugar).
Cheese (unrationed, but to be used carefully).
Fruit (unrationed).

The whole day's ration is here used up with the exception of 3½ ounces of bread. This can be saved if not required or it can be exchanged in the day's rations for an equal weight of meat if more of the latter be needed, or for flour or other cereals at the rate of ¾ pound for every pound of bread. It is approximately equal to 2½ ounces of flour or other cereals.

The same edition of the Mail contains a half dozen food-control items. On other days the papers told of fines as high as \$500 for what in antiwar times might be considered minor offenses.

I hope to find an opportunity soon to address the House on comparative prices in Great Britain and the United States, as shown by menus brought back by me.

In the meantime, citizens who feel that they are grossly overcharged should register complaints with the office of the Food Administrator or the Federal Trade Commission or their Congressmen.

In addition to studying the defense of the realm food and supply acts, I beg to suggest that other Members secure from the Library and read a book entitled "Employers and Workmen Under the Munitions of War Acts," which is a compact digest of the munitions code of the British Parliament, and which was prepared by T. A. Frye, who was connected with the munitions tribunal of Great Britain.

On the Declaration of War Against Austria-Hungary.

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1917.

Mr. HUDDLESTON. Mr. Speaker, a declaration of war against Austria-Hungary is a necessary incident to our war with Germany. The German element of the people of Austria-Hungary are in complete accord with the aims, ideals, and culture of the people of Germany; the governments of the two nations have a unity of purpose which has cemented them into an unshakable alliance; the military and financial resources of the two nations have been welded practically into a whole. To war with Germany is, in fact, to war with Austria-Hungary. It is necessary, therefore, that we should abandon the pretense of friendly relations with the latter and frankly acknowledge a state of actual war.

It is easy to declare war, but quite a different matter to wage war; the first is a matter of formal words, the last of devoted and heroic action and perhaps appalling sacrifices. Wars are not to be won by patriotic processions, public meetings, shouting, and display. War calls for the shock of battle and the pouring out of men's blood, and small service is performed by patriotic pretense and flag waving unsupported by deeds. In this awful war emergency the profiteer who camouflages his greed with blatant lip patriotism is the least useful citizen.

ORGANIZATION FOR WAR.

Our country is at grips with the most powerful war machine that ever existed. Germany's terrible efficiency for war commands respect, even from her enemies. It is a heavy task that we have assumed to defeat her. It calls for sacrifices and devotion from all our people.

Germany has been enabled to achieve her terrible efficiency for war by a thoroughgoing organization of her entire resources of men and wealth upon a war basis. Stayed neither by sentiment, property interests, nor humanitarian impulses, Germany has stripped herself for conflict. Every activity of her people has been forced to conform to military necessity. We must match German efficiency for war with American efficiency. Only in this way may we win the war.

Wars are no longer waged between armies, but between whole peoples. No longer is service in war rendered only by soldiers in the field, but now they also serve who follow civilian pursuits—men, women, and even little children a thousand miles from the battle line. Nor is merely flesh and blood the sole food of war. Property must serve as well; property must suffer, must bear its wounds, and make its final sacrifices.

PATRIOTS AND PROFITEERS.

Many of our great captains of industry have been loud in lip service, but it would seem that in their hearts they have scarcely realized the awful undertaking to which our country is committed. They have continued to think in terms of profits. They have acted on the precept "Business as usual." They have taken advantage of the Nation's peril to profiteer, to exact from Government and people alike extortionate profits on war material and on the necessities of life. They have given themselves to a wild orgy of greed and exploitation such as the world never saw before.

The current report of the Commissioner of Internal Revenue shows that corporations returned for the year ending June 30, 1916, taxable net income of \$5,184,442,389.17 and for the year ending June 30, 1917, \$8,693,841,327.21, so that during the last fiscal year corporations had a net taxable income of \$3,509,378,938.04 in excess of the previous year. These figures do not include the incomes of individuals and firms, nor do they show incomes used for paying expenses, interest, taxes, or replacements or extensions of plants, so that the grand total would be an incredibly stupendous sum. The past two years has been the time for heaping up vast fortunes—for the creation of millionaires and multimillionaires. We now have 206 persons in the United States who admit to yearly incomes of over \$1,000,000, there are 10 who have yearly incomes of over \$5,000,000, while 53,569 of our citizens admit to and pay tax on incomes exceeding \$20,000 per year, and 14,000 of the latter are millionaires and better. It is stated that the past two years has seen the American millionaire class multiplied more than three times.

During the years 1912, 1913, and 1914, 48 American industrial and trading corporations now engaged in war trafficking averaged net annual profits aggregating \$255,050,567. For 1915 their net profits were \$412,348,513; for 1916, \$900,301,596. These corporations made in 1916, \$640,083,669 in excess of the prewar average of 1912, 1913, and 1914. In other words, the net earnings of these companies applicable to dividends in 1916 were more than three times the average net earnings of the prewar period. These companies have, for the most part, not only made gigantic war profits applicable to dividends but have paid for extensions to their plants, so that their actual earnings are really much greater than stated. These figures do not include the big powder companies nor others of the most greedy of the war contractors, and are merely illustrative of a general situation.

Complete figures are not available; however, such reports as we have for the first half of 1917 indicate that war profits will be very much greater this year than last. For instance, in 1916 the Central Leather Co. netted \$15,489,201; it is estimated that in 1917 it will net over \$24,000,000. In 1916 the Republic Iron & Steel Co. netted \$14,789,163; this year it will net over \$22,000,000. In 1916 the United States Steel Corporation netted \$271,531,730; it will probably net over \$550,000,000 this year. In 1916 the Granby Consolidated Mining, Smelting & Power Co. netted \$3,819,295; in 1917 it will net about \$5,000,000. In 1916 the Ray Consolidated Copper Co. netted \$12,084,166; in 1917 it will probably net \$14,500,000. In 1916 the Chino Copper Co. netted \$12,527,948; in 1917 it will net about \$13,600,000. In 1916 the Lackawanna Steel Co. netted \$12,218,234; in 1917 it will probably net \$24,000,000. There is every indication, therefore, that 1917 will be a bumper year, in which America's profiteers will accumulate from the war sums of money unparalleled in financial history. It is estimated that American corporations engaged in making war profits will make in 1917 war profits of \$3,600,000,000 in excess of their average profits during prewar years. These calculations show a situation at once shocking and deplorable.

It was recently stated that it costs the United States more than ten times as much as Germany for each soldier maintained in the field. In other words, for every dollar that Germany spends on one of her soldiers the United States spends \$10. This shocking difference is occasioned in a large measure by the extortionate prices exacted from our Government for war material and supplies. The difference is due only in a slight degree to the better pay and better equipment of American soldiers. Our Government is being overcharged all along the line for the things required for war. The worst offenders are the metal producers and manufacturers of war material. It is established beyond doubt that in many cases the Government is being required to pay enormous profits, sometimes reaching 100 per cent and yielding annual dividends to profiteers of 100 per cent, 500 per cent, and 1,000 per cent on their investments. Such a situation is a threat to the financial strength of our country and must be abated without delay.

Not only is extortion being practiced on our Government, but the people of the country are being bled white by profiteers taking advantage of the world-war situation. Producers of great

basic commodities, metals, and manufactures have arbitrarily jacked up their prices. Pig iron, which three years ago in my home city, Birmingham, was selling for \$9.50 a ton, was increased to above \$50 a ton, until recently reduced by governmental order to \$33. This is merely an illustration. Coal, copper, and many other commodities were dealt with in the same way. The prices were increased not because of an increase in cost of production but merely because the profiteers could "get the money." They charged all the traffic would bear and gave labor as small a share of the increase as it could be made content with. The arbitrary increase in the price of the great basic commodities soon reacted upon all other prices, and they began to soar, with the result that the cost of living has become almost unbearable. Necessaries of life are rapidly going beyond the reach of the people, and the poor man's dollar has less purchasing power than ever before in the history of our country.

The situation in its aspect both toward Government and people is most dangerous. It must be corrected at once if we are to carry on efficient war. Should it remain unchecked our country's financial strength will be speedily sapped and the patience and the patriotism of the people ground out of them in the struggle against extortion and high prices for food and clothing. The Government must enter upon a thorough-going process of price fixing. Prices of commodities must be arbitrarily forced down, even as they have been arbitrarily forced up. Only in this way can a reasonable relation and equilibrium between prewar conditions, values when normal conditions have again been restored, and the present war situation be maintained.

When we were being urged by some of the same interests now engaged in profiteering to abandon the voluntary system for conscription, we were told to "avoid British blunders." Yet they have not urged that we avoid British blunders so far as business interests are concerned. The monumental British blunder was in assuming that business should be allowed to go on as usual. Yet untaught by this we are proceeding on the same false theory. The recent session of Congress was characterized by war legislation in which regard for men's natural rights was allowed to interfere but little with preparation for war. However, extraordinary tenderness for property rights was shown. Great fear was entertained that business might be disrupted, that the efficiency of American capital and industry might be somewhat impaired so that our after-the-war commercial situation would not be as strong as desired. I have not shared in any such feeling. I refuse to place property or business upon higher ground than men. If there be a moral right to take men against their will for war service, then property may also be taken. If there may be conscription of men, there also may be conscription of profits. If the situation justifies the disruption of homes and dragging the son from the mother's arms and the husband from his wife and children, then surely the sensibilities of profit makers are not to be greatly regarded.

As a matter of principle as well as of good public policy we should not require all the sacrifices war entails to be made by our soldiers and their dear ones left behind. We should also require the corpulent Knight of the Swivel Chair to make his sacrifices. While our soldiers shed their blood he should shed his profits for our Nation's preservation. *No man should be allowed to come out of this war richer than he went into it.* We should see to that by proper price fixing and the levy of income taxes. It would be a shame if at the end of the war, when our soldiers come back to us, we should be compelled to confess that while they were fighting and shedding their blood for us we permitted their loved ones to be sweated and overcharged for food and clothes, and greedy profiteers to practice extortion upon the Government, and thereby create a grievous public debt to burden the shoulders of many generations of their descendants.

PAYING FOR THE WAR.

The cost of the war, so far as possible, should be paid by the present generation. It is we who entered on the war—we who are managing it. Future generations will have their own struggles, their own problems to solve. We should not destroy them in advance by an evil heritage of war burdens. To do so will be unjust to Americans who are yet to be born, to the future of our country, and to the development of the time that is to come. Future generations will have no way to avenge themselves upon us nor to correct the evils we may do. We must leave to them America and its opportunities, fresh and ample as we ourselves received it.

But there are yet other more pressing reasons why we should not finance the war with bond issues beyond what is absolutely necessary. It is because of the inflation of prices that issues of securities cause. The flotation in the United States of European securities reached perhaps six billions before we

entered the war and caused great inflation in circulation and stimulation of industry. The sale of United States bonds has greatly accelerated the rise in prices and industrial activity. Business of many kinds even not connected with war industry is overrun with orders. The supply of labor and transportation is even now inadequate and seriously hampers our war preparations. A thoroughgoing system of profits taxation which will absorb practically all profits in excess of legal interest will act as a salutary curb upon business and industrial activities. Unnecessary businesses will be eliminated so that our commercial and industrial activities may be centered upon war production. It will tend to organize this country upon a war basis and greatly simplify the situation. It will release labor and transportation for military use and make our Nation more efficient for war. It will at the same time have effect to reduce prices of the necessities of life so as to free our people from a pressure which is rapidly becoming unbearable.

OUR WAR AIMS.

A declaration of war against Austria marks the second phase of our entry into the war. The past eight months has brought to many of us clearer vision and a better understanding of the problem before us. The war is not a theory; it is an accomplished fact, and is so accepted by the American people. All of us may not agree as to what our immediate war aims should be. There is ample room for honorable differences of opinion on that subject between the most enlightened patriots. There should be no scorn nor hectoring of those who hold to different views. However, every patriotic American must agree that our ultimate war aim is the protection of American honor, dignity, and interests, and the future security of our country.

As for myself, I hold that as our boys fight for democracy in France we must stand for democracy here at home, for the sacred principles for which our fathers suffered and which are secured to us in the American Constitution. The right to life, liberty, and the pursuit of happiness, the right to govern ourselves, the right of free religion, of free speech, and free press; the right of the people peaceably to assemble, to bear arms, to be secure against unreasonable searches and seizures, and to trial by jury—these are fundamental democracy and constitute real Americanism.

I am resolved to support the war in every way which will adequately furnish our soldiers with the best of food, equipment, arms, and instruments of war, and to do everything in my power for their comfort and welfare; to see that the families of those who are fighting our battles are amply provided for, that those who are disabled shall be cared for so long as they live, and that the widows and orphans of those who do not come back are generously and justly dealt with. I am determined that the cost of the war should be paid so far as possible by those who are making profits out of it, and that no swollen fortunes shall be made out of the Nation's extremity; that extortion is not practiced upon the people; that necessities of life shall be within the reach of common men, and that American liberties shall be jealously guarded always.

Even in this dark hour I dare look forward to the coming of peace. This awful war can not go on always, and surely the time must soon come when mankind will be restored to sanity and the sun will again shine. I am hoping that peace when it does come may bring us higher aims and loftier ideals, and that it will bring to our beloved country such security and wisdom in which to enjoy it as will enable us to avoid all future wars. I am hoping that in finding peace we may keep ourselves clear of European entanglements and alliances, from competition in Old World's systems of caste and avarice, and that we may hold to traditional American isolation and reserve. Burned on my heart are the words of Washington's Farewell Address:

Europe has a set of primary interests, which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns.

Also the wise counsel which he gave on the same occasion:

Against the insidious wiles of foreign influence the jealousy of a free people ought to be constantly awake, since history and experience prove that foreign influence is one of the most baneful foes of republican government; but that jealousy to be useful must be impartial, else it becomes the instrument of the very influence to be avoided, instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike for another cause those whom they actuate to see danger only on one side, and serve to veil, and even second, the arts of influence on the other. Real patriots who may resist the intrigues of the favorite are liable to become suspected and odious, while its tools and dupes usurp the applause and confidence of the people to surrender their interests.

The great rule of conduct for us in regard to foreign nations is in extending our commercial relations to have with them as little political connection as possible.

Washington did but voice the sentiments shared by all the founders of the Republic. Time has brought no change calling

for the reversal of this salutary policy. It is just as wise now as when Thomas Jefferson expressed it with such wonderful clarity:

I am for free commerce with all nations, and political connections with none; I am for not linking ourselves by new treaties with the quarrels of Europe, or entering that field of slaughter to preserve their balance or join in the confederacy of kings to war against the principles of liberty. The first object of my heart is my own country.

Waterways—An Alarming Condition.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, the transportation situation in the United States is alarming. The Government itself is put to a great disadvantage in this matter. It is so serious that food supplies for the large centers of population are held up, commerce which ought to have free access to the market is delayed, and travel generally is impeded. The movements of troops from camp to camp or to the frontier must be arranged by commandeering cars and engines, and even then munitions of war, needful alike to our own troops in Europe and to our allies, are not advanced as rapidly or as efficiently as they should be.

The railroad managers who have largely monopolized American transportation in recent years are at their wits ends to meet the public demands, including those of the Government. Many of them have been obliged to confess their utter inability to keep up with the service required of them.

At a recent convention of the Atlantic Deeper Waterways Association in Miami, Fla., a convention attended by representative men and women from all the Atlantic seaboard States, with a strong representation from the Gulf States also in attendance, these facts were pointed out. What transpired in that convention may fairly be quoted as the latest word on the subject of transportation, since it embodied expressions of sentiment from national officials interested in rail-and-water transportation, and others deeply concerned in the welfare of our own country and in the outcome of our participation in the war in Europe. The resolutions of that convention reminded Congress and the country of the availability in this national crisis of the waterways of the United States. They drew attention to the long-standing agitation for their improvement for just such an emergency as this, and to the wisdom of at once proceeding to their development in accordance with the recommendations of the United States Army engineers.

INDUSTRIAL DISTRESS THREATENING.

Before extending my remarks by inserting the speech made by me, as president of the Atlantic Deeper Waterways Association, on that occasion, may I be permitted to draw the attention of the House to the urgency of the suggestion for immediate action. The Atlantic coast line, from Eastport, Me., to Key West, Fla., is approximately 1,800 miles. The greatest industrial wealth of the Nation is located along that coast, particularly from Narragansett Bay to Hampton Roads. We have four great navy yards and many shipbuilding and munition plants extending from Boston to Norfolk. We have natural means of communication by water inland between Boston and New York, New York and Philadelphia, Philadelphia and Baltimore, and Baltimore and Norfolk. We have other great ports north and south of these points, none of them now communicating inland by waterways sufficient to enable a battleship to pass through. Any two of these points could be connected up by water to a battleship's depth for the cost of a battleship. Few of them are now sufficiently connected up to permit of the passage of coal barges, a few of which are now being sent to sea—and some of them to the bottom of the sea—because the canals are insufficient to accommodate them. The railroads are not able to carry the coal which the people of New England sorely need, and industrial distress is threatening.

The cost of living, apart from the necessities of war, is necessarily enhanced to an aggravating extent by these conditions.

INDEFENSIBLE NEGLECT OF PREPAREDNESS.

Let me refer to the preparedness side of this question. The enemy could strike our ships at the upper end of Long Island Sound, and under present channel conditions our battleships

could not pass through to New York. They could strike us in New York Bay, and our ships could not pass through to the Delaware River. They could strike us at the mouth of the Delaware Bay and probably destroy our railroad communications north and south. Our ships could not now pass through from the Delaware River and its navy yard to New York Bay or to the Chesapeake Bay. The enemy might strike us at the mouth of the Chesapeake, and if our ships were driven in they could run up the Chesapeake Bay only to be blocked by the existing small canal, which would forbid them entrance to the Delaware Bay or to the navy yard at Philadelphia. Thinking men who look at the Atlantic coast map in these war times can not view this condition without concern.

Or let us take the coast of Florida with the West Indies and the Bahamas just across the way. I have recently completed a tour of the Florida East Coast waterways and am able to speak from personal knowledge of the conditions which there prevail. If a battle should occur anywhere off the 500 miles of the Florida coast, and the Atlantic side of the Florida coast is almost one-third as long as the entire Atlantic seaboard, there is no port from Key West to the St. Johns River into which a lame American ship, drawing more than 16 feet of water might go in distress or for repairs. There is no port along this vast stretch of Florida coast to accommodate a battleship of the American Navy, except possibly the St. Johns River. The nearest approach to a channel into which even an American torpedo boat might go along the whole 500 miles is at Miami, where the local authorities cooperating with the Government has just completed an 18-foot channel to the sea.

As the remarks which I desire to introduce under leave to extend, go into this subject more in detail, I shall not now pursue it further except to urge all patriotic citizens to examine the map closely, study conditions that have arisen with respect to our country's preparedness, and then ask themselves the question whether the time has not come for the utilization of the inland waterways of the country as the one great relief measure demanding immediate attention.

ANNUAL ADDRESS OF HON. J. HAMPTON MOORE, M. C., PRESIDENT ATLANTIC DEEPER WATERWAYS ASSOCIATION, TENTH ANNUAL CONVENTION, MIAMI, FLA., NOVEMBER 27, 1917.

Ladies and gentlemen, for 10 years the Atlantic Deeper Waterways Association has been preaching the doctrine of improved waterways as an aid to transportation. It has contributed to a better general understanding of the waterway necessities of the country and has aided in securing from Congress increased appropriations for worthy projects along the Atlantic coast. It is not an exaggeration to say that every one of the States affected, from Maine to Florida, has been benefited by this agitation, and that in some instances the appropriations during the period of the association's activities have equaled the entire appropriations for all the years preceding 1907. Take the Delaware River, upon whose banks the association was founded 10 years ago. There was then a 26-foot channel project nearing completion, from the ocean to Philadelphia. Shipbuilding had already made the Delaware a noted American stream, but the draft of ships was limited to the depth of the channel, and Philadelphia's international trade was thereby necessarily restricted. The river was not then as well able to accommodate large vessels as were the ports of Baltimore, Boston, and New York. The upper Delaware to Trenton, approaching the shallow canal which leads on to New York, was insufficient for vessels drawing 6 feet of water. Owing to the supremacy of the railroads the waterways along the Atlantic seaboard and elsewhere had fallen into disuse. The association was organized to correct that condition, to agitate for better treatment for waterways, and to urge Congress and the business interests to put these natural media of transportation, these willing and serviceable burden bearers of commerce, into practical use.

RESULTS OF 10 YEARS' WORK.

As to results, the 10 years' work of the association is satisfactory, but not complete. Using the Delaware River project, which had the friendly interest of the association, as an illustration, it may be observed that, though it has returned to the Federal Government in customs duties as high as \$21,000,000 per annum, and continues, even under present conditions, to contribute very heavily to the national revenues, it received from the Government for all improvements from the beginning down to 1907 approximately \$19,300,000. That was up to the point of completion of a 26-foot channel. Since then the appropriations have approximated \$11,000,000, an increase in the 10 years of the association of 56 per cent, compared with all previous years. And what has been accomplished in that 10 years? First, a 26-foot channel, then a 30-foot channel, and now a 35-foot channel at mean low tide is approaching completion to Philadelphia 100 miles from the sea.

IMPROVEMENTS WORTH WHILE.

Along the banks of the river at Wilmington, Chester, Camden, Bristol, and intermediate points have come the greatest of industrial plants and shipbuilding establishments, some of them now operated by the Government, and great ships engaged in international trade. It is safe to say that if it has not already done so the Delaware with its 35-foot channel completed will outstrip in commerce and shipbuilding any inland river in the world. In the same period the upper Delaware has been given an assured 12-foot channel to Trenton, inducing the location of mammoth industrial plants, including barge and shipbuilding concerns, whose activities point inevitably to the early construction of a waterway or canal through to the harbor of New York for which the State of New Jersey has provided the right of way, and for which a favorable report has been presented to Congress by the United States Army Engineers. A suitable opening across the State of New Jersey of course would mean immediate access to the Hudson River and the New York State Barge Canal and their tributaries north and west, as it would also connect with Long Island Sound and the inland waters of New England. The association is steadily driving its agitation north and east, just as it persistently strives to bring the southern links together through the Chesapeake & Delaware Canal entrance to Chesapeake Bay—a project, which I am happy to report, received the preliminary approval of Congress in an authorization of condemnation proceedings in the last rivers and harbors bill.

HOW STATES HAVE BENEFITED.

If we deal with the projects by States separately from interstate projects, the comparison of appropriations before and after the revival of interest in waterways by the Atlantic Association is illuminating. Every State has or ought to have an interest in the maintenance of navigable waterways within its own boundaries. Preference for rail transportation, interest in railroad investments, the construction of railroad bridges, and the accessibility of certain ports to deep-sea shipping connected up with the railroads had much to do in some localities with the decadence of canals and the neglect of inland waterways. Perhaps one or all of these causes is accountable for the halting attitude of certain large interests and apparently large men who have derided the waterways movement in recent years, not knowing how soon it would be necessary to appeal to the waterways for relief. The fact is that up to 1907, when a disastrous car shortage struck the country, the entire Atlantic seaboard, which sustained the greatest volume of the Nation's business, had received from the beginning of our history only \$141,000,000 of the \$552,000,000 that had been appropriated for rivers and harbors up to that time. The rest of the money had been diverted. It had gone to the Mississippi Valley, to the Pacific coast, to the Great Lakes, and to the Gulf, where the people seemed to have a greater appreciation of their rivers and harbors than we had of ours in the East. And they took the money and used it, and the cry of "pork barrel" was not heard in the land.

REVIVAL OF INTEREST SUBSTANTIAL.

Massachusetts was one of the Eastern States whose representatives were fairly active in obtaining appropriations in the earlier years. They began to tap the Federal Treasury about 1823, and up to the slump in 1907 had received altogether approximately \$15,640,000. That the new agitation was not without advantage to the old Bay State is shown by the fact that since 1907 Massachusetts has received approximately \$6,200,000, about 40 per cent of the appropriations previously received, and that it now has other important projects under way. Connecticut is another New England State which invites your notice. In all its history prior to 1907 the Nutmeg State received approximately \$4,160,000; since 1907, \$1,650,000, or about 40 per cent of the preceding total. Little Delaware, apart from the advantage derived from the Delaware River improvements, ran along slowly with about \$1,500,000 for its inland streams up to 1907, but jumped to \$1,250,000 in the 10 years thereafter, an increase of more than 80 per cent, compared with all preceding years. Of the Southern States, South Carolina, one of the oldest canal States in the Union, showed appropriations of \$3,800,000 up to 1907, and more than \$2,000,000 thereafter, an excess of about 25 per cent, compared with the total for preceding years.

RIVERS CAPABLE OF SERVICE.

I could present many other interesting State contrasts but shall stop with Florida—Florida, the land of waterways as much as it is the land of fruits and flowers. Up to 1907 Florida received Federal appropriations for inland waterways amounting to more than \$13,500,000. In the 10 years succeeding, Florida obtained additional appropriations approximating \$9,000,000, or substantially 65 per cent of all preceding appropriations, and that increase included the \$100,000 which is carried in this year's

rivers and harbors bill for the 18-foot channel at Miami. It is not claimed that this splendid increase was due to the Atlantic Deeper Waterways Association, for Florida's Representatives in the Senate and House are alert and have unusual influence in waterways matters, but the association has maintained a sympathetic interest in Florida's progress and has cooperated with the State's Representatives wherever practicable. This, indeed, has been the uniform practice in every State penetrated by the great intracoastal waterway or any of its 148 tributary rivers or subsidiary feeders. The effort everywhere has been to unite the forces of the various States—to show in the New England States, for instance, a kindred interest in the development of Florida and vice versa, since once adequately united and improved, the products of the Southland may be carried into New England upon the same waters that return to the Southern States the products of New England, or of New Jersey, or of Pennsylvania, or of Maryland. Or, if you please, so that the pleasure craft which frequent the waters of Narragansett Bay or Atlantic City in the summer months may enjoy the alluring climate of Miami in the winter. So that the service of our vessels of commerce or war may not be impeded. So that the most may be made of all seasons and all products. So that idleness and waste may be reduced to a minimum. So that the cost of living may be cut down. So that time and opportunity may be accepted at their full value as essential factors in the problem of transportation.

THE MEANING OF TRANSPORTATION.

It is easy in these war times to understand the supreme importance of transportation—transportation for troops who are to fight our battles, transportation for munitions of war, and transportation for supplies. We can understand transportation more readily now because of war's demands, which curtail our ordinary home supplies and which increase the cost of everything that is necessary to sustain life. It is not so easy, however, to understand why men of large influence in business and statecraft have contributed to the limitations that transportation has suffered hitherto and which now rise to plague and alarm them. Viewed in the light of our own war necessities, it seems to the average waterways man as if the "transportation expert" who has ignored the opportunities presented by our natural means of transportation has, to speak softly, been too insistent and dogmatic in his dependence upon the railroads as the chief common carriers of the country. Surely the warning which James J. Hill sounded in 1907 was not heeded. Surely the recourse to the waterways as a relief measure has not been followed up in such manner as to be effective now that the country has reached the very limit of its transportation capacity.

FAR-SEEING MEN SPEAK OUT.

We have the admission of Mr. Daniel Willard, head of the Railway War Board, that the railroads need help. We have the appeal of Secretary Redfield, of the Department of Commerce, for the utilization of waterways. We have the statement of President Holden, of the Chicago, Burlington & Quincy road, that the hour has come for national assistance from the waterways. These are among the big thinkers who have had to do with this question. We are hearing also from the lumber men and the cotton men and from the poor farmers upstream who have nothing but the product of their own labor to sustain life. They can not get to market by rail and the waterways are not properly opened up to them. If the streams were made navigable up even to the last farmer's remote neck of the woods, he could get out in his motorboat to a larger stream and thus through the trunk line could eventually get to market. He could contribute more than he does. The country needs his product as much as that of the larger producer, and we believe his labor should not go to waste. But in too many instances it is going to waste in 1917, just as it did in 1907. The automobile has helped many a farmer in 1917 who was not so fortunately equipped in 1907, but even the automobile has its limitations. If the rail service is checked by Government demands; if the great car shortage takes away both engines and cars into new and unusual fields; if through lines of waterways are left unimproved or with links in the chain so weak and shallow as to prevent the passage of suitable carriers pressing on to market and the ports, even the automobile and the motor boat may not afford the producer or the consumer a reasonable measure of relief.

DISTRESS OF AMERICAN RAILROADS.

It is no time to paint word pictures of the distress of American railroads. We all know they have been largely commandeered for the Federal service. We know they are carrying troops and supplies to the borders. We are all willing to put up with poor accommodations, crowded trains, cold cars, uncertain schedules, and the absence of dining and sleeping cars in order that the Government's work may be done. We have witnessed in New

England the practical seizure of high-grade passenger train engines for service in the coal-carrying trade. We have seen the old and battered box cars come into use as carriers of human beings and live stock. These are a few only of the many present-day embarrassments of rail transportation. It may not be for us who have hammered away upon this very problem for the past 10 years to say, "We told you so," but it is not immodest to say that each year in convention during the past decade, and each year since 1907 that Congress has considered river and harbor bills, we have insisted that the waterways were being ignored and that the day would come when their availability for public service would be demanded by the needs of the country. It is not unreasonable, therefore, to suggest to the convention that our predictions have been verified; that the incompetency of the railroads, with their present mileage and equipment, is clearly proven; and that the failure to put the waterways in proper and serviceable condition justifies the immediate surrender of every prejudice against the prompt utilization of the waterways for the purposes of our country.

FURTHER DELAY DANGEROUS.

As president of this association I will go a step further and say that we should begin to hold accountable those who may be responsible for delaying the needful transportation agencies of the United States. Not only are the railroads suffering, but the people are making sacrifices and enduring hardships which they need not have borne but for the selfishness or pigheadedness of waterway obstructionists in the United States. There is no reason for longer delaying such absolutely necessary projects as an improved Chesapeake & Delaware Canal. There is no good reason why we should not begin at once, in accordance with the recommendations of the United States Army Engineers, the completion of every unfinished link in the Atlantic intracoastal chain. If we can afford to lend billions to the people of Europe to fight wars and make internal improvements, we can certainly afford to spend the few millions necessary to put our own house in order. The welfare of our own people is dear to us, and it is due to our soldiers and sailors that we take every measure possible to protect them in the heroic work they have to do. We must keep up production to give them heart and nourishment. We can not do this without adequate transportation by water as well as by land. In the light of our present information and experience it may not be unjust to say that deliberate obstruction of waterway projects capable of aiding transportation in this day of national peril is lacking in patriotism if it does not actually give aid and comfort to the enemy.

WARRING COUNTRIES WANT WATERWAYS.

If we will rid ourselves of local differences affecting transportation, if we will coordinate the work of the railroad with the work of the waterways and the other highways of the Nation, we will best serve our country at this critical period of our national history. There is every reason why we should do so, even from the selfish point of view. Other nations have done it, and other nations continue to do it during the war. It is remarkable—possibly amazing to many—that while we are lending money, even billions of dollars, to England, France, Italy, Russia, and other nations and are charging it up in taxes against ourselves, money that is being utilized abroad for railroad construction, bridge construction, canal construction, waterway construction, if you please, we are still gagging over the paltry hundred millions that would serve to put the entire intracoastal waterway in workable order for the relief of the railroads and for the relief of the people of the United States in the matter of prices for commodities and food supplies. We are lending hundreds of millions to France, which is more directly in the war than we are. Is France neglecting her inland waterways? It was announced in July last, in the midst of all her war excitement, that France proposed to canalize the river Rhone for navigation and for water power. It was announced that the completion of the project would "relieve the congestion of traffic and decrease fuel requirements." If France can continue her canalization schemes in war times, why should the United States hesitate to construct a Chesapeake & Delaware Canal suitable to the interests of modern navigation and capable of carrying our ships of war? It would cost the Government to do this work less than it costs to build one American battleship. The strategic situation here is of equal importance to the United States as is the Kiel Canal to Germany. Are we to haggle over a cost equal to the price of a single battleship until our neglect puts us to the expense of a dozen battleships?

EUROPEANS PREPARING FOR COMMERCE.

Only a few days ago it was announced that Italy, now desperately at war with Austria, intended to push the Milan-Venice Canal to immediate completion for navigation and the promotion of industries. Listen to the mayor of Milan, who regards

this project as of special significance at the present time. He says the central Empires against which Italy is fighting "plan to build in seven years a magnificent canal between the Rhine and the Danube for ships of very heavy tonnage." "It is well for Milan and for Italy," says the mayor now so deeply concerned in the scheme, "that there should be planned and executed a work of civilization which, if not so grandiose, will certainly be of the greatest benefit for the economic development of our country, and because, while the tempest of war still rages, it is the duty of those who look after public affairs to prepare such work without loss of time and provide for the period of peace." Could any argument be framed that would apply more vividly to the neglected waterways of the United States? We are lending Italy money, hundreds of millions of dollars, and Italy is looking forward to her avenues of communication when peace shall be restored. Is there not in this a lesson for the people of the United States? But why pause here? Even Germany, against whose Government we have declared war, is not overlooking her waterways and canals. A few months ago it was reported that the Germans and Austrians had gotten together for the further development of their inland waterways, with the view of connecting the Danube and its tributaries with the rivers of northern Germany, the Elbe, the Oder, and the Vistula, and thus connect Austria-Hungary with the Baltic. Great stress was laid upon the precautionary inland-waterway project, indicating that it had "been forced upon the attention of both empires owing to their great and increasing difficulties of transportation during the war." We are not lending Germany any money, but we are lending our allies vast sums in addition to what we ourselves are spending to beat Germany, and yet everywhere abroad, in the territory of friend and foe alike, we find advantage being taken of waterway transportation.

OUR AMERICAN REQUESTS MODEST.

And we continue to neglect our own and chasten ourselves by the highest possible cost of living due to the limitations of the railroads, which, strive as they may, are unable to carry the products we are capable of producing and upon which both we and our allies must depend. We are asking to start with a 12-foot canal from the Delaware River across the State of New Jersey to the port of New York. It would cost \$20,000,000, but we are told by objectors the cost is too great. We are also told that our daily gross war cost is upward of \$40,000,000. If that is a true estimate, half a single day's war cost would build a serviceable waterway connecting New England with the South across the State of New Jersey, encouraging industries and providing a channel for small war vessels between the great navy yards. A full day's war cost would give us a battleship depth across the State. For strategic purposes, it might mean to the United States a national victory or defeat. In times of peace, if we should be wise enough to give up the price of a battleship to acquire an adequate waterway to the Chesapeake Bay, it would mean not only a sensible preparedness for war but a means of interchange for all time of the products of industry between the North and the South and the East and the West. Are we too parsimonious to take a tithe of our war money for this purpose? Or are we so blind to our national welfare now that when peace is restored the opportunity shall have been lost?

WHY LIMIT OUR PRODUCTIVITY?

The limitations now being placed upon our productive capacity are as serious as the limitations placed upon consumption. We may be able to eat less meat and to put less sugar in our coffee without seriously injuring the body politic, but if we dismantle our industries, discourage the farmer, or reduce his acreage we may not so readily recover from the ill effects of it or restore the conditions that once prevailed. Limited transportation is largely responsible for this. To such a plight have we been brought that the railroad war board has recently suggested an embargo upon more than 500 nonessentials. What does this mean?

Does it mean that with one railroad along the east coast of Florida you are no longer to send to the northern markets the fruits that grow in abundance here? Does it mean that these are nonessentials? Are the wall-paper factories in Buffalo to cease sending their products into Florida to adorn and make comfortable the homes of your citizens? Is this nonessential?

COMING HOME TO FLORIDA.

The great intracoastal waterway runs by your very door in eastern Florida. You are not using it. Why? If it were opened up to a proper depth and width steamboats and barges might now be carrying your valuable products into the northern markets for transshipment east or west or to be sent "over there" where our boys are now rapidly approaching the trenches. Refrigeration settles the problem of long hauls for fruit from California. Refrigeration would settle the problem for you in

long hauls from your great State to the North and to the West. I have asked you why you do not use this intracoastal waterway. You know the answer. It is not open to an adequate width and depth. If it were open the railroads would continue to do their normal business. They would necessarily do a greater business because of the traffic that would accrue along the line of the waterway and its tributaries, but to all intents and purposes this natural, God-given avenue of communication between the North, the East, the South, and the West is closed to the State of Florida.

TYING UP NEW ENGLAND COAL.

The American citizen who wishes to come through from the Northern States is compelled to adjust his craft to the weakest link in your Florida coastal waterway. The same condition confronts the Floridian who seeks to enjoy the navigability of northern streams to the use of which he is entitled. But you are not alone with your problem. The difficulties which confront you are similar in degree to those which make heavier the burdens of your northern brethren. New England is paying its highest price for coal. It secures its coal from Pennsylvania, from Virginia, from the Middle West. The railroads are now groaning under their burden carrying coal to New England. In the Delaware River to-day are more than a dozen barges loaded with coal. They carry from one to three thousand tons—the equivalent of trains of 20 and 60 cars. They are deprived of towage to New England because the tugs that formerly took them to sea have been requisitioned by the Government. It is not for me nor for you to ask why these tugs stand idle, leaving these barges with their precious black nuggets helpless in midstream. That is the Government's business. But up yonder in New England they are waiting for that coal. Some of them are going cold. Some of their industries are shutting down for want of that coal. The railroads are doing their best, but they can not meet the situation. An incompetent canal between the Delaware River and New York could be modernized for less than a single day's war cost; but to New England and to the seagoing barges which could utilize it it hangs out the hellish inscription, "All hope abandon ye who enter here."

APPEAL TO ALL THE STATES.

I will not prolong this report. If I have shown that the work of the Atlantic Deeper Waterways Association during the last 10 years has justified its existence I am satisfied. We have been pushing onward and upward in this great work, the pioneers of a true and permanent preparedness in the United States. We have achieved many successes in the approval of projects and the securing of appropriations for the completion of links in the main line of the great intracoastal waterway, but the work is not finished. You have your drawbacks here in Florida as they have theirs up yonder in North Carolina, and farther on in Massachusetts. Every State along the line has its share of the work to do. We want the sympathy of all the States, that we may impress Congress favorably. Not Eastern States alone, for this is not a sectional movement, except as geography fixes it; it is a national movement in which every man, woman, and child of the country has a patriotic interest. We would not permit New York to fight single-handed against a common enemy; therefore we must throw safeguards about New York. If Florida were assailed, we would not regard it as Florida's fight; it would be an affront to the Nation. Therefore we say to all the States, "Your interests are linked with ours. We have pinnacle rocks in the harbor of New York which impede the progress of our battleships. You should help us remove them. We have navy yards at Boston, at Brooklyn, at Philadelphia, at Norfolk, at Charleston. We are unable to communicate inland by vessel as between those navy yards. You should help us open the passageways. Get behind Congress and help the work along."

MEMBERS WANTED FOR SERVICE.

These are some of the things we would say to our friends from other States. To our friends of the East we feel we have the right now to appeal for help for an increased membership to promote the work we have in hand.

The country is filled with men and women who are anxious to be of service. They can not, many of them, enter the Army or the Navy; they can not nurse the sick, nor can they shine in public place. What higher or more important service can they render than to join the grand army of waterways advocates who plead for a common-sense preparedness? Who plead for an increased production and a decreased cost of living? Who plead for the sinews of war and the serviceable instrumentalities for prosperity in times of peace?

To the incoming board of directors of this association I have but one recommendation to make. It is to meet at once and provide the ways and means for an increase in membership. We have depended largely upon voluntary contributions at con-

ventions for the work we have had to do throughout the year. Let us depend more upon members, upon individuals, upon corporations, upon municipalities, and others who are necessarily concerned in bettering transportation conditions. Let us drive the intra-coastal waterway project into every State. It is a great volunteer work. It has not been unmixed with agreeable associations. It has created enduring friendships, and it has resulted in substantial achievement. Push it forward, gentlemen of the board; push it forward, ladies and gentlemen of the convention. Bring new members and join them with the old and the faithful. There is no more patriotic work for you to do, no more unselfish service you can give to your country.

To Win the War, Fight All Our Enemies.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1917.

Mr. RANDALL. Mr. Speaker, the House of Representatives is about to adopt this resolution declaring war upon the Imperial and Royal Government of Austria-Hungary, and I shall vote for the declaration. The country is in war, and it is the duty of every patriotic citizen to support his Government under such circumstances. Though he may have in the beginning exercised his constitutional and conscientious prerogatives and endeavored to steer a different course, when the country entered the world struggle, so far as I am concerned, my vote always has been and always will be given in support of my Government.

During 3,000 years of recorded history only 227 years have been free from war in some part of the world. Surely it is time to discard war as a panacea for the ills which disturb governments on this earth. After 3,000 years of almost constant warfare as a method of harmonizing disputes, we find ourselves in the midst of the most horrible orgy of blood ever known.

War breeds war. The victor's appetite is whetted for more blood, for more conquering marches, and for wider world influence. The vanquished is bitter in spirit and only awaits that day when he is ready to spring again in revenge at the throat of his successful rival. The victor must therefore unceasingly prepare for that day of revengeful attack. Thus we see even now an ominous demand for compulsory universal military training in this country, and this can mean nothing but the rapid development of a militaristic nation.

Mr. Speaker, war will never end on this planet until the nations sink their battleships and destroy their guns. Disarmament is the only remedy. Then all nations, great or small, will enjoy equal liberty and equal commercial advantages. Then the world will truly be filled with constant "peace without victory."

WINNING THE WAR.

But, Mr. Speaker, the first business in hand is the winning of this war in which we have engaged. A necessary step is to fight all our enemies, not half of them. I vote for a declaration against Austria because I believe that means an earlier end. With far better grace I would also vote for a declaration against the unspeakable Turk. He is the royal author of horrors. We are paralyzed with the stories of German atrocities, but Turkish tortures of thousands upon thousands of peaceful noncombatants, carried on for years which can not be counted, excite us to an exclamation of pity, but no action.

To-day we are engaged in a gigantic struggle to avenge the wrongs of Belgium—and those wrongs ought to be avenged. But only a few years ago the Belgians were down in East Africa, under their vicious old King Leopold, cutting off the hands of the little African children because their parents did not bring in the raw rubber fast enough to suit the greed of the Belgian King. Here is the Turk, whose bloody hands have not been clean in hundreds of years, the destroyer of a nation of Christian people, an ally of our present enemy, and we hesitate to brand him as one whom we intend to punish!

BOOZE IS ANOTHER ENEMY.

Mr. Speaker, I am for a declaration of war against all our enemies. I am for a declaration against those traitors in our own country whose efforts tend to defeat us. One of these disloyalists—and the greatest traitor of all—is Booze. The greed of the liquor interests would see this country defeated in this war

rather than surrender their profits. The same interests chained England down to such an extent that her real entry into the war was delayed two years. That two years nearly spelled defeat. The story of England's shame, when the world finally reads history, will shock all civilized people. Premier Lloyd-George only hinted at it when he declared a year ago that Britain could not win if she had to fight liquor and Germany both.

Let us take warning by England's experience. We are only just entering the war. Any suggestion intended to help win the war ought to be received without prejudice.

"SUICIDE OF HUMAN RACE."

To begin with, "war" is not the proper title of the great disaster. We are in the midst of the "suicide of the human race." Only a few years' continuance of the strife will tell the story. It will not be suicide by the bullet, but by starvation. The world is on the verge of starvation now, but does not know it.

Twenty million men are under arms. All the great producing nations of the earth are in war. Their able-bodied have quit the ranks of production and joined the ranks of destruction. You do not see this as plainly in the United States yet, but we are rapidly mobilizing in that direction. The United States Food Administration talks about raising more foodstuffs, but says nothing about a supply of labor to do that work. Upon a recent trip from the Pacific to this city I saw thousands of acres of wheat, potatoes, and corn still in the fields. Upon inquiring the reason, the universal answer was "no help can be secured to do the harvesting."

With more and more drafts for the National Army and more forced employment in munition plants and shipyards, the harvest of next year does not look encouraging.

ONLY ONE STEP FROM FAMINE.

On the day after he arrived in America, Herbert Hoover gave confidentially to a committee of Congress the exact food status of England, France, and Italy. As the necessity for secrecy has passed, I give you his statement. On April 1 of this year England had exactly 10 weeks' bread supplies, France 9 weeks, and Italy 8. After that date the submarine reached its highest degree of effectiveness. At the moment Mr. Hoover was talking to us he said the bread supplies, which means every edible thing except meat, had been reduced very much below the figures named. In addition to this, France had used up its entire meat supply and was butchering thousands of its original stock.

When a country treads so close to famine as to destroy its original herds, then actual starvation is only a short way off. The food animals of the allies have decreased since the war began by about 33,000,000 head. Thus their meat, fat, milk, and butter have decreased in the face of increased need. You can thus get an idea what our task is to help feed the allies, in the face of our own entry into the war and inevitable lessened production here.

Take the one item of sugar, about which we seem to be disposed to joke. The United States only produces a portion of the sugar which it consumes. France and Italy formerly produced their own but can not do so now. England secured sugar from Germany and Russia. We imported from the West Indies and Germany. Now the allies must have over 2,000,000 tons from the West Indies, which was our own base of supply.

A STARTLING ILLUSTRATION.

Let me give this one startling illustration of the problem which confronts us as feeders of the allies:

In peace times we furnish 8.2 per cent of the breadstuffs of France, England, Ireland, Italy, and Belgium. This year we must furnish 20 per cent to these nations and 2 per cent to neutrals from whom we draw vital supplies. This means that we must send them 220,000,000 bushels, while owing to short crops we only have a surplus of 88,000,000 bushels, if we eat just as we have in the past.

In peace times we supply them with less than 2 per cent of their fodder grains, corn, oats, barley, and rye. This year we must send them 40 per cent, or 500,000,000 bushels.

Is it any wonder that Herbert Hoover is making frantic appeals to the American housewife?

The possibilities of his conservation campaign are just as startling as are the figures which I have just given you.

"ONE THIN SLICE OF BREAD DAILY."

For instance, if every person in this country will save one thin slice of bread daily, that simple act will furnish 4,000 carloads of wheat daily for the allies. If we reduce our average consumption per person per week 1 pound of wheat flour, 2 ounces of fat, 7 ounces of sugar, and 7 ounces of meat, when these apparently small individual savings are multiplied by 100,000,000 persons every week they assume gigantic proportions and offer an apparently complete solution of the problem.

But this solution is based on normal production in this country. What about the harvest not gathered, and the gloomy prospects for labor to plant next year's crops?

LIQUOR TRAFFIC GREAT DESTROYER OF FOOD.

Hoover has not gone far enough. He has missed some of the things which result in enormous waste of foodstuffs and of labor which might be devoted to producing foodstuffs.

With the world starving and with 20,000,000 producers called to the trenches in Europe, the liquor traffic withdraws 107,000,000 bushels annually from the bread supply. This, by the authority of the best economists, would make 11,000,000 pounds of bread a day, or enough to supply the bread ration to more than 22,000,000 men. It is equal in nutritive value to the entire food demands of 7,000,000 people. Think of this industry which is powerful enough in the political councils of the Nation to continue its wholesale criminal destruction of foodstuffs while the world looks on and starves!

The figures are amazing. I took the precaution to submit them to high authorities for examination and confirmation if true. I have in my office in Washington, over the signatures of the men named, the following certificate:

AN AUTHORIZED STATEMENT.

We have reviewed the statistics submitted in regard to the 7,000,000,000 pounds of foodstuffs used in the manufacture of malt and distilled liquors in the United States. It is probable that as much as one-sixth of the total may be necessary for the production of denatured alcohol. At a low estimate of its calorific or fuel value, the remaining five-sixths would supply the energy requirements of 7,000,000 men for a year.

WALTER B. CANNON,

Professor of Physiology in Harvard University.

PERCY G. STILES,

Assistant Professor of Physiology in Harvard University.

IRVING FISHER,

Professor of Political Economy, Yale University.

Until a very recent date the liquor interests openly boasted of the vast quantities of agricultural products which they consumed. In the Year Book of the United States Brewers' Association for the year 1914, page 156, the following claim is set forth:

In the course of the fiscal year 1913 grain and other farm products to the value of \$113,513,971 were used in the manufacture of liquors. The full significance of this amount can best be appreciated if we compare it with the reports of the last United States census on the total value of the crops in certain typical States, which show that it exceeded the total combined crop values in the census year of Vermont, Maryland, and West Virginia; of Massachusetts, Rhode Island, New Jersey, and Florida; of Louisiana (with its great cotton and sugar interests), New Hampshire, and Utah; or of Maine, Connecticut, Delaware, Nevada, New Mexico, and Wyoming.

THREE HUNDRED THOUSAND FARMERS RAISE FOOD FOR LIQUOR.

The National Wholesale Liquor Dealers' Association makes even larger claims on page 21 of their Antiprohibition Manual for 1916, just last year:

According to the United States Statistical Abstract there are 300,000 farmers raising corn, barley, rye, hops, and fruits that go into the production of liquor. They receive in prices from the liquor interests of the country \$200,000,000 annually. Destroy this market and you reduce their purchasing power by \$200,000,000 a year. This means a corresponding reduction in the volume of all business—the output of the mines, mills, and factories. When you hear a prohibition speech you will imagine that only corn and only a small per cent of that is used in the production of liquor. They do not tell you the whole truth. They never intimated that barley, rye, hops, and fruits go into the production of liquor. We are not afraid of the whole truth. The brewers and distillers of Peoria alone consume the entire surplus crop of Iowa and Illinois.

While these figures may now be somewhat reduced by the fact that Congress has prohibited the manufacture of distilled liquors, no embargo has been placed on other liquors. The brewer used twice as much food and feed materials as the distiller, and now that his competitor, the distillery, is removed he will vastly enlarge his destruction of foodstuffs.

I commend this state of affairs to those housewives who are enforcing wheatless and meatless days in their homes. The remedy is total prohibition at once for the period of the war.

THE SERIOUS NEED IS LABOR.

The really serious need of our country in this war has not yet fully developed. It will be the lack of labor to grow the normal crops. In this situation the conservation of men becomes fully as important as the conservation of food. The liquor interests not only commit the crime of destroying our food, but they commit the crime of employing many men in their destructive industry, who in this hour of peril might be employed as producers instead of destroyers. And then they commit the crime of making thousands more inefficient; therefore they reduce the output of the producers.

The State of Massachusetts, in an official investigation, discovered the fact that the loss of time on account of arrests for drunkenness alone, counting no other crime or misdemeanor growing out of drink, aggregated 600,000 days per year in that

State. Remember, this made no count of the men who lay off on account of drunkenness or who lost their position for that reason. It is only the time spent in jail, and an official estimate of the time required after getting out to connect with a new job. The population of Massachusetts is to that of the United States as 1 to 27. If the same ratio holds throughout the Union, the total loss would aggregate 32,400,000 days per year. There is beyond question a much greater loss of valuable man power resulting from liquor-made tramps and idlers.

MANY WILL FREEZE.

The coal-mine operators of Pennsylvania agree that miners employed in West Virginia mines produce an average of 25 per cent more coal per week than Pennsylvania miners do. It is freely admitted that no time is lost by West Virginia miners on account of drunkenness, that being a prohibition State. In the present crisis coal occupies almost as important a place as food. Great suffering is bound to occur this winter and hundreds will actually freeze to death for lack of fuel. Staten Island, a community of 100,000 people, was the other day without a pound of coal. Yet the entire coal problem might be immediately solved if the production of Pennsylvania miners and all other miners were placed on the West Virginia basis, and thus secure a 25 per cent increase in production.

But the liquor traffic also absorbs directly the energy of labor. On page 21 of the Antiprohibition Manual for 1916, already quoted, the claim is made that the traffic consumes the products of 300,000 farmers. If it consumes their products it also consumes their time and labor. The traffic also employs laborers, salesmen, managers, brewers, maltsters, and such like. Prof. Irving Fisher, the political economist of Yale University, places the number of such employees at 289,000. That means that a total of 589,000 men were withdrawn from the ranks of producers, and their time, skill, and ability is absorbed to manufacture a harmful poison, while the world faces starvation.

"BRAN, TOOTHPICKS, AND SCENERY."

Mr. Speaker, in conclusion let me again suggest to the housewives who are feeding their families on bran muffins, toothpicks, and scenery that this iniquitous industry, which daily converts the bread ration of 22,000,000 men—more than all the armies of the world—into a liquid poison, ought to step aside during the war, at least; and if next year we are to produce harvest enough to avoid starvation, then the liquor business ought to release the 600,000 men directly engaged in that traffic, and it ought to help conserve the 32,400,000 days of labor lost by men who serve terms in jails for drunkenness; it ought to discontinue making men in the mines inefficient, so that the coal production might be increased 25 per cent; and it ought to stop its production of tramps, idlers, and criminals, at least until we win this war.

STATEMENT OF ANTISALOON LEAGUE.

Mr. Speaker, the case against our enemies, foreign and domestic, has never been more strongly proclaimed than in the following statement by the Antisaloons League:

Congress decreed that the manufacture of distilled spirits for beverage purposes be discontinued during the war in order to conserve the grain supply. There was an enormous surplus of whisky on hand anyhow. Because the saloons are mostly owned or controlled by German brewers, this whisky is mostly retailed through the German selling organization. This act of Congress thus enabled the German brewery corporations to enormously raise the price of whisky and add to their riches at the expense of the impoverished drinkers. With the German brewers it was a case of "Tails I win, heads you lose."

Vastly more grain is wasted in making beer than in the making of whisky, but the beer business is not disturbed in the smallest particular. Much of American standard beers contain only 3 per cent alcohol anyhow, and a reduction of one-quarter of 1 per cent won't affect anybody. Brewers that have been making 4 and 5 per cent beer can drop to 2½ or 3 per cent and double their output, because they can thereby get two brews out of the same mash. They can reduce their consumption of grain by 30 per cent and at the same time increase their output by something like 70 per cent.

If that is not a snap, what is a snap?

Congress empowered the President to save some 70,000,000 bushels of grain annually by stopping the manufacture of beer during the war. The German brewers who make the beer need the money and this enormous waste has not been stopped.

Congress authorized the President to commandeer the gigantic supply of whisky on hand for the manufacture of munitions if it should be "necessary." It is held by high authority that this is not necessary, because the alcohol supply for the manufacture of munitions comes from "another source."

What is this other source of alcohol supply?

Why, more grain, of course. Instead of commandeering the existing supply of whisky and redistilling it into alcohol at a cost of 2 or 3 cents per gallon, hundreds of thousands of bushels of grain are being used in making alcohol for munitions.

The German brewery overlords win again. If the Government commandeered the whisky at a low price, the brewers could not sell it through their saloons at an extortionate price.

And so the housewives must save the bread crumbs in order that the German brewers may have the grain to make beer with.

Why should we go to all this trouble to help out German brewers who are doing what they can to aid the Kaiser anyhow?

The War Resolution.

EXTENSION OF REMARKS

OF

HON. JOHN A. STERLING,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 11, 1917.

Mr. STERLING of Illinois. Mr. Speaker, I had not intended to print under the leave granted by the House, but feel constrained to do so on account of circumstances which arose on the day the war resolution was before the House. On Friday while the debate on the resolution was in progress I left the Hall to fulfill an appointment which I had with Senator CALDER to see Secretary Tumulty on a matter of some urgency and importance. When I left the House it was generally understood—or I, at least, understood, and I think all did—that the debate would continue until 5 p. m., when the vote would be taken, at which time I had arranged to be back, and was. The debate closed sooner than was expected and the vote came before the appointed hour. This accounts for my name being in the list of those not voting. I favored the resolution and should have so voted had not these circumstances prevented my being present. I regret very much not to have been able to vote for this declaration of war. I think it is of immense importance that we take this action at this time. Personally I had hoped the declaration would extend to Turkey and Bulgaria, but I am willing to defer to the wishes of the President on that point, assuming he has good reasons for his position. He knows the diplomatic situation better than we do. I make this statement so that my attitude may be known and not misconstrued.

War With Austria-Hungary.

EXTENSION OF REMARKS

OF

HON. IRA G. HERSEY,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1917.

"There must be nothing half-hearted in our attitude in this war. Therefore we must not only be loyal to all our allies; we must also make war on all our foes. It is both absurd and mischievous to be at war with Germany and yet not at war with Germany's vassal allies, for it is these vassal allies who make Germany a menace to civilization."

"Austria, Bulgaria, and Turkey stand on a par. We can not do our full duty in the war unless we make war on all. It is empty wisdom to give verbal encouragement to Roumania and Serbia unless we go to war with Bulgaria. It is worse than folly to profess sympathy for Armenia unless we make war on Turkey."

THEODORE ROOSEVELT.

"We must meet its force with our own and regard the central powers as but one. The war can be successfully conducted in no other way. The same logic would lead also to a declaration of war against Turkey and Bulgaria. They also are the tools of Germany."

President WILSON.

Mr. HERSEY. Mr. Speaker, the President has presented to the Congress his second war message, in which he has requested us to declare war against Austria and not include in that declaration Bulgaria and Turkey. He intimates the time may shortly come when he shall ask for a further declaration of war against these last two mentioned nations.

The Congress last April declared war against Germany and will to-day with perhaps but one dissenting vote declare war against Austria. We know that the people of this Nation are almost unanimous to-day in favor of a declaration of war against all these nations who are now our enemies and our bitter foes. We, of course, know not the reasons that influence the President in withholding that declaration at the present time. We now know that the reasons for not including Austria-Hungary, Bulgaria, and Turkey in the first declaration of war have not been satisfactory to the American people.

Germany at the outset of the war, over three years ago, formed an alliance with Austria-Hungary, Bulgaria, and Turkey, and these nations have acted as one in the war against our allies and ourselves. Bulgaria and Turkey by their past history and their present acts of barbarity have placed themselves outside

of the respect of all civilized nations, and Turkey, especially, has forfeited all right to be ever accepted again into the family of nations.

When we, last April, declared war against Germany our soldiers were then upon our own soil. During the past eight months we have sent our armies abroad, and to-day they are fighting all the enemies of the United States, and we ought not to prevent them from making a relentless war upon all our foes. No considerations that are now apparent to the American people should hamper and prevent our soldiers from full freedom upon the field of battle, and certainly the Turk should not be selected for our especial favor in this hour of destiny.

The present war must be conducted against all our foes, both at home and abroad; against autocratic and bloody Germany; against fawning and slavish Austria now cringing to the Kaiser; against the savage Bulgarian; against the "unspeakable Turk," who finds a congenial companionship with the cruel Germans and the bloody Hun.

To win this war we must wage a relentless warfare against all the foes of this Nation in our own household—the so-called Industrial Workers that masquerade under the name of the labor union, the striker, and the picket in the Government employ, the disloyal pacifist in and out of Congress, that perverts the principles of socialism to serve Germany, and against every disloyal pacifist that would hinder and obstruct this Government in presenting a united front against the enemies of democracy.

There have been many delays in preparation, in training, in the manufacture of munitions, in the building of ships, in the sending of our armies abroad, and in the carrying on of this great war—delays many of which no doubt are excusable; but the American people are very impatient of the delay in holding back a declaration of war against the Turk and his allies. Let us hope that our people at home and our soldiers abroad may be cheered by an early declaration of war against all our enemies.

In the meantime we shall, as in the past, rely upon the President as Commander in Chief to lead us successfully in this the greatest struggle of the ages.

The Louisville Segregation Decision.

EXTENSION OF REMARKS

OF

HON. L. C. DYER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 14, 1917.

Mr. DYER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a decision of the Supreme Court of the United States.

The decision is as follows:

[Supreme Court of the United States. No. 33. October Term, 1917. Charles H. Buchanan, plaintiff in error, versus William Warley. In error to the Court of Appeals of the State of Kentucky. (Nov. 5, 1917.)]

Mr. Justice DAY delivered the opinion of the court.

Buchanan, plaintiff in error, brought an action in the chancery branch of Jefferson Circuit Court of Kentucky for the specific performance of a contract for the sale of certain real estate situated in the city of Louisville at the corner of Thirty-seventh Street and Pfanz Avenue. The offer in writing to purchase the property contained a proviso:

"It is understood that I am purchasing the above property for the purpose of having erected thereon a house which I propose to make my residence, and it is a distinct part of this agreement that I shall not be required to accept a deed to the above property or to pay for said property unless I have the right under the laws of the State of Kentucky and the city of Louisville to occupy said property as a residence." This offer was accepted by the plaintiff.

To the action for specific performance the defendant by way of answer set up the condition above set forth, that he is a colored person, and that on the block of which the lot in controversy is a part there are 10 residences, 8 of which at the time of the making of the contract were occupied by white people, and only 2 (those nearest the lot in question) were occupied by colored people, and that under and by virtue of the ordinance of the city of Louisville, approved May 11, 1914, he would not be allowed to occupy the lot as a place of residence.

In reply to this answer the plaintiff set up, among other things, that the ordinance was in conflict with the fourteenth amendment to the Constitution of the United States, and hence no defense to the action for specific performance of the contract.

In the court of original jurisdiction in Kentucky and in the court of appeals of that State the case was made to turn upon the constitutional validity of the ordinance. The Court of Appeals of Kentucky (165 Ky., 559) held the ordinance valid and of itself a complete defense to the action.

The title of the ordinance is: "An ordinance to prevent conflict and ill feeling between the white and colored races in the city of Louisville, and to preserve the public peace and promote the general welfare by making reasonable provisions requiring, as far as practicable, the

use of separate blocks for residences, places of abode, and places of assembly by white and colored people respectively."

By the first section of the ordinance it is made unlawful for any colored person to move into and occupy as a residence, place of abode, or to establish and maintain as a place of public assembly any house upon any block upon which a greater number of houses are occupied as residences, places of abode, or places of public assembly by white people than are occupied as residences, places of abode, or places of public assembly by colored people.

Section 2 provides that it shall be unlawful for any white person to move into and occupy as a residence, place of abode, or to establish and maintain as a place of public assembly any house upon any block upon which a greater number of houses are occupied as residences, places of abode, or places of public assembly by colored people than are occupied as residences, places of abode, or places of public assembly by white people.

Section 4 provides that nothing in the ordinance shall affect the location of residences, places of abode, or places of assembly made previous to its approval; that nothing contained therein shall be construed so as to prevent the occupancy of residences, places of abode, or places of assembly by white or colored servants or employees of occupants of such residences, places of abode, or places of public assembly on the block on which they are so employed, and that nothing therein contained shall be construed to prevent any person who, at the date of the passage of the ordinance, shall have acquired or possessed the right to occupy any building as a residence, place of abode, or place of assembly from exercising such a right; that nothing contained in the ordinance shall prevent the owner of any building who, when the ordinance became effective, leased, rented, or occupied it as a residence, place of abode, or place of public assembly for colored persons, from continuing to rent, lease, or occupy such residence, place of abode, or place of assembly for such persons if the owner shall so desire, but if such house should, after the passage of the ordinance, be at any time leased, rented, or occupied as a residence, place of abode, or place of assembly for white persons, it shall not thereafter be used for colored persons if such occupation would then be a violation of section 1 of the ordinance; that nothing contained in the ordinance shall prevent the owner of any building who, when the ordinance became effective, leased, rented, or occupied it as a residence, place of abode, or place of assembly for white persons, from continuing to rent, lease, or occupy such residence, place of abode, or place of assembly for such purpose if the owner shall so desire, but if such household, after the passage of the ordinance, be at any time leased, rented, or occupied as a residence, place of abode, or place of assembly for colored persons, then it shall not thereafter be used for white persons if such occupation would then be a violation of section 2 thereof.

The ordinance contains other sections and a violation of its provisions is made an offense.

The assignments of error in this court attack the ordinance upon the ground that it violates the fourteenth amendment of the Constitution of the United States, in that it abridges the privileges and immunities of citizens of the United States to acquire and enjoy property, takes property without due process of law, and denies equal protection of the laws.

The objection is made that this writ of error should be dismissed because the alleged denial of constitutional rights involves only the rights of colored persons, and the plaintiff in error is a white person. This court has frequently held that while an unconstitutional act is no law, attacks upon the validity of laws can only be entertained when made by those whose rights are directly affected by the law or ordinance in question. Only such persons, it has been settled, can be heard to attack the constitutionality of the law or ordinance. But this case does not run counter to that principle.

The property here involved was sold by the plaintiff in error, a white man, on the terms stated, to a colored man; the action for specific performance was entertained in the court below, and in both courts the plaintiff's right to have the contract enforced was denied solely because of the effect of the ordinance making it illegal for a colored person to occupy the lot sold. But for the ordinance the State courts would have enforced the contract, and the defendant would have been compelled to pay the purchase price and take a conveyance of the premises. The right of the plaintiff in error to sell his property was directly involved and necessarily impaired because it was held in effect that he could not sell the lot to a person of color who was willing and ready to acquire the property, and had obligated himself to take it. This case does not come within the class wherein this court has held that where one seeks to avoid the enforcement of a law or ordinance he must present a grievance of his own, and not rest the attack upon the alleged violation of another's rights. In this case the property rights of the plaintiff in error are directly and necessarily involved. (See *Truax v. Raich*, 239 U. S., 33, 38.)

We pass then to a consideration of the case upon its merits. This ordinance prevents the occupancy of a lot in the city of Louisville by a person of color in a block where the greater number of residences are occupied by white persons; where such a majority exists colored persons are excluded. This interdiction is based wholly upon color; simply that and nothing more. In effect, premises situated as are those in question in the so-called white block are effectively debarred from sale to persons of color, because if sold they can not be occupied by the purchaser nor by him sold to another of the same color.

This drastic measure is sought to be justified under the authority of the State in the exercise of the police power. It is said such legislation tends to promote the public peace by preventing racial conflicts; that it tends to maintain racial purity; that it prevents the deterioration of property owned and occupied by white people, which deterioration, it is contended, is sure to follow the occupancy of adjacent premises by persons of color.

The authority of the State to pass laws in the exercise of the police power, having for their object the promotion of the public health, safety, and welfare is very broad as has been affirmed in numerous and recent decisions of this court. Furthermore, the exercise of this power, embracing nearly all legislation of a local character, is not to be interfered with by the courts where it is within the scope of legislative authority and the means adopted reasonably tend to accomplish a lawful purpose. But it is equally well established that the police power, broad as it is, can not justify the passage of a law or ordinance which runs counter to the limitations of the Federal Constitution; that principle has been so frequently affirmed in this court that we need not stop to cite the cases.

The Federal Constitution and laws passed within its authority are by the express terms of that instrument made the supreme law of the land. The fourteenth amendment protects life, liberty, and property from invasion by the States without due process of law. Property is more than the mere thing which a person owns. It is elementary that it includes the right to acquire, use, and dispose of it. The Constitution

protects these essential attributes of property. (*Holden v. Hardy*, 169 U. S., 366, 391.) Property consists of the free use, enjoyment, and disposal of a person's acquisitions without control or diminution save by the law of the land. (1 Blackstone's Commentaries (Cooley's Ed.), 127.)

True it is that dominion over property springing from ownership is not absolute and unqualified. The disposition and use of property may be controlled in the exercise of the police power in the interest of the public health, convenience, or welfare. Harmful occupations may be controlled and regulated. Legitimate business may also be regulated in the interest of the public. Certain uses of property may be confined to portions of the municipality other than the resident district, such as livery stables, brickyards, and the like, because of the impairment of the health and comfort of the occupants of neighboring property. Many illustrations might be given from the decisions of this court and other courts of this principle, but these cases do not touch the one at bar.

The concrete question here is, May the occupancy, and, necessarily, the purchase and sale of property of which occupancy is an incident, be inhibited by the States, or by one of its municipalities, solely because of the color of the proposed occupant of the premises? That one may dispose of his property, subject only to the control of lawful enactments curtailing that right in the public interest, must be conceded. The question now presented makes it pertinent to inquire into the constitutional right of the white man to sell his property to a colored man, having in view the legal status of the purchaser and occupant.

Following the Civil War certain amendments to the Federal Constitution were adopted, which have become an integral part of that instrument, equally binding upon all the States and fixing certain fundamental rights which all are bound to respect. The thirteenth amendment abolished slavery in the United States and in all places subject to their jurisdiction, and gave Congress power to enforce the amendment by appropriate legislation. The fourteenth amendment made all persons born or naturalized in the United States citizens of the United States and of the States in which they reside, and provided that no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, and that no State shall deprive any person of life, liberty, or property without due process of law, nor deny to any person the equal protection of the laws.

The effect of these amendments was first dealt with by this court in the *Slaughterhouse* cases (16 Wall., 36). The reasons for the adoption of the amendments were elaborately considered by a court familiar with the times in which the necessity for the amendments arose and with the circumstances which impelled their adoption. In that case Mr. Justice Miller, who spoke for the majority, pointed out that the colored race, having been freed from slavery by the thirteenth amendment, was raised to the dignity of citizenship and equality of civil rights by the fourteenth amendment, and the States were prohibited from abridging the privileges and immunities of such citizens or depriving any person of life, liberty or property without due process of law. While a principal purpose of the latter amendment was to protect persons of color, the broad language used was deemed sufficient to protect all persons, white or black, against discriminatory legislation by the States. This is now the settled law. In many of the cases since arising, the question of color has not been involved, and the cases have been decided upon alleged violations of civil or property rights, irrespective of the race or color of the complainant. In the *Slaughterhouse* cases it was recognized that the chief inducement to the passage of the amendment was the desire to extend Federal protection to the recently emancipated race from unfriendly and discriminating legislation by the States.

In *Strauder v. West Virginia* (100 U. S., 303), this court held that a colored person charged with an offense was denied due process of law by a statute which prevented colored men from sitting on the jury which tried him. Mr. Justice Strong, speaking for the court, again reviewed the history of the amendments, and among other things, in speaking of the fourteenth amendment, said:

"It (the fourteenth amendment) was designed to assure to the colored race the enjoyment of all the civil rights that under the law are enjoyed by white persons, and to give to that race the protection of the General Government, in that enjoyment, whenever it should be denied by the States. It not only gave citizenship and privileges of citizenship to persons of color but it denied to any State the power to withhold from them the equal protection of the laws, and authorized Congress to enforce its provisions by appropriate legislation. . . . It ordains that no State shall make or enforce any laws which may abridge the privileges or immunities of citizens of the United States. . . . It ordains that no State shall deprive any person of life, liberty, or property without due process of law, or deny to any person within its jurisdiction the equal protection of the laws."

"What is this but declaring that the laws in the States shall be the same for the black as for the white; that all persons, whether colored or white, shall stand equal before the laws of the States; and, in regard to the colored race (for whose protection the amendment was primarily designed), that no discrimination shall be made against them by law because of their color?"

"The fourteenth amendment makes no attempt to enumerate the rights it designs to protect. It speaks in general terms and those are as comprehensive as possible. Its language is prohibitory; but every prohibition implies the existence of rights and immunities, prominent among which is an immunity from inequality of legal protection either for life, liberty, or property. Any State action which denies this immunity to a colored man is in conflict with the Constitution."

Again this court, in *Ex parte Virginia* (100 U. S., 339, 347), speaking of the fourteenth amendment, said:

"Whoever, by virtue of public position under a State government, deprives another of property, life, or liberty without due process of law, or denies or takes away the equal protection of the laws, violates the constitutional inhibition; and as he acts in the name and for the State and is clothed with the State's power, his act is that of the State."

In giving legislative aid to these constitutional provisions Congress enacted in 1866 (chap. 31, sec. 1, 14th Stat., 27), that:

"All citizens of the United States shall have the same right in every State and Territory, as is enjoyed by white citizens thereof, to inherit, purchase, lease, sell, hold, and convey real and personal property."

And in 1870 (by chap. 114, sec. 10, 16th Stat., 144) that:

"All persons within the jurisdiction of the United States shall have the same right in every State and Territory to make and enforce contracts, to sue, be parties, give evidence, and to the full and equal benefit of all laws and proceedings for the security of persons and property as is enjoyed by white citizens, and shall be subject to like punishment, pains, penalties, taxes, licenses, and exactions of every kind, and no other."

In the face of these constitutional and statutory provisions, can a white man be denied, consistently with due process of law, the right

to dispose of his property to a purchaser by prohibiting the occupation of it for the sole reason that the purchaser is a person of color intending to occupy the premises as a place of residence?

The statute of 1866, originally passed under sanction of the thirteenth amendment (14 Stat., 27), and practically reenacted after the adoption of the fourteenth amendment (16 Stat., 144), expressly provided that all citizens of the United States in any State shall have the same right to purchase property as is enjoyed by white citizens. Colored persons are citizens of the United States and have the right to purchase property and enjoy and use the same without laws discriminating against them solely on account of color. (*Hall v. DeCuir*, 95 U. S. 485, 508.) These enactments did not deal with the social rights of men, but with those fundamental rights in property which it was intended to secure upon the same terms to citizens of every race and color (*Civil Rights Cases*, 109 U. S., 3, 22.) The fourteenth amendment and these statutes, enacted in furtherance of its purpose, operate to qualify and entitle a colored man to acquire property without State legislation discriminating against him solely because of color.

The defendant in error insists that *Plessy v. Ferguson* (163 U. S., 537) is controlling in principle in favor of the judgment of the court below. In that case this court held that a provision of a statute of Louisiana requiring railway companies carrying passengers to provide in their coaches equal but separate accommodations for the white and colored races did not run counter to the provisions of the fourteenth amendment. It is to be observed that in that case there was no attempt to deprive persons of color of transportation in the coaches of the public carrier, and the express requirements were for equal though separate accommodations for the white and colored races. In *Plessy v. Ferguson*, classification of accommodations was permitted upon the basis of equality for both races.

In the *Berea College* case (211 U. S., 45) a State statute was sustained in the courts of Kentucky, which, while permitting the education of white persons and negroes in different localities by the same incorporated institution, prohibited their attendance at the same place, and in this court the judgment of the Court of Appeals of Kentucky was affirmed solely upon the reserved authority of the Legislature of Kentucky to alter, amend, or repeal charters of its own corporations, and the question here involved was neither discussed nor decided.

In *Carey v. City of Atlanta* (143 Ga., 192) the Supreme Court of Georgia, holding an ordinance, similar in principle to the one herein involved, to be invalid, dealt with *Plessy v. Ferguson* and the *Berea College* case in language so apposite that we quote a portion of it:

"In each instance the complaining person was afforded the opportunity to ride, or to attend institutions of learning, or afforded the thing of whatever nature to which in the particular case he was entitled. The most that was done was to require him as a member of a class to conform with reasonable rules in regard to the separation of the races. In none of them was he denied the right to use, control, or dispose of his property, as in this case. Property of a person, whether as a member of a class or as an individual, can not be taken without due process of law. In the recent case of *McCabe v. Atchison*, etc., Ry. Co. (235 U. S., 151), where the court had under consideration a statute which allowed railroad companies to furnish dining cars for white people and to refuse to furnish dining cars altogether for colored persons, this language was used in reference to the contentions of the attorney general: 'This argument with respect to volume of traffic seems to us to be without merit. It makes the constitutional right depend upon the number of persons who may be discriminated against, whereas the essence of the constitutional right is that it is a personal one.'

"The effect of the ordinance under consideration was not merely to regulate a business or the like, but was to destroy the right of the individual to acquire, enjoy, and dispose of his property. Being of this character it was void as being opposed to the due-process clause of the Constitution."

That there exists a serious and difficult problem arising from a feeling of race hostility which the law is powerless to control, and to which it must give a measure of consideration, may be freely admitted. But its solution can not be promoted by depriving citizens of their constitutional rights and privileges.

As we have seen, this court has held laws valid which separated the races on the basis of equal accommodations in public conveyances, and courts of high authority have held enactments lawful which provide for separation in the public schools of white and colored pupils where equal privileges are given. But in view of the rights secured by the fourteenth amendment to the Federal Constitution such legislation must have its limitations, and can not be sustained where the exercise of authority exceeds the restraints of the Constitution. We think these limitations are exceeded in laws and ordinances of the character now before us.

It is the purpose of such enactments and it is frankly avowed it will be their ultimate effect to require by law, at least in residential districts, the compulsory separation of the races on account of color. Such action is said to be essential to the maintenance of the purity of the races, although it is to be noted in the ordinance under consideration that the employment of colored servants in white families is permitted, and near-by residences of colored persons not coming within the blocks, as defined in the ordinance, are not prohibited.

The case presented does not deal with an attempt to prohibit the amalgamation of the races. The right which the ordinance annulled was the civil right of a white man to dispose of his property if he saw fit to do so to a person of color and of a colored person to make such disposition to a white person.

It is urged that this proposed segregation will promote the public peace by preventing race conflicts. Desirable as this is, and important as is the preservation of the public peace, this aim can not be accomplished by laws or ordinances which deny rights created or protected by the Federal Constitution.

It is said that such acquisitions by colored persons depreciate property owned in the neighborhood by white persons. But property may be acquired by undesirable white neighbors or put to disagreeable though lawful uses with like results.

We think this attempt to prevent the alienation of the property in question to a person of color was not a legitimate exercise of the police power of the State, and is in direct violation of the fundamental law enacted in the fourteenth amendment of the Constitution preventing State interference with property rights except by due process of law. That being the case the ordinance can not stand. (*Booth v. Illinois*, 184 U. S., 425, 429; *Otis v. Parker*, 187 U. S., 606, 609.)

Reaching this conclusion it follows that the judgment of the Kentucky Court of Appeals must be reversed, and the cause remanded to that court for further proceedings not inconsistent with this opinion.

Reversed.

Submarine Activities.

EXTENSION OF REMARKS

OF

HON. FREDERICK C. HICKS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 14, 1917.

Mr. HICKS. Mr. Speaker, availing myself of the privilege granted me to extend my remarks on submarine activities I submit extracts from a speech delivered in Parliament on October 29 by Sir Eric Geddes, of the British Navy:

PUBLICATION OF TONNAGE LOSSES.

I now wish to deal with a question which is of considerable public interest, namely, the desirability or otherwise of publishing the tonnage of British merchant vessels lost as the result of enemy action. I may say that, personally, I approached this subject with the idea that it was desirable, and ought to be possible, to give figures to the public, because it seemed hardly conceivable that the enemy did not know what he was sinking; but after a most careful review of the question, and as the House knows, it is one which has constantly engaged the attention of the cabinet—I regret very much indeed to say that it has not been found possible to arrive at any form of publication which would not, at the same time, convey most valuable information to the enemy, which I am perfectly sure they do not possess to-day, if the information is to be given in regular sequence, and for specific periods, which would enable the general public to follow the situation in detail. I have studied, from a variety of sources, the statements made from time to time by the enemy as to the tonnage position, and I have come to the definite conclusion that not only does he not know what is being sunk, but that he would like very much indeed to know the tonnage regularly month by month, or week by week, or even if he could get a precise figure for a period. If I am right in this conclusion—and I believe I am—it is in itself, I am sure, sufficient justification to the House for the nonpublication of the tonnage figures. I can, however, give, as supplementary to the recent statement of the prime minister in the Albert Hall, certain information which I think will show the House and the country that we are making reasonable and satisfactory progress in overcoming the menace of the enemy's submarine activity. The House will realize, however, that, great as is the loss of mercantile tonnage—and the figure is still very formidable—one can not at this stage of the war pick any one item and deduce therefrom that the war, or even any phase of the war, is going well or badly. It is a truism that it is the unexpected that happens in war, and this, I think, applies equally to warlike preparations behind the battle fronts. We may make a plan to produce certain tonnage of merchant shipping, but a change may take place in sinkings, previous measures may bear fruit, and, for the time being, sinkings decrease. It may thus be possible to transfer the labor and the material either to antisubmarine appliances, or to appliances for the war on land. Men and material devoted to-day to the building of submarines may to-morrow have to be diverted to the production of aircraft engines. Men and material to-day utilized for the production of tanks, light railway material, or bombproof shelters, may to-morrow have to be transferred to the manufacture of mines. And so the kaleidoscopic change which goes on in actual warfare is continually occurring in the workshop and shipyard. To the uninitiated observer it must appear sometimes that there is no method in the madness of those who control these matters. But I would appeal to the country for confidence that there is method in what we do.

The general situation of submarine warfare may be demonstrated by the following figures: Since the beginning of the war—and these are an entirely new set of figures, which, I think, will be interesting to the House—between 40 and 50 per cent of the German submarines commissioned and operating in the North Sea, Atlantic, and Arctic Ocean, have been sunk.

Mr. HOLT. Are those figures of sinkings you are sure of?

Sir E. GEDDES. As sure as one can be of anything. During the last quarter the enemy have lost as many submarines as they lost during the whole of last year, 1916. That is a later figure than the one given by the prime minister at Albert Hall. He told the country that in this year—he was speaking a few weeks ago—we had already sunk twice as many as in the whole of 1916. The figure I am able to give you is important, because it shows that we are really making progress in this. The figure I give you is that in one quarter—that is, roughly, a third of the time—we have sunk the equivalent of the whole of 1916.

As to the sinkings of British merchant tonnage by submarines the German official figures for August are 808,000 tons, those are given out officially by the German wireless press, and the figure is all nationalities. German figures are usually given for all nationalities, and then they turn from that on to how the British mercantile marine can stand this. They actually sank very little more than a third of that amount of British tonnage and a little more than half for all nationalities.

For September, next month, their official figures are 672,000 tons: that is, they have gone down from 808,000 to 672,000, and I will tell the House later on how they explain that. They sank far less than a third of that amount of British tonnage and less than half that amount of all nationalities. The Germans claim—and this is how they account for a decrease in their mythical sinkings—that our tonnage is falling so low that there are not enough ships at sea to enable their submarine commanders to maintain their "bag." They say the game is getting very scarce. That is the explanation that is given by both semi-official organs, the *Cologne Gazette* and the *Frankfurt Gazette*, on the same day, 23d October, so obviously it was communicated to them. I would like to give the House the facts on that. They say that there is so little game on the ground that they can not get the bag. In April last, which was absolutely the heaviest month of sinkings—they were very bad that month—by the enemy submarines since the war began, we must assume because it was their best month that our trade flowed in satisfactory volume for their submarines. They had no complaint in that month. They did very well; they got a good bag. In September last, which is the month they explain away as unsatisfactory because there is not enough tonnage to sink, which is the lowest month of sinkings, and which he tries to explain to his people, as I have said above,

the overseas sailings of all ships 1,600 tons and over were 20 per cent in numbers and 30 per cent in tonnage higher than in April. So he has to find another and a better explanation for his lack of success. I can supply that. The reason is that the long arm of the British Navy has reached down into the depths and the harvest reaped by the submarines is poorer and the number of German submarines that "do not return" is increasing. Since April, the peak month for British losses, the highest month we have ever had, they have steadily decreased, and latterly very markedly decreased. It has been an absolutely steady curve down to September. September was a most satisfactory month, the best we have had since we began the intensive submarine warfare, and, though not quite so good in October, still October is very slightly worse than September, very slightly, and is far better than any other month since the unrestricted submarine warfare began. I am not juggling with the figures, and I mean far better. It is 30 per cent lower than any other month, except September, and September was the best month.

I have dwelt on the interchangeability of effort, showing how it is sometimes possible to achieve the same net result by greater efforts in other directions, such as the production of antisubmarine craft and appliances instead of the production of merchant tonnage. The net reduction in tonnage in the last four months is to-day 30 per cent less than was anticipated in an estimate prepared by me for the cabinet early in July.

NET REDUCTION IN BRITISH TONNAGE.

The total net reduction since the beginning of the war from all causes in British tonnage on the official register, and applying it only to ships that are ocean going, 1,600 tons and over, is 2,500,000 tons. That is the net reduction; that is the tonnage which we have lost net, and that is 14 per cent of the ships on that register in that class. That reduction has taken place during a period while our armies, with their magnificent equipment, were receiving absolute priority, and the great growth of our navy was simultaneously achieved, and achieved to the detriment of merchant shipbuilding. Now that the submarine is, for the present at any rate—and I should like to lay emphasis on these words—doing less damage, and the resources of the country are again being devoted to a far greater and increasing extent to the upbuilding of the mercantile marine, I hope and I look to the net results being still more favorable. I have tried to really give a consecutive idea of how I read the submarine situation to be. I have given the figures, all the figures that I feel can safely be made public, because, although I am talking in this House, I am really talking in Germany as well.

To summarize the submarine warfare as clearly as I can, therefore, I would put it thus: In spite of an increased number of ships passing through the danger zone our defensive measures have, during the past seven months, proved so efficacious that there has been a steady and very great reduction in the damage done by the enemy's underwater craft. Meantime we are sinking enemy submarines to an increasing extent. Our offensive measures are improving and becoming more effective, and will still more considerably improve and multiply. On the other hand, on the best information before us, I believe that the Germans are building submarines faster than they have hitherto been able to do, and that they have not yet attained their maximum strength. It appears to me, therefore, that in this submarine warfare, as elsewhere, it is becoming a test of determination, grit, and ingenuity between the two contending forces. For the present I come to the conclusion that the submarine warfare is going well for us. The enemy has done far less damage than he hoped. As I have told the House, the net result is better than we estimated four or five months ago. He has succeeded in doing this decreasing amount of damage with serious and heavy losses to himself. At present one may be justified in feeling—I think so—that his attack on our trade is being held and is being mastered, and one is justified in looking to the future with courage and determination, confident that he will fail. There is one point that I would like to make which will, I think, interest the House, and I wish to give publicity to it. It is this: We of course analyze in every possible way submarine sinkings, and, although we may do and are doing a great deal by the use of science, by various kinds of weapons and appliances, to defeat the submarine, there is one thing which is almost the most potent protection against submarines that exists. It is not an appliance; it is a gift that God has given to men on the ships. It is their eyesight. It is a good lookout that is kept. I will give figures to the House which, I think, will interest it, and will tell these outside how they can help the navy against the submarine. A good lookout kept by an experienced man, covering a great many attacks by submarines, has given us the following facts, that if a submarine is sighted by the lookout on a vessel, whether the vessel is armed or not, it makes no difference, taking it all over, it is 7 to 3 on the ship in favor of it getting away. Out of every 10 attacks when the submarine is sighted by the ship 7 of them fail; but of every 10 attacks when the submarine is not sighted 8 ships go down. It is 7 to 3 on the ship if the submarine is sighted, and 4 to 1 against it if it is not.

I have now dealt with the submarine situation, and the situation as regards the net reduction in our own merchant tonnage. Many members of the House will recollect and will know for themselves what the German position is, but it is perhaps interesting to give that figure here. At the outbreak of war Germany had about 5,000,000 tons of shipping. To-day nearly half of it is sunk or in the hands of our allies and of ourselves. He has got a 50 per cent reduction, and none of his merchant ships go to sea. We have got a 14 per cent reduction. It is well, however, that the British public should be told what they are up against, and this I think I can do in a few sentences. We must not consider ourselves alone. We must consider the alliance as a whole. We must not be optimistic and say we can do all we like because submarine warfare is, for the present at any rate, going well with us. Some of our allies may in some particulars be better off or may be worse off than we are. For example, while we have plenty of coal to be had for the winning, Italy and France have not, and it is essential that the greatest economy in food and in all our imports should be exercised in order that tonnage saved may be diverted to other vital needs of the alliance.

I think the country has accepted the position that we must lay our plans for a long war. I see no sign of it being a short one. All by their economy can help the Royal Navy and the navies of our allies to defeat the submarine. The fewer times a ship goes through the danger zone, the less are her risks of being sent to the bottom. Every British citizen in his home, every worker in the shipyards and the marine engineering works has it in his power to help to defeat the submarine menace and to strengthen and sustain our allies. It is only by the strictest economy at home, and by the maximum effort of all the workers, that the submarine will be finally defeated. Further, there are great and ever greater calls upon the shipping of the world. The huge army that our ally, the United States, is preparing has to be transported and maintained. Our French, Italian, Russian, and other allies require sea-

borne help, and that help can only be given to the full extent which this country would wish if the nation is prepared strictly and rigorously to curtail its needs, to develop home resources, and to conserve its present and potential maritime strength.

I am saying this because one has so often heard the charge made that one speaker is optimistic and says, "Everything is going well," and another speaker says, "You must save tonnage." I have tried to give both sides. I am convinced that at no period of this war has it been more a test of the grit, determination, and endurance of the people of these islands. The question has often been asked, not only in this House but outside, as to whether we are building merchant tonnage at a sufficient rate to replace the submarine sinkings? The answer has been given in the negative. But, as I have already endeavored to point out to the House, it is unsound and inconclusive to take any one factor of output as against submarine losses to be a vital indication of our situation.

Let me give some information upon the position of the merchant-ship construction and of the new national shipyards. Our present position in merchant shipping is an interesting phenomenon of the war. If it shows us how quickly our surplus resources are wasted, we can take courage in remembering that at the same time we have grown strong where once we were weak. In the well-grounded confidence that our sea front was strongly held, the nation set itself three years ago to become strong where it was weak and to build up its force on land, and with an effort thought impossible in the early months of the war. The great host holding our line in France and the other theaters of war is now equipped on a scale never dreamt of before. This effort was achieved in part at the cost of our mercantile marine and also in part at the cost of our Navy. If we had continued during the war with our merchant shipbuilding on its prewar level we should to-day have been between 2,000,000 and 3,000,000 tons to the good. Expenditure of effort in one direction calls for restriction in another, and we were fortunate that we started well supplied. Even so, we have had to sacrifice to the needs of our land forces between 2,000,000 and 3,000,000 tons, but we are less than 2,500,000 tons down on the register of big ships.

REPORT BY THE ASSOCIATED PRESS AS REPORTED IN THE WASHINGTON POST.

LONDON, December 13.

"The submarine menace, in my opinion, is held but not yet mastered," said Sir Eric Geddes, first lord of the Admiralty, in the House of Commons to-day. "Our shipbuilding is not yet replacing our losses."

"Since November 1, when I made my last statement, the downward trend of mercantile shipping losses has continued satisfactorily. The upward curve of merchant shipbuilding and the upward curve of destruction of enemy submarines have been equally satisfactory. I have no reason to doubt that all three will continue satisfactory."

CAN WIN BY ECONOMY.

The first lord said that if the country would economize so as to restrict the use of tonnage and set ships free for more urgent uses, if the English would follow the tradition of their race and put forth all their power, relaxing no effort to defeat the submarine, then the war could end only in victory.

"Since June," said Sir Eric, "there had been only three torpedoed ships in home waters, the salvage of which had been abandoned, and only one ship which it had been decided not to repair for the present. In June 27 per cent of the total salvaged tonnage on hand was under repair, while to-day 80 per cent was undergoing the repairing process. Since August the output of ships repaired in dry dock had increased 48 per cent and repairs afloat by 45 per cent."

The first lord described three new national shipyards which were being built on the River Severn. The first keels, he said, would be laid there during the early part of the year of a more highly standardized ship than had heretofore been undertaken. A great deal of the steelwork would be done in bridge yards, and a considerable part of the labor would be performed by prisoners of war and unskilled help.

"These yards," added Sir Eric, "will provide 34 shipbuilding berths. They were located on the Severn because of the facilities there for the more comfortable and healthier housing of the workmen. The cost of the new yards, he stated, would be \$3,887,000."

"In the year 1913," continued Sir Eric, "Great Britain launched 2,282,000 tons of ships, of which 1,920,000 tons was merchant tonnage." That, said the first lord, was the highest output ever reached.

CLOSE TO HIGH RECORD.

If the output for December was as good as that in November the tonnage launched this year, he stated, would be equivalent to that of 1913. The rate reached during November and thus far in December was 18 per cent higher than in 1913.

When the Associated Press inquired of high naval authority to-day "if the antisubmarine war was going well and what was the reason for the high rate of sinkings in the past three weeks," the answer was:

"The enemy has had more submarines at work. He has actually been attempting a submarine offensive of the largest possible magnitude in an effort to reinforce his offensive on land. He is trying to bring off a coup which will incline us to peace."

"He has failed signally on sea as on land, and he has had to pay a heavy price. Our countermeasures are meeting with increased success, and the enemy will experience constantly increasing difficulty in maintaining his campaign."

MUCH DEPENDS ON AMERICA.

"If the shipbuilding efforts can be properly spurred on in England and America the allies will be able to say within a measurable time that tonnage is being launched at a rate exceeding the sinkings; and also, if the naval measures continue to improve, as it is reasonable to expect, that U-boats are being sunk faster than the Germans are able to build them and that the German U-boat fleet is steadily dwindling away."

"Much still depends on American shipbuilding, but as encouragement to those who are putting their efforts into that work it may be said with confidence that the allied navies are able to handle the U-boat."

Transportation is without question one of the controlling factors in determining the war, and every Government official on the other side with whom I talked emphasized its importance.

When it is considered that the decrease of merchant tonnage has been caused not alone by submarine activities but by the commandeering of a large number of ships for war purposes it is evident that transportation is a vital issue, and now that America has entered the conflict, with the great demand that will be made for the transit of men and supplies for their maintenance, every effort must be put forward by ourselves and our

allies to increase the merchant marine engaged in ocean transportation.

Premier Lloyd-George yesterday is reported by the Associated Press as having said:

Victory now is a question of tonnage. Nothing can defeat us but the shortage of tonnage, and the advent of the United States has increased the tonnage problems enormously. Germany has gambled on America's failure to transport her Army to Europe. The Prussian claim is that autocracy alone can do things. The honor of democracy is at stake, and I do not doubt that the Prussians will be disillusioned, but both America and Great Britain will have to strain their resources to the utmost to increase their tonnage. The fact that American tonnage will be absorbed in the transport of their own armies compels us to increase our responsibilities in assisting France and Italy with the transportation of essential commodities to their shores.

Soldiers' Mail.

EXTENSION OF REMARKS OF HON. ISAAC SIEGEL, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, Friday, December 14, 1917.

Mr. SIEGEL. Mr. Speaker, the story how our boys abroad came to have mail delivered to them more quickly is told in the following correspondence:

SEPTEMBER 5, 1917.

MY DEAR MR. BURLESON: I inclose you two newspaper articles, one by Mrs. Cook and the other by Mrs. Porter, complaining about the slowness of the mail service from our boys in France, and I may add that I have received a number of complaints from residents in my own district. May I ask you to look into this matter and to advise me what arrangements have been made to facilitate the handling of mail and what is the average time for mail to reach here from France?

Thanking you for your prompt attention to this matter and assuring you that I know of nothing that would relieve the minds of the relatives here and of the boys abroad than the hastening of transportation and delivery of mail, and with kindest regards,

Very sincerely, yours,

ISAAC SIEGEL.

Hon. A. S. BURLESON,
Postmaster General, Washington, D. C.

POST OFFICE DEPARTMENT,
Washington, September 6, 1917.

HON. ISAAC SIEGEL,
House of Representatives.

MY DEAR CONGRESSMAN: Your letter of September 5, relating to complaints about the mail service for soldiers in France, inclosing newspaper clippings giving letters by Mrs. Cook and Mrs. Porter, is received and in reply I beg to advise that mail is being as expeditiously handled for the American troops in France as is possible with the irregular sailings of mail steamers for France and Great Britain, supplemented by such Government steamers as are available for mails. Added to this are the censorship delays abroad, which frequently account for 30 days between the posting and the delivery of the mail to our own troops. Occasionally insufficiently addressed letters add to the delay by the necessity of their being sent to Washington, where a search for the proper address of the soldiers has to be made at the War Department. However, all the mail which is addressed to the unit to which the soldier belongs clears New York with every departure of a French liner or an available Government vessel bound for France.

Owing to the long time which necessarily elapses between the writing and the receipt of letters it is very probable that the missing letters complained of by the writers of the complaints you submit have by this time reached the parties addressed. The foregoing applies only to mail to our own soldiers and does not apply to mail of Americans identified with the French or English Army, which mail is handled by the foreign governments concerned.

I shall be glad to receive details from these complainants and any others as to delays to mail to the front, together with information as to the Army units to which the soldiers belong and specifically how the letters are addressed. Such information will often prove helpful in clearing up trouble that may exist in the field.

Yours, truly,

OTTO PRAEGER,
Second Assistant Postmaster General.

POST OFFICE DEPARTMENT,
Washington, October 3, 1917.

HON. ISAAC SIEGEL,
395 Broadway, New York, N. Y.

MY DEAR MR. CONGRESSMAN: Referring to your letter and to your personal call, relating to complaints of soldiers in France about the nonreceipt of mail, letters, papers, and parcel post, I have to say that this mail is dispatched by available liners to Liverpool and Bordeaux and by such transports on which we are permitted to send mail. In answer to your specific inquiry I will state that we have been permitted to send mail on transports sailing August 7, 16, and 29, and September 7, 8, 12 (?), 21, and 29.

Yours, very truly,

OTTO PRAEGER,
Second Assistant Postmaster General.

HOBOKEN, N. J., October 3, 1917.

Second Assistant Postmaster General PRAEGER,
Post Office Department, Washington, D. C.:

Investigation on my part after conference with Capt. Townsend, Gen. Shanks, and representatives of the Post Office Department of the Foreign Branch and Railway Mail Service indicates that unless mail is sent by the *Cedric* this afternoon that no other ship is available

for that purpose until after October 13. It is important and urgent that you issue orders by telegraph instructing Railway Mail Service clerks here to send the mail this afternoon as indicated above. Wire me what you intend to do.

ISAAC SIEGEL,
Member of Congress.

HOBOKEN, N. J., October 3, 1917.

DEAN KEPPEL,
War Department, Washington, D. C.:

Following copy of telegram sent by me to Assistant Postmaster General Praeger: "Investigation upon my part after conference with Capt. Townsend, Gen. Shanks, and representatives of the Post Office Department, foreign branch, and Railway Mail Service indicates that unless mail is sent by the *Cedric* this afternoon that no other ship is available for that purpose until after October 13. It is important that you issue orders by telegraph instructing Railway Mail Service clerks here to send the mail this afternoon." In view of the complaints we got in the mail service and the delay that is going to ensue unless action is taken by both departments immediately, I would urge you to telephone Praeger at once to issue the orders requested in the telegram to him. Will see you personally and explain the whole situation as I found it.

ISAAC SIEGEL, M. C.

HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D. C., October 6, 1917.

HON. NEWTON D. BAKER,
Secretary of War, War Department.

MY DEAR SECRETARY: As it is probably known to you by this time, there has been considerable complaint on the part of the soldiers now in France about the nonreceipt of mail, magazines, newspapers, and parcel post, caused by the various delays and by the lack of obtaining available liners to Liverpool and Bordeaux, and also by the insufficiency of the number of transports. At times over 2,000 bags of mail has accumulated, and this matter has been the subject of considerable correspondence between myself and the Postmaster General. I also have personally taken the matter up with Second Assistant Postmaster Praeger, interviewed Gen. Shanks and Capt. A. C. Townsend at the port of embarkation, and several officials connected with the Navy Department.

The Navy Department has now consented to carry mail if a request be made by you to that department. I may add that arrangements are being perfected now by which all Christmas mail will be carried by the Navy's vessels to Europe, provided the mail is received prior to November 15.

On October 2, 1917, the New York Times published an editorial and closed it with a sentence as follows:

"It is not well that our soldiers should get the impression or the suspicion that they have been forgotten."

Bearing that in mind, I would ask you to kindly write a letter to Secretary Daniels, making the request to which I have made reference, and also instruct the officers at the port of embarkation to take on mail on all transports.

I may add that Gen. Shanks and Capt. Townsend, at the port of embarkation, are desirous and have been doing all that can reasonably be expected on their part, bearing in mind the fact that supplies must be sent abroad.

Thanking you for your early attention to this matter, and with kind regards,

Very sincerely, yours,

ISAAC SIEGEL.

WAR DEPARTMENT,
Washington, October 10, 1917.

MY DEAR COL. SIEGEL: I have your letter of the 6th with regard to mail for our over-seas forces. I sympathize with your feeling that every effort ought to be made to dispatch mail for our army in France in the most complete and rapid way. I do not understand that the Secretary of the Navy is awaiting any request from me, as the Second Assistant Postmaster General has told me that the Navy is already carrying mail for them on convoy ships. This department is, of course, also carrying mail on transports. I am, however, asking Gen. Chauncey Baker, of this department, who is in general charge of the transport system, to take up the whole question with the Postmaster General and the Secretary of the Navy and work out as practicable and effective a plan as can be made to secure the quick dispatch of all such matter.

Cordially, yours,

NEWTON D. BAKER,
Secretary of War.

HON. ISAAC SIEGEL,
House of Representatives.

On October 2, 1917, the New York Times printed the following editorial expressive of the feelings of the American people on the subject:

SOLDIER MAILS DELAYED.

American soldiers in France are complaining with what threatens soon to become bitterness that their letters and papers from home arrive—when they arrive at all—only after delays amounting often to more than a month, and that in grievously numerous cases they seem never to get further than the Atlantic seaboard. This is a grievance about the reality of which there seems to be no question, for inquiries addressed to responsible officials of the Post Office Department have elicited excuses for the badness of this part of the Postal Service, and not denials that it is bad.

The excuses do, indeed, have some weight. Sailings of mail steamers to England and France are necessarily irregular, and the operations of the censorship frequently result in the holding back for days or even weeks of much mail matter perfectly innocent in character. For these things, of course, due allowance will be made by all reasonable people, but after that has been done there remains not a little evidence of failure on the part of our postal officials to realize the importance of forwarding to our men abroad with all possible dispatch the letters for which they wait so impatiently—letters on which their contentment and good spirits so largely depend.

Almost as much can be said for the newspapers addressed to them. Deprivation of these is a real hardship for every intelligent American, and one especially severe for those who know no foreign language. The task confronting the Post Office Department is a difficult one, but that should be an inspiration to effort, not a discouragement of it. It is not well that our soldiers should get the impression or the suspicion that they have been forgotten by their friends at home.

Exempting Congressmen's Salary from the Payment of Income Taxes.

EXTENSION OF REMARKS

OF

HON. CALEB POWERS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 18, 1917.

Mr. POWERS. Mr. Speaker, Judge J. M. Robsion, of Boursville, Ky., in announcing his candidacy for the Republican nomination for Congress at Williamsburg, some time ago, among other things said:

Congress has exempted the salary of Congressmen from paying an income tax. They get \$7,500 per year with some extras. They passed a law requiring a single man with an income of more than \$1,000 per year and married men with an income of more than \$2,000 per year to pay an income tax, and if I go to Congress I expect to ask for this law so far as it exempts Congress Members from paying income tax on their \$7,500 to be repealed.

Mr. Robsion means to charge, I take it, that Members of Congress, including myself, voted to exempt our own salaries from the payment of an income tax, and at the same time voted to tax the salaries and income of nearly everybody else. He does not specifically mention me, but the inference is, judging from his remarks, that I am guilty along with the rest, else why use that as an argument to succeed me as a Member of Congress? [Robsion did say in his speech at Somerset later on: "Yes, Mr. Powers, you voted for that bill there that exempts your salary."] Judge Robsion says that such a law is unjust, and the charge he means to make is that I ought to be turned out of Congress because I was, and am now, for such a law, and that he ought to be elected in my stead because he is and will be against it, and if elected will ask that this "law be repealed," using his own words.

JUDGE ROBSION DOES NOT KNOW WHAT THE LAW IS.

There is not a word of truth in the charge made by Judge Robsion that the salaries of Members of Congress are not taxed. As a matter of fact, the new revenue act taxes the incomes of Members of Congress three times more than they were taxed before. The act of September 18, 1916, among others, imposed upon Members of Congress and others a 2 per cent tax upon the normal annual incomes of married men earning over \$4,000, and the same act also imposed upon single men a similar tax where their earnings were over \$3,000 per year. This is the old revenue act. It was modified and made much more stringent by the act of October 3, 1917. This later act is the one that Judge Robsion so severely criticizes because he says that it does not tax Members of Congress at all. In this he is badly mistaken.

This act does tax the incomes of Members of Congress along with the incomes of nearly everybody else. Under this law the rate of tax for married men, Congressmen included, is 2 per cent on the amount of net annual income exceeding \$2,000 but less than \$4,000, and 4 per cent on the amount of net income above \$4,000 but less than \$5,000. This same law applies to single men where their net annual income exceeds \$1,000. The above tax on both married and single men is what is known as the normal income tax. In addition to this there is an extra levy or surtax imposed on incomes of Members of Congress and others above \$5,000, so that the amount of income between \$5,000 and \$7,500—the amount of a Congressman's yearly salary—is subject to a surtax of 1 per cent, or total income tax of 5 per cent. This is the law that Judge Robsion says he expects to ask to be repealed because it does not tax Members' salaries. In addition to all the above, this same act of October 3, 1917, imposes a tax of 8 per cent on all persons, except Government, State, county, and city officers, earning above \$6,000 per year, and this is known as the war excess-profits tax. The Supreme Court has held that Members of Congress are not Government officers.

The war excess-profits tax was imposed, as its name implies, for the purpose of making persons pay this tax who had made big profits out of the war. How anybody can figure out that there is any excess war profits in a Congressman's salary is beyond my comprehension; and yet the act of October 3, 1917, the one about which Judge Robsion so bitterly complains, in the opinion of the best lawyers of this House and the country imposes this war excess-profits tax upon the salaries of Members of Congress. There has been no ruling or decision from any court or other authoritative source relieving Members of Congress from the payment of this war excess-profits tax on

their salaries. Every member of the conference committee that incorporated in the revenue act the exemptions above referred to has declared that they had no thought of exempting Members of Congress from paying this war excess-profits tax.

If Members of Congress were trying to relieve themselves from the payment of income taxes it would be the act of idiots to subject their salaries to the payment of the normal income tax and in addition to that the surtax and other taxes and then try to relieve only \$1,500 of their salaries from the payment of the war excess-profits tax.

CONGRESSMEN SPECIFICALLY PROVIDE FOR IMPOSING THIS WAR EXCESS-PROFITS TAX ON THEIR SALARIES.

But in order to relieve any and all doubt upon the question and, as one Member put it, "to prevent a lot of demagogues who want to come to Congress from willfully misrepresenting what Congress has done," this House a short while ago passed almost unanimously a resolution specifically naming Members of Congress as having to pay on their salaries this war excess-profits tax. [The Commissioner of Internal Revenue has, however, later decided that the passage of the resolution was unnecessary; that Congressmen had to pay a war excess-profits tax under the act of October 3, 1917.] I voted for this resolution not because there is any sound principle back of such a tax, but because Members of Congress are drawing good salaries, and they voted this war on the people, and, for one, I am willing to help make them bear the burden of it.

In taking the position he does, Judge Robsion either advertises his own incapacity to represent the district or willfully misrepresents Members of Congress. I submit that in either event his own words condemn and disqualify him.

His position on this matter illustrates the danger and advertises the inadvisability of electing new and untried Members of Congress in the places of old and experienced ones, especially in the grave crisis that now confronts this Government. It is rank folly to go to the expense of training men to fill important places, but to turn them out when once equipped and qualified. Lincoln's sage advice, not to swap horses in the middle of the stream, comes to us, in the grave crisis that now confronts this country, with added force and vigor and warns us of the dangers lurking in such a policy.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 17, 1917.

On the bill (H. R. 7237) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1919, and for other purposes.

Mr. LONERGAN. Mr. Speaker, the bill under consideration merits the attention and should command the support of every right-thinking man in Congress. The clerks and carriers in first and second class post offices ask for an increase in pay. And public opinion is behind them. It is provided that they be divided into six classes and that the classes be reimbursed as follows: First grade, \$1,000; second grade, \$1,100; third grade, \$1,200; fourth grade, \$1,300; fifth grade, \$1,400; sixth grade, \$1,500. Inclusion in the various grades is to depend upon terms of service.

The proposition is a fair one. Service at all times should be rewarded. Private corporations throughout the country are taking every advantage of the present shortage in labor to offer increases to their employees, to grant bonuses to them, to interest them in many kinds of social endeavor, so that they will be contented with their work and satisfied with their opportunities. This is true alike of manufacturing establishments in Hartford County, which I have the honor to represent, in the State of Connecticut, and throughout the industrial centers of the country; it is true of large mercantile establishments; it is true of smaller concerns. Obviously, then, it must of necessity be to the best interests of the United States for the Government to change the schedule of salaries of its employees in the Postal Service so that their remuneration will at least be in keeping with the wages paid to the men even less skilled than they in other walks of life. The things for which the employees ask comprise a modest request indeed. The Government should be the model employer.

Their arguments are facts that are at the disposal of everyone. If it were for service alone they ask to be better treated, their desires should be granted without question, for there is no harder-working department in the Government to-day than the Postal Department. But with the small recompense they now receive for their labors is the very vital problem brought home to every man to-day, the problem of meeting the increased cost of living. A few years ago a man with a salary of \$1,000 a year was considered to be well paid. Then the dollar had high purchasing value. To-day its purchasing power is not so marked.

Investigation of the change in the market prices of food in Hartford, Conn., my home town, and the other cities of the State reveals figures that are surprising. It will be noted in the table of comparison given below that practically every substantial eatable has been advanced from 25 to 50 per cent, while some of the necessary articles that go toward a meal have been advanced almost 75 per cent.

The increase has been the greatest in meats. Short steaks that to-day cost 60 to 70 cents a pound could be bought in 1907 for only 32 to 40 cents a pound, while roast veal that to-day sells for 30 to 45 cents a pound could be obtained at 14 to 25 cents a pound 10 years ago. Corned beef has shown an increase of from 6 to 20 cents a pound in 1907 to 20 and 35 cents a pound to-day, but cabbage, which usually accompanies corned beef onto the table, has ascended only 2 cents. Lamb chops could be bought for from 18 to 30 cents a pound then, but to-day the housewife must pay from 50 to 55 cents a pound. Other meats have gone up in proportion.

A meatless dinner would not save the housewife much, as there has been a very noticeable increase in the price of vegetables. Potatoes, the standard food in thousands of Connecticut homes, have almost doubled in price. It was possible to buy a peck of potatoes for 30 cents in 1910, but 50 cents is the price asked now, with every indication that it will be higher in the near future. Sweet potatoes have gone up in the same proportion, jumping from 35 cents a peck in 1907 to 60 cents a peck in 1917. Tomatoes, watercress, new beets, mint, and parsley have, however, remained the same during the 10 years.

Housewives feel the high cost of groceries, especially those who were buying for a family back in 1907. In those days butter could be bought for 35 cents, cheese for from 12 to 25 cents, flour for \$6.75 a barrel, sirup for \$1.50 a gallon, sugar for 6 to 8 cents a pound, eggs for from 35 to 40 cents a dozen. To-day butter sells for 57 cents, cheese for from 35 to 38 cents, flour for \$1.90 a sack, sirup for \$2.10 a gallon, sugar 5 pounds for 53 cents, and eggs for from 55 to 75 cents.

Poultry took a big jump. Native broilers sold for 28 cents a pound in 1907, but they cost 45 cents a pound now. Fowls have jumped from 22 and 25 cents a pound to 38 cents, squabs from \$3.75 to \$5 a dozen to 60 cents each, and ducks from 25 to 28 cents a pound to 40 cents. Fish are also more expensive now, especially halibut, haddock, and lobsters.

The following table shows the comparison of the prices in 1907 with those of this year:

	1907.	1917.
Groceries:		
Butter, print and fancy dairy	35 cents.	57 cents.
Butter, Simsbury Creamery	\$1.95, 5-pound box.	60 cents, 1-pound box.
Cheese, plain	16 and 20 cents.	35 cents.
Cheese, Young America	25 cents.	38 cents.
Crackers, plain	10 and 25 cents.	12 to 35 cents.
Crackers, fancy	35 to 75 cents.	35 to 75 cents.
Flour, Pillsbury's Best	\$7.25, barrel.	\$1.90, sack.
Flour, Washburn, Crosby & Co.	\$6.75, barrel.	Gold Medal, \$1.90, sack.
Flour, rye	25 cents, 10 pounds.	9 cents a pound.
Flour, graham	35 cents, 10 pounds.	9 cents a pound.
Syrup, new maple	\$1.50, gallon.	\$2.10, gallon.
Molasses, New Orleans	65 cents.	75 cents.
Tea, Oolong	35, 40, 50, 60, 70, 80, cents, \$1, \$1.25.	35, 40, 50, 60, 70, 80, cents, \$1, \$1.25.
Tea, finest Formosa	\$2.	\$2.
Tea, English Breakfast	50, 60, 75, 90 cents.	50, 60, 75, 90 cents.
Tea, Ceylon	80 cents to \$1.	95 cents, \$1, \$1.25.
Coffee	20 to 40 cents.	25, 30, 35, 40 cents.
Miscellaneous:		
Cider vinegar	25 cents.	25 and 40 cents.
Sugar	6 to 8 cents, pound.	33 cents, 5 pounds.
Pearl barley	10 cents, pound.	12 cents, pound.
Cracked wheat	5 cents.	15 cents.
Oatmeal	6 cents.	7 cents.
Rolls oats	5 cents, 6 pounds, 25 cents.	8 cents.
Eggs	35 to 40 cents.	55 to 75 cents.
Lard, 10-pound pail	\$1.50.	\$3.60.
Prunes	13 to 25 cents.	18 to 29 cents.
Jellies, jar	10 and 25 cents.	15 and 30 cents.
Guava jelly	35 cents.	25, 30, 35 cents.

	1907.	1917.
Miscellaneous—Continued		
Sardines	10 to 40 cents.	10 to 45 cents.
Salmon	10 to 30 cents.	23 to 35 cents.
F. A. Soups	\$2 pint, \$1.50 quart.	\$2.40 pint, \$4.10 quart.
Chocolate	25 to 35 cents.	28 to 40 cents.
Lemon peel	25 cents.	25 cents.
Orange peel	25 cents.	25 cents.
Citron	30 cents.	45 cents.
California fruits	\$4, dozen.	\$4, dozen.
Olive oil, bottle	25 cents, \$1.	26 cents, \$1.50.
Macaroni	10 to 14 cents, pound.	15 to 18, 20 cents, package.
Raisins	13 to 25 cents.	18 to 45 cents.
Tapioca	10 cents.	15 cents.
Vegetables:		
Tomatoes	10 cents quart.	10 cents pound.
Eggplant	15 to 20 cents.	20 to 25 cents.
Peppers	5 cents quart.	19 cents quart.
Watercress	5 cents.	5 cents.
New beets	do.	Do.
Mint	do.	Do.
Parsley	do.	6 cents.
Summer squash	do.	5 cents.
Cucumbers	7 cents.	9 to 13 cents.
Lettuce	5 to 13 cents.	7 to 13 cents.
Celery	15 cents.	15 cents.
Radishes	5 cents.	4 cents.
Cabbage, new	8 cents.	10 cents.
New potatoes	30 cents.	50 cents.
Sweet potatoes	35 cents peck.	60 cents peck.
Lima beans	15 cents quart.	13 cents quart.
Cauliflower	15 to 25 cents.	35, 40, 50 cents.
Fruits:		
Olives	10 cents to \$1.90.	13 cents to \$1.
Fancy mixed nuts	20 cents.	25 cents.
Brazil Jumbo	do.	Do.
English walnuts	do.	30 cents.
Lemons	25, 30, 35 cents.	25 to 35 cents.
Oranges	60 to 75 cents.	40, 50, 60 cents.
Bananas	10, 20, 25, 30 cents.	25, 30, 35 cents.
Red bananas	50 cents.	60 cents.
California plums	10 to 20 cents.	15 to 25 cents.
Limes	20 cents.	30 cents.
Peaches	15 to 25 cents quart.	\$1 to \$1.75 basket.
Delaware grapes	20 cents.	25 cents.
Tokay grapes	18 cents pound.	50 to 60 cents basket.
Meats:		
Beef, long cut	25 to 28 cents.	40 cents.
Beef, short cut	28 to 30 cents.	42 to 45 cents.
Loin roasts	32 to 33 cents.	32 to 55 cents.
Short steak	32 to 40 cents.	60 to 70 cents.
Shoulder clods	14 to 18 cents.	28 to 30 cents.
Corned beef	6 to 20 cents.	20 to 35 cents.
Dried beef	25 to 30 cents.	60 cents.
Beef liver	10 cents.	18 cents.
Calves' liver	30 cents.	50 cents.
Lamb chops	18 to 30 cents.	50 to 55 cents.
Shoulder	14 to 16 cents.	30 to 35 cents.
Veal cutlet	30 cents.	50 cents.
Veal chops	18 to 25 cents.	45 cents.
Veal, stewing	8 to 15 cents.	18 to 22 cents.
Veal roasts	14 to 25 cents.	30 to 45 cents.
Poultry:		
Native broilers	28 cents pound.	45 cents pound.
Fowl	22 to 25 cents.	33 cents.
Squabs	\$3.75 to \$5 dozen.	60 cents each.
Ducks	25 to 28 cents.	40 cents.
Miscellaneous meats:		
Honeycomb tripe	10 cents.	18 cents.
Pork	18 to 20 cents.	40 to 45 cents.
Ham	do.	34 cents.
Salt pork	12 cents.	30 cents.
Bologna	12 to 14 cents.	28 cents.
Bacon	20 to 25 cents.	48 to 55 cents.
Fish:		
Halibut	25 cents.	45 cents.
Haddock	8 cents.	14 cents.
Sea bass	20 cents.	30 cents.
Butterfish	18 cents.	20 cents.
Flounders	12 cents.	14 cents.
Salmon	45 cents.	40 cents.
Live lobsters	32 cents pound.	48 cents.
Boiled lobsters	35 cents pound.	52 cents.
Snapper blues	18 cents.	22 cents.
Finan haddies	12 cents.	20 cents.
Prices for farmers:		
Fowls	11 cents.	22 cents.
Eggs	32 cents.	62 cents.
Lettuce, dozen	40 to 50 cents.	60 cents.
Parsley, dozen	40 cents.	30 cents.
Squabs	\$3 dozen.	\$4.50 dozen.
Veal, live	7 cents pound.	14 cents pound.
Veal, dressed	11 to 12 cents.	15 cents.

These figures were as of the early days in November this year. It will be seen at once that salaries of a few years ago can no longer provide for the families of the employees of the Government in the Postal Service the necessities and surroundings that the family, if it is to continue as the strong social unit, must have.

The clerks and carriers are not fighting their fight for higher wages alone. There has recently come to me as Representative of the first district of Connecticut, a petition signed by more

than 1,000 of the most prominent men in the civil life of Hartford, among them that of a former chief executive of the State, members of the State legislature, merchants, workingmen, professional men, and clergymen. All ask that the clerks and carriers be granted the increase they seek. The laborer is worthy of his hire.

Incidentally, it may be stated here that in the city of Hartford alone during the past year, from the carriers' list, 48 carriers were notified, but 20 eligibles declined to accept, and 6 substitutes resigned after being appointed. In addition, 6 regular carriers and 1 rural carrier resigned, all because they could not afford to take the position. The salary was inadequate. From the clerk list, in the same time, 34 eligibles declined to accept appointment and 11 substitute clerks resigned after being appointed, 80 clerks having been notified. Four regular clerks resigned. This, to my mind, is a reflection on the method of establishing salaries for men in the service.

The importance of keeping the mails and the Postal Service of the country and the maximum of efficiency during these war times is self-evident. It has impressed itself so upon the military leaders of our country that in the draft many postal employees, while not by virtue of their office exempt, are placed in deferred classes. If the Postal Service of the country fails during the present emergency, then the business of the country will be seriously handicapped. If business is at all handicapped, the sources from which we expect to take revenue for winning the war will be jeopardized; jeopardize the collecting of revenue and immediately the sinews of war are affected. The consequence in disrupting the Postal Service by driving men from it into other occupations because of the poor salaries paid postal employees would be harmful in the extreme. We have the words of the President, that the present task of the Nation is to win the war. Teamwork must do it. And raising the salaries of the clerks and carriers will make the Post Office Department a most efficient branch of the service. To this the people are entitled.

It is to be hoped, too, that the rural carriers, those men who brave the storms of winter and who at all hazards keep the avenues to the farms open to the cities, will also soon benefit by legislation. The same increase in the cost of living in cities, as cited above, has also been felt in the country in the purchase of supplies for the farm. And we should not forget any particular class of men in one service, if the legislation planned to benefit the whole service is to be enacted.

At any rate, Mr. Speaker, I trust that a bill for the increase of salaries of clerks and carriers will soon become law.

Address of Former Gov. M. R. Patterson, of Tennessee.

EXTENSION OF REMARKS
OF
HON. HUBERT F. FISHER,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,
Monday, December 17, 1917.

Mr. FISHER. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include the address of former Gov. M. R. Patterson, of Tennessee, made in Washington, D. C., on December 13, 1917, before the National Anti-Saloon League.

The address is as follows:

This is the day for rigid self-examination, the firm establishment of American purposes and reincarnation of American ideals. It is idle to talk of what our influence may be in democratizing the Old World until we set our own house in order and we ourselves have a national conscience and mind—until we know what we want to do and how to do it.

In an incredibly short time—as the lives of nations are measured—we have gone from four to more than one hundred millions of people, from 13 States to 48, and I don't believe that any of us can quite comprehend the vast and compelling forces that surge and break all around and about us. If your experience is like mine, I feel sometimes as if I were wandering in a land of quick and vanishing dreams. Before we become accustomed to the new we find it is old, and when we are told with all certainty and solemnity that something is good or bad, and begin to adjust our lives and ourselves to its rules and formulas, we are told with equal solemnity that the opposite is true, and we must begin to live all over again.

We are surprised at nothing, and will do anything suggested, and will take anything from Carter's pills to Peruna with sublime confidence in the results. It is off with the old and on with the new, and with the rise of each new sun we look upon another world, so fast does change tread upon the heels of change. We no longer smile at Darius Green and his flying machine, for the dreams of Darius have come true in myriad forms which roam at will beyond the flight of eagles.

Once we regarded the shark and the swordfish as the terrors of the deep, but they are toys for children, compared with the submarine. New York has adopted woman suffrage, and a lady from Montana is a Member of Congress. Not long ago a friend of mine said that he thought everything had happened that could happen to him in the East, but when he moved West where women vote and hold office it was not a year until he had married the sheriff of the county.

George Washington never saw an engine, a steamboat, a match, nor a postage stamp. So we are moving, we know not where or how, but deep within us, way down beneath the rubbish we make, below the doubts we have, buried like treasures from sight, is a belief in the guiding Master hand, in the mystery and love of God. Here is the answer to the riddle—the final and only one that satisfies and rests the soul; in it there is no change, and it is the hope of the world. Right is harmony; wrong is discord—with one's self and the Creator—and all men know it. So, unless we fail, toward the right we must go, and for the right we must stand; and this must remain the test and standard of human conduct, whatever may be the apparent exception or however variable the manifestations.

THREE ERAS OF PROGRESS.

In computing the progress or regress of our history, it may be roughly divided into three great eras: The first was the stretch of the time from the beginning of the Government to the war between the States; the second was the period from the end of that struggle until now; and the third era has come as we sail out from our own narrow seas of thought and action and enter the ocean which touches the shores of all humanity, to become world workers and share its larger responsibilities.

The first period was the heroic age, the age of State building, of the romance of adventure and ideals, in which we trod the high levels of private thought and public honor. Washington was the first and Lincoln was the last of the titanic race which then moved across the stage in mighty procession.

We entered upon the second period when the science of mechanism succeeded the science of government, and then the vision became narrowed to self and locality. We reached the day of highly developed, specialized, and successful individualism, but we seemed to forget that a people could be singly strong and collectively weak—that sticks must be in a bundle before there is strength and the unity of resistance.

BALLOT BOX AS PALLADIUM.

We boasted still of the ballot box as the palladium of our liberties, and although it took the blood and toll of years to win its privileges we turned it over to the vicious to control and corrupt as they would. We were fervid enough in patriotic expression when our particular parties were in power, which meant an opportunity for place and spoils, and we measured the value of our public men not by what they might accomplish for the good of all, but by how much they could obtain from the National Treasury, and the pork barrel became the real thrill and inspiration of patriotism.

In this time, though we were only life tenants, we despoiled the fee and ravaged the fairest and most lavish gifts bestowed by Providence on man.

When we could have no fear of open competition in trade we erected tariff walls of selfishness and isolation and gambled with ourselves. We gained and we lost. We gained wealth and almost lost the soul of America. We grew enormously around the stomach and smaller around the heart. We grew larger in corn deals, wheat deals, munition deals, and smaller in ideals. We became image brokers, pulling down old temples and shattering old moralities. The classics were set aside, for the gory and public appetite feasted on the prurient.

The newspapers, with some rare and fine exceptions, gave the public what the public wanted; and the public wanted—not essays, poems, pictures, or sermons—but stories of divorce, high finance, sexual crime, and murder. These were told, not in English but in a strange jargon of words which would have made Addison and Milton shudder in despair. We became not only a nation of bad grammarians and outlandish rhetoricians but heavy eaters and drinkers, gorged with appetite, forgetting the spirit of sacrifice and self-restraint.

We took more interest in the games between the White Sox of Chicago and the New York Giants than in the results on the battle fields of Europe. We refused to take anything seriously and wanted to laugh and be amused all the way from the cradle to the grave.

SOME NATIONAL HEROES.

Our national heroine was the vampire woman, and our most popular Englishman was not Asquith, Lloyd-George, or the King, but Charlie Chaplin, and we crowded the shows where he fell upstairs and down, over the furniture, and everything else in sight, including himself. For these performances he is said to draw in a year more money than Edwin Booth saw in a lifetime, or the Continental Treasury contained at any one time in its entire existence.

I do not know how you regard this, but if the amusements of a people indicate their character, something must be wrong when they had rather see Charlie Chaplin in a picture house than to read Shakespeare and the Bible. In comparison, fox hunting, cock fighting, and horse racing were heroic virtues, for they at least indicated virility. It was amazing how little we thought of nation making in these easy days of self-indulgence, and we were almost wholly without world vision.

We looked upon the rest of mankind as our inferiors and boasted that with the squirrel rifles of our forefathers we could lick the world—that volunteers would spring up overnight as our defense in war. We strutted about too gorged, too lazy in physical and spiritual valor, to realize our growing weakness. It is said that a peacock, with his head in the air and his tail spread to the sunshine and the breeze, when he looks down upon his ugly feet becomes so disgusted that his feathers fall, and the show is over. So, with the glare of a world in flames, we were at last revealed to ourselves, and we were startled by what we saw—that this was the richest, most envied, and most defenseless among the first-class powers of the earth.

There is a cause for all this. Nothing happens by chance, and as a people we must confess to money madness. Our exemplars were the bag barons who might ruthlessly levy tolls upon us but who still received our admiration. We measured success not by how many healthy children a man had reared but by how many dollars he possessed. The chief end of education was to fit the child for money getting, and life itself became a feverish contest to reach it in the quickest way and by the easiest road.

ENGULFED BY MATERIALISM.

Literature and art were submerged in the rising flood. We were surrounded and engulfed by materialism. We erected false shrines for our devotions. Mammon, and not the living God, demanded our time, our interests, our passions, and, sometimes, I think, our very souls. So

America became the richest Nation of the world. Our stock of gold is greater than that of Russia, France, and England combined. Our stores of copper and iron and our work in these metals exceeds the output of the rest of the earth, and we have four times as many automobiles. So, when the great crisis came, the hour of test, we could give, offhand, \$7,000,000,000, but at the same time we were not ready to furnish a single man for the firing line, for we had been so busy making money that we had forgotten the art of making men, and America found herself going to school to England and France to learn the rules of war.

I hope the time may never come again when we must choose between war and submission to dishonor, but if it should come, when the roll call is made America must answer ready—ready in money, ready in men, and ready in national strength and unity.

What the people and the Republic need is a rebaptism in the waters of the old religion, faith in the right, different and better definitions of success, simpler living, high thinking, the gathering and molding of the rich materials we have in the House which will hold the mind of the Nation. A national mind is as important as the mind of an individual. It governs and has the power of selection and rejection. In men it gives to each act a meaning, to each movement a direction, and in a nation it expresses purpose, character, and power, and excludes inadequacy, vacillation, and failure to coordinate.

As a people we have built churches, but we have not built spirituality; we have created townships, cities, and States, but we have not built a nation. I have no fear of a strong, organized National Government, one with a mind and a conscience, but I do fear a weak, obese, and uncertain government, one of caprice and not of purpose. If democracy can not be highly efficient while safeguarding human rights, then we must confess its failure.

It is time we were thinking of ourselves, not as citizens of the State, but as citizens of America, when, instead of grotesque differences and confusion of State laws, those relating to fundamentals should be the same everywhere in the Republic; when, instead of many minds, we shall have one mind, and that the mind of the Nation. Among others, marriage and divorce laws should be national and uniform; so should suffrage laws and those of descent and distribution of property; we should have universal military training and discipline—essential to peace as well as war. And the time has come when all local laws everywhere relating to the liquor traffic should be superseded by national constitutional prohibition.

PRICE NOT TOO HIGH.

This war, frightful as it is, will have its compensation if it saves us from physical and moral decay. We are paying a tremendous price for our lack of vision and the crime of unpreparedness, but no price is too great if America finds her mind and soul, and we can create a nation.

Surprised in the pleasant ways we were going and forced to measure our worth and strength, we have found the old spirit was not dead, only sick and drooping, and it is wonderful what a mighty forward movement America has taken and how changed has become her destiny. As men are turned from old ways not in years but in moments, so are nations moving forward.

Happy the day when our people are learning there are other interests than their own, that other peoples are as strong, that other things in life are more permanent and valuable than money. Blessed and victorious must a nation be that goes to war expecting nothing, demanding nothing but the spread of freedom and the glory of sacrifice.

This is said to be a war between autocracy and democracy, and it is true; but there is another and deeper meaning. It is a struggle between two conceptions of divinity—between the German God and the God of the English-speaking races. One conception is God without Christ—a crushing and ominous Deity—without grace—and allied to kings in murder. The other conception is God with Christ, breaking up caste and leading men to wider, freer, and more potential lives, away from slaughter and the bloody scepter of hereditary power. To fight and lose in this cause is glory enough, but to fight is to win, for this cause is of humanity and the true God.

The task of America is a tremendous one. We have set out to make the world safe for democracy—and it is a sublime undertaking; but we must first make democracy itself safe, and if we would sober the world we must first sober ourselves.

Two things we must now do. One is to use every ounce of strength to teach the implacable and murderous Hun that he can not bestride the world; the other is to destroy the liquor traffic—the Hun of our own civilization.

LIQUOR WORST OFFENDER.

Other causes have doubtless contributed to American decadence, but this traffic has been the chief offender. It has caused waste and extravagance in private and public life, in money, time, and character. It has bred in our people everywhere disrespect for law and order. It has undermined self-restraint and substituted license for liberty. It has defiled every ballot box in the land it could reach. It has entered the legislative halls of every State to threaten and corrupt. It has soiled, wherever it could, the ermine and polluted the streams of justice. It has murdered men and women, strangled babes in their cradles, and bequeathed to others the foul germs of disease and death. So the first great step to national clear thinking, to the formation of a national conscience and a national mind, must be to close every brewery and distillery in the land and every saloon beneath the shadow of the flag.

The reasons for this are now multiplied and press upon the conscience of government as never before.

Never was an issue more plain or a call more clear, and it is no time for parleying or delay.

When the Government tells us to save food, we agree; when it requires other patriotic efforts, we respond. And we have the right to demand, on our part, of the Government that the enormous waste of food, fuel, labor, and transportation involved in a criminal business should cease.

This winter no American family must suffer from cold to feed the fires of lawless breweries; no child cry for bread or soldier go hungry in a foreign land for lack of precious grain converted into drink.

We were not wise enough to prepare against war, but let us now be wise enough to prepare against this calamity.

When the flower of young American manhood has been called to endure hardships and to give life itself, he who now talks of the personal liberty of the liquor traffic stands dishonored.

To prevent this waste in our war is a patriotic necessity, and to prohibit it as a settled national policy is the best and safest bond for peace; for peace, not war, must be our ideal, and it must be this world's desire to save it from chaos.

What a bloody and discordant day this is, and the mind, try as it will, to fathom it all, is like an imprisoned bird beating against the bars, failing back helpless and breathless from its useless task. As men think of God when the supreme moment comes, so must nations in a conflict so awful and stupendous, so death-dealing, and so steeped in horrors. Whether there were many causes or one cause, those who hereafter write of these distempered times may differ, but France and Italy, England and the United States, and all the civilized peoples of the earth not under the fear or favor of the German war lord now unite in the belief that he prepared and lay in wait to assassinate mankind that he might assert a world dominion, claiming authority from God to aid his bloody plans.

INCENDIARY OF WORLD.

They agree it was the German Emperor—cold, calculating, dominant, and self-centered—intellectual beyond all other hereditary rulers—ambitious beyond the archangel—ominous and malignant—who threatens with the mailed fist and decorates with the iron cross—who lit the match that set the world on fire.

He leads a great race—great in everything except in the one thing that makes all greatness a menace—and that is the golden rule of conduct. It is all for Germany and Germany over all that is the fatal weakness of an otherwise mighty people—who have instructed the world in science and philosophy—and whom the world must now instruct in the ethics of humanity.

It was he who unbolted the gates of hell and turned loose on a world at peace the imprisoned fiends who now range and hunt and cry for human flesh and blood.

Trees, roads, treaties, the earth itself, temples of art, and shrines, men and women, children, nursing babes, all animate and all inanimate things, have paid the awful toll, until cruelty and murder have turned pale at thought of redder hands than theirs.

Science tells us—even German science—that alcohol long used deadens the finest qualities of the mind and soul; that it has the fatal power of transmitting its evil seed; and who knows that beer, the milk of Germany, fed even to the children and which has become a German sign all over the world, has not deadened and soddened the German conscience and cloaked the face of mercy? If beer and brutality thus walk hand in hand, we want no more of it in America—and we have risked the hazard all too long.

There is no fear of America sober—and she must be sober to escape the penalties which nature forever exacts for her broken laws.

A PROPHECIC VISION.

I have a vision of my country—the first to shake the shackles of alcohol from her limbs, as she once shook loose from the chains which bound her to a throne—clear-eyed, clean-bodied, clean-souled, leading the world to sobriety as she is now leading it to the light of democracy.

God bless the flag of our country, and the soldier boys who march beneath its folds and live and die in battle.

God bless America. May He guide and protect you in this your hour of trial, and our love, our prayers and loyalty go out and follow you to distant lands, for you are to us, and forever shall be, "Sweet Land of Liberty."

War Against Austria-Hungary.

SPEECH

OF

HON. J. THOMAS HEFLIN,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1917.

The House in Committee of the Whole House on the state of the Union had under consideration the joint resolution (H. J. Res. 169) declaring that a state of war exists between the Imperial and Royal Austro-Hungarian Government and the Government and the people of the United States and making provision to prosecute the same.

Mr. HEFLIN. Mr. Chairman and gentlemen of the House, I had hoped that this resolution would pass the House without a dissenting vote. I have just received the gratifying information that the Senate has passed a similar resolution by a unanimous vote. I regret that there is to be one vote in the House against the resolution. I can not understand how any loyal American can vote against it. The resolution simply declares the truth—that a state of war exists between the United States and Austria—and it is the duty of this Congress, of every Member of it, to show to Germany and Austria that we are one people in the purpose and determination to resent and resist their unjust and inexcusable attacks upon our rights and liberties. [Applause.]

As in the case of Germany, we have been forced by Austria to sever diplomatic relations with her and to take up arms to defend ourselves against the unlawful and hostile acts repeatedly committed by her against the United States. Germany made war upon the United States when we were neutral and doing everything in our power to remain neutral. Germany disregarded her treaty obligations, she violated the law of nations, denied us the right to remain neutral, and while we were striving to remain at peace with her, without fault on our part and against our will, she made war against the United States.

Just as the United States had been patient and long suffering with Germany, and just as we had patiently endured in-

sults and outrages at the hands of Germany, we have been even more patient and long suffering with Austria, and with remarkable patience and forbearance we have endured insults and indignities at the hands of the Austrian Government.

Yes, in the hope that Austria would appreciate our forbearance and good offices, we have submitted in silence to many indignities and insults at her hands. But our frequently expressed and long-standing desire to remain at peace and on friendly terms with Austria has been spurned and rejected, and now instead of appreciating our friendly attitude and showing respect for our rights and liberties Austria, without cause, has joined Germany in making war upon the United States.

And, Mr. Speaker, in spite of all of our efforts to avoid it, Austria has forced the issue of war upon the United States and Congress is called upon to declare the truth. Our intelligence, our patriotism, our love of liberty, our honor, and the safety of our country all demand that we take the step that we are now about to take. God help our people to gird up their loins and to present a solid front to all of the enemies of our country. [Applause.]

Food and Fuel for America.

EXTENSION OF REMARKS OF HON. ERNEST LUNDEEN, OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 18, 1917.

Mr. LUNDEEN. Mr. Speaker, practical patriotism demands that we remember America first. There has been a lot of loose talk about America feeding the world; that we must keep the world warm.

Our resources are tremendous, but nevertheless they are limited by labor conditions, by the withdrawal of a vast army of toilers for military duty, and by many as yet undetermined and only partially understood factors. The call of the nations for aid against the Teutonic allies creates a demand far exceeding the supply.

This is the condition that confronts us to-day. What policy, then, shall we pursue?

We must supply America first. We must first ascertain our home needs and fill them. Then, all that it is in our power to produce above and beyond our necessary home consumption, plus all that we can save in food and fuel, must go to the aid of those now fighting bravely against our common foe.

America must be fed first. The American fireside must be kept warm. The entire surplus in food and fuel must go to the entente allies and to such other nations as the President may direct.

But an America-first policy has not been pursued, and to-day across the Halls of Congress falls the shadow of want. Telegraphic advices from the Nation's workers crowd the wires with messages of hunger and destitution. An America-first policy would have brought action months ago.

A STATEMENT OF FACTS.

Food and fuel act approved August 10, 1917; Lundeen letter to President Wilson, August 17, 1917, asks that the powers granted under the food and fuel act be used to bring relief to the Northwest fuel situation; Lundeen fuel resolution introduced August 21, 1917, demanding immediate action by the Government to avoid dire distress; fuel administrator appointed August 23, 1917; supervision of coal exports to Canada ordered, September 14, 1917, by fuel administrator, which failed; embargo on Canadian fuel exports ordered October 1, 1917.

CANADA GRABS FIRST.

While the fuel administration marked time at Washington, Canada took occasion to grab 2,341,462 tons of bituminous or soft coal during the month of August alone—1,000,000 tons more than she had been purchasing from the United States monthly. There was also shipped out of the United States in August, 1917, 818,797 tons of anthracite or hard coal, most of which went to Canada. This is more than twice the export of hard coal to Canada for the corresponding month in 1916 or the month of July, 1917. These figures are given on the authority of the Bureau of Foreign and Domestic Commerce of the Department of Commerce.

Canada pursued this "Canada first" policy while the fuel administration at Washington was organizing its staff of 10,000 fuel physicians to diagnose the cause of the decrepitude of old King Coal. They kept organizing; they issued biographical sketches from time to time; held many no doubt important conferences, and told about them in the newspapers.

On August 21 the Lundeen fuel resolution had pointed out that Minnesota and the Northwestern States were short more than 4,000,000 tons of soft and 16,000 tons of hard coal; that this was so in spite of the fact that more coal was being loaded on cars during the summer months of this year than last; and that the cause of the shortage at the docks at Duluth was that too much coal was being shipped out of the country.

The fuel administration began to see the light on September 14 and issued the following:

It was found that plenty of coal was reaching the lake ports, but it is not getting through to the Northwest. In the period between August 24 and September 6, out of a total of 1,755,812 tons, 530,812 tons, or 30.2 per cent, had been shipped into Canada. This is far in excess of the proportion of Canadian exports by lake boats in normal times.

It was stated that the fuel administration would "supervise" shipments of coal to Canada and the Northwest thenceforth.

Supervision failed, however, for it seems Canada received more coal and the Northwest less after the issuance of the order of September 14 than before. Further light on this point came to Prof. Garfield's staff, and in due time—October 1, to be precise—there issued from the fuel staff Bulletin No. 29:

About 180,000 tons of coal are being shipped from Lake ports daily, of which only about 53,000 tons have been reaching the Northwest. One hundred and fifty thousand tons a day must be shipped until the close of navigation to meet the needs of this region.

And then came the order:

Fuel Administrator Garfield to-night issued an order stopping for the time being the shipping of coal into Canada from Lake ports. The purpose of this order is to divert this coal to the Northwest, where there is great immediate need of it.

This order was issued more than six weeks after the introduction of the Lundeen fuel resolution, too late to prevent distress. The barn was locked after the horse was gone.

LETTER TO THE PRESIDENT AND HIS REPLY.

The following letter was addressed to the President:

HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D. C., August 17, 1917.

The honorable WOODROW WILSON,
President of the United States,
Washington, D. C.

Mr. PRESIDENT: Minnesota and the Northwest are now 4,198,109 tons short of soft coal at Duluth and the Head of the Lakes as compared with 1916. Hard-coal shortage is 16,514 tons. I am inclosing a detailed statement prepared by the railroad and warehouse commission of our State.

The people of Minnesota are not so much concerned with the coal supply of foreign nations as they are about their own supply. The Nation's coal production is ample for the Nation's domestic needs. If we are to hew down our forests to keep our furnaces burning and keep warmth in our firesides, we want to know that in advance, so that we may at least prepare.

We feel sure that you, as the Chief Executive of our Nation, will take immediate action in our behalf under the powers already granted you by Congress.

Yours, respectfully,

ERNEST LUNDEEN.

On August 21 the President replied, as follows:

THE WHITE HOUSE,
Washington, August 21, 1917.

MY DEAR MR. LUNDEEN: The President directs me to acknowledge the receipt of your letter of August 17 and to say that this matter is receiving the most careful consideration and that everything that can be done will be done.

Sincerely, yours,

J. P. TUMULTY,
Secretary to the President.

Hon. ERNEST LUNDEEN,
House of Representatives.

LUNDEEN COAL RESOLUTION.

In the belief that the dangerous fuel situation had to be speedily met, I introduced the following resolution:

Joint resolution (H. J. Res. 143) directing the President to seize sufficient coal supplies for home consumption.

Whereas a serious shortage of coal supplies exists in the State of Minnesota and the Northwest; and

Whereas intense suffering and general paralysis of business in the Northwestern States during the winter months is inevitable unless a sufficient supply of coal is procured; and

Whereas a large proportion of coal for northwestern consumption must come via the Great Lakes and be unloaded on the docks at the head of the Lakes before the close of navigation; and

Whereas the Minnesota State Railroad and Warehouse Commission reports that soft coal shortage at the docks at the head of the Lakes was 4,198,109 tons and hard coal shortage 16,514 tons on July 16, 1917; and

Whereas the executive committee of the American Railway Association—that is, the special committee on railroad transportation cooperating with the advisory commission of the Council of National Defense—reports that 750,322 cars of coal were loaded during June, 1917, as compared with only 594,531 during June, 1916; and

Whereas a great supply of coal is thus shown to be moving and sufficient coal is produced in the United States to supply all home demands and still have a handsome surplus; and

Whereas the Congress has given the President ample power to protect the consumer of coal in Public, No. 41, Sixty-fifth Congress (H. R. 4961); and

Whereas the people of Minnesota and the Northwest are not so much concerned with the coal supplies of foreign nations as they are about their own supply: Therefore be it

Resolved, etc., That the President is hereby directed to seize sufficient supplies of coal and hold the same within the continental and insular area of the United States for home consumption.

Sec. 2. That the President is hereby directed to give the necessary orders to ship coal immediately into such of our States in which there is now a lack of supply, thus to avoid dire distress.

OTHERS FINALLY AGREE.

Certain carping newspapers, at the time the Lundeen fuel resolution was introduced, refused to concede the correctness of my diagnosis pointing out the cause of the dangerous fuel situation, but some of them saw the light before it was given the Fuel Administration to see. Out of patience at the dilatory tactics of Prof. Garfield and his biographical assistants, the Washington Post, an administration newspaper, had the following to say on September 29:

COAL DATA COMPILED—QUESTION OF FUEL SUPPLY FOR NEXT WINTER ANOTHER MATTER—ISSUE NUMEROUS PAMPHLETS—PROF. GARFIELD'S COHORTS EAGER TO GET BIOGRAPHIES BEFORE PUBLIC—MEANWHILE, THOSE WHO PROTEST AGAINST DILATORY MEASURES ARE BRANDED AS SLACKERS OR GERMAN SPIES—PRODUCTION OF COAL DECREASING—EXTRACTS FROM PUBLICATIONS SHOW DEPTH OF PROBE IS AMAZING.

Those individuals and corporations who assert that the Fuel Administration is not handling the coal question properly are slackers and German spies. If a search were made probably it would be discovered that everybody who has criticized the Fuel Administration has a German name or is related by marriage to somebody with a German name.

Carping critics say that the production of coal is diminishing while the Fuel Administration is devoting its time to biography. But that is a mere detail. The public must be made acquainted with the Fuel Administration before the Fuel Administration can be expected to have the confidence of the public. The threatened strikes can be adjusted later. The operators are closing down mines, and there is some indication that poor people will be without coal in some of the cities by the middle of winter. The prairie towns may have to burn corn on the cob. There may be coal riots and some of the industries may have to shut down. But there is no absolute certainty that any of these things will happen, while it is a certainty that the Fuel Administration has issued important biographical data setting at rest many questions which might have come up to vex and perplex posterity.

Organizations and individuals began to bombard the Fuel Administration, and on October 1 an embargo on coal exports to Canada was ordered.

Again, a few days later, the Washington Post had this to say:

The shortage of bituminous coal will be so great that work on guns, aircraft motors, destroyers, and steel ships will suffer if not be suspended entirely after January 1.

The shortage of anthracite is now keenly felt in Washington under the very nose of Dr. Garfield and his staff of biographers. Dr. Garfield says there is no shortage. The lawyer told his client that he couldn't be sent to jail, but the client said, "But I am in jail."

COMPLICATED BY EUROPE.

The pinch upon the poor will come in December or January, from present prospects. They will suffer terribly if they do not get coal, no matter what the price may be.

The situation is complicated by the demands of foreign Governments.

FOOD EMBARGO.

Winter comes on with all its appalling possibilities of a food and fuel shortage. Action should be taken to safeguard the interests of our country and our soldiers abroad in the world war; we must prepare and protect our people at home against the menace of hunger and cold in the coming months.

Congressman FITZGERALD, chairman of the House Committee on Appropriations, introduced on December 4, 1916, a bill empowering the President to suspend the exportation of farm products, fish, game, and manufactured foodstuffs to conserve the food supply of the United States and to protect the people from extortionate prices.

We were then a neutral Nation; now we are at war, and conditions have changed. We can not now place an embargo on all food products; that would be unjust to those with whom we are associated in this war. We must, however, embargo as much food and fuel supplies as are necessary for home consumption.

LUNDEEN FOOD RESOLUTION.

In the belief that the food situation was rapidly becoming dangerous to the average man and the laborer, who has but his wage to ward off the wolves, I introduced a food resolution for the consideration of Congress:

Joint resolution (H. J. Res. 158) directing the President to place an embargo upon such food supplies as are found necessary for home consumption and for the supply of our soldiers at home and abroad; and further directing the President, when necessary to the public welfare, to seize food supplies and apportion them among the people.

Whereas during the period June 30, 1914, to June 30, 1917, the United States shipped food supplies valued at \$3,212,313,312 to foreign ports, as against \$1,332,146,968 during the corresponding period immediately preceding the world war; and

Whereas such depletion of our food stocks in favor of foreign nations has brought great hardship and intense suffering to the American people and resulted in numerous food riots in many American cities and industrial centers during the winter of 1916 and 1917; and

Whereas foreign commissions are continually calling upon us for more money and more food and seek daily to shift their burdens upon America; and

Whereas the people of the United States are demanding that they be supplied first, and that foreign nations be given only out of our surplus and insist now that it is high time that we adopt a permanent and fixed policy of America first, foreigners second; and

Whereas we produce far more food than is necessary for our own people, and the American people are willing to sell their entire surplus to nations now engaged in war upon our common enemy and to such other nations as the President may direct; and

Whereas the entire allies, composing more than one-half of the earth—an overwhelming preponderance in men, money, and resources—are receiving wheat and many other food products at a less cost in Europe than in our own land where these products are produced; and

Whereas the history of human nature, selfishness, and greed would indicate that these nations will not call upon their final resources or drain their credit while we pour forth the treasures of America to the injury of the Republic; and

Whereas it is almost impossible for the laboring man and the average family to exist on the wage earned, because of the high cost of living, and it is a fact that an underfed and undernourished people can not fight its best battle against a powerful foe and continue its struggle for complete economic independence; and

Whereas the Congress has given the President ample power to protect the people in the food-control law (Public act No. 41, 65th Cong., H. R. 1961): Therefore be it

Resolved, etc., That the President be, and hereby is, directed to place an embargo upon such food supplies as are found necessary for home consumption and for the supply of our soldiers at home and abroad, and, when necessary to the public welfare, to seize food supplies and apportion them among the people.

THE SPECIAL SESSION OF THE WAR CONGRESS.

The duty of Congress is here at Washington, more imperatively so in times of war than in times of peace. I did not favor an adjournment of the special session of the War Congress. I felt that at any hour might come news of some vast and vital change in the world-war situation, so vitally affecting the safety and welfare of the people of the United States as to require the immediate exercise of every ounce of forethought and wisdom that Congress could bring to bear upon it.

The legislative branch of the Government under the Constitution is peculiarly the sentinel of the American people. It is our duty to exercise constant watchfulness, supervision, and control. It is our duty to remain here on guard. Millions are destitute. We must not forget the people. We were elected to serve them. Let us act in the living present.

On this watchtower of the Nation the elected Representatives of the people should remain on guard while the world is on fire.

Exemption from War Taxes.

EXTENSION OF REMARKS

OF

HON. COURTNEY W. HAMLIN,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 4, 1918.

Mr. HAMLIN. Mr. Speaker, under the leave granted me by the House, I take pleasure in inserting in the RECORD a copy of a communication written by my esteemed colleague, Judge RUCKER, to the Chariton Courier, a newspaper published in his district.

I made this request because I believe that the letter just referred to sets forth in the most terse, concise, and intelligent way facts which will satisfy any person who reads it that the charge heretofore made by certain newspapers that Congressmen had attempted to exempt their salaries from the payment of certain taxes is in no sense true. The letter is as follows:

WASHINGTON, D. C., January 2, 1918.

EDITOR COURIER: Newspapers recently published and certain individuals have circulated the erroneous statement that "Congressmen exempted themselves from the payment of income taxes." This idea probably had its origin in a misconception of the revenue bill passed October 3, 1917, which amended the revenue act of September, 1916, and also added a new source of revenue by levying a tax upon "excess profits." The confusion evidently comes from treating "income" and "excess-profits" taxes as one and the same when, in fact, they are different taxes. Under the "income" paragraph of the last revenue law all married men are allowed an exemption of \$2,000 and unmarried men of \$1,000, while under the "excess-profits" tax paragraph all persons, whether married or single, are allowed exemptions of \$6,000. In either case taxes are computed and paid on the amount above exemptions.

After the passage of the last revenue act a question arose as to the construction of the clause exempting certain classes from the provisions of the "excess-profits" section of the bill, but no intelligent person has or can suggest a doubt that Members of Congress are clearly liable under its "income" tax provisions. The fact is (and no one will dispute it), Congress greatly increased the amount of "income" tax to be paid by all who are subject to its payment, and intended to and, I think, did impose an "excess-profits" tax on every person who has an income of more than \$6,000, including Members of Congress. Before the passage of the act of October 3, 1917, a Member of Congress paid on his salary an "income" tax of only \$70 per year, but under this last law each Member will pay annually on his salary \$205 "income" tax, and, in addition, will pay 8 per cent on that part of his salary which is above \$6,000, or \$120 for "excess-profits" tax, making a

total tax of \$325 under the new law, as against only \$70 under the old law. It is from the payment of the last item of \$120 "excess-profits" tax that we are accused by newspaper critics of exempting ourselves, but some men have confused this with "income" taxes.

For the purpose of making plain the intention of Congress and removing every doubt, the Committee on Ways and Means recently reported House joint resolution 195, to amend section 209 (the "excess-profits" section of the last revenue law) by adding a paragraph, to read as follows:

"The income of officers and employees under the United States, including Members of Congress * * * shall be taxable under this section * * *."

The resolution quoted was considered and passed, by a vote of 311 for and no vote against it, on December 18, 1917. This vote ought to vindicate Members of Congress, but in order to conclusively show the injustice of the report that "Congressmen exempted themselves" from the payment of taxes which they imposed upon all the people of the United States, as a war necessity, to wage and win the war into which we have unavoidably become involved, I quote extracts from a few of the speeches made while House joint resolution 195 was under consideration:

Mr. KITCHIN (North Carolina): "This resolution proposes to specifically include with the provisions of such tax—that is, to make subject to the excess-profits tax—all Federal officers and employees, including Members of Congress. This would make it clear and remove all doubt."

"A lot of demagogues who want to come to Congress, who want to succeed some Member of the House upon either side, and the press almost generally, have * * * misrepresented these provisions, the authors of the act, and the conferees that reported it to the House and to the Senate. They have declared repeatedly, the press a thousand times over, that Members of Congress taxed the income of everyone else in the country but exempted their own incomes from taxes. There is not one word of truth in that. This new revenue act taxes the incomes of Members of the House and Senate three times more than they were taxed before."

Mr. MOORE (Pennsylvania): "The act of September 18, 1916, which is law in force, imposed upon Members of Congress a 2 per cent tax upon the normal income of married men earning over \$4,000. * * * The act of October 3, 1917, imposed upon Members of Congress an additional normal tax of 2 per cent upon all they earn (married men) over \$2,000 and in addition a supertax of 1 per cent upon everything they earn over \$5,000. * * * Now, that is what you Members of Congress have to pay, * * * and I am liable * * * for 8 per cent tax on everything I earn over \$6,000."

Mr. GREEN (Iowa): "Mr. Chairman, when I voted for the last revenue bill I voted to put the excess-profits tax on the salaries of Members of Congress the same as on the salaries of any other party who was taxed. When this matter first came up and it was charged that Members of Congress were exempted, I stated that there was nothing in the charge; that the tax was placed upon Members of Congress as well as upon others. * * * I so intended when I voted for the bill, and if there is any Member of this House who says that he intended to the contrary, I would like for him to stand up and say so."

"I have not time in five minutes to make a legal argument on this matter. I wish I had, in order that I could show there is nothing in the statement that Congressmen's salaries were exempt as a legal proposition. * * * I am willing now to stake my professional reputation on the opinion of the Commissioner of Internal Revenue, feeling absolutely satisfied and confident that if he ruled on this point he would hold that as the law now stands Members of Congress are subject to this tax."

Mr. HULL (Tennessee): "Mr. Chairman, immediately after the passage of the war-revenue act on October 3 some question arose as to whether the compensation paid to Senators and Representatives in Congress was subject to the excess-profits tax. That controversy, however, was at once shifted to a general charge, made in the press of the country, that they had been exempt, as the gentleman from North Carolina has stated, not from the excess-profits tax but from the income tax. In other words, the real question was at once completely belated by the injection of entirely erroneous statements and sweeping charges with respect to the status of the salaries paid to Senators and Representatives in Congress as they might be affected, not by the excess-profits act, but by the income tax."

"There was ground for enough difference of opinion as to the application of the excess-profits law to the compensation of Senators and Congressmen as to afford room for controversy. And while I thought then and think now that the Treasury Department would probably rule that the compensation paid by the Federal Government to Senators and Representatives is subject to section 209 of the excess-profits tax law, yet, in view of the widespread charges sent all over this country as to just what Congress intended in that connection, and in view of the perversion of what I know was the intention of this House in that respect, I have thought as one Member here that * * * we owed it to ourselves to say in the clearest terms what our intention was, in order to leave no doubt in the minds of any citizen of this country and in order to give no person or newspaper the pretext to say falsely that Congress attempted to exempt itself."

"Now, this resolution simply does what I know was in the minds of the House on October 3 when this war-revenue act was passed."

Mr. BRAND (Georgia): "According to the view I hold upon this question, the passage of this resolution is useless legislation, and if I had time I believe I could demonstrate it to the satisfaction of any critic. * * * When I first heard of the report that Congress had voted to exempt themselves from the payment of the income tax and the excess-profits tax, though the report was confined to the former, I denied it, and I deny it now."

Mr. RUSSELL (Missouri): "Mr. Chairman, this is a bill to amend the revenue law passed at the last session of this Congress, but it is not for the purpose of correcting that law, but is simply for the purpose of making absolutely certain that which everyone in this House thought was certain when the act was passed. I have not yet found a man who was present when the revenue bill was passed who believes that there was any intention to or that it did in fact exempt Members of Congress from the payment of their taxes under the excess-profits provision. * * * The good lawyers in this House and outside of it say that our salaries are subject to the tax, but I am glad to-day to be able to vote for a resolution not to correct but to make absolutely certain that which we thought was certain at the time we voted for and passed the revenue bill."

Mr. GILLET (Massachusetts): "I do not believe that if the bill remained as it was before we were exempt. I believe, on the arguments presented by the gentleman from Iowa, that the Members of Congress

are not officers, and therefore the Members of Congress are subject to taxation just the same as anybody else."

Mr. ROSE (Pennsylvania): "Mr. Chairman, it is doubtless true that under the act of October 3, 1917, the Members of Congress are required to pay all of the taxes set forth in the act. The words, however, are capable of two constructions, and an effort has been made to convince the people of the country that the Congressmen undertook to exempt their salaries from the payment of the tax."

"I am fully satisfied that no Member of Congress had in mind the exemption of his salary from taxation. * * *"

"The Members of Congress are not Federal employees and hence would not be affected by the exception in the original bill, and this present resolution will set at rest completely all unjust criticism heaped upon the Members of this body."

Mr. ALMON (Alabama): "Mr. Chairman, while I do not consider there is any question but that the original revenue law makes the salaries of Congressmen liable to the excess-profits tax, still, in order to remove all doubt on the question, I am in favor of the resolution * * * and will vote for it."

Mr. DICKINSON (Missouri): "Mr. Chairman, it has been charged that in the passage of the war-revenue bill Members of Congress exempted their own salaries from the payment of all income taxes. The contrary is true."

I trust this letter will be read by every citizen who had read or heard that "Congressmen exempted themselves from taxation," and if it is read I confidently believe that every good man will reach the conclusion that we have been unjustly criticized.

Respectfully,

W. W. RUCKER.

Relations of the Railroads to the Public and Also of the States to the Federal Government.

EXTENSION OF REMARKS

OF

HON. WILLIAM GORDON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 4, 1918.

Mr. GORDON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech on the subject of relations of the railroads to the public, and also of the States to the Federal Government, by Jeremiah S. Black.

The speech referred to is as follows:

RAILROAD MONOPOLY.—THE GREAT QUESTION DISCUSSED BY JEREMIAH S. BLACK BEFORE THE JUDICIARY COMMITTEE OF THE PENNSYLVANIA SENATE AT THE SESSION OF 1883.

INTRODUCTION.

Mr. Chairman, the irrepressible conflict between the rights of the people and the interests of the railroad corporations does not seem likely to terminate immediately. I beg your permission to put our case on your record somewhat more distinctly than heretofore.

Why do I give myself this trouble? My great and good friend, the president of the Reading Railroad Co., expresses the suspicion that I am quietly acting in the interest of some anonymous corporation. I wish to contradict that as flatly as I can.

The charge that I am communist enough to wish the destruction of all corporate property is equally untrue. I think myself the most conservative of citizens. I believe with my whole heart in the rights of life, liberty, and property, and if anybody has struggled more faithfully, through good report and evil, to maintain them inviolate I do not know who he is. I respect the State constitution; perhaps I am prejudiced in favor of natural justice and equality. I am convinced that without the enforcement of the fundamental law honest government can not be expected.

These considerations, together with the request of many friends, should be sufficient reason for doing all the little I can to get "appropriate legislation." At all events it is unfair to charge me with any motive of lucre or malice.

It is not proposed by those who think as I do that any corporation shall lose one atom of its property. A lawful contract between a railroad company and the State is inviolable and must not be touched by hostile hands, however bad the bargain may have been for the people. Mr. Gowen, and all others with similar contracts on their hands, are entitled each to his pound of flesh, and if it be "so nominated in the bond" the Commonwealth must bare her bosom to all their knives and let them "cut near-est the heart."

But we, the people, have rights of property as well as the corporations, and ours are—or ought to be—as sacred as theirs. Between the great domain which we have ceded to them and that which still belongs to us the line is plainly and distinctly marked, and if they cross it for purposes of plunder they should be driven back under the lash of the law. It is not the intent of the amended constitution, nor the desire of those who demand its enforcement, to do them the slightest injury. We only ask for that impartial and just protection which the State, as *parens patriæ*, owes to us not less than to them.

THE COMPANIES NOT THE OWNERS OF THE RAILROADS.

In the first place it will, I think, be admitted by all impartial persons of average intelligence that *the companies are not the owners of the railroads. The notion that they are is as silly as it is pernicious.* It is the duty of every commercial, manufacturing, or agricultural State to open thoroughfares of trade and travel through her territory. For that purpose she may take the property of citizens and pay for the work out of her own treasury. When it is done, she may make it free to all comers or she may reimburse the cost by levying a special tax upon those who use it, or she may get the road built and opened by a corporation or an individual and pay for it by permitting the builder to collect tolls or taxes from those who carry and travel on it. Pennsylvania has tried all these methods with her turnpikes, canals, and railroads. Some have been made at her own cost and thrown open; on others made by herself she placed officers to collect a special tax; others have been built for her by contract, in which some natural or artificial person agreed to do the work *for the privilege of appropriating the taxes which she authorized to be levied.*

But in all these cases the proprietary right remained in the State and was held by her in trust for the use of the people.

RAILROAD AND CANAL CORPORATIONS ARE PUBLIC SERVANTS.

Those who run the railroads and canals are always public agents. It is impossible to look at them in any other light or to conceive how a different relation could exist, because a *railroad which is not managed by public agents can not be a public highway.* The character of their appointment, even upon the same work, has differed materially. The Columbia railroad and all the canals were for a time under the management of officers appointed by the governor or elected by the people and paid out of the State treasury. Afterwards the duty was devolved by the State upon persons associated together under acts of incorporation, who contracted to perform it upon certain terms. The Erie & Northeast Railroad was at first run for the State by a company; *the company was removed from its trust for misbehavior;* the governor then took it and appointed an officer to superintend the work; later the governor's appointee was displaced, with the consent of the legislature, and the duty was again confided to a corporation newly chartered.

None of these agents—neither the canal commissioner nor the State receiver, nor any corporation that went before or came after—had the slightest proprietary right or title to the railroads themselves. To say that they had would be as preposterous as to assert that township roads are the private property of the supervisors.

A RAILROAD BUILT BY AUTHORITY OF THE STATE IN NO SENSE PRIVATE PROPERTY.

The legal relations existing between the State and the persons whom she authorizes to supervise her highways was somewhat elaborately discussed by the Supreme Court of Pennsylvania in the case of the Erie & N. E. R. R. Co. v. Casey (2 Casey, pp. 307-324). It was there determined that a railroad built by authority of the State for the general purposes of commerce is a public highway and in no sense private property; that *a corporation authorized to run it is a servant of the State as much as an officer legally appointed to do any other public duty, as strictly confined by the laws, and as liable to be removed for transgressing them.*

All the judges concurred in this opinion. The two who dissented from the judgment did so on the technical ground that certain circumstances, which would have estopped the State in a judicial proceeding, disarmed the legislature of the power to repeal. Neither they nor any other judge in this country, whose authority is worth a straw, ever denied the doctrine for which I have here cited that case, though it may have been sometimes overlooked, ignored, or perchance evaded. This principle and no other was the basis of the decision in Pennsylvania and all the other States that cities and counties might issue bonds, or their money, and tax their people to aid in building railways. The Supreme Court of the United States has affirmed it in scores of cases. It was so universally acknowledged that the convention of 1873 incorporated it into the constitution as a part of the fundamental law. I do not know upon what foundation more solid than this any great principle of jurisprudence was ever established in a free country. When in addition you consider the reason of the thing, and the supreme necessity of it for the purposes of common justice, it seems like a sin and a shame and a scandal to oppose it.

RAILROAD AND CANAL CORPORATIONS ARE PUBLIC AGENTS—HOLD THEM HARD TO THEIR RESPONSIBILITIES.

It being settled that the railroads and canals belong of right to the State for the use of the people, and that the corporations who have them in charge are mere agents to run them for the owners, it will surely not be denied that all proper regulations

should be made *to prevent those agents from betraying their trust.* The wisdom is very plain of those provisions in our constitution which put them on a level with other public servants and forbid them to prostitute their functions for purposes merely mercenary, or to engage in any business which necessarily brings their private interests into conflict with their public duty. Seeing the vast magnitude of the affairs intrusted to them, and the terrible temptation to which their cupidity is exposed, it is certainly necessary that you should hold them to their responsibilities and hold them hard.

THOSE CORPORATIONS DENY THAT THEY OWE ANY RESPONSIBILITY TO THE STATE.

But, on the other hand, the corporations deny that they owe any responsibility to the State, more than individuals engaged in private business. They assert that the management of the railroads, being a mere speculation of their own, these thoroughfares of trade and travel must be run for their interests, without regard to public right. If they take advantage of their power to oppress the labor and overtax the land of the State; if they crush the industry of one man or place to build up the prosperity of another; if they plunder the rich by extortion or deepen the distress of the poor by discriminating against them, they justify themselves by showing that all this was in the way of business, that their interest required them to do it; that if they had done otherwise their fortunes would not have been so great as they are; that it was the prudent, proper, and successful method of managing their own affairs. This is their universal answer to all complaints. Their protests against legislative intervention to protect the public always take this shape, with more or less distinctness of outline. In whatever language they clothe their argument, it is the same in substance as that with which Demetrius, the silversmith, defended the sanctity of the temple for which he made shrines: "Sirs, ye know that by this craft we have our wealth."

That railroad corporations and their paid adherents should take this view of the subject is perhaps not surprising. Nor does it excite our special wonder to see them supported by the subsidiary rings whom they patronize. But it is amazing to find that this odious and demoralizing theory has made a strong lodgment in the minds of disinterested, upright, and high-placed men. Two members of the senate judiciary committee—I do not say the ablest, because comparisons are odious, but they are both of them among the foremost men of the country for talents and integrity—these gentlemen emphatically dissented from me when I asserted that the management of the railroads was not a matter of business to be conducted like a private enterprise, merely for the profit of the directors or stockholders. A heresy so supported is entitled to serious refutation, however absurd it may seem on its face.

A PUBLIC DUTY MUST BE PERFORMED WITH AN EYE SINGLE TO THE PUBLIC INTEREST.

I aver that a man or a corporation appointed to do a public duty must perform it with an eye single to the public interest. If he perverts his authority to purposes of private gain he is guilty of corruption, and all who aid and abet him are his accomplices in crime. *He defiles himself if he mingles his own business with that intrusted to him by the government and uses one to promote the other.* If a judge excuses himself for a false decision by saying that he sold his judgment for the highest price he could get you cover his character with infamy. A ministerial officer like a sheriff, for instance, who extorts from a defendant, or even from a convict in his custody, what the law does not allow him to collect and puts the surplus in his pocket is a knave upon whom you have no mercy. You send county commissioners to the penitentiary for consulting their own financial advantage to the injury of the general weal. When the officers of a city corporation make a business of running it to enrich themselves at the expense of the public, you can see at a glance that they are the basest of criminals. Why, then, can you not see that the officers of a railway corporation are equally guilty when they pervert the authority with which they are clothed to purposes purely selfish? *A railroad corporation is a part of the civil government as much as a city corporation.* The officers of the former as much as the latter are agents and trustees of the public, and the public has an interest precisely similar in the fidelity of both. Why, then, should partiality or extortion be condemned as criminal in one if it be tolerated as fair business when practiced by the other? Yet there are virtuous and disinterested statesmen among us who think that faithful service ought not to be enforced against the railroad companies, however loudly it may be claimed by the body of the people as their just due, and no matter how distinctly it may be commanded by the constitution itself.

I am able to maintain that all the corruption and misgovernment with which the earth is cursed grows out of this fatal

proclivity of public servants to make a business of their duty. Recall the worst cases that have occurred in our history and see if every one of them does not finally resolve itself into that. Tweed and his associates, the Philadelphia rings, the carpet-bag thieves, the star-route conspirators, all went into business for themselves while pretending to be engaged in the public service. Oakes Ames distributed the stock of the Credit Mobilier where he thought it would do the most good to himself and others with whom he was connected, and that was business in him who gave, and in them that took, his bribes. Madison Wells, when he proposed to Mr. Kenner, that he would make a true return of the election if he could be assured of getting "\$200,000 apiece for himself and Jim Anderson and a less sum for the niggers," had as keen an eye to business as if he had been president of a railroad company instead of a returning board. Certain greedy adventurers made it a business to rob the Nation of its lands and, uniting with Congress, carried it on so magnificently that they got away with an area nearly equal to nine States as large as Pennsylvania. The imposition of the whisky tax, excluding what was held on speculation, was business to the officers and legislators who were sharp enough to anticipate their own votes. You will see on reflection that every base combination which officers have made with one another or with outside parties has been a business arrangement precisely like that which the railroads justify on the sole ground that it is business. The effect is not only to corrupt those who engage in such transactions but to demoralize all who are tempted by personal and party attachments to apologize for it.

When the officers of the Pennsylvania Railroad Co. corruptly bought the remission of the tonnage tax and thereby transferred to their own pockets an incalculable sum justly due to the State, it was business, rich to them and profitable beyond the dreams of avarice, while to the swindled taxpayers it was proportionably disastrous. The nine million steal of later date was a business enterprise which failed, because Gov. Geary most unexpectedly put his veto upon it. Still more recently the same organization undertook to get from the treasury of the State \$4,000,000 to which it had no decent pretense of a claim. Never was any affair conducted in a more businesslike way. The appointed agents of the corporation came to Harrisburg when the legislature was in session and regularly set up a shop for the purchase of members at prearranged and specified prices. You condemn this piece of business because it was dishonest, but was it more dishonest than that which the same corporation habitually does when it stands on the highway, and by fraud or force extorts from individual citizens a much larger sum in excessive tolls, to which its right is no better than to the money it tried to get by bribery?

The functions of railroad corporations are clearly defined and ought to be as universally understood as those of any servant which the State or General Government employs. Without proprietary right in the highways they are appointed to superintend them for the owners. They are charged with the duty of seeing that every needed facility for the use of those thoroughfares shall be furnished to all citizens, like the justice promised in *Magna Charta*, without sale, denial, or delay. Such services, if faithfully performed, are important and valuable, and the compensation ought to be a full equivalent; accordingly they are authorized to pay themselves by levying upon all who use the road a tax, or toll, or freight sufficient for that purpose.

But this tax must be reasonable, fixed, certain, and uniform; otherwise it is a fraud upon the people, which no department of the State government nor all of them combined has power to legalize.

IT IS EASY TO SEE THE MISCHIEF.

It is much easier to see the nature and character of the mischief wrought by the present practices of the railroad companies than it is to calculate its extent. If your action depends in any degree upon the amount of the spoliation which the people of the State have suffered, and are now suffering for want of just laws to protect them, you certainly ought to direct an official inquiry into the subject and ascertain the whole truth as nearly as possible.

But investigations have already taken place in Congress and the legislatures of several States; complaints founded upon specified facts come up from every quarter; verified accusations are made by some of the companies against others; railroad men have openly confessed their fraudulent practices, and sometimes boasted of the large sums they accumulate by them. Putting these together you can form at least an approximate calculation. I doubt not you will find the sum total of the plunder they have taken in the shape of excessive charges to be frightful.

Three or four years ago a committee of the United States Senate collected the materials and made a report upon this

general subject, in which they showed that an excess of 5 cents per hundredweight charged on the whole agricultural crop of the then current year would amount to \$70,000,000. Upon the crop of the last year it would doubtless come nearer a hundred millions. The railroads would not get this sum, because not near all of it is carried, but it would operate as an export tax operates; that is to say, the producer, the consumer, or the intermediate dealer would lose that amount on the whole crop, carried or not carried. In 1880 the charges from Chicago to the eastern markets were raised from 10 cents per hundredweight to 35 cents, the latter rate being unquestionably twice as high as a fair one. You can count from these data the terrible loss sustained by the land, labor, and trade of the country. It was the end and the attainment of a combination still subsisting between the great trunk lines, as they are called, to pool their receipts, to stop all competition, to unite the stealing power of all into one grand monopoly, and put the whole people at their mercy. It was a criminal conspiracy by the common and statute laws of all the States.

THE RIGHT TO RAISE OR LOWER THE RATES.

The magnitude of these excessive charges is not the worst thing about them. The corporations think it perfectly right to raise or lower the rates as they please without regard to the rights or interests of anybody but themselves. A grain grower, manufacturer, miner, or merchant who can sell his goods at a profit, if he can get them carried at the rates of to-day, may find himself ruined to-morrow by an increase which did not enter into his calculations. A rise in the market inures not to the benefit of the producer but to the use of the carrying corporations, which openly avow that their rule is to charge in all cases as much "as the traffic will bear"; that is to say, as much as the shipper can submit to without being driven entirely off the road. You must see plainly that this power to depress agriculture, to diminish the profits of manufacturing industry, and to skin the commerce of the whole country by the arbitrary use of a sliding scale upon freights, can not safely be trusted to human hands, and especially not to irresponsible corporations whose interest, as well as their acknowledged principle of action, constantly impel them to abuse it. Can it be that a Pennsylvania Legislature will hesitate to curb the career of this destructive monopoly by adjusting the charges according to some rule equitable, fixed, and certain?

THE WRONG OF DISCRIMINATION.

But even this sinks into insignificance compared with the wrong and evil of their discriminations. Common justice, sound policy, every sense of duty, the whole spirit and letter of the law, requires them to give every man equal facilities in the use of the roads and to charge them at the same rates for the same class of goods, according to weight and distance. There can be no possible doubt about this. Every unprejudiced man who has sense enough to know his right hand from his left acknowledges that *equality must be the rule of right*, and he understands this perfectly well without looking at the constitution, where it is solemnly declared to be part of the *lex legum*, the law of laws, and the rule of all rules on the subject. Yet this sacred principle is constantly and steadily violated, trampled under foot, and treated with heartless contempt.

At the slightest glance you will see the enormous injury, direct and consequential, which these discriminations inflict upon the public. A man who invests his capital or employs his time in mining or manufacturing can be driven into bankruptcy at any time by a discrimination against him and in favor of his competitors. This is done every day and all the time, not in a few cases here and there but systematically and regularly, whenever a carrying monopoly conceives that its own interests can be promoted in that nefarious way, and it will continue to be done until the prohibition of the constitution is enforced by penal enactment.

THE FOUL BULK OF THESE ENORMITIES.

Instead of breaking the foul bulk of these enormities, I will give you a sample; convenient, because it is small and easily handled. A neighbor and friend of mine (in partnership with another) became the lessee and operator of a coal mine in Northumberland. For a short distance they were obliged to carry their product over one of the branches of the Pennsylvania company; they were charged for the use of the road and motive power alone—there was no loading or unloading in the case, and no cars were furnished by the company—at about the rate of 20 cents per ton per mile, while others whom the monopoly chose to favor were let off at 2 cents. They paid the excess under protest and brought suit to recover it back. It was as simple a case of extortion as can be conceived, but certain officers of the Pennsylvania Railroad Co. swore that in their judgment it was right to commit it, and moreover declared that it was a usual, common, and customary practice. I blush to acknowledge

that in all this the supreme court indorsed and abetted the corporation. The dialectics of the decision turned on a *prohibition* in the charter *against charging more on an average than 4 cents per ton per mile*—which was construed as a legal *warrant* for any robbery of one person which the company could prove to be balanced by the aggregate of favors shown to all others. *But neither the greatest corporation in the State nor the highest judicial tribunal paid any respect whatever to the principle that all men's rights to the use of a public highway are equal.*

It is known and not denied that this equality of right—sacred and fundamental though it be—is by the common practice of carrying companies corruptly discarded.

If you want to drive business competition out of the field, bribe a railroad manager to raise the freights upon your rivals and lower your own, or take the whole board of directors into partnership with you, or promise to divide the spoils with the corporation, and they will make you a monopoly with power to plunder, limited only by the range of your dealings. The loss thus inflicted upon the worthiest men in the land is startlingly large. But a single one of these arrangements—that with the Standard Oil Co.—the estimated injury direct and consequential to honest persons within the State amounts to not less than a hundred and fifty millions of dollars. For this fact you have the statement of Mr. Gowen, whose veracity no man that knows him will doubt, and whose faculties of observation, sharpened by a personal interest in the subject, make him a most intelligent witness.

THEY VICTIMIZE THE PEOPLE REMORSELESSLY.

At whatever place one of these railroad corporations has power to control the whole carrying trade, or where several combine together for that purpose, they victimize the people remorselessly. I give you the example of York for the reason that it presses itself on my attention with peculiar force. The freight exacted on the single article of anthracite coal is nearly \$1 per ton more than is charged upon the same commodity carried from the same mine and delivered by the same company at Baltimore. In all reason and conscience it should be from fifty cents to a dollar less, seeing that the distance is 60 miles greater to Baltimore. That makes the discrimination against York at least equal to a dollar and a half on every ton. The quantity consumed in the latter place is something upward of a hundred thousand tons, and the excessive tax upon it all is therefore \$150,000. Every cent of this is as wrongfully taken as if it were feloniously stolen. It amounts to many times as much in the aggregate as all the legitimate taxes which the same community pay for the support of the State, county, schools, and almshouses. Nay, it is more than all the taxes imposed for those purposes on the whole of the great county in which the town of York is situated. A manufacturer there who uses 2,000 tons of coal per annum must pay \$3,000 of blackmail to the railroads, or to the monopoly which they have created, unless the influence of his wealth gets it remitted. But the largest part of it is levied upon poor laborers whose wages are barely sufficient to furnish their families, in scanty measure, with food, shelter, and clothing; much of it is paid by the contributions of charity for those who would otherwise perish by cold and hunger. The man who can hear the simple story of this wrong without indignation must be as cold-blooded as a snake.

You need not confine your sympathies to York. I can give you an exact account of similar suffering inflicted on Philadelphia. But any officer of the Reading Co. can furnish it. Mr. Gowen, free-spoken as he is about the sins of his rivals, is naturally reticent concerning his own. But if he opens his mouth he will tell you the truth; and, unless I am much mistaken, it will be an awful tale of wrong and oppression.

THEY HAVE VIOLATED THEIR CHARTERS.

A full inquiry, if it shall ever be instituted, will probably show that nearly all the railroad corporations—the smaller ones following the example of the greater—have violated their charters by engaging "in mining and manufacturing articles for transportation over their own works," and thus acquired a monopoly of the production as well as the carrying. It is in this way that the Reading company has got the coal market of Philadelphia under its foot. Why should not that corporation and the others be made to respect the majesty of justice by an enforcement of the constitution (sec. 5, Art. XVII), which, if it leaves them what they have already got in violation of law, will at least prevent or punish such outrages in the future?

THEIR LOCAL RATES.

The imperious necessity, however, of enforcing the constitution arises out of the depredations which they commit upon all classes everywhere within the State, in what they call their local rates. You can take the figures known to be true, and demonstrate by the plainest process of simple arithmetic that their

tariff of rates for carrying goods from place to place within the State is *extortionate beyond all reason.*

They have not the face to deny that their through rates are high enough to give them all the compensation they can reasonably demand for that part of their service. The trunk lines struggled and fought for that trade against one another with a fierceness that showed that they regarded it as very profitable. Their own competition reduced it for awhile, but they combined and raised their charges high enough to satisfy all of them. It is ridiculous to say that this mutual agreement fixed the rates below a fair standard. This is a sort of error which monopolists never commit. Accepting the almost unanimous testimony of disinterested persons who ought to know whereof they affirm, the belief is fully authorized that they have fixed their through rates unreasonably high, but we will assume that they are only fair. That point being satisfactorily established, it follows as the day follows night that the much higher rates which they charge on local freights are *unjust and extortionate*, a palpable violation of our rights, a gross offense against the constitution.

I use the word rate in the popular and legal sense as meaning the ratio or proportion of the whole charge to the distance the freight is carried. Thus, if a ton be carried 600 miles, from Chicago to Philadelphia, for \$5, and the same charge be made for carrying it 12 miles, from Philadelphia to Media, the *rate* in the latter case is fifty times as high as in the former. I am credibly informed that such disproportioned charges are or have recently been made, and that as a general rule all local freights, whether the haul be long or short, are charged, without regard to distance, the same, or nearly the same, that would be charged on the same weight if carried from Chicago to Boston. To the extent of this enormous discrimination against our own people they are robbed and plundered.

The effect of it upon the agricultural interest can not be ascertained exactly without an investigation, which you can make and I can not, but the reasonable probability is that it takes most unjustly from 7 to 10 cents per bushel from all grain grown in the State and correspondingly reduces the value of all other products.

Then look how it touches the rights and interests of consumers in the great centers of population. Within a circle of 150 miles in diameter around Philadelphia provisions enough might be raised to feed the city, but they can not be taken there without paying a freight on them as heavy as it would cost to bring them from Illinois or Wisconsin. Thus an army of a million souls, some of them half mad with hunger, virtually have their base of supplies moved back six or seven hundred miles away.

THEY HAVE ANOTHER WAY OF CHEATING THE PUBLIC.

These railroad men have another way of cheating the public, not for the benefit of their corporate treasuries but to swell the private fortunes of the managers. A ring of them is formed into a separate transportation company, with the privilege of carrying on their own roads at the highest freights they can extort. By means of preferences and discriminations the parent corporation forces into the hands of its bastard offspring as much of the business as it wants, for the shipper who refuses to patronize the ring must suffer the penalty of still higher rates, as well as delay and difficulty. The convention of 1873 believed that this was one of the devices for fleecing the trade of the Commonwealth which ought to be broken up, and the people adopted that opinion. Do you wish to continue it? If not, why do you hesitate to carry out the constitutional prohibition?

Perhaps the most remarkable, certainly the boldest thing about the discriminations we complain of, is that they are always avowedly made against those who are least able to endure the wrong. A heavy grain dealer in the West who ships his millions may get rates 90 per cent below those extorted from a Pennsylvania farmer with only a thousand bushels to carry. Between all rivals of equal fortune the railroad king is ever strong upon the strongest side, and never fails to make his discrimination against the concern whose business is conducted on the smaller scale. In my town of York, the demand of some very rich manufacturers for lower rates has been conceded with gratifying promptness, but you might as well plead pity with a wolf as ask the monopoly to relieve a starving laborer by taking the excessive charges off his bread and fuel. Indeed, if the tariffs of railway charges be founded in any rule at all, it is this: That all rates shall be high in inverse proportion to the magnitude of the cargo and the distance it is carried, the practical effect of which is to grind the face of the small trader that the great one may increase in fatness.

The only argument they make against the equality of rates commanded in the constitution is that they can not afford it; that they must charge higher for short hauls and light loads or

else their compensation will be less than for the greater service. If this were true it would be no ground of justification. But, in point of fact, it is wholly untrue. It is not more difficult or costly to carry a hundred tons for 50 shippers than it would be to carry the same goods for 1. The expenses incident to the reception and discharge of a cargo may be greater in proportion for short hauls than for long ones, but you can make all that even by allowing them to charge, in addition to their mileage, for loading and unloading, whether the haul be short or long. These terminal expenses which they make so much ado about are nothing as an excuse for the enormous excesses of their local rates, and they know that very well. Their real reason is that they find it easier, safer, and more profitable to cheat a thousand poor men than one who is powerful enough to resist them or rich enough to bribe them.

A CHARTERED RIGHT TO DO THOSE THINGS.

But they insist that they have a chartered right to do these things; that they have purchased from the State the privilege of charging unreasonable tolls and making such discriminations as they think best for themselves, without regard to justice; that the State had sold out to them the power of protecting the people against any wrong of that kind which they may choose to commit; and that the constitution which forbids them is itself unconstitutional, because it impairs the obligation of a contract. Let us see whether there be or not any truth in this plea.

If the State had in express terms authorized them to impose unreasonable tolls or taxes upon the people for the use of their own roads the grant would be void. Judge Baldwin's opinion to that effect in *Bonaparte v. The Camden & Amboy Railroad Co.*, has never been denied or its soundness doubted from the day it was delivered to the present time. To give a corporation a power like that would be to give it the public highway as private property; to arm a body of mere adventurers with the police authority of the Commonwealth and to convert railroad managers from public servants into public robbers. You might as well say that the legislature could sell the State out and out.

Upon the same principle a grant of authority to discriminate between one citizen and another is worthless. The rights of all the people to be protected against robbery and extortion are precisely equal, and the legislature can not barter away one more than the rest; that is to say, a wholesale bargain of that kind would be no worse than a contract to sell the rights of individual citizens at retail.

If therefore these companies had a bargain with the State expressly giving them power to charge unreasonable and discriminating freights, it would be a mere nullity and of course revocable at the will of the legislature.

But no such contract was ever made between this State and any railroad company; at least I never saw an act of incorporation upon which a decent pretense of that kind could be set up.

IN PUBLIC GRANTS NOTHING PASSES BY CONSTRUCTION.

You must remember that in a public grant, whether of land, money, or franchises, nothing passes by construction, the grantee at the very utmost gets only what is given in express words, of which the sense is too plain to be misunderstood—nothing goes by inference—no ambiguous phrase carries with it anything to swell the dimensions of the gift.

Now, where is the express grant of power to take more than a fair and reasonable toll for the use of any railroad? In what act of incorporation is it stipulated that the State may not adjust the tolls according to what she, by her proper authorities, shall deem a reasonable rate? The sole answer ever given to this is that in some if not all of the charters there is a provision forbidding the company to make any charge beyond a certain rate per ton per mile, and from this prohibition against taking more they infer the right to take in spite of the State anything they please under that maximum, whether it be reasonable or not. But it is precisely such inferences that you can not make; they are excluded by the rule of interpretation already mentioned.

Neither does their practice of discrimination find the slightest countenance in any word of the charters. When did you ever see an act of incorporation expressly declaring that the company shall have power to make a difference between two citizens whose legal and natural rights to the use of the highway are precisely the same? Where do you find the words which clothe any company with the awful power to crush out the business of one man with burdens which he can not bear in order that another, in which the railroad has an interest, may be built up? But especially and particularly I desire to know what part of any bargain with the State justifies the extortion of higher rates from a poor man on his little freights than from a rich man on his great and valuable cargoes? If you can not put your

finger on the very words that give this authority, then the authority is withheld and the practice forbidden.

But that is not all. The limitation of the charges to rates, perfectly and uniformly proportioned to weight and distance, must be apparent to anyone who will consider the nature of the contract, the subject matter of it and the parties to it. The Commonwealth, reserving the equal proprietary rights of all the people to the use of the highway, agrees to employ a corporation as her agent, to see that the exercise of the right by every citizen is properly facilitated and never in any case impeded, delayed, or hindered. The agent agrees to do this service at rates which, in the aggregate, will be a reasonable compensation for all labor and expense of it. As between the State, who is the employer, and the corporation, which is the employee, the contract is an entire one—a lump bargain—an agreement to do one whole job, which comprehends all the carrying for all the people on that highway at a price for which the only measure furnished by the contract is weight and distance. Whenever in those acts of incorporation any measure is made of rates, taxes, or tolls, they are spoken of as proportioned to the use made of the road by him who pays them—so much per ton per mile, whether the miles be many or few, up grade or down, without regard to the number of tons carried at one time or at different times for the same shipper.

Let me illustrate a little further. If you make a contract to do a job of excavation at a price per cubic yard which gives you a heavy profit on the whole job, have you a legal right to demand additional pay for particular parts of it which you allege to be harder than the rest? I do not say what claim you might have on the liberality of your employer if the bargain taken altogether were a losing one; I only ask whether you could by construction of the contract charge more for one yard than another?

Take a case more precisely analogous. A contractor agrees to pave a mile of street at so much per foot, taxing the owners of the lots for the number of feet that fronts upon each one's property. Such contracts have often been made by the authorities of towns and cities, and they have never been understood to warrant a higher charge per foot against the owners of small and cheap lots than against the proprietors of those which are more valuable.

Reasoning fairly from premises known to be true, you can not escape the conclusion that the extravagant and discriminating charges of these corporations are a fraud upon their own charters, as well as a gross wrong to their victims. The contracts they invoke to save them from the justice of the State are as strong against them as the constitution itself.

THERE IS A POWER OF THE STATE TO CONTROL THEM.

But there is a power of the State to control them, to check their rapacity, and to make them honest, which lies back of all this. The police authority, of which she can not disarm herself if she would, enables her to regulate the use, even of private property, in such manner that neither the general public nor particular individuals can be made to suffer by it unjustly. Upon that principle you can forbid an excessive rate of interest upon the loan of money, fix the charges of hack drivers, or ferry-men, or tavern keepers, or the owners of grain elevators.

THE STATE CAN ABOLISH MONOPOLY.

Besides all that the State can abolish a monopoly or bring it to terms of justice at any time by virtue of her right of eminent domain. All property, corporeal and incorporeal, is held upon condition that it may be divested whenever the general interest requires it. All charters and acts of incorporation are subject to such modification as may be necessary to prevent the owners from doing wrong to the public. This principle was expressed in the constitution by the amendment of 1856, but that was not its origin; it existed from time immemorial as a rule of public and universal law. It has always been one of the powers of every sovereign government, and it applies with equal force to all charters, whether dated before or after 1856.

These are arguments in favor of the power. Except in Pennsylvania it would not be necessary to state them. Everywhere else the most zealous advocates of corporate monopoly concede the authority in question, while they deprecate its exercise. But here the shallow notion still lingers that an act of incorporation is an irrevocable license to defraud and plunder whomsoever the managers please to select as their prey.

FREE TICKETS.

I have hesitated to speak of free tickets. I can understand how a thing so cheap might be accepted as a mere courtesy, like a drink or a dinner. Perhaps therefore it is not *malum in se*. But since 1874 no man can hold office without taking an oath to obey the constitution, which expressly prohibits free passes.

Can that oath be violated with a safe conscience? I am a private citizen, and I speak with respect for the better judgment of others when I say that executive and judicial officers who have acted thus during the last 10 years ought to be impeached and removed from their places. But that is easier said than done, for the house of representatives, which should prefer the impeachment, and the senate, which has exclusive jurisdiction to try it, are tarred nearly all over with the same stick.

The legal predicament in which this practice places the railroad officers is somewhat worse. The passes which they distribute are things of considerable value, worth perhaps two or three hundred dollars apiece and hundreds of thousands altogether. If the agents of the company would bring up that much money in a bag at the first meeting of every legislature and hand it around to the members, dishing out their shares to the judges and executive officers, it would look very much like wholesale bribery. But to bribe an officer it is not necessary that money should be used. Giving or offering "anything of value, testimonial, privilege, or personal advantage," is, by the constitution and the statute, the same crime as the giving of silver dollars, gold eagles, or greenbacks. It must appear, however, that it was given to influence the officer or member of the general assembly in the performance of his public or official duties. That is undoubtedly the very purpose and object of giving passes to members of the legislature. I do not say or think that those senators and representatives who receive them consent to be so influenced. But that does not redeem the guilt of the giver, to whom it is impossible to ascribe any other motive than the *criminal one*. Those great corporate officers and their respectable subordinates, who are concerned directly and indirectly in these practices, are probably ignorant of the existing law. They ought to be solemnly warned by some penal enactment directly and exclusively aimed at this besetting sin.

IS THE LITTLE FINGER OF MONOPOLY THICKER THAN THE LOINS OF THE LAW?

We are often told that in this struggle for honest government against the power of the railroad corporations the just cause has no chance of success. We do seem to be out on a forlorn hope. The little finger of monopoly is thicker than the loins of the law.

The influence of our enemies over the legislature is mysterious, incalculable, and strong enough to make the constitution a dead letter in spite of oaths to obey it and a popular demand, almost universal, to enforce it. There is no other subject upon which the press is so shy as upon this, the most important of all. *Afraid to oppose the corrupt corporations and ashamed to defend them, it sinks into neutrality.* Prudent politicians always want a smooth road to run on, and the right path here is full of impediments. In this state of things we seem to be weaker than we really are, for the unbroken heart of the people is on the side of justice, equality, and truth. Monopolists may sneer at our blundering leadership and the unorganized condition of our common file, but they had better bethink them that when the worst comes to the worst our raw militia is numerous enough to overwhelm their regulars, well paid and well drilled as they are. They have destroyed the business of hundreds for one that they have favored. For every millionaire they have made 10,000 paupers, and the injured parties lack no gall to make oppression bitter.

The people certainly got one immense advantage over the carrying corporations when they adopted the seventeenth article of the constitution. That concedes to us all the rights we ask, puts the flag of the Commonwealth into our hands, and consecrates our warfare. The malign influence that heretofore has palsied the legislative arm can not last forever. We will continue to elect representatives again and again, and every man shall swear upon the gospel of God that he will do us the full and perfect justice which the constitution commands. At last we will rouse the "conscience of a majority, screw their courage to the sticking place and get the appropriate legislation" which we need so sorely.

Whenever a majority in both houses become independent enough to throw off the chains which now bind them to the service of monopoly—when frequent repetitions of the oath to obey the Constitution shall impress its obligation upon their hearts—when admonition and reproof from within and without—"line upon line, precept upon precept, here a little and there a little," shall have taught them that fidelity to the rights of the people is a higher virtue than subserviency to the mere interests of a corrupt corporation—when the seventeenth article shall have been read and reread in their hearing often enough to make them understand the import of its plain and simple words—then, without further delay and with no more paltry excuses, they will give us legislation appropriate, just, and effective. A tolerably clear perception of their duty, coupled

with a sincere desire to do it, will enable them to catch the shortest and the easiest way. All trifling with the subject will cease at once; all modes of evading this great point will go out of fashion; no contrivance will be resorted to of ways not to do it while professing to be in favor of it; our common sense will not be insulted by the offer of a civil remedy to each individual for public offenses which affect the whole body of the people and diminish the security of all men's rights at once. The legislative vision, relieved from the moral *strabismus* which makes it crooked now, will see straight through the folly of trying to correct the general evil except by the one appropriate means of regular punishment at the suit of the State. Does this seem harsh? Certainly not more severe than any other criminal law on our statute book which applies to railway managers as well as to everybody else. They need not suffer the penalty unless they commit the crime, and they will not commit the crime if you make a just penalty the legal consequence. Pass a proper law to-day, and they will be as honest as you are to-morrow. Every one of them can be trusted to keep clear of acts which may take him to the penitentiary. They have been guilty in their past lives and will continue in evil doing for some time to come, because the present state of your laws assure them that they shall "go unwhipped of justice." But threaten them with a moderate term of imprisonment and a reasonable fine, and they will no more rob a shipper on the railroad than they will pick your pocket at a prayer meeting. Your law will do its work without a single prosecution. Thus you could if you would effect a perfect reform and yet not hurt a hair on any head—"a consummation most devoutly to be wished."

But it is not to be expected that such good will come immediately. Nearly 10 years ago the legislature was commanded to carry out the beneficent measure of the constitution. For nine years that illustrious body was a dumb impediment to the course of justice—all its faculties paralyzed by some inscrutable influence—dead—devoid of sense and motion, as if its only function was to "lie in cold abstraction and to rot." At last, when it was wakened up by the present governor and reminded of the seventeenth article, it opened its mouth and spoke as one who did not know whether he was sworn to oppose the constitution or to obey it. Some members have shown their utter hostility to it, some seem willing to defend small portions of it, and one senator discovered that it was all equally sacred. But his plan meets no favor. Still we need not despair. The people and the constitution, mutually supporting one another, will be triumphant yet. Meanwhile let all the railroad rings rejoice. This is their day; ours is to come.

EXTRACT FROM A SPEECH OF HON. J. S. BLACK IN THE COURTHOUSE, YORK, PA., OCTOBER 7, 1880.

"This government of ours, though badly damaged by 20 years of mismanagement, is still worth first cost and carriage. It was framed by the wisdom of sages; heroes have devoted their blood to it; and, rightly administered, it promises more happiness and greater prosperity to us and our children than have ever been enjoyed by any equal portion of the human race.

"As a whole its organism is not free from complications, for it was made to secure the rights of the *separate States*, as well as the necessary powers of the *United States*, and so to adjust them that the liberties of the people could not be invaded by either. It needs no argument from this to show that whosoever by military force breaks down the rights of the States or tramples on the liberties of the people is guilty of treason as much as he who violently resists the authority of the Federal Government, for the life of our political system is as certainly destroyed one way as another.

"The United States could not properly govern the internal affairs of a State if they would try; they have no machinery that fits a local government—no rules for the protection of individual rights or the enforcement of private obligations. Whenever they have put their arbitrary force in the place of a State government, they have converted law into ruffianism and made justice a mockery. Besides, when a State or a number of States, through the agency of the General Government or otherwise, undertake the government of another State in its domestic affairs, the mismanagement of the State so controlled is as certain as the death of a man when the heart is cut out of his body. No community has ever been decently, peacefully, or honestly governed by strangers, whose wishes, feelings, and interests are different from its own. If aliens, by accident or force or fraud, ever get you under their feet they will inevitably rule you for their own pleasure and plunder you for their own profit, without the smallest regard for your benefit or your rights. Ask Poland, struggling in the bloody grasp of Russia, if this is not so. Learn from the history of Switzerland what she suffered under the accursed yoke of

Austria before she threw it off. Go to the far past, if you please, and let Italy tell you how she suffered under the rule of the Gaul and the Goth. Or come down to the present day. Interrogate Ireland, and she will answer by pointing you to seven centuries of unmitigated outrage as the steady practice of an alien government, always dishonest, treacherous, and cruel. If this does not satisfy you, then cast your eyes for a moment on the unspeakable infamy of the carpet-bag domination in every State where they were allowed to get a foothold. Why, fellow citizens, this necessity for home rule as the only safeguard for life and property was the great principle which the Continental Congress thundered into the ears of the world when it declared that every one of these States should be sovereign, independent, and free to regulate its own internal affairs, according to the will of its own people, and to the maintenance of this principle they pledged their honor, devoted their lives, and expended their fortunes.

"On this point of State sovereignty as between themselves and against the outside world they were thoroughly unanimous. No one thought of denying that such was the relation created by the success of the Revolution. A Federal Government was agreed upon, clothed with certain powers, which the States could not exercise efficiently or well in their separate capacity. These powers are carefully enumerated, and the compact expressly provides that the powers not granted are reserved to the States and the people. It was a political combination, strictly limited by the terms of its charter.

"The man who will say, in the face of these undeniable facts, that the doctrine of State rights is a political heresy, or that the States are not supreme and sovereign to the whole extent of their reserved powers, lacks either the mental or moral qualifications of a good citizen; he is unfaithful to his plainest duties; he is fit only for treason, stratagem, and spoils.

"It is vain to say that this is a matter of opinion upon which men may conscientiously differ. It is no question of interpretation; the words of the Constitution are express. There is nothing plainer in the decalogue. You might as well say that the eighth commandment requires you to steal as to assert that the Federal Constitution extinguishes State sovereignty. To hold that this is and was originally a self-existent nation, which made the States and was not made by them, is as inconsistent with the genesis of our institutions as it would be with the Mosaic history to declare that Abel killed Cain. When you hear a man deny that the States have any rights except what the Nation (with a big N) has bestowed in its mercy and may take away in its wrath, you can assure yourself that he is insincere and dishonest. Such a theory is not only without truth, but without plausibility and can not impose upon a person of common understanding."

The National Prohibition Amendment.

EXTENSION OF REMARKS

OF

HON. BURTON L. FRENCH,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 17, 1917.

The House had under consideration the joint resolution (S. J. Res. 17) proposing an amendment to the Constitution of the United States.

Mr. FRENCH. Mr. Speaker, the gentleman who was seated but a moment ago has appealed to the Members of this body to be patriotic, to have only the interest of their country in mind as they vote upon this question, and then from his language he has fairly challenged the loyalty, the good faith, the patriotism itself, of those who are urging at this time that we become a dry Nation. Gentlemen, the appeal that he made to the Members of this body to be loyal is an appeal that is worthy of the man who uttered it, and I have no doubt that it finds a response in the hearts of all Members of this Chamber; but it is remarkable that the gentleman who uttered that appeal can see no conclusion other than the one at which he arrived—that no one can be loyal, no one can be patriotic, no one can be devoted to his country except he be in favor of continuing the present policy with regard to the liquor traffic within the United States.

I, too, could use the appeal that he used, but it would be unfair for me then to assume that you could only be patriotic and loyal by being in favor of submitting the prohibition question to the voters of the United States. Earnestly as I believe that that is the way to meet this question, I am frank to say that

I am able to understand how men can consistently and honestly believe that this problem is one that can best be settled by the States themselves.

No; the Members of this Congress are devoted to their country, and it is with that feeling and spirit of devotion that the Members who are urging the passage of this resolution, under which the people will be given an opportunity to vote this Nation dry, are urging its consideration.

There can be doubt no longer as to the effect upon the physical and moral fiber of men and women who are victims of alcoholic drink. Some men and women seem impervious for many years to injuries commonly caused by alcoholic beverages, and they are pointed out as examples and proofs that indulgence in liquor does no harm. Those persons are like the mighty pine tree that lightning has coursed time and again, and yet because of its hardness continues to raise its tall fronds skyward; so some men and women are able to undergo the punishment of alcoholic intemperance and by reason of remarkable physique and temperate lives in other respects withstand the scathing that their indulgence imposes upon them. But as a question there can be no doubt that intemperance means weakness, means injury to the race, means the lowering of vitality of the individual or the nation that is the victim, and from a military standpoint it could well be urged that in this greatest crisis of the world's history this Nation and all nations abolish forever that which is a constant menace to human kind.

In the extra session we passed a law abolishing the manufacture of all kinds of liquors except certain wines and beers, and we did so because we regarded it as expedient from a military point of view. We went further than that. We authorized the President to take over for the Government all the alcohol and liquors that had been forbidden to be manufactured when, in his judgment, it would seem best. We did this from the standpoint of aiding the military efficiency of our country, and whether or not the President avails himself of the power with which he is clothed, the very fact that the law exists will tend to maintain a wholesome condition. But the Congress went further than that, and it gave to the President the power to prevent the manufacture and sale of even light wines and beers. And why? Because we believed that it would be to the military advantage of this country so to do. Again, I say, whether the President avails himself of the authority conferred upon him, the existence of the law will have a wholesome effect upon conditions within this country. But we have not stopped here. We have gone further and, as never before, have taken measures both by law and administration looking to the protection of our men who will fight their country's battles, and especially looking to the maintaining of these men temperate and clean and ready upon their return to take their part in the communities from which they came. All of these things we have done because we do believe that from a military standpoint a temperate army is the efficient army.

Indeed, instead of refusing to urge the passage of this amendment on account of the war, we urge its passage because the war is upon us. I urge it, because in this crisis we need all the available man energy; we need all the available food values; I urge it, because it is in the interest of winning the war; it is in the interest of patriotism and our country that every man be relieved from useless occupation, or occupations worse than useless, and be permitted to expend his energies where they will be common gain. I urge it, because it is in the interest of our common cause that the food store be large and that the vast amount of food products that are being wasted, or worse than wasted by being converted into alcoholic drinks, be used to sustain human life and to scale down the prices that the people of this country must pay for the bread that they would eat.

THE OPPORTUNE TIME.

If I were to judge from numerous letters and telegrams that I have received since this question has been pending in Congress, I would say that those who are opposed to the passage of the prohibition amendment believe that its passage will throw millions of men out of employment and bring hardship upon them and their families through loss of work. We are appealed to to refuse to pass the amendment because of that dire calamity.

Gentlemen, if there ever was a time in the history of our country when from an economic standpoint it was opportune to make this Nation dry at one stroke of the pen, now is the time.

From everywhere throughout this Union men are being called to the colors. A million men, the strong, virile men of the country, are taking their places in the Army or industry occasioned by the war. Millions are taking their places in the production of munitions of war and these millions are vacating places that are inviting others to fill them. From everywhere the call is for men. We are receiving petitions asking us to throw

down the bars to immigration so that men to do our labor may come in. We are receiving petitions asking that even those who would be denied citizenship in this country be permitted to enter to do our work. A few weeks ago, at the adjournment of the extra session, at the depot my trunk was checked to my home by a young lady, the first time in my life that anyone other than a man had checked any of my baggage, and on my way home all along the way women were working in the harvest fields. The last express package that I sent from my home to Washington was taken in charge and sent by a young lady. The last ton of coal that I purchased, I purchased over the counter with a young lady making the sale. Telegrams are being delivered in this city by young women, tickets upon street cars of our big cities are being collected by young women, and in many of the industries where men alone have been employed women are being employed to-day, because there is a dearth of men who can do the work. Children are being employed. Delivery of goods to my home is often made by little boys who prior to this war would have been at school or at play and the deliveries have been made by men. Deliveries of goods that were purchased days ago were made long after their purchase, because there was not sufficient help to send out the goods to their destination at an earlier time.

A responsible officer in this city told me this month that he needed six stenographers in his department and that his work was behind many weeks because he could not get efficient help. Men who can drive a nail and saw a board are qualifying as carpenters, and men who know but the rudiments of trades and professions are deemed trained men because there is a dearth of those who are proficient. The other day I bought a couple of tons of coal and in the office of the coal company I was told, when they explained that the delivery could not be made for possibly two or three weeks, that they had 40 teams standing in their stables that they would use if they could only obtain drivers. Men had better be driving these teams in hauling coal than driving teams in distributing barrels of booze.

So I may say with regard to other lines of work. There never in the history of this country was a time so opportune for making this Nation dry from the standpoint of the laboring man as now, because now, whether the man who is employed is working in the office or in the distillery, working behind the bar, or hauling the liquor to the warehouse or to the saloon, he can leave his employment and he can get work with which he is somewhat familiar in one of the many other lines of occupation.

CAN AMEND ONLY BY OVERWHELMING VOTE.

The gentleman from North Carolina [Mr. SMALL] is a man for whom we have profound respect. We admire his honesty and his courage. He is opposed to this amendment because he believes that the question is one that should be left to the several States; that 36 States by their votes should not impose temperance upon the other 12 States that desire to maintain conditions under which their people can be intemperate.

There are several points of view from which that statement may be answered. In the first place that question was thrashed out and answered by the fathers when the Constitution was framed, and it was there settled that all States in the Senate of the United States should have equal representation; that in the House membership population should control. It was likewise settled that no bare majority of the States could alter the fundamental law of the land, but that the Constitution could be changed only by the votes of three-fourths of the States themselves through their legislatures or through conventions called for that purpose—this after Congress, by a two-thirds vote, had approved the amendment.

In all government we think of the control being vested in less than the absolute total and unless we submit to some such proposition as that there could be no government. In the zeal with which our fathers protected the individual States the extreme, it would seem, was attained by which any degree of workability can exist.

Again, if the logic of my friend is correct that the rights of the States themselves are so sacred that three-fourths of the States may not change the fundamental law, where shall we draw the line? By what logic could all the States have the right to modify the fundamental law if towns or individuals opposed? Or, again, if in our jealousy for local self-government it is urged that we do wrong to pass an amendment of this kind, although it be passed by three-fourths of the States before it shall become effective, how can we justify a State itself becoming dry?

The gentleman says that the State of North Carolina is dry, but it was not made dry by the votes of all the people of that State. I suppose it was not made dry by the votes of all the counties of North Carolina. How can the gentleman defend the State of North Carolina's voting itself dry when any of the

counties of which that great State is composed refused to vote dry? Or, again, going a little further, how can he consistently be in favor of local option by counties? Perhaps in many of the counties that are now dry there are townships that if they could vote, would vote wet, yet men urge local option by counties on principle who apparently find themselves unable to apply the same principle to our Nation. Carrying the matter still further, how can anyone defend the submitting of the temperance question to the votes of the people of a township so long as a single person within any township shall vote wet? It is the same principle carried but a few steps further.

No; in our jealousy for local self-government—and for my part I believe in the people's retaining a very large measure of government of local matters—I can not feel that anyone's rights are trodden down by the passage of this amendment.

STATES DO NOT LIVE UNTO THEMSELVES.

There was a time when the family was the unit of government. We outgrew that time and the tribe became the unit. Conditions and needs changed and we have long since reached the day in which for different matters we must reckon with different units of government. To-day transportation is a simple problem. Communication has been made easy. State lines have been obliterated for many purposes, and what was a local affair a hundred years ago has become to-day a national problem.

The whole Nation has a right to say whether or not 12 of its States shall require temperance or permit intemperance. The whole Nation has this right because States can not live merely unto themselves; they can not surround themselves by Chinese walls and say, "That which we do shall have no bearing upon our neighbors." Everyone who has lived in a dry State surrounded by States that are wet knows the temptations that are constantly at hand; he knows of the liquors that are illicitly dispensed; he knows of the expenditure of time and money by people who live within dry territory who go into territory that is wet and coming under the influence of liquor proceed to their homes to inflict the results of their intemperance upon communities of the State that is dry; he knows of the expenditure in time and money in handling crime and other problems caused by a neighboring State. Twelve intemperate States scattered throughout the Union would be sufficient to accommodate the wets of our country, and they would not need to travel any considerable distances either to obtain the liquor that they would desire to purchase. So, then, not only from principle but from the standpoint of self-interest, it is the right of three-fourths of the States to say that the other fourth shall subscribe to conditions that will mean for the common good.

INDIVIDUAL LIBERTY.

One of the chief arguments that is made against the passage of the proposed amendment is that it belongs to that type of legislation that looks to the limitation or restriction of the liberty of the individual. Because of this, it is urged it should not pass.

In all government it is a difficult matter to determine just where we shall draw the line between acts which the individual shall be regarded as having the liberty or freedom to perform and acts which he shall not perform in the interests of society. This is true in our very simplest laws touching the course of human conduct. It is true in our legislation touching the education of our children; it is true in our laws touching the use of public roads.

Why should Jones not drive his automobile 100 miles per hour on the public highway if he desires to do so?

Immediately comes back the answer that the public highway belongs to the public, and that while Jones may be trusted to do extreme things that will jeopardize only his own life and property, he should not be permitted to place in jeopardy the lives and property of other people who use the highway.

Again our liberties are sometimes restricted in order that not merely life and property may be preserved but that an orderly course of business may be followed.

Take, for instance, at the crossing of two busy streets in a city there is stationed a traffic policeman. His whistle, his extended hand, or other signal indicates that at a certain time traffic going east and west shall stop so that traffic north and south may proceed, and then in another moment by another signal the north and south traffic is suspended while the traffic east and west flows on.

Is this an interference with liberty? It is, in a certain sense, to the man who wants to go across the street at the particular place where traffic for a moment is suspended. And yet let us look further. Not long ago a test was made at the intersection of two of the busiest streets in Chicago. The experiment was made to determine just how long it would take for traffic to become blocked if no traffic policeman were at hand to direct the course of the automobiles and wagons and pedestrians hurrying in their regular work. To those who are familiar

with the traffic of a great city it causes no surprise when I say that within two minutes there was such a jam at the intersection of the streets that it was impossible for traffic to proceed either east or west, north or south. In other words, there was perfect liberty, and perfect liberty meant perfect disorder, perfect chaos. On the other hand, the infringement of liberty by the policeman, as he stops the crowd going one way or the other way for a moment intermittently and then intermittently stops the crowd going in the opposite direction, enables the busy man to proceed upon his way with comparatively great rapidity.

This is merely an illustration. Apply it to the liquor business and what do we find?

In sparsely settled communities or among simple peoples where liquors are brewed within the home it may be that the individual may be trusted with the liberty of being his own judge as to whether or not any kinds of liquors may be used as a beverage, but is it not an entirely different question when instead of a comparatively few people on a vast continent we have an ever-increasing mass of people congregating not only by the thousands but by the millions in centers throughout our land? Omitting sentiment and merely applying to this business the same principle that we apply in directing the course of business at the crossing of important streets of cities, may it not be apparent that legislation is necessary that in a way may restrict to some extent the liberty of individuals in order to insure a greater liberty, a greater freedom, more safety to the public generally, all of whom have an interest in whether or not the liquor business shall proceed just as they have an interest in whether or not an orderly course of traffic shall proceed along the various streets of our busy cities or whether at the crossing of those busy streets there shall be a mob congested, impossible of motion, because the individual members of that mob have too much liberty?

ECONOMIC WASTE.

I urge the passage of this constitutional amendment from the standpoint of efficiency of our Nation. The war is drawing millions of our men from their usual avocations. We are urged to save, to conserve our food supplies and our fuel. Christmas vacations in many schools are being extended so as to save fuel. We are urged to produce all we can. And all these appeals are reasonable. Yet how about the waste of the country through liquor? In 1914, according to the brewers' manual, the following grains were used in the United States for liquor: Barley, 110,000,000 bushels; corn, 63,000,000 bushels; rice, 8,000,000 bushels; rye, 6,000,000 bushels; and wheat 1,000,000 bushels. Other agricultural products, including grapes, of tremendous value were used, and likewise immense quantities of molasses. In 1916 alone we used 152,000,000 gallons of molasses for liquor. Here, gentlemen, is tremendous waste. The grain alone that is wasted would make nearly all the bread that the combined armies of Great Britain, France, and the United States could consume.

Measured in another way, this means a waste of 7,500,000 acres of our best agricultural land every year. It means the waste of time of 1,200,000 of our people. It means the waste of 3,000,000 tons of coal every year, besides vast quantities of coke, wood, and other means of power. It means congestion of our traffic on railways and by sea, and it means tremendous loss to other people through this congestion.

Mr. Speaker, these losses in efficiency to which I have referred are deliberate, and they are only a small part of the waste. What shall we say of the loss in efficiency and the charge upon society caused by drink? The money paid for liquor last year was somewhere near \$2,400,000,000 in the United States. The loss to society through drunkenness was about \$1,200,000,000. The economic loss by death through drink was about \$750,000,000. The loss to society through asylums, almshouses, and courts occasioned by drink was nearly \$100,000,000. Here is a total loss of nearly four and a half billion dollars in a single year, and when you add to this more than a billion dollars paid to the army producing liquor and engaged in its distribution you have a vast economic loss or cost to our country of nearly \$5,500,000,000.

HUMAN WASTE.

I shall not take time to review the horrible record of intemperance, the toll that alcohol has exacted in a thousand ways, that which must be called the human waste. That story is being told to the people of the country by the splendid organizations that are assembling and making usable facts bearing upon intemperance, upon health, upon morality and order, upon social relationships, and upon life itself. That story is told in the records of insane asylums and hospitals; it is told in the records of pauperism; it is told in the police records of our land and the records of prisons and penitentiaries. It is told in the story

of wrecked homes; in the lives of children who have been denied their birthright through no fault of theirs; it is told in the weak and inefficient lives of drunkards and by the procession of countless thousands who reach the grave through drunkenness or through disease that intemperance has caused.

WASTE BY ACCIDENTS.

I shall scarcely mention the waste by accidents caused through drink—a waste that more and more is being recognized by employers of labor.

The superintendent of a mine in Montana told me while the campaign was on last year that resulted in Montana voting dry in the fall of 1916 that intoxicants in one way or another were responsible for 90 per cent of the accidents in mines. He remarked, "I can not claim personally to be a teetotaler—I like to have liquors in my home—but I am going to vote dry this year, for I am willing to forego my pleasure for the good it will do the people of this State."

Such great industrial concerns as the Illinois Steel Co., the American Steel & Wire Co., the Carnegie Steel Co., the American Tin Plate Co., the American Manganese Steel Co., the American Car & Foundry Co., as well as all the railroads of the United States are conducting an active campaign in favor of temperance among the men employed in these various lines of work.

Mr. Hendrick, in an article, "How business fights alcohol," in Harper's Magazine, 1916, quotes an officer of the Du Pont Powder Co., as saying, "A man with a bottle of whisky is as dangerous around a powder plant as a bomb thrower." And further, he quoted Mr. Charles L. Huston, vice president of the Lukens Wire & Steel Co., a concern that employs 2,000 men in Pennsylvania, as declaring that prohibition had decreased accidents 50 per cent in the Lukens plant.

And so I could continue. The evidence piles itself mountains high, and everywhere it is the same. Were there no other reason for making this country dry, the innocent bystander who with the drunkard are the victims of the latter has a right to ask for the protection that the abolition of liquor will afford.

DOES PROHIBITION PROHIBIT?

Does prohibition prohibit? That is the question that is being asked over and over in this country. That is the question that you are asking. Many hard-headed men freely admit the curse of intemperance; they possibly indulge in liquor themselves to some extent; they have come to feel that intemperance is a sort of necessary evil that must be controlled, but that can not be prohibited. If they could be shown that prohibition does prohibit, or that it measurably prohibits, they would forego any pleasure of indulgence for themselves in standing stoutly for prohibition for the sake of the common good. A year ago the State that in part I represent upon this floor went through a wet-and-dry fight. We amended our constitution and placed Idaho in the dry column. During the campaign many were the men I met who had looked at the question as I have just indicated, and after full study made up their minds that prohibition does prohibit, and so they voted dry.

Let us consider the question for a moment from this standpoint. But in doing so let us remember that laws against murder do not prevent all murder; that laws against theft do not prevent the thief from plying his profession to some extent. Yet you would not repeal your laws as to murder and as to stealing. Well, let us be as frank with the temperance question and candidly admit at the beginning that in spite of prohibition laws there will be some violations of the same. And let us also bear in mind that whatever the showing may be now, it is a showing that is made by dry States which are adjacent to States that are wet. It is a showing made against heavy odds. It is a showing made under conditions that would not exist if national prohibition could prevail.

Now, what do we find? I shall not attempt any exhaustive study, but shall refer to but a small number of circumstances.

Turn to the District of Columbia. It has been dry less than two months. In November, 1916 (wet), there were 837 arrests for drunkenness made by the police within the District. In November of this year (dry) arrests were made of 199 on account of the same cause.

In 1912 the State of North Carolina was dry. In that State during that year there were 16 deaths from alcoholism. The State of Massachusetts during the same period was wet, and with only one-third more population it had 296 deaths from the same cause.

In 1915 the law requiring saloons to be closed in the city of Chicago on Sundays began to be enforced. The Chicago Herald summarized the result of the first Sunday with closed saloons, pointing out that 7,146 saloons closed their doors and that there were but 6 that failed to do so; that there were 18 arrests for drunkenness against 47 the day before and against 243, which

is the usual number of arrests on Saturdays and Sundays; there were no murders, while the usual number was from two to three.

The State of Alabama was under a dry law enacted in 1908 for a period of about three years, when the law was repealed in 1911. The Alabama Citizen published in 1909 a table showing the arrests for drunkenness and other offenses in the principal cities of the State under wet and dry régimes. The table is as follows:

Arrests for drunkenness:	
1907, wet	6,830
1908, dry	1,536
Arrests for all offenses:	
1907, wet	24,044
1908, dry	12,907

No wonder the law was reenacted, effective 1915. President George B. Ward, of the city commission, who opposed the prohibition law that is now in operation, has made some comparisons that are startling. He declared:

The more serious phases of crime have almost disappeared under the operation of this law and less important offenses have greatly decreased in number. Suicides for the entire year of 1914 were 35. For the entire year of 1915 there were 14. Homicides in the city of Birmingham have been reduced exactly 33½ per cent for the last three months of 1915.

And then he pointed out that on February 2, 1914 (wet), there were 130 cases in the police court in comparison with 3 cases on February 2, 1916 (dry). The bank deposits increased in Birmingham the year ending July, 1915, \$5,134,052 and the number of depositors was 7,860 greater. President Ward further declared that the use of deadly drugs by negroes had been almost entirely abolished as soon as prohibition went into effect.

Mr. Hendrick, in an article in Harper's Magazine for August, 1916, pointed to a dry Chester County, Pa., in comparison with a wet, and said:

The grand jury of Chester County submitted a report declaring that crime had greatly decreased. Merchants testified to increased purchases of children's and women's clothing, bank presidents reported a great increment in savings deposits, and citizens generally declared that Coatsville had become a decent place of residence. In the old days the average citizen was afraid to let his wife or daughter walk up the main street; now a drunken man was a rarity.

Much has been said of Kansas, and the statement is frequently made that prohibition laws do not prohibit in Kansas. But let us see.

Comparing Topeka with other cities of between 43,000 to 40,000 we find that Topeka has but 29 policemen, while the average for 20 American cities of similar population is 46.

Make an other comparison: "For the United States as a whole alcoholic insanity averages 10.1 per cent of all insanity," while according to Dr. Philip Newcomb, of the State Hospital at Osawatimie, Kans., "the average in Kansas is only 1.7 per cent."

Compare further and you will find that her commitment to prisons is less than in wet States. Her taxes are less; her average savings-bank deposits are greater; her cost of county and other municipal government is less. In short, these are the answers to the question "Does prohibition prohibit in Kansas?"

One of the leading citizens of Georgia, in speaking of the benefit of prohibition in his State, told me a few months ago that the first year after prohibition was inaugurated the number of convicts maintained on public roads throughout the State had decreased 70 per cent.

In Oregon, Gov. Withycombe reports 148 commitments to the penitentiary for 1916 for the entire State, as compared with 257 in 1915, the latter a license year. Savings deposits increased from \$35,935,674 in 1914 to \$45,212,123 in 1916, and this Gov. Withycombe ascribes to prohibition.

The State of Arkansas passed under prohibition laws on January 1, 1916. The following comparison, which might be termed "before and after," is interesting in showing the effect in one city of that State in a variety of ways of people living under dry laws in comparison with the same people living under wet laws:

	Wet (\$ months, 1915).	Dry (\$ months, 1916).
Cases of disturbing the peace.....	1,002	516
Cases of drunk and disorderly.....	137	74
Cases of vagrancy.....	459	238
Cases of immorality.....	635	491
Cases of drunks.....	425	103
All offenses.....	5,119	3,423
Readers in library.....	27,416	31,193
Telephones in use.....	9,826	10,286

In Toronto, Canada, the license system prevailed during the year 1915, but prohibition was extended in 1916. Taking the two weeks ending September 30, 1915, it appears that in Toronto there were 457 arrests for drunkenness; during the same two weeks in 1916 the number of arrests for drunkenness was 88. For all offenses the arrests for this period of time in 1915 were 1,665; in 1916, 742.

Hon. Fred O. Blue, the State tax commissioner of West Virginia, made the statement that in two years prohibition decreased drunkenness in that State by 75 per cent.

Upon municipal reports from 50 municipalities it appeared that the year before the dry law went into effect there were 19,567 arrests; during the first year after the law was passed the number was 9,956, and during the second year 3,357.

The abolition of the Army canteen on February 2, 1901, has shown a remarkable effect upon the morals and health of our soldiers.

During the year 1907 deaths due to alcoholism were nearly 50 per cent less than in 1901, while admissions to hospitals for certain diseases decreased from 113.33 per thousand to 30.2 in the same period.

The figures that I have given were selected as mere illustrations. I could surfeit you with more such testimony. In my home State of Idaho it is the same. We were dry under law for almost a year before we voted for the constitutional amendment, and as I traveled over the State the testimony was practically unanimous that prohibition does prohibit. Families that had been in poverty had warm clothes and good food. Merchants were able to collect accounts as never before. Bank deposits had increased, and even the superintendent of the Coeur d'Alene Indian Reservation advised me that because of temperance the Coeur d'Alene Indians had increased in population—birth rate greater than death rate—the first year in many years, and due to temperance. Oh, there were some who were able to get drunk, but a justice of the peace in a fine mining town told me that in nearly eight months he had had but four drunks before him, while formerly he had been able to say good morning to as many at one time as the victims of a spree the night before were haled before him.

I found what has been found elsewhere, that the "wettest dry county"—and they were all dry—was dryer than the "driest wet county" under the old system.

Gentlemen of the House, prohibition does prohibit, and the practical man who is casting about for an opportunity to do an act that will mean positive good may find it in the support he will give this amendment, either on the floor of this Chamber or in his State, in helping to bring about its ratification.

Speech of Premier Lloyd-George.

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 8, 1918.

Mr. TREADWAY. Mr. Speaker, under the unanimous consent granted me to extend my remarks I present herewith the speech made by Premier Lloyd-George, to which reference was made by President Wilson in his address to Congress to-day:

"When the Government invite organized labor in this country to assist them to maintain the might of their armies in the field, its representatives are entitled to ask that any misgivings and doubts which any of them may have about the purpose to which this precious strength is to be applied should be definitely cleared. And what is true of organized labor is equally true of all citizens in this country, without regard to grade or avocation.

"When men by the million are being called upon to suffer and die, and vast populations are being subjected to sufferings and privations of war on a scale unprecedented in the history of the world, they are entitled to know for what cause or causes they are making the sacrifice.

"It is only the clearest, greatest, and justest of causes that can justify the continuance, even for one day, of this unspeakable agony of the Nation, and we ought to be able to state clearly and definitely not only the principles for which we are fighting but also their definite and concrete application to the war map of the world.

"We have arrived at the most critical hour in this terrible conflict, and before any Government takes a fateful decision as to the conditions under which it ought either to terminate or to continue the struggle, it ought to be satisfied that the conscience of the Nation is behind these conditions, for nothing else can sustain the effort which is necessary to achieve a righteous end to this war.

CONSULTED MANY LEADERS.

"I have, therefore, during the last few days, taken special pains to ascertain the view and attitude of representative men of all sections of thought and opinion in the country.

"Last week I had the privilege not merely of perusing the declared war aims of the Labor Party, but also of discussing in detail with labor leaders the meaning and intention of that declaration.

"I have also had opportunity of discussing this same momentous question with Mr. Asquith and Viscount Grey. Had it not been that the Nationalist leaders are in Ireland, engaged in endeavoring to solve the tangled problem of Irish self-government, I should have been happy to exchange views with them; but Mr. Redmond, speaking on their behalf, has, with his usual lucidity and force, in many of his speeches made clear what his ideas are as to the object and purpose of the war. I have also had an opportunity of consulting certain representatives of the great dominions over seas.

"I am glad to be able to say, as a result of all these discussions, that, although the Government are alone responsible for the actual language I purpose using, there is a national agreement as to the character and purpose of our war aims and peace conditions, and in what I say to you to-day, and through you to the world, I can venture to claim that I am speaking not merely the mind of the Government but of the nation and of the Empire as a whole.

ENTERED WAR IN SELF-DEFENSE.

"We may begin by clearing away some misunderstandings and stating what we are not fighting for.

"We are not fighting a war of aggression against the German people. Their leaders have persuaded them that they are fighting a war of self-defense against a league of rival nations bent on the destruction of Germany. That is not so. The destruction or disruption of Germany or the German people has never been a war aim with us from the first day of this war to this day.

"Most reluctantly, and, indeed, quite unprepared for the dreadful ordeal, we were forced to join in this war in self-defense of the violated public law of Europe and in vindication of the most solemn treaty obligations on which the public system of Europe rested and on which Germany had ruthlessly trampled in her invasion of Belgium.

"We had to join in the struggle or stand aside and see Europe go under and brute force triumph over public right and international justice.

AS TO DEMOCRACY IN GERMANY.

"It was only the realization of that dreadful alternative that forced the British people into the war, and from that original attitude they have never swerved. They have never aimed at a break-up of the German people or the disintegration of their State or country. Germany has occupied a great position in the world. It is not our wish or intention to question or destroy that position for the future, but rather to turn her aside from hopes and schemes of military domination.

"Nor did we enter this war merely to alter or destroy the imperial constitution of Germany, much as we consider that military and autocratic constitution a dangerous anachronism in the twentieth century. Our point of view is that the adoption of a really democratic constitution by Germany would be the most convincing evidence that her old spirit of military domination has, indeed, died in this war and would make it much easier for us to conclude a broad, democratic peace with her. But, after all, that is a question for the German people to decide.

"We are not fighting to destroy Austria-Hungary or to deprive Turkey of its capital or the rich lands of Asia Minor and Thrace which are predominantly Turkish.

"It is now more than a year since the President of the United States, then neutral, addressed to the belligerents a suggestion that each side should state clearly the aims for which they were fighting.

"We and our allies responded by the note of January 10, 1917. To the President's appeal the central empires made no reply and in spite of many adjurations, both from their opponents and from neutrals, they have maintained complete silence as to the objects for which they are fighting. Even on so crucial a matter as their intention with regard to Belgium

they have uniformly declined to give any trustworthy indication.

TEUTON TERMS VAGUE.

"On December 25 last, however, Count Czernin, speaking on behalf of Austria-Hungary and her allies, did make a pronouncement of a kind. It is, indeed, deplorably vague.

"We are told that it is not the intention of the central powers to appropriate forcibly any occupied territories or to rob of its independence any nation which has lost its political independence during the war.

"It is obvious that almost any scheme of conquest and annexation could be perpetrated within the literal interpretation of such a pledge. Does it mean that Belgium, Serbia, Montenegro, and Roumania will be as independent and as free to direct their own destinies as Germany or any other nation? Or does it mean that all manner of interferences and restrictions, political and economical, incompatible with the status and dignity of free and self-respecting people, are to be imposed? If this is the intention, then there will be one kind of independence for the great nation and an inferior kind of independence for the small nation.

"We must know what is meant, for equality of right among the nations, small as well as great, is one of the fundamental issues this country and her allies are fighting to establish in this war.

"Reparation for the wanton damage inflicted on Belgian towns and villages and their inhabitants is emphatically repudiated. The rest of the so-called offer of the central powers is almost entirely a refusal of all concessions. All suggestions about the autonomy of subject nationalities are ruled out of the peace terms altogether. The question whether any form of self-government is to be given to the Arabs, Armenians, or Syrians is declared to be entirely a matter for the Sublime Porte. A pious wish for the protection of minorities, 'in so far as it is practically realizable,' is the nearest approach to liberty which the central statesmen venture to make.

"On one point only are they perfectly clear and definite. Under no circumstances will the German demand for the restoration of the whole of Germany's colonies be departed from. All principles of self-determination, or, as our earlier phrase goes, government by the consent of governed, here vanish into thin air.

NOT A FOUNDATION FOR PEACE.

"It is impossible to believe that any edifice of permanent peace could be erected on such a foundation as this. Mere lip service to the formula of no annexations and no indemnities or the right of self-determination is useless. Before any negotiations can even be begun the central powers must realize the essential facts of the situation.

"The days of the treaty of Vienna are long past. We can no longer submit the future of European civilization to the arbitrary decisions of a few negotiators, trying to secure by chicanery or persuasion the interests of this or that dynasty or nation.

"The settlement of the new Europe must be based on such grounds of reason and justice as will give some promise of stability. Therefore, it is that we feel that government with the consent of the governed must be the basis of any territorial settlement in this war. For that reason also, unless treaties be upheld, unless every nation is prepared, at whatever sacrifices, to honor the national signature, it is obvious that no treaty of peace can be worth the paper on which it is written.

BELGIAN RESTORATION FIRST.

"The first requirement, therefore, always put forward by the British Government and their allies has been the complete restoration, political, territorial, and economic, of independence of Belgium, and such reparation as can be made for the devastation of its towns and Provinces.

"This is no demand for a war indemnity, such as that imposed on France by Germany in 1871. It is not an attempt to shift the cost of warlike operations from one belligerent to another, which may or may not be defensible. It is no more and no less than an insistence that before there can be any hope for stable peace, this great breach of the public law of Europe must be repudiated and so far as possible repaired.

"Reparation means recognition. Unless international right is recognized by insistence on payment for injury done in defiance of its canons it can never be a reality.

"Next comes the restoration of Serbia, Montenegro, and the occupied parts of France, Italy, and Roumania. The complete withdrawal of the allied (Teutonic) armies and the reparation for injustice done is a fundamental condition of permanent peace.

MUST RECONSIDER WRONG OF 1871.

"We mean to stand by the French democracy to the death in the demand they make for a reconsideration of the great wrong of 1871, when without any regard to the wishes of the popula-

tion two French Provinces were torn from the side of France and incorporated in the German Empire.

"This sore has poisoned the peace of Europe for half a century, and until it is cured healthy conditions will not have been restored. There can be no better illustration of the folly and wickedness of using a transient military success to violate national right.

"I will not attempt to deal with the question of the Russian territories now in German occupation. The Russian policy since the revolution has passed so rapidly through so many phases that it is difficult to speak without some suspension of judgment as to what the situation will be when the final terms of European peace come to be discussed.

"Russia accepted war with all its horrors because, true to her traditional guardianship of the weaker communities of her race, she stepped in to protect Serbia from a plot against her independence. It is this honorable sacrifice which not merely brought Russia into the war, but France as well.

"France, true to the conditions of her treaty with Russia, stood by her ally in a quarrel which was not her own. Her chivalrous respect for her treaty led to the wanton invasion of Belgium, and the treaty obligations of Great Britain to that little land brought us into the war.

"The present rulers of Russia are now engaged, without any reference to the countries whom Russia brought into the war, in separate negotiations with their common enemy. I am indulging in no reproaches. I am merely stating the facts with a view to making it clear why Great Britain can not be held accountable for decisions taken in her absence and concerning which she has not been consulted or her aid invoked.

PRUSSIAN DESIGNS UPON RUSSIA.

"No one who knows Prussia and her designs upon Russia can for a moment doubt her ultimate intention. Whatever phrases she may use to delude Russia, she does not mean to surrender one of the fair Provinces or cities of Russia now occupied by her forces. Under one name or another (and the name hardly matters) those Russian Provinces will henceforth be in reality a part of the dominions of Prussia. They will be ruled by the Prussian sword in the interests of the Prussian autocracy, and the rest of the people of Russia will be partly enticed by specious phrases and partly bullied by the threat of continued war against an impotent army into a condition of complete economic and ultimate political enslavement to Germany.

"We all deplore the prospect. The democracy of this country mean to stand to the last by the democracies of France and Italy and all our other allies. We shall be proud to stand side by side by the new democracy of Russia. So will America and so will France and Italy. But if the present rulers of Russia take action which is independent of their allies we have no means of intervening to arrest the catastrophe which is assuredly befalling their country. Russia can only be saved by her own people.

"We believe, however, that an independent Poland, comprising all those genuinely Polish elements who desire to form a part of it, is an urgent necessity for the stability of western Europe.

"Similarly, though we agree with President Wilson that a break-up of Austria-Hungary is no part of our war aims, we feel that unless genuine self-government on true democratic principles is granted to those Austro-Hungarian nationalities who have long desired it, it is impossible to hope for a removal of those causes of unrest in that part of Europe which have so long threatened the general peace.

"On the same grounds we regard as vital the satisfaction of the legitimate claims of the Italians for union with those of their own race and tongue. We also mean to press that justice be done to the men of Roumanian blood and speech in their legitimate aspirations. If these conditions are fulfilled, Austria-Hungary would become a power whose strength would conduce to the permanent peace and freedom of Europe instead of being merely an instrument to the pernicious military autocracy of Prussia that uses the resources of its allies for the furtherance of its own sinister purposes.

WOULD LET TURKS KEEP CONSTANTINOPLE.

"Outside of Europe we believe that the same principles should be applied. While we do not challenge the maintenance of the Turkish Empire in the homelands of the Turkish race with its capital at Constantinople, the passage between the Mediterranean and the Black Sea being internationalized and neutralized, Arabia, Armenia, Mesopotamia, Syria, and Palestine are, in our judgment, entitled to a recognition of their separate national conditions.

"What the exact form of that recognition in each particular case should be need not here be discussed beyond stating that it would be impossible to restore to their former sovereignty the territories to which I have already referred.

"Much has been said about the arrangements we have entered into with our allies on this and on other subjects. I can only say that as the new circumstances, like the Russian collapse and the separate negotiations, have changed the conditions under which those arrangements were made, we are, and always have been, perfectly ready to discuss them with our allies.

COLONIES TO SETTLE OWN FUTURE.

"With regard to the German colonies, I have repeatedly declared that they are held at the disposal of a conference whose decision must have primary regard to the wishes and interests of the native inhabitants of such colonies. None of those territories are inhabited by Europeans. The governing consideration, therefore, must be that the inhabitants should be placed under the control of an administration acceptable to themselves, one of whose main purposes will be to prevent their exploitation for the benefit of European capitalists or Governments.

"The natives live in their various tribal organizations under chiefs and councils who are competent to consult and speak for their tribes and members and thus to represent their wishes and interests in regard to their disposal. The general principle of national self-determination is, therefore, as applicable in their cases as in those of the occupied European territories.

"The German declaration that the natives of the German colonies have, through their military fidelity in war, shown their attachment and resolve under all circumstances to remain with Germany is applicable not to the German colonies generally but only to one of them, and in that case, German East Africa, the German authorities secured the attachment not of the native population as a whole, which is and remains profoundly anti-German, but only of a small warlike class, from whom their askaris, or soldiers, were selected. These they attached to themselves by conferring on them a highly privileged position, as against the bulk of the native population, which enabled these askaris to assume a lordly and oppressive superiority over the rest of the natives.

"By this and other means they secured the attachments of a very small and insignificant minority, whose interests were directly opposed to those of the rest of the population and for whom they have no right to speak. The German treatment of the native populations in their colonies has been such as amply to justify their fear of submitting the future of those colonies to the wishes of the natives themselves.

"Finally there must be reparation for the injuries done in violation of international law. The peace conference must not forget our seamen and the services they have rendered to and the outrages they have suffered for the common cause of freedom.

MUST HAVE PERMANENT SETTLEMENT.

"One omission we notice in the proposal of the central powers which seems to us especially regrettable. It is desirable and essential that the settlement after this war shall be one which does not in itself bear the seed of future war. But that is not enough. However wisely and well we may make territorial and other arrangements there will still be many subjects of international controversy. Some, indeed, are inevitable.

"Economic conditions at the end of the war will be in the highest degree difficult owing to the diversion of human effort to warlike pursuits. There must follow a world shortage of raw materials, which will increase the longer the war lasts, and it is inevitable that those countries which have control of raw materials will desire to help themselves and their friends first. Apart from this, whatever settlement is made will be suitable only to the circumstances under which it is made, and as those circumstances change, changes in the settlement will be called for.

"So long as the possibility of a dispute between nations continues—that is to say, so long as men and women are dominated by impassioned ambition and war is the only means of settling a dispute—all nations must live under a burden, not only of having from time to time to engage in it, but of being compelled to prepare for its possible outbreak.

"The crushing weight of modern armaments, the increasing evil of compulsory military service, the vast waste of wealth and effort involved in warlike preparation—these are blots on our civilization, of which every thinking individual must be ashamed. For these and other similar reasons we are confident that a great attempt must be made to establish by some international organization an alternative to war as a means of settling international disputes.

"After all, war is a relic of barbarism, and just as law has succeeded violence as a means of settling disputes between individuals so we believe that it is destined ultimately to take the place of war in the settlement of controversies between nations.

"If, then, we are asked what we are fighting for, we reply, as we have often replied, We are fighting for a just and a lasting peace, and we believe that before permanent peace can be hoped for three conditions must be fulfilled: First, the sanctity of treaties must be reestablished; secondly, a territorial settlement must be secured, based on the right of self-determination or the consent of the governed; and, lastly, we must seek by the creation of some international organization to limit the burden of armaments and diminish the probability of war. On these conditions its peoples are prepared to make even greater sacrifices than those they have yet endured."

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. ALBERT F. POLK,

OF DELAWARE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. POLK. Mr. Speaker, by request I desire to present the following resolutions:

Resolved, That this meeting call upon President Wilson and the Democratic administration to give effective support to the national suffrage amendment and secure its passage in this session of Congress.

Resolved, That this meeting call upon the Congress of the United States to pass at once the Federal suffrage amendment.

Resolved, That this resolution be sent to the President; the Speaker, Hon. CHAMP CLARK; Senator THOMAS S. MARTIN, Democratic leader of the Senate; Hon. CLAUDE KITCHIN, leader of the House of Representatives; Hon. FREDERICK H. GILLET, Republican leader; and to our Senators and Representative.

FLORENCE BAYARD HILLES,
Chairman.

Mass meeting January 6, 1918, Majestic Theater, Wilmington, Del.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. LUTHER W. MOTT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. MOTT. Mr. Speaker, to-day in the first-line trenches in France, on many seas, and in the air American men are striving to save the world for democracy. Here in the House of Representatives we are soon to vote as to whether we shall have democracy in all the States of the Union or merely in scattered portions. There has been no time in the history of the country since 1878, when this amendment was first introduced in Congress, that it has been as appropriate and suitable to vote upon it as it is to-day, when we are involved in the greatest war in history. Before this war it was said that women could not render service to the country in time of war, but they have amply disproved this since the war began. They are sharing the burdens of the war in our country and in every other country. When the Treasury Department formulated its plan for selling billions of bonds, a woman's national liberty loan committee was at once created, and did splendid work, reaching through its branches every State and almost every community.

The Food Administration says "Food will win the war," and the country must depend almost entirely upon women to save the wheat, the meat, and the sugar to feed the starving millions of Europe. We expect any day to read in sorrow long lists of men wounded somewhere in Europe. It will be on women we shall depend to nurse these soldiers and to save their lives for future usefulness. Not long ago we gave a hundred million dollars and more to the Red Cross. This great sum was largely raised by women, and will be spent largely for what we are accustomed to think of as women's work. It is the wives and mothers of our brave fighting men, who brought them up, who have been most concerned over their education, who have cared

for them in sickness, and who will look after their children and homes while they are away upholding the national honor. Shall we not say that these things constitute military service? Are they not as vital and necessary as the actual fighting in the trenches or on the ships? And if the time should come—which God forbid—that the women of Germany and its allies should actually take to arms and join the fighting line, as some of the women of Russia have done, I have no doubt but that American women would stand ready to take on this added burden of war.

New York State has responded to every call that the war has made upon us. We furnished the Federal Government with one of the best trained divisions of the National Guard in the service, sent out a third of the Naval Militia forces of the entire country, and enlisted many more than our share in the Regular Army and Navy. We subscribed to millions more than our quota of the two Liberty Loans and we shall pay what many think to be an unduly large proportion of the billions to be raised by taxes. No man can say that the State of New York is lacking in patriotism.

Two months ago the State of New York voted on the question of woman suffrage and it was carried by a majority of over 100,000, notwithstanding the fact that only two years before it had been defeated by 195,000, a change that can be explained by nothing save the fact that the war has brought about a tremendous wave of feeling that as we are calling upon the women to share every responsibility and burden of the Government, we must no longer deny them a share in the choice of officials by whom their Government and ours was to be administered. I know that it has been said by a few misguided women, largely society leaders, that this change in sentiment was due to the pro-German and Socialist vote in the city of New York. No more absurd statement could be made, and the figures show it. Seven hundred thousand men in the State of New York voted for woman suffrage last fall. This is 150,000 more votes than were ever cast in New York State for any amendment offered to the Constitution of the United States. In the city of New York more than 351,000 votes were cast for suffrage, while the Socialist candidate for mayor polled only 145,000. When the pro-German influence was said to have swung the day for woman suffrage, the votes of the soldiers and sailors had not been counted. If pro-Germanism and socialism were the handmaidens of woman suffrage, our soldier boys would have discovered it fast enough. But the boys in the trenches and camps knew how the women felt about the war and how they were working for democracy, and the men in uniform from Greater New York voted 2 to 1 for woman suffrage—to be exact, 17,353 for to 8,858 against. Our soldiers did not or could not all vote, but it is fair to say that the soldiers of the whole country would vote at least as strongly in favor of woman suffrage as did those from the city of New York, particularly when you consider that the anti charge, by inference at least, that the great metropolis is the headquarters of pro-Germanism and socialism. We are taking a million men of voting age out of their homes and many of them will not be able to vote. Is it not worth while to replace their vote by those of a million women of their families who will be just as much interested as the soldier in backing every bit of legislation and every official who is doing his duty trying to prosecute the war to victory? When these women, who unfortunately and perhaps without their knowledge or consent, are lined up in opposition to suffrage with the crooked bosses and politicians, the labor interests and every vicious influence in American life attribute the suffrage victory in New York to pro-Germanism and socialism, do they mean to assert that President Wilson, Theodore Roosevelt, Charles E. Hughes, and the distinguished Speaker of this House all advocated woman suffrage because they thought it would spread pacifism and bring us peace without honor, or did these men agree with the great majority of New York voters in feeling that votes for women would help bring a speedy victory with honor and a lasting peace among nations?

Even the bitterest opponents of woman suffrage say that its coming is inevitable. They advocate the State method as delaying the final result and as making the women of the various States spend more money, time, and energy in securing what is due them. The platform of every political party in the land in 1916 favored woman suffrage. The great leaders of all parties were for it. No political party declared against Federal action. Since 1916 the trend of popular sentiment has been all for woman suffrage. The complete reversal of the vote in conservative New York showed the general feeling throughout the United States. Within two years Lloyd George has pledged the vote to the British women, and it is expected that the King will sign the bill within six weeks. The Parliament of the

Dominion of Canada has given the vote to women who are mothers, wives, widows, and sisters of soldiers and the premier has pledged full suffrage for all women. A committee of the French Chamber of Deputies has brought in a favorable report on woman suffrage. The premier of Italy has pledged municipal suffrage for women. All the Scandinavian countries have woman suffrage, excepting Sweden, and there the King has recommended it. The King of Belgium, one of the greatest figures of the war, has said that if his kingdom is restored one of his first acts will be to see that women are enfranchised. Even in Germany they have caught the drift of the times and woman suffrage has recently been debated in the Reichstag, so that all over the world the war has brought the claims of women to a share in the responsibilities of government to successful recognition.

The men and women of the State of New York believe the women of other States are as much entitled to votes as are the women of New York. More than a million of our women signed petitions asking that the vote in the State should be given them. These million women, now voters, and the 700,000 men who carried woman suffrage last November favor the passage of the Federal amendment and ask the Congress of the United States that while it strives to save the world for democracy it should not forget to save and secure democracy here at home in the United States.

Federal Farm Loans.

EXTENSION OF REMARKS OF HON. JOHN T. WATKINS, OF LOUISIANA, IN THE HOUSE OF REPRESENTATIVES, Friday, January 4, 1918.

Mr. WATKINS. Mr. Speaker, this amendment to the Federal farm loan act, which became a law on July 17, 1916, is timely and well merited. The amendment provides that the Secretary of the Treasury be authorized to purchase \$100,000,000 worth of farm-loan bonds during the fiscal year ending June 30, 1918, to which will be added a further amount of \$100,000,000 for 1919, under the House bill. At the time the original law was enacted it was an experiment, and we were not involved in war. The enormous amounts of money which have been applied for by the farmers of the country was not contemplated when the law was passed, nor was it contemplated that the demands for the products of the farm would be so great as they now are as a result of the war.

As a citizen of Louisiana, I have a special interest in having this amendment adopted. Under the law it is made the duty of the Farm Loan Commissioner to make examination of the laws of every State of the United States and inform the Federal Farm Loan Board as to whether the laws are such as to prevent the loans from bearing as a first mortgage on the real estate offered as security. Also, that if the laws of any State were such as to prevent first mortgages from operating as a first lien and privilege upon the real estate, then loans under this law should not be made in that State. At that time the laws of Louisiana provided that a widow in necessitous circumstances should be paid \$1,000 ahead of all ordinary mortgages. Hence, the people of Louisiana were barred. An extra session of the State legislature was called by the governor, and the law was so changed as to permit the loans made under the Federal farm loan act to take precedence over the widow's \$1,000. In the meantime the available funds had become so depleted as to prevent the farmers of Louisiana from availing themselves of the privileges afforded by the act. Doubtless this happened in other States. As an original advocate of the Federal farm loan law, being satisfied of its beneficent effects, and having assured my people to this effect, I feel that it would be a rank injustice for them to be deprived of participating in the benefit to be derived from the law when so large a part of the citizenship of this common country of ours has partaken of its benefits.

The object of this amendment is not to take \$100,000,000 or \$200,000,000 out of the Treasury of the United States, but it is to float perfectly valid bonds at a higher rate of interest than Government bonds carry, backed up by first mortgages on real estate worth double the value of the amount called for in the mortgages.

Of course there are those who object to the law. It has had a tendency to lower the rates of interest all over the country,

and conflicts with the interests of those who were loaning their money at high rates of interest.

But we must remember that prior to the enactment of this law the farmer could not go to any national bank and borrow money by giving his land as a security. Besides, a 30, 60, or 90 day loan which he could procure from a national bank by giving personal security would not even permit him to utilize the crops on his farm, as a rule, as it usually takes a year to make a crop. The long time in which he has to pay under this law, and the low rate of interest, makes it almost certain that the mortgage will be paid at maturity, while, at the same time, the landowner will be enabled to improve the land, which is worth double the mortgage.

But those opposed to this law say it is unconstitutional and condemn it as a species of paternalism.

The gentleman from Kansas [Mr. CAMPBELL] in speaking about this amendment stated, referring to the Constitution of the United States, that apparently that great charter had been lost.

The gentleman from Pennsylvania [Mr. McFADDEN] stated that "beggars should never play the rôle of philanthropists." He also stated that if this precedent is established all the schemers who favor Government aid will get into the crib, and there will be no such thing as being able to satisfy this class once the door is open. The gentleman from Pennsylvania [Mr. MOORE] undertook to berate the cotton farmer of the South, because he had paid so small a proportionate part of the war tax. I took a note of these remarks for the purpose of commenting on them. The gentleman from Pennsylvania [Mr. MOORE] said that 4 States paid practically all of the income tax necessary to prosecute the war, naming New York, Pennsylvania, Massachusetts, and Illinois; that 44 States unload the burden of war taxes on these 4 States. He should reflect that the origin of the prosperity and accumulated wealth of these four States was the disastrous conflict which raged between the States, since which time the money barons of the North have reveled in luxury, while the people of the South have been struggling to recoup from the financial disasters which they sustained, resulting in the loss of billions of dollars in value, not to refer to the after consequences growing out of misgovernment and extravagant misrule during reconstruction time.

The passage of this amendment will go a long way toward enabling the cotton planter of the South to contribute more liberally in taxes and by raising commodities useful in the war.

Paternalism—unconstitutional—let us see. Within the last few months this Congress has voted billions of dollars to be loaned to foreign countries, known as our allies, for the purpose of enabling them to wage war against our common enemy. It was distinctly understood that this money was not to go abroad, but was to be deposited in this country and used in making purchases here. Has the gentleman considered what proportionate part of these billions has gone to build up the fortunes of those manufacturers who live in the four States which he mentions? Has his voice been heard decrying the paternalism or the want of constitutionality of these acts?

Let us cite a few instances where acts of Congress have been passed resulting in great benefit to the people in certain sections of the United States: When the gentleman from Pennsylvania [Mr. MOORE] and I came here in the Fifty-ninth Congress the National Government had not taken over the quarantine laws. On account of the epidemics of yellow fever in the South I joined with other Members from the South in procuring the passage of the national quarantine law. There has not been an epidemic of yellow fever since. The extermination by the Government of the gypsy moth, which infested the North, gave a precedent for various appropriations which have been made by Congress in the suppression of the Mexican cotton boll weevil and the cattle tick in the South, for which I have worked for years.

When this European war began the price of cotton dropped from 12 cents a pound to 6 cents. A few of us from the South got together, formulated plans, appointed a committee to confer with the President and the Secretary of the Treasury. The Secretary of the Treasury put \$50,000,000 in the banks of the country upon which the farmers could procure loans at a lower rate of interest, using cotton as security. We did not hear this denounced as "paternalism." Cotton advanced from 6 cents a pound to 30 cents and hundreds of millions of dollars were saved to the farmers of this country.

I do not recall that any of the gentlemen cried out "Paternalism"—"Unconstitutional," when we succeeded in procuring the passage of the law providing for the expenditure of \$85,000,000 for the construction of good roads. We labored hard for the passage of a good-roads law before its passage. It has

been a blessing to this country. The parcel-post system, added to the rural free delivery of mails, which are boons to the farmers, had done much to encourage the building of good roads; but the passage of the law by Congress settled the question of the right of the Government to contribute to the betterment of the conditions of the people and spend money for those things which are conducive to their comfort and happiness.

When the 8-hour day law was up it was derided as a species of paternalism and branded as unconstitutional. The passage of the law preserved the peace of the country and is still intact upon the statute books. I did not think it was unconstitutional when I voted for it, and I did not think the law exempting farmers and labor unions from the operation of the antitrust laws was unconstitutional when I voted for it, nor do I believe the farm-loan law is unconstitutional, or the anti-injunction law, or the workmen's compensation act, all of which I supported.

Since I have been a Member of this House I have advocated the passage of many similar laws, as well as other laws demanded by the people for the betterment of their condition, such as the election of United States Senators by direct vote of the people, the pure-food law, the law against the white-slave traffic, prohibition and all other moral laws, and against all those laws conducive to vice, immorality, and against all laws favoring combinations in restraint of trade and fostering monopolies, as well as all the laws increasing the salaries of the Members of Congress or their secretaries. Hence, I hope I can not be classed as among those alluded to by the gentleman from Pennsylvania [Mr. McFadden] as the schemers who get into the Government crib.

It is hardly plausible that a man who has stood up for those laws benefiting the poor and has stood out against the powerful monopolies represented by shrewd lobbyists would have a sinister motive in endeavoring to make stronger and more operative a law which is already on the statute books.

I heartily join with my colleague in the view that every citizen should pay his proportionate part of the income tax and all species of war tax. I voted for the income-tax law to begin with, have always gladly paid my income tax, and, although a Member of Congress does not have an excess profit, still I voted for them to pay this species of income tax when the amendment to the revenue bill was up before the House.

In referring to the various measures which I have supported during my membership of this body. I ask leave to print, revise, and extend my remarks in the Record so as to insert a table showing a list of those Members of Congress who have served with me in Congress since I first became a Member, nearly all of them supporting the legislative policies to which I have referred.

No prop is needed to bolster up my statement that I have invariably stood by the interests of the agriculturists in my district. As early in my term of service as 1908 I made a speech on agriculture and trusts in which I stated:

Agriculture is the basis for all other industries; as the ebb and flow of the tide in the ocean, so other industries rise and fall with the prosperity and the adversity of the farmer.

The farmers of America not only feed and clothe the people of this country, but they supply one-third of the grain and three-fourths of the cotton used by the entire world. After feeding and clothing this country the farmers of America furnish annually over \$800,000,000 worth of their products to foreign customers.

In this country alone over 2,000,000 people are dependent upon manufacturing for a living. If some great calamity should prevent the farmers from making a crop these people would be overwhelmed; woe and want would go hand in hand; misery and destitution would stalk in the land.

If the boll weevil should destroy the entire cotton crop of the country, hundreds of thousands of manufacturing people in this country and in Europe would be thrown out of employment and their hungry throats would send up a wail of lamentation for bread.

For this fiscal year there has been appropriated by Congress \$250,000 to circumvent the ravages of the boll weevil, \$150,000 to destroy the cattle tick, about \$50,000,000 for the benefit of the rivers and harbors of the country, in all of which measures the farmers are directly interested. The first agricultural appropriation bills passed by Congress carried \$1,000 annually. Now, these bills aggregate over \$7,000,000 annually.

Not only do I favor these increased appropriations for the benefit of the farming class of people, but I want millions added to the list for good roads, signal-service reports, food inspection, and I want to see the Post Office appropriation bills provide for the establishment of rural free-delivery routes all over the country.

I stood with the farmers and laboring people in their demands for the railroad rate bill which prevented discrimination in freight rates and prevented officers from riding on passes; the bill which provided for the investigation of the New York and the New Orleans cotton exchanges, with a view of checking the gambling in cotton futures; the pure-food law; the denatured alcohol bill, which was intended to afford cheaper light and fuel and lessen the evil of the Standard Oil Co.'s iniquitous monopoly; for the election of United States Senators by a direct vote of the people; and the bill preventing corporations from contributing campaign funds.

The great men of a nation usually come from the humble fireside, the rustic grove, the shady hillside, the murmuring brook, the waving grain, and the loamy furrow. Here, there is no pollution, no intrigue, no infidelity; but men and women are the imprints of the handiwork of the God of Nature.

Three-fifths of the expenses of the Government are paid by agriculture. There are ninety-five laboring men in this country to every five capitalists—there is no class of laborers which is not organized. The great mass of the people are pure in mind and heart, and by properly cooperating they can control the destinies of this Nation. No one class of honest citizens should be arrayed against the other—no legitimate enterprise should antagonize any other, but each should work for the good of the other and all for the welfare of the whole—in this way alone can our happiest dream be realized.

When we want to find purity in its pristine beauty, we go to the country. Charity, in all its generous impulses, abounds there. There, each man who lives a correct life is the equal of all his neighbors. There are no castes, no social scale, no high fliers or degraded debauchees. A man is judged for what he is worth. Each joins in the sorrows of the others, and in sickness, trials, or troubles each man leans upon the strong arm of his neighbor, and a sympathetic chord is touched in each manly heart.

Give us the purity of the country hearthstone in our homes, in our courts, in our legislative halls, in our executive chairs, and our Government will go down, resounding through all the ages as the grandest monument ever erected to the liberties of mankind. Then let the manipulators in stocks and bonds and the gamblers in high finance endeavor to bring on a financial crash the people who own their homes and those pursuing the peaceful avocations of life will bid defiance, and will rejoice at their emancipation from the thralldom of environments like those with which they are now surrounded. We see the dawn of a brighter day in the east, and may God speed the time when the effulgent rays of a noonday sun may beam in their brilliancy over the destinies of a people redeemed from avarice and restored to their love for all that is noble, pure, and good.

List of those who were Members of the House of Representatives when I became a Member in the Fifty-ninth Congress and who are still serving either in the House or the Senate:

NOW SERVING IN THE HOUSE.

J. G. Cannon, first entered Congress December 1, 1873.
 William A. Jones, entered Congress March 4, 1891.
 H. W. Cooper, entered Congress March 4, 1893.
 F. H. Gillett, entered Congress March 4, 1893.
 Champ Clark, first entered Congress August 7, 1893.
 J. F. C. Talbott, first entered Congress March 18, 1879.
 Thomas S. Butler, entered Congress March 4, 1897.
 William S. Greene, entered Congress March 4, 1897.
 Edward L. Hamilton, entered Congress March 4, 1897.
 James R. Mann, entered Congress March 4, 1897.
 John A. Moon, chairman Committee on the Post Office and Post Roads, entered Congress March 4, 1897.
 T. W. Sims, chairman Committee on Interstate and Foreign Commerce, entered Congress March 4, 1897.
 James L. Slayden, chairman Committee on the Library, entered Congress March 4, 1897.
 George E. Foss, first entered Congress December 2, 1895.
 F. W. Mondell, first entered Congress December 2, 1895.
 Richard W. Parker, first entered Congress December 2, 1895.
 John L. Burnett, chairman Committee on Immigration and Naturalization, entered Congress March 4, 1899.
 John J. Esch, entered Congress March 4, 1899.
 Joseph W. Fordney, entered Congress March 4, 1899.
 Gilbert N. Haugen, entered Congress March 4, 1899.
 W. W. Rucker, entered Congress March 4, 1899.
 D. W. Shackelford, chairman Committee on Roads, entered Congress August 29, 1899.
 John H. Small, chairman Committee on Rivers and Harbors, entered Congress March 4, 1899.
 E. S. Candler, entered Congress March 4, 1901.
 Henry D. Flood, chairman Committee on Foreign Affairs, entered Congress March 4, 1901.
 Carter Glass, chairman Committee on Banking and Currency, entered Congress November 4, 1902.
 Claude Kitchin, chairman Committee on Ways and Means, entered Congress March 4, 1901.
 A. S. Lever, chairman Committee on Agriculture, entered Congress November 5, 1901.
 L. P. Padgett, chairman Committee on Naval Affairs, entered Congress March 4, 1901.
 Edward W. Pou, chairman Committee on Claims, entered Congress March 4, 1901.
 James H. Davidson, first entered Congress March 15, 1897.
 Julius Kahn, first entered Congress December 4, 1899.
 P. P. Campbell, entered Congress March 4, 1903.
 Charles R. Davis, entered Congress March 4, 1903.
 John N. Garner, entered Congress March 4, 1903.
 A. W. Gregg, chairman Committee on War Claims, entered Congress March 4, 1903.
 J. Thomas Hefflin, entered Congress May 19, 1904.
 B. G. Humphreys, chairman Committee on Flood Control, entered Congress March 4, 1903.
 M. P. Kinkaid, entered Congress March 4, 1903.
 H. T. Rainey, entered Congress March 4, 1903.
 Swager Sherley, chairman Committee on Appropriations, entered Congress March 4, 1903.
 Halvor Steenerson, entered Congress March 4, 1903.
 A. J. Volstead, entered Congress March 4, 1903.

E. Y. Webb, chairman Committee on the Judiciary, entered Congress March 4, 1903.

Daniel J. Riordan, first entered Congress December 4, 1899.

William A. Rodenberg, first entered Congress December 4, 1899.

Thomas M. Bell, entered Congress March 4, 1905.

Frank Clark, chairman Committee on Public Buildings and Grounds, entered Congress March 4, 1905.

Lincoln Dixon, entered Congress March 4, 1905.

F. J. Garrett, entered Congress March 4, 1905.

E. A. Hayes, entered Congress March 4, 1905.

W. C. Houston, chairman Committee on Territories, entered Congress March 4, 1905.

Gordon Lee, entered Congress March 4, 1905.

Martin B. Madden, entered Congress March 4, 1905.

J. Hampton Moore, entered Congress March 4, 1905.

J. T. Watkins, chairman Committee on Revision of the Laws, entered Congress March 4, 1905.

Charles F. Booher, first entered Congress December 5, 1887.

Charles E. Fuller, first entered Congress November 9, 1903.

C. W. Hamlin, chairman Committee on Expenditures in the State Department, first entered Congress November 9, 1903.

Nicholas Longworth, first entered Congress November 9, 1903.

Isaac R. Sherwood, chairman Committee on Invalid Pensions, first entered Congress December 1, 1873.

W. H. Stafford, first entered Congress November 9, 1903.

John A. Sterling, first entered Congress November 9, 1903.

W. W. Wilson, first entered Congress November 9, 1903.

B. L. French, first entered Congress November 9, 1903.

W. B. McKinley, first entered Congress March 4, 1905.

Harry C. Woodyard, first entered Congress November 9, 1903.

SENATORS WHO WERE MEMBERS OF THE HOUSE IN 1905.

John H. Bankhead, entered Congress December 5, 1887.

Marcus A. Smith, entered Congress December 5, 1887.

Frank B. Brandegee, entered Congress December 5, 1892.

Charles Curtis, entered Congress August 7, 1893.

J. E. Ransdell, entered Congress December 4, 1899.

John W. Weeks, entered Congress December 4, 1905.

Charles E. Townsend, entered Congress November 9, 1903.

G. M. Hitchcock, entered Congress November 9, 1903.

William Hughes, entered Congress November 9, 1903.

A. J. Gronna, entered Congress December 4, 1905.

Claude A. Swanson, entered Congress December 2, 1895.

Miles Poindexter, entered Congress March 15, 1909.

O. W. Underwood, entered Congress December 2, 1895.

Joseph T. Robinson, entered Congress November 9, 1903.

Thomas W. Hardwick, entered Congress November 9, 1903.

Ollie M. James, entered Congress November 9, 1903.

R. F. Broussard, entered Congress March 15, 1897.

William Alden Smith, entered Congress December 6, 1895.

John Sharp Williams, entered Congress August 7, 1893.

George W. Norris, entered Congress November 9, 1903.

William M. Calder, entered Congress December 4, 1905.

Morris Sheppard, entered Congress in October, 1902.

Wesley L. Jones, entered Congress December 4, 1899.

Woman Suffrage.

EXTENSION OF REMARKS OF HON. THADDEUS H. CARAWAY, OF ARKANSAS, IN THE HOUSE OF REPRESENTATIVES, Thursday, January 10, 1918.

Mr. CARAWAY. Mr. Speaker, this amendment seeks to change the fundamental law of the land by taking from the States the right to abridge or deny the right to vote to anyone on account of sex. Upon us, the advocates of its adoption, there rests the duty to justify our advocacy of it by giving the reasons that impel us to this course. I shall attempt to do so. Aside from the inherent and fundamental right of all those who bear the burdens of government to be heard in their own behalf when it comes to imposing those burdens, there is at this time, as it seems to me, an infinitely weightier reason to grant suffrage to women. Within the last three years has taken place the greatest revolution the world has ever known. We are living in an age of transition. It is a new world; nothing that was is. New conditions, new duties, and necessarily new obligations are imposed upon us, and we hope and believe also new opportunities await us, and therefore new ideals should inspire us. Into this world, then, with its new problems, new difficulties which make

the strongest among us hesitate, should we be willing to thrust one-half of our race, and that the half which suffers most by changes and revolution, without granting to them to the fullest extent possible the power of self-defense?

Can we men, especially we men of the South, who boast of our chivalry and are so justly proud of the fineness of our women, compel them, these women to face these new conditions, bear these new burdens unfortified and unable to make their wishes heard and their rights respected? We can not, and we will not do this thing. We will deny to her, our sister, no rights and keep from her no advantages which will better enable her to meet the new conditions and to make her place secure in this new world. It has been said that the women of the South are not asking the vote. Is it not characteristic of our Southern women to refuse to beg for that which should be granted to her without her asking and to bear cheerfully such injustices as may be inflicted upon her? Is she to suffer by reason of the fact that she possesses these very attributes which, in our minds, make her such a splendid woman? If not, then does not it all the more rest upon us, as sons of such women, to be ready and willing to do her justice before she asks? Can we afford to be moved and actuated by our prejudices in dealing with the rights of such women? To answer "yes" would be to deny that we are worthy sons of our mothers. I know we will not do it. Then this being true, the question is, Will the adoption of this resolution be of advantage to the women and enable them better to find and keep their places amid the new conditions that confront us? Or would it be better to confine to one sex—the men—the privileges and opportunities to build the new world from the wreck of the old? Have we succeeded so well in the past and is justice so universal and rights so undenied that we can answer this question in the affirmative? Is want, sorrow, and strife no more? If we have banished all these wrongs from amongst men and liberty and justice is upon its throne we can afford to deny this appeal of women for a place in the sun and a right to help readjust the world.

If this is not true, then, again, I ask, "Can we afford to thrust that half of our population, unarmed for self-defense, into these new conditions and new struggles that await us?" Is the right to vote an advantage and a safeguard? Is it a weapon of offense and defense? To ask that question is to answer it. The very fact that men upon this floor are struggling to keep for themselves the exclusive right to make and administer the law is the answer. Men do not fight for a privilege unless that privilege grants an advantage. They do not seek to keep an advantage unless it affords them a superior vantage point from which to fight. Therefore whenever we contest with women the right to be heard in the selection of those who make and enforce the law we admit that this right is a valuable one and that we are unwilling to engage in a contest on equal terms with her. This conclusion is inevitable, and therefore it seems to me unthinkable that any man should be willing to deny to his sister, who must engage in a contest with him, the right and advantage of being equally armed and equally fortified to successfully wage that fight. I for one repudiate the insinuation and am unwilling to believe that others are less generous than myself.

Let Us Have Equality in Fact—Reason and Justice Alike Demand That We Give to Woman Equality in Fact and Not Be Content With the Theory.

EXTENSION OF REMARKS OF HON. GUY T. HELVERING, OF KANSAS, IN THE HOUSE OF REPRESENTATIVES, Thursday, January 10, 1918.

Mr. HELVERING. Mr. Speaker, it is not at all likely that any words spoken on this floor to-day will influence those who will decide the question before us; neither are they likely to alter a single vote. However, this debate will have its value, for it will give to many the opportunity to give us information as to their experience in the States where equal suffrage has been weighed in the balance, and that is what we most need. We have had theory in plenty, mainly from those who believe that they can see ahead innumerable evils which are bound to come in case woman is given the ballot. Theory undoubtedly has its place, and it is a most useful one, but after all theory can not prevail when it is brought in conflict with the actual truth, and

that is the case when we investigate as to what has happened where equal suffrage has been tried and compare it with the theories of those who detail to us what may happen in the States where it has not yet been tried and where they hope it never will be tried.

WHAT KANSAS HAS LEARNED.

Kansas is one of the 12 States which has unhampered equal suffrage, and it probably affords a better illustration of the advantages or disadvantages of woman suffrage than any State in the Union, and for this reason: Equal suffrage in Kansas was not given impulsively, but has been a matter of steady growth. More than 40 years ago Kansas gave to its women the right to exercise the ballot in the selection of school officials and in deciding on policies pertaining to education, and with what result? The influence of woman upon education in the State was distinctly beneficial. The mothers took an interest in the schools, which the fathers were too prone to neglect. They sought out deficiencies; they were not content to follow in a beaten path, but insisted upon having the best in education; they demanded that incompetent educators and officials should be weeded out, and from the start we found that in granting them equality of control with the men in the management of the schools we had succeeded in getting far better schools and an improvement all along the line.

The experience of Kansas with equal suffrage in matters of education was so satisfactory that it was only natural that the question should arise: If by granting the vote to women in school matters we have been the gainers, why not extend the franchise and see if the aid of woman is an advantage in other departments of government? The result of that question was that suffrage was extended to woman in municipal matters, and for 25 years the women of Kansas have had a voice in selecting mayors, councilmen, and other city officials.

And again we found that we had gained by taking woman into a closer partnership in matters of government. It is true that for a time but few of our women saw fit to exercise that right, but we could always depend upon one thing—whenever it became necessary to see to it that a municipal house cleaning was needed, whenever it became an issue of enforcing law or of driving evil or indifferent influences out of power, there never was a necessity for urging our women in Kansas to go to the polls. They took the leadership whenever there was a chance to advance the moral interest of the communities, and the very men who had dreaded their participation in municipal politics soon came to welcome it.

Therefore, as a result of our practical experience with partial woman suffrage, it was but a natural step for us to take to demand equal suffrage unrestricted, and a little more than five years ago the voters of Kansas decided to incorporate such an amendment in their State constitution. We have had time enough, gentlemen, to test suffrage, and as the result of our experience I have no hesitation in saying here to-day that it has so operated as to silence those who had voted against it in 1912. The arguments raised have proven to be unfounded; the evils dreaded as the result of woman suffrage have not materialized, and to-day we can look upon the record and assert, without fear of any chance of contradiction, that Kansas has been the gainer by granting full suffrage to its women.

They told us in opposition to suffrage, and they told it in all sincerity, that suffrage was not needed by woman, as it would merely double the vote and have no effect in the ultimate results. They told us that the wife would vote just as the husband voted, and that the daughters would be with the mothers. Has that proven to be the case? The election tables showing results at every election held in Kansas since that time will give to you the answer. Never have we had so much independence in voting, never has there been such keen discrimination shown at the polls. The women brought into our politics ideals as well as ideas, and they have proven that in using the ballot they are controlled by intelligence and not by prejudice, and this can not always be said of conditions prior to the time when the ballot was given to them.

Likewise we were told that participation in politics would contaminate women; that they would not be able to raise men to their high plane, but that, on the contrary, they would be degraded themselves. Without exception, the contrary has proven to be the case. The participation of women in politics has in no way lowered them, but they have been instrumental in raising the politics of Kansas to a higher plane. Particularly is this noticeable when you come to consider the matter of the nominations of candidates for public office. In the old days, when the "boss" was supreme in politics, selection of candidates was made according to the advantage to be derived by selfish and special interests. It was felt that the party label would be sufficient to hold the voters in line, and it generally

so resulted. Those were the days of "yellow-dog" politics, and they have departed, I hope, forever. To-day in Kansas when it comes to select party candidates the thought must always be borne in mind that the women have the ballot, and candidates must be able to pass their microscopic tests. Consequently not only is ability and availability canvassed, but likewise the personal character of the man, for it is fully realized that unfit candidates can not command the support of the women voters. The result of it all is that the participation of the women in politics in Kansas has resulted to the benefit of the political parties, to the benefit of the State, and to the benefit of the individual voters. Surely that is worth working for. If nothing more had been accomplished through equal suffrage in Kansas than the elimination of the "boss" and the grafter from politics, then the women have well justified the decision which resulted in granting to them the ballot.

WOMEN ARE NEEDED IN POLITICS.

There never was a time when there was greater need for the participation of women in governmental affairs on equal terms with men than there is to-day. This war has changed many things and will bring about many new adjustments. More than ever will problems of a social nature be brought up for consideration, and we can not afford to shut out nearly one-half of our entire population from consideration when it comes to a determination of these problems. Very likely they could be settled by the men acting as the agents of women, as has been so often suggested as the ideal course of action, but it would be far better if we had woman at the council table to aid with her judgment and advice and to bring to us that large measure of sympathy with the "other half" which is essential in any just settlement of many of our social and economic problems. I do not believe in granting suffrage to her as a privilege, but rather do I believe in granting it to her because we need her aid. We have progressed far since the days of the "cave men," and the progress has brought with it a greater amount of freedom for woman. She has had the duty of bringing up the sons and daughters who have aided materially in the development and progress of the world, and the tendency has been to recognize that the very qualities which have made her so successful in this work are the qualities we most need in sanely developing the best in government. Hence it has been that the tendency all over the civilized world has been to make woman a full partner in the things which go to make the ideal government. Hence it is that the tendency steadily has been toward equal suffrage and not away from it. Surely if we believe that civilization is worth while; surely if we believe that we are going forward and not back, we can not close our eyes to these facts, but be ready to admit that the argument in favor of equal suffrage must be founded on reason and on justice; otherwise it would not have thus so far prevailed.

When we note that ex-Premier of England Asquith has changed his mind and now favors equal suffrage; when we note that Lloyd-George is now numbered among those who believe in it; when we note that Australia and New Zealand have full woman suffrage, and Canada is rapidly headed in the same direction; when we note that Norway and Denmark have universal suffrage and that Sweden seems ready to join them; and when we note that in practically every other civilized country the issue is now being given serious and sympathetic consideration—is it not enough to convince us that full equal suffrage is but another and a most necessary step in the progress of the world? The steady forward trend has not been marred by a single backward step, and that in itself should convince that it is and must be eternally right.

AS TO THE OPPOSITION.

I have given careful consideration to the arguments advanced by those who are in opposition to equal suffrage, and I must confess that I can not see where a single logical reason in opposition has been advanced in 50 years. Many of these arguments have been exploded in the light of practical experience, while others are based wholly either upon prejudice or upon supposition.

On Monday last I went to the room in which the hearings were being held. It was my understanding that on that day, the opponents would have every opportunity to present their side, and I was anxious to learn if, by any possibility, there was anything new to be advanced—anything which had not been taken up and considered in the past. Particularly was I interested because I had been informed that a very distinguished public man, a man who had attained fame both in the Halls of Congress and before the courts of our country, would be present and voice his opposition to universal equal suffrage. Surely, I thought, if there is anything new to be said in opposition to equal suffrage, the distinguished ex-Senator will give voice to it.

And I must confess that my disappointment was keen. Clever was the argument of the orator; quick at repartee and bright at all times, but it brought forward nothing new, and very often lacked the ring of sincerity. I could not but feel that the speaker was prostituting his own intelligence when he advanced much of his argument, and I have too much respect for that intelligence to believe for a moment that he would stand sponsor for the logic. He was much in the attitude of a lawyer who had a bad case and was well aware of it; therefore, as he had to earn his fee, he simply had to do the best he could, even if the evidence and the law was against him.

To oppose woman suffrage because woman could not, in truth, assume all of the duties of citizenship is trivial. We will admit that woman should not be called upon to do military duty. Even were she willing so to do we would not favor it. But should that be a bar against granting to her the ballot? In that event every young man who has been examined under the selective draft and who has been found to be physically unfit to serve in the Army should be disenfranchised. As they are incapable of performing military service they should not be entitled to the ballot, provided that we keep the ballot away from woman for the same cause.

Likewise we should disfranchise every citizen who belongs to a religious sect which believes in the doctrine of nonresistance. Surely, if we are to keep the ballot away from those who are physically unable to do military service, there is all the more reason why we should keep it away from those who are able but will not render such service. And you might go down the line and find that the same thing would have equal force when applied to the old men among us, and yet we are proud of their gray hairs and respect the judgment which has come to them out of the fullness of their experience, so that their counsel is one of our most valuable assets—and yet they are not fit for military service.

The army of Americans in the field to-day are all the stronger because the young men who are in its ranks have behind them the solid support of the mothers, wives, sisters, and sweethearts, who take pride in the fact that their loved ones are able to give service to their country. As it was yesterday, in the Civil War, so it is to-day that the mother sends her son forth for service because she believes that ours is a country which deserves every sacrifice its sons can offer. Nor do the women of the country stop there. Equally as active as the men at home, they are working for the men in the Army and are striving to give strength to their arms. In Red Cross work they are taking the bulk of the labor upon their shoulders. In every hamlet you will find them knitting and sewing for the soldiers; conserving to the end that our armies can be fed and our allies given needed aid; and they do not stop there. Wherever the wounded are to be found there you will find the women ready and eager to bind up the wounds and to bring a little of light into the places made dark by war. We do not ask and we will not permit the women of our country to do service in the ranks of our armies; we do not ask but we can not prevent them from shouldering innumerable burdens and assuming endless sacrifices because of war and because of the fact that they propose to do their full share toward seeing their country triumphant.

"But," said the orator, "woman has not the time to exercise the rights and duties of citizenship, because she can not spare the time from her home duties to give to the subject the study essential if she is to use the ballot wisely." Just consider that a moment and I think you will agree with me that if we are to carry it to its logical conclusion we would sap the very foundations upon which our Government rests. If woman has not the time to study the fundamentals so as to exercise the ballot wisely, neither has the average citizen who has to toil long hours and who has no time to give study to anything other than the special subjects affecting his daily life. Disenfranchise them, and you would be justified in doing so if you debar woman from the possession of the ballot for this cause, and you have left only the comparatively small leisure class. Instead of a republic in which individuals are upon an equality we would have class government and would put power into the hands of the men who would make the worst possible use of it. If we are going to put up bars so that only those shall use the ballot who can convince us that they know how to use it, we start on a course which would result in something worse than the average monarchy, for we would have a government in which only a privileged class would have power to govern.

And to say that man has always taken good care of woman and will always continue to do so is beside the point. The same argument was advanced in defense of slavery, and it was equally applicable. If woman is to be the equal partner, which we boast she should be and is, we have no right to demand that we shall speak for her unless she is willing. It should be for her

to say whether or not she wants a voice in government, and the fact that many of them are, as many of the slaves no doubt were, perfectly contented and firm in the conviction that the ballot would not improve their lot, yet the fact that many do not want the benevolent bondage to continue, but prefer to be wholly free to express their convictions and give force to them by means of the ballot, should be sufficient reason for us to give to them the freedom sought, just as the natural cry of the negro for freedom caused the people all over this world to see the justice of the plea and demand that it should not go unheeded.

The question of man acting wisely or unwisely in representing woman is not involved in the present controversy any more than good or bad government was involved in the controversy which terminated in our freedom. "Taxation without representation" was repugnant to the self-respect of the pioneers, and "taxation without representation" is repugnant to the women of the Nation, as it should be. It matters not whether they exercise the right of suffrage or not, they should have it as their due; otherwise their state is nothing better than one of benevolent slavery.

And as to any dread of dividing the home by reason of political differences between husband and wife, we can best judge that by the lamp of experience. We who have lived in States where equal suffrage is in force know that the dread expressed is but a creature of the imagination. We have yet to hear of political differences causing division in a home, and we know of countless instances where husband and wife are not of the same political faith. The marriage which does not bring with it mutual respect and toleration is not a marriage which gives promise of enduring, and if a difference of opinion over politics would be apt to cause a break, the same result would surely come over every trifling difference of opinion. The right to exercise personal judgment is not abrogated by the marriage vow, and there is no reason why the mated should not exercise tolerance and grant to each other the same rights which they demand for self.

But, says this opponent of equal suffrage, "to grant woman the ballot will cause her to demand a single standard of morals." Well, what of it? Would man be injured if his morals were improved? Surely no one will take that position. On the other hand, to say that the result would be that the standard of woman would be lowered is not only an assumption, not based on facts, but it is an insult to the very sex these men so pretend to revere. There has been no lowering of the moral standard among the women of the suffrage States because of equal suffrage, and there is not likely to be. On the other hand, the laws which they have insisted upon putting into the statute books have helped to aid morals, have helped to diminish crime and protect womanhood; and if that is a result of a demand for a single standard of morals, it should be sufficient to align us all with those who make the demand.

But we hear too much of this lip service, which is designed to content woman by means of flattery. We preach of her equality with man when we well know that the equality is but the husk as long as we deny to one-half of our population the right to participate in government. Woman is not asking for flattery. She has heard often enough about the beautiful position she occupies as wife and mother. She appreciates the wonderful blessings which are hers through having the opportunity to train her children in the way they should go. But when you get down to the foundations upon which her duty rests you must recognize that the greatest good she can accomplish in this Nation of ours is to train her sons to become the best of citizens; and how can she do that unless she herself has had actual experience with the rights and privileges of citizenship and the obligations entailed thereby? If there was no greater reason than this for granting the right to use the ballot to woman, it would be sufficient for me. We should not hesitate to do so when we can not help but see that it will improve the future citizens of the country.

And when the distinguished opponent of suffrage states that ignorance in use of the ballot is the greatest danger we have to face he certainly should be able to see that the best possible way to avert that danger would be by enabling the mothers of the citizens to be better fitted to teach their sons and daughters what the ballot means and how vital it is as a weapon to be used in building up or tearing down our Government. You are not dispelling ignorance as long as you keep the teachers in ignorance, and by putting the ballot into the hands of the women of the country you strike at the evil of ignorance at its roots, for it is the training received at the mother's knee which molds the character of the future men and women of a nation.

And now we come to the one demagogical appeal which has been made to the country in opposition to woman suffrage. I refer to the insinuation made that to grant the ballot to woman

would mean to weaken the strength of this country in time of war. It seems peculiar to me, to say the least, that such a charge should come from those who pretend to honor woman-kind as the possessors of every virtue and of every attribute worth while. In so assuming they cast a doubt upon the patriotism of every American woman, for to assume that they would take a position adverse to the best interests of their country is to assume that they are lacking in love for the motherland. However, let us see if there is any basis for this charge, and once more we can find our answer to the assumption put forward by simply referring to the unquestioned facts.

Five Provinces of our neighbor, Canada, had put equal suffrage into effect, and, as a recognition of the patriotism shown, the right to use the ballot was extended so that it could be exercised by every woman in the Dominion who had relatives serving in the army. Did this weaken the patriotic purpose of Canada to do her full duty, to the end that the dread of German militarism should be ended? Let us see about that. Canada had contributed nearly 500,000 of its young men to serve with the allies in France, and the time at last came when the volunteer system broke down, and it became necessary to pass legislation to provide for conscription. Here came the real test to show what woman would do in the face of war. It was in the power of the enfranchised women of Canada to prevent any further movement to take the young men of the Dominion into the army. It was in their power to show whether they were governed by a suicidal policy of pacifism or by a patriotism which would keep their country up to the high standard which it had set. And when the vote was counted it was found that not only had the women of Canada voted in favor of the policy of conscription but without their votes it would have been lost. Woman had been tried, and she had not failed. Her love of country proved to be superior to the sentimentalism which the opponents of suffrage credit her with, and she never faltered when the test came.

In the face of that how can it be said that to grant suffrage to woman would weaken our strength of purpose or paralyze our armies? To so assert is to insult the women of the United States. Surely they are as patriotic as are their sisters in Canada. Why, then, assume that they would not meet any test with equal courage and with equal sacrifice?

We are here to-day to act for all of the people of the country—men and women, suffragists and those who oppose. We are not called upon to decide the question of suffrage; and if I have dwelt upon the subject as far as the merits may be involved, I have done so because the merits have been made an issue in this debate.

However, the one question which is before us is, Are we willing to trust the people of this country to take up this question and settle it in the orderly manner provided by our laws? It is not within our power to alter one letter or omit one comma in the Constitution of these United States. But the organic law provides the method by which it can be altered, and it is for us to say whether or not we will give to the voters of the country the opportunity to express their views. Why, then, should there be opposition? Is it that the opponents of equal suffrage are afraid to trust the citizenship? According to my belief, whenever it becomes evident that what is seemingly a majority of the people want to change their Constitution they should be given the opportunity to decide the matter at the polls. I trust that the time will never come when I feel that their judgment should be mistrusted, for if that time comes it will be because I have lost confidence in our institutions. I am here to-day, just as every Member is, because our constituents felt that we would represent them, and the moment that we fail to do that then we fail to be representative, and our people have no voice in the deliberations here. So it is that the question before us should not be a political one, but every man on this floor should vote just as he believes his constituents would wish him to vote. But, some one will say, the majority of the men in my district are not in sympathy with woman suffrage. Very well. But how about the women in your district? Are you not here to represent them just as much as you represent their fathers, husbands, sons, and brothers? Are they to be kept in the background, fit to govern the homes, to raise the families, and to be equal with you in everything save in the right to participate in government—without which equality exists only in spirit? Take that thought and let your decision be guided by the wish of all of your people, and I feel that the number of adverse votes cast upon this resolution to-day would not be worthy of counting.

The issue is made up, and nothing which we can do here to-day can or will change the ultimate verdict. We may delay, but it is not in our power to defeat. It was Wendell Phillips who once scoffed at assassination, because, according to him, you can not kill an idea. So it is here. The progress of this Nation and the progress of the world has steadily been toward

equal suffrage, and we might as well try to imitate King Canute and sweep the tide back with a broom as to attempt to prevent the final triumph of woman suffrage in this country. But the chivalrous thing to do, the logical thing to do, and the just thing to do is to put our seal of approval upon the resolution before us and give to the States of the Union the opportunity to say whether or not they shall change the Constitution and add to it this amendment. Let us give to them the opportunity to say whether or not the forefather in declaring that "all men are created equal" meant to forever shut out woman from the intimate circle of equality. Let us give to them the opportunity to say whether or not they favor the present system which permits taxation of so large a body of our people without any representation in the making of the laws by which taxes are levied. The evidence is before us and it is up to the jury to pass judgment. That the judgment may be based only upon reason is my fervid wish, for with prejudice omitted from our deliberations here to-day we will see the triumph of this resolution, as we will see the triumph of the constitutional amendment when the voters of the several States are called upon to register their verdict.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. CHARLES P. COADY,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. COADY. Mr. Speaker, the other day I received in my mail a printed communication from the California Federation of Women's Clubs, a suffrage organization of that State, setting out in detail some of the advantages it claimed had accrued to that State by reason of the exercise of the privilege of voting by the women.

It enumerated in detail various legislative acts that contained wise and advanced legislation, like child-labor laws, laws providing for an eight-hour workday for women, laws extending the scope of the work of the juvenile court, pure-milk laws, compulsory education laws, and provisions for the registration of births, deaths, and marriages.

Such a contention, I need scarcely say, is ridiculous and absurd. Every thinking person knows that the passage of such progressive laws was brought about by enlightened public opinion, and that similar laws are upon the statute books of many, if not most, of the States in which women are not permitted to vote. In Maryland women do not vote, and our legislature several years ago passed similar legislation.

The communication I referred to was entitled "A survey of the results of woman's suffrage in California," and it contained a section headed "Women as officeholders," and I would like now to direct the attention of the chairman of the committee, the gentleman from California [Mr. RAKER], and the other members of the California delegation to this communication.

It is really illuminating. Some mere man may suggest that it shows a conceit on their part that is insufferable, but far be it from me to make such a charge.

After mentioning the various offices held by women in that State, and they were both numerous and important. It went on to say in regard to the performance of the duties of these offices by them that there is a unanimity of statement that they, the women, are more conscientious than men, more careful of details, more faithful, and as a general thing they do not dabble in petty politics, as men do. Now, can you beat that? And, mark you, the communication says that this feeling is unanimous in California. Not a protesting voice to be heard.

Only recently my attention was called to an article appearing in one of the newspapers that in the State of Colorado the women intended to make a drive to capture and control the next legislature. In New York City, a day or so after the election there, a meeting of women was held with a view to determining and selecting the public offices they wanted, and I understand in that city there are now more women between the ages of 21 and 50 than men, and that they want their share of the offices.

And why, may I ask, should they not receive them? Why should not they in California, Colorado, New York, and other woman-suffrage States get offices in proportion to their numerical strength?

I think this is inevitable. They claim it is fair. If democracy means equal suffrage, as claimed by the women, does it not also mean equal opportunity in the holding of public offices? They say it does. When the day for this arrives, and it will come with universal suffrage, then what, may I ask, will become of the home, its integrity and sanctity?

Surely the women do not intend to confine office holding to unmarried women and those not blessed with children! And who, I ask, would be best qualified to pass upon the matters in which they are most interested—those affecting the children and the homes—single women, married women without children, or mothers with children of tender ages? The answer is obvious. With such married women holding office—that is, those with young children—what, I ask, will become of the home, the integrity and sanctity of which must be preserved? Who shall look after the little children, their moral and religious welfare; who shall watch over them and guide them, instruct and care for them?

I mentioned this to one of the women who called to see me in advocacy of this resolution, and she flippantly remarked that that was easy; nurses could be hired to do that. Another of these women, who is the mother of a daughter of tender years, said she was ambitious not only to vote but to hold public office as well, and she preferred a legislative position, which of course would take her away from her home city, and she thought her daughter was old enough to take care of herself during her mother's absence. Just think of it; they are willing to turn over to hired nurses the training of the minds and the guidance of the hearts of little children. This seems incredible, but it is true.

I shudder to think of the evil consequences that will follow from such neglect of the home and the children, and such evil consequences will follow the adoption of this amendment as surely as the night follows the day. Its effect on the home will be disastrous.

Threats have been made by some of the women conducting this suffrage fight that they will defeat the Democratic Party unless there is a changed attitude on this question upon the part of the Congressmen from the South; and I have been pained and grieved to know that this threat has had some effect. I am a Democrat and have always been one. I am anxious to see my party successful at all times, but I prefer to see it right rather than see it successful, and I would rather see it go down to defeat than to compromise when a principle is involved, as it is in this suffrage question.

We should never let party expediency interfere with a conscientious adherence to a course of action which we believe to be right and just. If a thing is fundamentally wrong, like this suffrage question undoubtedly is, stand against it, be the political consequences what they may. Let us set principle above party expediency. Any other action would be cowardly, and an evasion of our plain duty and responsibility.

I believe this resolution to be vicious in principle, and believing thus I shall vote against it if I am the only man in the House to do so. I would rather be thrown upon the political scrap heap than to surrender my judgment on this or any other political question.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. FREDERICK W. DALLINGER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. DALLINGER. Mr. Speaker, for many years in common with many other public men of Massachusetts, among whom I may mention Gov. Long, Gov. Greenhalge, Gov. Bates, Gov. Walsh, and Gov. McCall, I have been in favor of extending the suffrage to women, seeing no valid reason why in a democracy sex should be a bar to the suffrage any more than race or color.

In 1915, when the suffrage amendment to the State constitution was submitted to the voters at the State election, I not only voted for it but also spoke in its behalf. As a result of that election woman suffrage was defeated in Massachusetts by a very large majority, and the voters of the eighth congressional district defeated it by a vote of almost 2 to 1. Moreover, every city and town in the district returned an overwhelming adverse majority against the proposition. Furthermore, in

my opinion, the opposition to suffrage on the part of the women was even stronger than on the part of the men.

As a believer in the principle of the referendum and of true representative democracy, I stated both in the press and in a circular sent to every voter previous to the election of 1916 that, although personally in favor of equal suffrage, I should, upon this question, be governed by the instructions of my constituents and should vote against the Anthony amendment to the Federal Constitution until such time as I was satisfied that the wishes of the majority of my constituents coincided with my own personal views. It was expected at that time that the Congress would vote upon the Anthony amendment in December, 1916, and if the vote had come then there would have been no doubt whatever about my duty in the premises, as there had been no change of sentiment upon this question. The matter, however, did not come up either in the second session of the Sixty-fourth Congress or during the first session of the Sixty-fifth Congress.

Since the election of 1916 the United States has entered the great world war, and there has been a very great change of sentiment upon the question of woman suffrage throughout the world, as witnessed by the granting of woman suffrage by the Dominion of Canada, by the English House of Commons, by the people of the State of New York, and by the Legislature of the State of Rhode Island. This change of sentiment has been due partly to the fact that women for the first time have gone into occupations heretofore exclusively filled by men and have done everything for their governments in this crisis except actually fight in the trenches. Moreover, in a great many cases all the men of the family have gone to the front, leaving the women the only persons to do the voting at home. While arrangements will undoubtedly be made for men to vote in the field, it is felt that in State, and particularly in municipal elections, the women at home will be the only ones who will be in a position to know the local conditions and vote intelligently. Furthermore, it is felt that in such cases the women will have a vital interest in many matters of legislation affecting the comfort of their men at the front. Finally, there has been a strong feeling that in the great struggle for democracy the United States of America ought not to be behind all the rest of the English-speaking world and the other allied nations in granting equal suffrage to women.

While all of these reasons have brought about a general change of sentiment throughout the world and in many parts of the United States, particularly in New York State, where a very large majority of the soldiers in the field voted in favor of suffrage, I have not been convinced that there has been a similar decided change of sentiment among the voters of the eighth congressional district. It is true that in some parts of the district, notably in the city of Melrose, there has been a marked change of sentiment, nevertheless in the district as a whole, after a very careful investigation of all the evidence obtainable, I can not conscientiously say that at the present time the wishes of a majority of my constituents, either men or women, coincide with my own personal views, and I shall, therefore, in accordance with the promise made to the voters of the district, vote against this amendment.

I think that perhaps one reason why there has not been a greater change of sentiment in the eighth congressional district is due to a feeling on the part of men and women who are friendly to suffrage that it will be much better for the people of Massachusetts this coming year to voluntarily adopt suffrage, as New York has done, instead of having it forced upon them by an amendment to the Federal Constitution. Moreover, there are others who are not unfriendly to suffrage who fear that the submission of the suffrage amendment and the prohibition amendment at the same time, involving two issues in the election of the same State legislature, may imperil the chances of the prohibition amendment, which they feel is of vital importance as a war measure.

Finally, a great many people in the district feel that the vigorous prosecution of the war is the one great business of the Nation at the present time, and that the energies of everyone should be directed to this end, and not diverted by precipitating a contest on the suffrage question in the different States.

In conclusion, I wish to state that, although in my representative capacity I feel obliged to vote against this amendment in fulfillment of a preelection promise, nevertheless, if the constitutional convention submits a woman-suffrage amendment to the voters this year, I sincerely trust that the voters of Massachusetts will adopt it by a large majority and that the voters of the eighth congressional district will reverse their former decision and take a position in keeping with the traditions of a section of the country which in the past has been the leader in the struggle for human freedom.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. BENJAMIN F. WELTY,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. WELTY. Mr. Speaker, having been granted permission to extend my remarks on House joint resolution 200, proposing an amendment to the Constitution of the United States providing for woman suffrage, I beg leave to submit the following:

When I became a candidate for Congress I found that Ohio had a statute which would prevent my name from being printed on the ballot unless I filed a written declaration of my candidacy and a certificate pledging me to "support and abide by the principles enumerated by the party in its national platform and in its platform in the State of Ohio." Upon investigation I found that among other planks the Democratic platform contained the following:

We recommend the extension of the franchise to the women of the country by the States upon the same terms as to men.

These principles met with my views, and I readily subscribed to them and filed my written declaration as required by law. During the course of my campaign I was asked by the National and State woman suffrage organizations what my attitude toward this measure would be, and I informed them that I would stand on the Democratic platform, and that I believed the franchise should be extended to women by the States and not by the Federal Government.

About two weeks before the election I was honored by the suffrage committees of my district with a call at my office, the members desiring to ascertain my views on the proposed Federal amendment on national suffrage. I informed them that I had subscribed to the principles of the Democratic platform as provided by the laws of Ohio, and that I meant to abide by those principles and cast my vote accordingly. I frankly informed them that I believed the women not only had a right to vote, but that I thought it their duty to discharge citizenship, and personally I had always voted for woman suffrage when the matter came up in the State of Ohio. These good women came to me just prior to the date of their convention with a view to reporting my views fully at their meeting.

I took that obligation without mental reservation, and it was made sacred because of a solemn public promise of what I would do if elected. Much as I would like to extend the ballot to women, I can not now disregard my promises without at least feeling a sense of being guilty of a breach of good faith if not perjury.

Mr. Speaker, I have listened to the debates with a great deal of interest and amusement, because of this shifting of position in attempting to square performances with promises. And, mark you, the Democrats are not the only ones who found themselves in this position, for upon investigation I find the following in the Republican national platform adopted at Chicago in 1916:

The Republican Party, reaffirming its faith in government of the people, by the people, for the people, as a measure of justice to one-half the adult people of this country, favors the extension of the suffrage to women, but recognizing the right of each State to settle this question for itself.

Now, these gentlemen recognized "the right of each State to settle this question for itself" when they were candidates for election. Is that not a promise clear and simple? Could the thought of the right of a sovereign State be more clearly expressed? Did you gentlemen mean what you said, or was that simply a bait to get votes? Or are you not now strong enough to resist the charms of the ladies who fling their banners in our faces calling for "Votes for women"? Or are we now forgetful in our eagerness to do homage to woman?

I have been informed that changes have occurred since we made that promise. This old "sin-cursed world" had been in war more than two years before we made that promise, and any man with a grain of sense knew that this Government could not continue neutral and live, unless the German Government ceased murdering our men, women, and children.

If this were a war measure, I should gladly support it to win the war. As a war measure Congress has voted to control the food and fuel of the country and prevent the use of food for distillation—a power granted which would bring about a revolution in times of peace, but most essential to carry on

and win this war. Do you think the sovereign State of Ohio would continue to freeze in times of peace for lack of coal just because the Fuel Administrator failed to provide the fuel when it could be had through the executive branch of the State? Do you think they would chatter their teeth and not act for themselves in order to provide warmth for their households? Mr. Speaker, they are enduring untold hardships these cold days in the Buckeye State which would never be tolerated were it not that this Nation is attempting to readjust itself to win as against an autocratic government. They are willing that the Federal Government should take over all transportation facilities and lines of communication in order to win over a tyrant who has no regard for the lives and liberties of a people opposed to his views.

You can no more destroy the sovereignty of a State and expect it to live without destroying this Government than you can cut out the heart of a human being and expect him to live.

But the gentleman from Kansas [Mr. CAMPBELL] informs us that "old things are passing away, and we are coming into new and greater things." The old ship of state has left her moorings and seems to be sailing on an unknown and uncharted sea. The Government founded in the blood of our fathers is fading away. Last fall, a year ago, both parties recognized these principles in their platforms, and each candidate solemnly declared that he would abide by them if elected. But lo, all old things are passing away, and the lady from Montana has filed a bill asking that separate citizenship be granted to American women marrying foreigners, so that their property might remain in the United States. These ladies want the privilege of exchanging their wealth for titles of nobility. In other words, if they marry foreign dukes or counts or "no 'counts," they want the Government to be in a position to interfere in family affairs even across the water. Can we in our eagerness to accept these new conditions afford to follow the lead of Russia by breaking down our dual form of government and transfer all government to Washington? Can we afford to deprive our people of local and self-government? Do we forget in our eagerness to please that we came from a school which taught that the people should sustain the Government and that the people are the Government? If you have forgotten the principles taught in this school, while we are passing into the new order let me remind you of only a few which the founders of this Republic deemed essential.

The Father of his Country advises on this point as follows:

Let there be no change by usurpation; for this, though it may in one instance be the instrument of good, is the ordinary weapon by which free governments are destroyed.

Jefferson is recorded as saying:

I believe the States can best govern our home concerns.

Interior government is what each State should keep to itself.

The States should severally preserve their sovereignty in whatever concerns themselves alone, and whatever may concern another State, or any foreign nation, should be made a part of the Federal sovereignty.

The support of the State governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against anti-Republican tendencies, I deem one of the essential principles of our Government, and, consequently, one which ought to shape its administration.

Can it be believed that, under the jealousies prevailing against the General Government, at the adoption of the Constitution, the States meant to surrender the authority of preserving order, of enforcing moral duties, and restraining vice within their own territory?

The true barriers of our liberty are our State governments, and the wisest conservative power ever contrived by man is that of which our Revolution and present Government found us possessed.

And again:

Our country is too large to have all its affairs directed by a single Government. * * * It is not by the consolidation of centralization or powers that good government is effected. * * * When all government, domestic and foreign, in little things as in great things shall be drawn to Washington as the center of all power, it will render powerless the checks provided of one government on another and will become as venal and oppressive as the government from which we separated.

Let me call your attention to what the foremost Democrat of his day had to say on this subject. Gen. Jackson said:

In the domestic policy of this Government there are two objects which especially deserve the attention of the people and their representatives, and which have been and will continue to be the objects of my increasing solicitude. They are the preservation of the rights of the several States and the integrity of the Union.

But for fear that some of my Republican friends will contend that only Democrats believe in the rights of a sovereign State, permit me to quote the following from the immortal Lincoln:

It is my duty and my oath to maintain inviolate the right of the States to order and control, under the Constitution, their own affairs by their own judgment exclusively. Such maintenance is essential for the preservation of that balance of power on which our institutions rest.

Pierce, in his work on "Federal Usurpation," says:

There is no statute of limitations in the law of cause and effect, and the usurpations of the war and reconstruction days are the fundamental causes of the existing conditions to-day.

Permit me, Mr. Speaker, to submit herewith a part of the minority views of the committee:

One of the very ablest of living Republicans, the Hon. Elihu Root, of New York, whose great learning and knowledge of the Constitution entitles any utterance of his to most careful consideration, has said:

"There is nothing more essentially and vitally local to a community than the way in which it shall select the officers who are to govern it. Any external power which can control that can control the local government. Nothing is more clear in the Constitution under which our Union was formed than that this is a matter of purely local concern."

Former President William H. Taft, in discussing this question, said: "If in any of the States now acting on the question I were called upon to vote, I would vote against giving the suffrage, because I think to force it on an unwilling or indifferent majority is to add to the electorate an element that will not improve its governing capacity."

Thomas Jefferson, author of the Declaration of Independence and patron saint of Democracy, thus expressed his opinion of women mingling in political strife:

"All the world is now politically mad. Men, women, and children talk nothing else, and you know that naturally they talk much, loud, and long. Society is spoiled by it. But our good ladies, I trust, are too wise to wrinkle their foreheads with politics. * * * American women have the good sense to value domestic happiness above all other and to cultivate it beyond all other."

Former President Grover Cleveland, the first Democratic President after the Civil War, gave utterance to his conviction on this subject in the following language:

"I am willing to admit that it was only after a more thorough appreciation of what female suffrage really means that I became fully convinced that its inauguration would vastly increase the unhappy imperfections and shortcomings of our present man-voting suffrage. Its especial susceptibility to bad leadership and other hurtful influences would constitute it another menacing condition to those which already vex and disturb the deliberate and intelligent expression of the popular will."

Our present President, Woodrow Wilson, never exemplified his great qualities of statesmanship more clearly than when with reference to woman suffrage he said in the New York Times October 7, 1915:

"I believe that it should be settled by the States, and not by the National Government."

Again, in a letter to Jane Jefferson Club, of Denver, Colo., October 7, 1916, he gave expression to this statement:

"Both the great political parties have in their recent platform favored the extension of suffrage to women through State action."

The President at various times has discussed the question of suffrage fully and at length, and always with the wisdom which he brings to the discussion of any question. In his textbook, *State and Federal Governments of the United States*, he announces the following indisputable truths:

"The suffrage in particular is a privilege which each State may grant upon terms of its own choosing, provided only that those terms be not inconsistent with a republican form of government."

"All the powers of the General Government are plainly such as affect interests which it would be impossible to regulate harmoniously by any scheme of separate State action, and only such all other powers whatever remain with the States. With them rests the regulation of the suffrage."

"Federal law does not determine who shall vote for Members of the House of Representatives. The Constitution provides, simply, that all those persons in each State who are qualified under the Constitution and laws of the State to vote for Members of the larger of the two houses of the State legislature may vote also for Members of the House of Representatives of the United States. The franchise is regulated, therefore, entirely by State law."

We are told that this is simply a vote to submit the proposition to the people for ratification, and that Congress does not necessarily assume any responsibility. Article V of the Constitution provides that when "two-thirds of both Houses shall deem it necessary they" shall propose amendments to this Constitution, but the same must be "ratified by the legislatures of three-fourths of the several States" and not by the people.

Because of the smaller States it would be possible to ratify an amendment by three-fourths of the States and not represent one-half of the population. There are 48 States in the Union. A constitutional amendment must receive the votes of 36 States. According to the estimated population used in the draft apportionment, the total population of the States was 103,849,684. Thirty-six States necessary to ratify have a population, according to this estimate, of only 46,441,148, while the remaining 12 States, which could not prevent ratification, have a population of 57,408,536.

A few days ago this Congress passed a Federal amendment to prohibit the manufacture and sale of intoxicating liquor and thus proposed to write a police regulation into the Constitution, with a hope of having the same enforced in the face of the fact that 12 States, having a population of more than 57,000,000 (almost 11,000,000 more than half of the population), can not prevent it from becoming a part of the Federal Constitution.

Lincoln on this subject has this to say:

If by mere force of numbers a majority should deprive a minority of any clearly written constitutional right, it might in a moral point of view justify revolution.

And yet we have a situation in which a minority may control a majority.

We must keep the fires of reformation burning at home and should not expect an alien to reform us. We should not forget that the more duties we require from the Washington Government the more departments and bureaus will be required, and that an employee of a bureau is responsible to his chief and not to the people. Can we build up a bureaucracy and still maintain a democracy?

We attempt to shift the burden of responsibility and now attempt to transfer all power from the States to the Government at Washington in utter disregard of the principles which not only gave life to this Republic but which have sustained the Republic from the day of its inception.

The champions of this resolution call us "out of date" and "40 years behind the times." I wonder if they came back when they gave their promises last fall a year ago?

Because of our form of government I do believe that this right to grant suffrage to women rests exclusively for determination with each State and should not be granted by the Federal Government. A proposal to amend the Constitution will, at its best, amount to only a proposal or recommendation. No laws would ever be passed by Congress to force suffrage on a hostile State. Congress passed the fifteenth amendment, granting suffrage to negroes, but we do not find any Federal law providing for the enforcement of this amendment. It was tried for a while, and a few "carpetbaggers" were sent into several States, but it soon became so obnoxious as to cause the Federal Government to recede, and since that time no attempt has been made to enforce the amendment. The Supreme Court, by a long list of authorities, has recognized the right of each State to determine for itself the qualifications of an elector. As recently as 1914 this tribunal, in the case of *Guinn v. The United States* (238 United States Supreme Court Report, p. 364), uses the following language when construing the fifteenth amendment:

Beyond doubt the amendment does not take away from the State governments, in a general sense, the power over suffrage which has belonged to those governments from the beginning, and without the possession of which power the whole fabric upon which the division of State and national authority under the Constitution and organization of both governments rests would be without support, and both the authority of the Nation and the State would fall to the ground.

I presume the next step will be to pry away all of our landmarks.

The Government may succeed in this new order of things, but, as for myself I would rather trust the wisdom of the fathers of our country than the bolsheviks of Russia and therefore I shall cast my vote on this resolution accordingly.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. GEORGE B. FRANCIS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. FRANCIS. Mr. Speaker, it would seem that to-day, after 50 years of exhaustive discussion of the suffrage question, nothing new could be said on the subject. If ever the content of any matter had been thoroughly churned, it would seem to be that of suffrage. The world, however, is moving swiftly these days, and each new hour brings in new relief some angle of this question and emphasizes the justice of the step we are about to take.

On Monday of this week the gentleman from Illinois [Mr. McCormick] spoke on the great war in Europe. In the course of his remarks he spoke of the spirit of the allied peoples behind the lines. He said:

It has been said that this is a war not of armies but of nations; yet until the eyes see and the ears hear it is not possible to know the measure in which the people have given themselves, body and spirit, to the conflict. The men from 18 to 40 years of age, if they be sound in body, have gone to the war. Boys have been called forward and old men called back to fill the places which the soldiers have left. Girls and young women have taken up the tools which the men have laid down. You see them everywhere, those high-hearted girls—in the stables and the shops, as conductors of omnibuses, running elevators, at work on railway trains, as messengers, as porters, as drivers of motor trucks. In France and England 2,000,000 of them are engaged in work for the war, while in England alone this year 200,000 women and girls, volunteers, went out from the cities upon the farms to garner the harvest. Crofters' lassies, daughters of old houses, girls from shops and from sheltered homes, like their brothers in the trenches, are knit together in the new democracy of toil. If in Europe they have suffered, so also have they been ennobled by self-sacrifice.

What the women of France and England are doing to-day our women have already begun to do, and will be doing fully to-morrow if this great war keeps up. We can not justly deny equal political rights to those who voluntarily assume equal social and economic responsibilities.

Two months ago the State of New York saw the question of suffrage in its new and true perspective and voted for it.

Forthwith maligners raised the cry that it was the pro-Germans who had brought about the result. This assertion has fallen flat, for it has been disproved by a mass of facts, figures, and irrefutable testimony. The Socialists in New York voted for suffrage because they were Socialists, not because they were pacifists. The Socialist Party was for suffrage 25 years before pacifism as an issue was ever heard of. The Socialist vote on this issue was a pro-American and pro-suffrage vote, and was only a fraction of the great suffrage total. The fast-falling claim that the suffrage vote was pro-German died when the soldier vote came in. Speaking of this vote Frederick Tanner, the former chairman of the Republican State committee, said at a Republican meeting:

No one should go away from this meeting with the idea that the vote in favor of woman suffrage was a pro-German or socialistic vote. No living man will question that the soldier vote—the vote of the men at the front, who are either in France to fight for our country or are on their way to the front—is a patriotic vote. These men from the city of New York have voted in favor of equal suffrage at a ratio of almost two to one. Their total vote in the city of New York in favor of suffrage is 17,139. The total vote of these same men from New York City in favor of Mr. Hillquit was 3,717. The Hillquit vote fell off among our soldiers from the general average cast in the city. The woman-suffrage vote among the soldiers made a distinct gain over the general vote cast in the city.

There is nothing inscrutable, calling for a lengthy explanation, about the vote of New York. The New York Tribune put it clearly in its edition of January 9, when it said:

The decision of New York was more than an isolated victory for a group of women. It was a sign and symbol of a changing attitude of mind, of that lived faith in genuine democracy, in all the citizens of a State, women as well as men, which the democracy of the trench and the munition plant has brought home to us as no time of peace ever did.

I shall vote to-day for suffrage with double satisfaction, because it is the wish of my constituents as well as my own. I have been for suffrage ever since I have been in political life. It was my first independent political decision, and it is with no small personal satisfaction that I see the position that a few of us maintained alone against great numbers years ago, now to be incorporated in the fundamental law of the land.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. AYRES,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. AYRES. Mr. Speaker, I would consider it a greater honor to be the nephew of that great leader of women, Susan B. Anthony, than to represent the first district of Kansas in the National House of Representatives. My distinguished colleague and friend, Mr. ANTHONY, bears that distinction, and no doubt is proud, and justly so, of such a relative. Let me say that he is not alone in the feeling of pride and affection for this noble woman.

If she were here to-day in company with some of her co-workers, like Elizabeth Cady Stanton, Lucy Stone, Mary A. Livermore, Frances Willard, and many others I might mention, and could realize that the cause she launched so fearlessly in 1866 and labored for so faithfully and tirelessly till the day she was summoned to the great beyond was about to be won and her efforts at last crowned with success her joy and happiness would be complete. But, like most pioneers in great reforms and righteous causes who so frequently never realize the fruits of their labors, toiled on that those who followed may receive the blessings derived; nevertheless, her recompense is great, for her name is indelibly impressed in the memory and hearts of millions of fair-minded and grateful women of the world.

I said a few moments ago as far back as in 1866 these two women, Susan B. Anthony and Elizabeth Cady Stanton, at the close of the Civil War and just after the negro race had been enfranchised came before Congress and protested against the enfranchisement of the negro men while white women remained disfranchised, and so persistent were they in their efforts that at the beginning of the session of Congress in 1878 the Federal amendment now pending was introduced, and, as I understand it, has been introduced in each and every Congress since that date.

Just think, gentlemen, at the close of the Civil War, the finish of a gigantic struggle, in which these brave women had done

their part—just the same as patriotic American women are doing to-day in this great crisis through which our Nation is passing. Yet they were at that time denied the right of franchise, but thousands of men who did not have at that time the least conception of the duties of an American citizen were given these rights and privileges.

The daughters and granddaughters of many of those patriotic women who made sacrifices for the preservation of the Union are to-day making the same sacrifices again for the preservation of the Nation, making the same sacrifice, and just as great, in work and toil and offering up husbands, sons, and brothers as a sacrifice on their country's altar, that the Nation may continue to be a democracy. To-day, gentlemen, like their mothers and grandmothers, they are appealing in the same manner for the same rights and privileges to the sons and grandsons of the men who occupied the places then we occupy to-day. The question is, Will we take the same, narrow view of it they did and turn a deaf ear to such pleas, or will we as men of to-day, believing in justice and equity, as we do, make amends for the wrongs of the past?

I am not a recent convert to this cause. I have espoused it in my State for over 25 years, at a time when it was not at all popular. It was defeated at that time. Again I had the pleasure of working for it when it won, and now it is so popular that all are very ardent supporters of it. Men who were then its bitter opponents to-day are its firm defenders, and, like some of the gentlemen from New York, declare they were the original suffragists.

I am not going into the question of calling attention to the many heroic deeds that are being performed to-day in this world's crisis by the women of the world, and especially the women of this Nation. I can not think it necessary to indulge in such events to convince any intelligent man that the women of this country are intelligent enough to know how to use the ballot. It seems to me it would be sufficient to say, undoubtedly, any Member of this body ought to have enough confidence in his wife, if he has one, and his mother to believe she would be just as safe with the ballot as a man who may not be able to read, write, or even speak the American language, or may not have the remotest conception of our Government. We have almost eliminated all the safeguards in our eagerness to make a full-fledged Democrat or Republican or Socialist out of a male foreigner of practically all nationalities, and it has made little difference as to his idea of the duties of an American, but we are realizing now, as never before, the folly of it. It mattered not if he did not know the Constitution of the United States from the wrapping of a piece of bologna or the receipt for making liverwurst, just so he had lived in the United States for a short period and promised some political roustabout of some political party that he would be a good party voter, he could become a full-fledged American citizen with all the rights and privileges appertaining thereto, while some good American woman, whose ancestors may have fought in the Revolutionary War to gain our independence and in every war since for the preservation of the Nation, and whose husband or son may be fighting to-day for national rights, but because of her sex she is denied these rights and privileges.

While I have the greatest admiration for the foreigner who comes to this country and fits himself to be a good, useful, and loyal patriotic citizen, I have the utmost contempt for a man who comes to this country, enjoys all the benefits and protection of our Government and its flag, and at a time like this proves to be recreant to his solemn vows. I repeat, gentlemen, we are now realizing most forcibly that many a supposed American citizen, made so overnight for the purpose of a vote, has to be watched night and day by a band of secret-service men to keep him from blowing up a bridge, a factory, or workshop, while the good American mothers, wives, and daughters are spending their days and nights working, sewing, and knitting, and slaving to make it as comfortable as possible for the brave lads who are fighting for Nation and home, and while other good American women, sisters and daughters, are at the front as ambulance drivers, Red Cross nurses, caring for the wounded and sick, undergoing the greatest deprivations women can endure, all for the love of humanity and love of country which denies them the rights of full citizenship.

Gentlemen, do not you suppose that the young men in France who are at the front would feel just as safe with their mothers or sisters or wives or their sweethearts voting for them and representing them at the polls as they would for a man who is not sure he is an American citizen or the subject of some potentate? Oh, but how about the pickets, some fellow says. Gentlemen, those deluded, hair-triggered individuals did not and do not represent the good women of this country. Just as well say that because we have men who defy all forms of good government, who destroy property and murder innocent men, women, and

children, that all men should be deprived of the franchise, as to say because a few misguided women made of themselves a nuisance at the White House gates the women should all be deprived of the right to vote.

No Member of this House can say that he ever conversed with a more intelligent class of real women than those who have been presenting this cause to you in the past few weeks. These were broad-minded women from the East, from the West, and from the North and the South—perfect ladies in manner of presenting their cause. These are the women, gentlemen, who are back of this cause, and they do not countenance nor approve of the outrageous and seditious acts of those women at the White House gates any more than good, loyal, patriotic men approve of the disloyal and seditious acts of men.

I have received some letters, just as I suppose other Members have received, setting forth some great reasons why women should not have the right to the ballot. One gentleman by the name of Wheeler, who is the chairman of the executive committee of the American Constitutional League—one would judge from the name of this league much wisdom emanates therefrom—says it would be particularly unjust to impose suffrage upon southern States involving as it would the votes of negro women. No doubt you southern gentlemen are proud and delighted over the fact that you have a champion of southern rights as well as State rights in that old southern State of New York. In about three days after receiving Mr. Wheeler's letter I received a letter from Mr. Charles S. Fairchilds, who is the real president of this league. This letter contained much wisdom and logic from his point of view. I want to quote from it. He says:

Pro-Germans, pacifists, and socialists who carried woman suffrage in New York, as the election figures prove, hope to Russinize this country by passing the Federal suffrage amendment and then demanding a national referendum to men and women voters on this war.

If this gentleman is correct in his statement, there must be a lot of pro-German pacifists and socialists in New York from the majority suffrage received. And, if true, then it is a good thing, no doubt, we are getting some new voters in New York.

Again he says:

"Free women of the world," they declare, "will stop the war by forcing the laying down of arms."

Fine reasoning. I wonder if this gentleman remembers what the poor Russian women did a few months ago, when they organized an army, such as it was, and fought the enemy of their country at a time when their own men were so cowardly and refused to fight, but preferred to fraternize and retreat. I also wonder if he remembers the vote in Canada a few days ago, where the women voted the heaviest. They also voted the heaviest to continue the war until victory, and where it was the lightest was a pacifist vote. Again this philosopher says:

Such a referendum, no matter how it went, might lead to rebellion here and another Russia in our midst.

That would not be called a veiled threat either. Just think of it! "Lead to another rebellion here and another Russia in our midst." All this because women might be given the privileges of an American citizen. I would like to know how many women have advocated resisting the Government in this crisis? Not one in one hundred of the arrests made so far for seditious acts; and once more, I want to quote one of this gentleman's fine spun reasons for opposing suffrage:

And incidentally, such an election would cost about \$60,000,000—the price of five dreadnaughts.

Well, gentlemen, from what I have heard there have been a few Presidents elected that have cost almost that much, and I have also been informed that most of it found its way into that gentleman's State, so it may be by getting another class of voters into the game it might not cost so much; it might lead to a change in the method of conducting expensive elections, especially in New York.

I am thankful, however, and I believe a majority of the people of the United States are, that we can elect a President of the United States without going to New York and asking permission. And I am inclined to think we will continue to do so. Here is his closing paragraph—listen, gentlemen:

Every patriotic American must see the peril of doubling the pro-German, pacifist, socialist vote at this time, even without the tragic example of Russia showing that weakness in America now would let the Kaiser win this war.

Just think of it—by giving the good women of this country a right to vote one would be doubling the pro-German vote, pacifist vote, and would let the Kaiser win! That is an insult to every intelligent, loyal American woman. I should think that such arguments and such reasoning, if you would dignify it by calling it such, would drive the women of the opposition into the suffrage camps as a matter of self-respect, and that all men

who possess the love of wife, mother, and home would resent it by passing this amendment at once and demonstrate to this philosopher he is living in the dead past.

Where women have had the privilege of voting, as in some States, they have shown themselves the most intelligent voters—far more than men. There is a good reason for this, for they are independent voters. They are not Republicans because their fathers were, not Democrats because their granddaddies were; therefore they are not partisan, but study the problems confronting them as new but intelligent citizens, and vote not a blind partisan vote, but an intelligent, thoughtful vote.

If you never experienced the pleasure of talking over the affairs of state with your wife the evening before election and then go to the polls the next day with her and cast your vote, you have missed a great deal. Try it once and you will say, "Never again; never will I argue against equal suffrage." So well satisfied are we people in the West with it that not one of us would think of returning to the old method.

Most of those who have opposed this amendment say they are not opposed to equal suffrage by States. But let me say to those gentlemen, it is not worth while fooling yourselves. You are not fooling anyone else. If you are in favor of suffrage at all, why not by the Nation and not localities? You know, or, at least, should know, what the submission of this amendment means, giving the people of the Nation an opportunity to say whether or not we should have equal suffrage throughout the Nation. It seems strange that any man would say that if the people in three-fourths of the States of the Union should say that there should be equal suffrage, undoubtedly the other one-fourth ought not to be willing to accept the verdict. Even should three-fourths of the States vote for this amendment it means universal suffrage throughout the Nation, subject, however, to such laws and regulations of the States; that is, women must possess the qualifications now required of men voters in the several States. It only makes it impossible for any State in the Union to pass laws barring women from voting on account of sex. That is all. So, you defenders of that old, worn-out theory of State rights had better forget that. It was worn threadbare years ago.

You gentlemen from the South talked it to death last winter during the discussion of the child-labor law, while gentlemen on the other side were amused to think you were so childish about it. Then, only a few weeks ago, you gentlemen from the South were saying: "To the winds with the State rights; we have a right to say whether or not you fellows in New York, Massachusetts, New Jersey, Wisconsin, or Ohio have a right to have a glass of beer, and since our mint juleps have faded away we are not so strong for State rights as we once were, and then the great legal minds of Massachusetts, Pennsylvania, New Jersey, and Ohio in the North, if you please, argued loud and long for State rights. So we are again facing the same argument from the North and the same argument from the South alike—"State rights." Like the fourteenth amendment it has been used for every purpose a legal mind can think of as a mere subterfuge.

I have heard some gentlemen from the Eastern and Northern States say they were not opposed to suffrage, but they represent wet States or wet districts, therefore their constituents were opposed to both prohibition and suffrage. Let me say to you, gentlemen, you had just as well come through, if that is the only excuse you have, because you ought to be able to see the handwriting on the wall. The die is cast! Before the close of the year 1919 at least 38, and I am not so sure but 39, States will have adopted the national prohibition amendment. Your wet districts or wet States can not and will not be saved, so far as the booze question is concerned. So come on, you can say to Mississippi, North Carolina, South Carolina, Tennessee, and Georgia, you were willing to forego that sacred question of State rights and let three-fourths of the States say whether or not we should have our glass of beer or our julep, so we of the East will do likewise and let three-fourths of the States say whether or not suffrage shall be equal and universal.

And now, you southerners, I have heard and I have read a great deal about southern chivalry; that one of the greatest assets of the southern gentleman is his knightly courtesy and chivalric actions toward the fair sex—nothing too good for the ladies of the land. The question is, Has all this we have heard and read been a myth or is it a reality? Here to-day, gentlemen from the South, will be the greatest test of this much-touted characteristic attitude of the southern gentleman. You can not offer the excuse, sir, that your women do not want the right of suffrage, for some of the fairest and most intelligent of your land have been here appealing for this equality. I have seen them; I have talked with them; therefore I know whereof I speak. So, gentlemen from the South, come on and join us from the West, and thus live up to your traditions of gallantry and

chivalry and demonstrate to the rest of the United States that this characteristic is not a mere myth but a real virtue; and not only this, but, in the language of President Wilson, you can say: "We are fighting for the things which we have always carried nearest our hearts—for democracy; for the right of those who submit to authority to have a voice in their own Government."

Let us do this, gentlemen, and make the United States a democracy, not alone in name but in reality, and all that a democracy stands for—liberty, justice, equality!

Woman Suffrage Uplift in California.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918,

On the joint resolution (H. J. Res. 200) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. RANDALL. Mr. Speaker, I shall, of course, vote for the national suffrage amendment, because I believe the influence of women in the legislative affairs of the Nation will be just as effective and just as uplifting as that influence has been in my own State of California. Our legislators have been responsive to the woman voter in a remarkable degree, for it was after they came into the councils of the State that California secured many humanitarian laws, among them being:

Joint guardianship law, giving women equal rights over children.

Designating schools as civic centers.

Amendment to child-labor law, reducing work from nine to eight hours.

Extending the eight-hour law for women.

Making tuberculosis reportable to the State board of health.

Creating minimum wage commissions.

A psychopathic parole law.

Birth, death, and marriage registration.

The home teacher's law.

Changes in the compulsory education law.

A pure-milk law.

Community property law, giving a wife greater equality with her husband with regard to the community property.

Amending juvenile court law to separate dependent from delinquent children.

A teachers' pension law.

Establishing State training school for girls, with a board of women trustees.

Age of consent law, raising the age from 16 to 18 years.

Red light abatement law, placing the responsibility of disorderly houses upon the property owners rather than the inmates, and providing for the prohibition of such houses.

WOMEN AS OFFICEHOLDERS.

In answer to the question of the offices to which women have been elected, it is found that no California woman has been elected to a Federal or State office; in the counties there have been elected 18 superintendents of schools, 2 tax collectors, 1 treasurer, 1 recorder, 1 assessor, 1 sealer of weights and measures, 1 constable, 3 justices of the peace, 1 county clerk, and 1 auditor; in the cities 12 city clerks, 3 trustees, 7 treasurers, 1 councilwoman, and 10 members of boards of education have been elected.

California women have been appointed to the following offices: One in Los Angeles in the Federal department of labor, 1 in San Francisco in the office of the attorney general of the United States, and some postmistresses, 25 on State boards and commissions such as the housing and immigration commission, State board of charities, industrial welfare commission, social insurance commission, minimum-wage commission, and the trustees for the California State School for Girls. In the different counties there are women serving on commissions, and a number of women probation officers, especially in Los Angeles and San Francisco; there are 6 women deputy district attorneys and about one-fifth of the election officers appointed are women; in the cities, women are serving by appointment on commissions such as art, public welfare, parks, civil service, playgrounds, housing, humane animal, library, social service, and public health nursing.

In regard to the service of women in these various positions there is an unanimity of statement that they are more conscientious than men, more careful of details, more faithful, and as a general thing they do not dabble in petty politics as men do.

SUFFRAGE STIMULATES CAMPAIGNS.

Suffrage has had the effect of improving the character of candidates for office, cleaner methods have been used in campaigns, political meetings are more orderly, more women are present, there is less "hot air" in the speeches and more real argument; women dislike personalities in political campaigns. Polling places have been much improved, all are in decent places with better surroundings, and everything about voting is quiet and orderly. The effect of suffrage on women themselves has been an increased interest in public matters, a decided mental broadening; it has developed a concern not only in the rights of women but in the rights of men, and all human kind; it has added dignity and poise, intelligence, and efficiency to women.

Women are less influenced by party lines than men. This may be true because they are not bound by long and sacred traditions of party politics. Men and women who were formerly opposed to equal suffrage have now accepted it and have ceased to disapprove.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. HENRY A. CLARK,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. CLARK of Pennsylvania. Mr. Speaker, on November 2, 1915, the electors of the twenty-fifth congressional district of Pennsylvania, which I have the honor to represent, voted on a proposed equal-suffrage amendment to the constitution of Pennsylvania and favored it by a majority of 4,568.

Prior to the roll call on House joint resolution 200, known as the woman suffrage bill, it became apparent that the Republican Members of the House would support it by approximately a vote of 5 to 1 and the Pennsylvania delegation by 2 to 1. The actual result is as follows:

Total Republicans for, 165, and against the measure, 33; and the Pennsylvania Representatives voted 23 for and 12 against.

Cognizant of the prevailing sentiment on the Republican side of the House and among my own State Members, and regarding the popular expression in my own district in the nature of instructions, I voted for submitting the question to all the people.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. THOMAS W. HARRISON,
OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. HARRISON of Virginia. Mr. Speaker, I am not opposed to conferring the right of suffrage upon those women in Virginia who are capable of exercising the right patriotically and intelligently; but I am opposed to the grant of the right of suffrage to males or females in Virginia without proper restrictions and safeguards. There are conditions in the State which render unprotected suffrage dangerous and unwise. I am not satisfied that the intelligent and patriotic women of Virginia in any considerable number at present desire to assume the burden and responsibility of dealing with suffrage problems; and until they have signified that they are prepared and desirous, I do not think such problems should be imposed upon them. When such women in any considerable number desire the franchise I believe it will be given to them by the same authority which gives the right to the males, and under the same safeguards.

I am very much opposed to the proposed method of giving women the right to vote.

The right of suffrage is a question which the Federal Government should not attempt to deal with. It is fundamentally a State problem. The voters of the State are the rulers of the State, and it is of the essence of local government that the people of a State should have the exclusive right to say who their rulers should be. Who shall enact their purely local laws and who shall administer their purely local affairs is entirely in the hands of the voters of the State. For the people of other States against the wish of a State to force a qualification upon the voters of such State is subversive of the entire theory of local government, which the State governments in our duplex system are supposed to embody.

Some attempt is made to charge with inconsistency those who voted for national prohibition but refused to vote for the proposed amendment.

There is no sort of analogy between prohibition and suffrage. According to repeated decisions of the Supreme Court of the United States and of the highest courts of many States the control, regulation, or prohibition of the traffic in intoxicating liquors involves no personal right. Its regulation for years has been partly supervised by Federal legislation and partly by State. Indeed, under the interstate-commerce clause of the Federal Constitution for years, and until Congress consented, any sort of interference on the part of the State with interstate shipments was forbidden. The regulation of interstate traffic is now and has always been a Federal legislative function. To what extent, however, the regulation or prohibition should be State or Federal is a question simply of expediency and legislative policy. To some it has seemed the better policy to leave to each community the method of dealing with the subject; to others, owing to the close intimacy between the States in all trade matters, it has seemed the better policy to make its suppression national. Between prohibition and suffrage, therefore, there can be no sort of analogy. The one is a subject of legislation and primarily a question of legislative expediency; the other is in no sense a subject of legislation but essentially governmental.

The impropriety of dealing with the suffrage question as is proposed in the pending amendment is fully illustrated by the immediate effect which its adoption would have upon the constitutional suffrage clauses of Virginia.

In Virginia a small capitation tax is laid on every male resident over the age of 21. It is a tax which is laid wholly independent of the right of suffrage. The tax is required to be paid without regard to whether the person exercises his right to vote or not. It is, therefore, in no sense a suffrage qualification. Two-thirds of this tax is dedicated to the maintenance of the public free schools. It is provided in the constitution, however, that no one shall be permitted to vote at an election unless six months in advance of the election he has prepaid the capitation tax which was due for the year previous. Certainly it is no hardship on anyone that he should be required to contribute a small sum to the education of his children if he desires to exercise the right to vote. This tax is not laid on females. The female can not be required to pay it, and could not pay it if she so desired, because there is no one authorized to collect it. The female, therefore, would be permitted to vote without payment of the capitation tax. The male, however, would claim that as this tax is laid on males only, its payment as a prerequisite to the right to vote would be a discrimination against his sex and therefore void. So that the immediate effect of the adoption of the proposed constitutional amendment would be not only to give the right to the female to vote but also to materially affect the male right of suffrage. The white people of Virginia are carrying a very burdensome proposition in endeavoring to educate the children of the negro race. Very few of the Negroes are property taxpayers. Almost the whole revenue which the negroes of Virginia pay to the State for the education of their children is this capitation tax, which they must pay if they desire to vote. It will be seen, therefore, at a glance how radically the proposition before the House can affect the domestic concerns of a State and its revenues.

But if ever a people were taught the folly of a proposition of this character it is the people of the South. The annals of reconstruction tell the story of the exact counterpart of the proposition before the House. At the time of the adoption of the fifteenth amendment the white man was already a voter, and by the adoption of the fifteenth amendment the negro man was made a voter. By the proposed amendment the white female and the negro female are alike made voters, so that the proposition now before the House is simply a repetition of the fifteenth amendment.

If there ever was a measure which has been bitterly denounced by the South it has been the fifteenth amendment. It has been

conceded to have been a political crime by all thoughtful people, of all sections, of all parties, of all creeds, and of both sexes.

After years of misrule, which entailed a loss greater than all the devastation of war, the several Southern States have obtained freedom to some extent at least from the mischievous effects of the fifteenth amendment. By recent amendments to their respective constitutions some stability and legal status has been given to anomalous political conditions. As I have pointed out, in the State of Virginia we will be brought once again face to face with the hateful conditions which prevailed in many parts of the State prior to the adoption of our recent constitution if the proposed constitutional amendment is adopted.

For years isolated, threatened with force bills, and deaf to all political cajoleries, the South has remained solid upon the Jeffersonian doctrine that each State should control her own local affairs and especially the right of suffrage. Every proposition has been subordinated to this. Her fidelity to this principle and to the teachings of Jefferson has in this year of grace brought her to political power. It is now suggested that she will lose her position of influence, unless she barter away her principles. She obtained her position of influence by her unswerving fidelity to principle, and there is no real guarantee that she can retain her political position except by adherence to the same principles which gave her power.

However this may be, there are some things which are dearer than political influence in the Nation. The peaceful, progressive, orderly, and prosperous administration of her public affairs, which has been the happy fortune of Virginia for many years, has meant far more to her people than the political prominence of her wise leaders. For years Virginia was an outcast in the councils of the Nation, but she grew rich, happy, and prosperous. Virginia can also recall days when her State affairs were controlled by those who had no conception of the responsibility of the ballot, and her sons and daughters will see to it that there is no return to such conditions.

It is not necessary to obtain the ballot for the true women of Virginia to resort to a measure so fraught with menace to all they hold dear, and they should not be led astray by the professional agitators of other sections who have no conception of and no sympathy with the conditions confronting them.

For these reasons, wholly independent of my views on female suffrage, I am opposed to the pending proposition.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. FRANK W. MONDELL,

OF WYOMING.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. MONDELL. Mr. Speaker, I am so profoundly interested in the success of the movement for the enfranchisement of women that I was willing to forego the opportunity to address the House at length on the subject when the resolution for a national woman suffrage amendment was before this body, in order to afford others who desired to speak an opportunity, contenting myself with a very brief statement of my great interest in the cause and my confidence of the adoption of the resolution.

In view of the brevity of my statement on the floor of the House, I am availing myself of the opportunity to submit under the leave to extend some further remarks on the subject.

The vote on the resolution was very close—rather more so than we had anticipated—in fact, the change of one vote might have defeated it. But the vote demonstrated so radical a change from the attitude of the House when a similar resolution was voted upon on a former occasion that the friends of woman suffrage may well feel that it was indeed a glorious victory.

This triumph of the cause of suffrage is especially gratifying to me as I recall the situation in Congress in years past. As the Representative of the original woman-suffrage State, I have always taken a great interest in the spread of this great reform toward the establishment of a true voting democracy, and I well remember how in the early years of my service in Congress but few were to be found in the House who viewed it favorably. I introduced the suffrage amendment Congress after Congress and urged its passage, only to find that my appeals and arguments fell upon deaf or unfriendly ears.

It affords me a vast amount of satisfaction as a Republican to note that our party, which has always had faith in the people and has so consistently advocated a broad and liberal extension of the right to vote and the defense and protection of that right, contributed a goodly majority of the votes which woman suffrage received in the House when the resolution was adopted.

There were 274 votes for and 136 votes against the resolution in the House. Of the 274 favorable votes, Republicans gave 165, Democrats 104. Of the votes against the amendment, 102 were cast by Democrats and only 33 by Republicans. Of the five independents voting for the resolution, three sit on the Republican side. Eighty-three per cent of the Republican vote was cast for the resolution and 51 per cent of the Democratic vote. At the same ratio, if all the votes cast had been Republican, the resolution would have been adopted with many votes to spare; had they all been Democrats, the resolution would have been disastrously defeated.

The evening before the vote in the House was taken the Republicans met in conference and adopted the following resolution, which I offered:

Resolved, That the Republican conference of the House of Representatives advises and recommends that Republican Members of the House support the woman-suffrage resolution in so far as is consistent with their convictions and the views of their constituents.

That the resolution voiced the view of the great majority of the Republicans is evidenced by the fact that the Republicans gave a large percentage of their votes for the bill. Thus the members of the Republican Party in the House have again shown by their votes their conviction that this should be in fact "a Government of the people, by the people, and for the people."

Woman Suffrage by Federal Amendment.

EXTENSION OF REMARKS

OF

HON. J. J. MANSFIELD,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. MANSFIELD. Mr. Speaker, I had occasion a few days ago to express upon the floor of this House some views concerning the proposition of placing in the Federal Constitution a new article seeking to limit the power of a State to make provision as to the qualifications of its own electorate. I stated at that time that upon the question of the franchise the Constitution has never made any distinction as to sex and that men and women alike stand before it sharing equal privileges. This statement, Mr. Speaker, has not been disputed by any person advocating the proposed amendment, but it stands before us an uncontroverted if not an admitted fact. Such being the case, then, who can claim that the adoption of the amendment is necessary in order to extend to women the privilege of voting? Has she not already obtained that privilege in a number of States without amending the Constitution? Then, why, I ask, is it deemed necessary to secure the amendment at this time after nearly one-half the States have granted the privilege?

Mr. Speaker, under our system of government the State is the unit and the source of all power and authority. For mutual protection only the several States by general agreement banded themselves together in one compact or union. This union was not for the purpose of exercising the functions of government, but rather for the purpose of protecting the governments exercised by the several States. It was expressly provided that the union of States had no power for any purpose except that which the States themselves gave it in the compact, and that all other powers of government remained with and vested in the several States. The courts of the country have at all times recognized this principle when called upon to construe a constitutional question. If they found the power attempted to be exercised was not granted to the Federal Union by the States, in the Constitution, either expressed or implied, they have invariably held the measure to be unconstitutional.

In construing a State constitution a different rule prevails. The State being the source of power it is not consistent or necessary for it to attempt to grant to itself more power. It already has all power, except that which it has given away, either to the Union in the Federal Constitution or to its own people in the State constitution. Consequently, the courts in passing upon the constitutionality of any assumed power of a State do not look to see whether such power was ever given to

the State, but they recognize that the State once had the power to do the acts complained of, and still has that power unless it has given it away either to the Federal Union or to its own people. In other words, the Federal Union has no power except that given it by the States, while the States have all power except that which they have given away. The object of the Federal Union being for the mutual protection of the several States it was deemed wise and prudent for it to have no more power than was consistent and necessary for that purpose. Unnecessary power in the Federal Union leads to despotism and oppression.

Now, the power to regulate the franchise was one of the powers retained by the States. In the proposition before us the States are now requested to give away that power, at least in so far as the question of the sex of the voter is concerned. The States can give this power to the Federal Union by deed of gift if they want to, just as a man may give away his property. It would be very unwise, however, for the States to do so, unless it was reasonably necessary to enable the Federal Union to carry out the purpose for which it was created.

I submit, Mr. Speaker, that no necessity can possibly exist for the uniform regulation of the franchise. Conditions are not uniform in all the States, and each State should be free to meet the varying conditions as they exist and as may be deemed in accord with the wishes of a majority of its people. If one State desires to have an educational requirement, no other State nor the Federal Union should be permitted to interfere. If one favors a poll-tax payment, it does not concern a citizen of another State. If the people of one State should exercise greater care than the people of another State in bestowing the privilege upon strangers, such should be their privilege. If one State should consider children of immature age incapable of exercising this important trust, then the proposition of permitting another State through its legislature to have a voice in compelling the enfranchisement of children in the State desiring to withhold the ballot from them, I take for granted, can not be justified or excused from the standpoint of reason or common sense. If the people of Kansas want the women to vote in that State, such should be their privilege without molestation from the State of Mississippi. If the people of Mississippi should find it detrimental to their interests to place the ballot in the hands of a million ignorant and irresponsible negro women of that State, I for one will voice my protest and cast my vote to deny to Kansas or to any other State the right to compel the State of Mississippi to place this dangerous weapon in their hands.

In Texas, the State I represent, the women do not vote. Many of them may desire to do so, many more may not want to be burdened with the responsibility. Do the people of Montana desire to force this burden upon the women of Texas without their consent? If so, why? Mr. Speaker, I submit that it is a thousand times better for Texas to be free to exercise this privilege whenever it is the desire of her own people to do so. We do not presume to enforce our system upon the other States, and many of our people might deem it presumption in the people of other States for attempting to enforce their system upon us. Suppose, Mr. Speaker, that the converse of this proposition were before us. Suppose a resolution were submitted here, supported by the Representatives of all the States where women do not vote, denying the right to any State to grant the privilege. Would the people of Montana or Utah or of California claim exemption under State rights? I submit, Mr. Speaker, that the fair women who are now filling the galleries, demanding this innovation, would then be preaching the doctrine of State rights throughout the length and breadth of this land. Their voices would echo and reecho back and forth from the Sierra Nevada to the Appalachian chain, and tons of literature would be sent broadcast demanding the retention of the principle they are now seeking to destroy.

Mr. Speaker, the State of Texas is the first State of the Union in area and the fifth in population. There are more women in that great State who abhor the idea of having suffrage forced upon them than there are men, women, and children in the State of Nevada. Yet, in passing upon the question of the ratification of this amendment, Nevada, with her comparative limited area and with her but little more than 100,000 people, will have as much voice as the State of Texas with her 262,000 square miles of territory and her, perhaps, more than 5,000,000 of people. When we further consider the proposition in the light of one as not affecting the people of Nevada in any way whatever, but as one of vast concern to the people of Texas, it is enough to cause the sages to wonder that the people of any State in this Union could possibly desire such an innovation in our Government.

Mr. Speaker, in the organization of our Government it was never contemplated that the regulation of the franchise should

ever become a Federal question. It is true the fifteenth amendment, having a similar bearing to the one now proposed, was adopted soon after the close of the late Civil War, but that was done at a time when a large number of the States were not permitted to voice their protests, and when the remaining section of the country was under the influence of passion resulting from the bitter conflict just ended. The fifteenth amendment, however, never had the result contemplated. In the Southern States, where it might have been thought that it would have a potent effect, the situation is so thoroughly safeguarded that the amendment to-day is virtually a dead letter, while in the Northern States, those that caused the initiation and ratification of the amendment, the negro to-day constitutes the balance of power and dominates the political situation, as well as entering largely into the industrial and labor question, from all of which, so far as the negro is concerned, the South is entirely free. Consequently, it will be seen that those who sowed the winds are reaping the whirlwinds, and perhaps in no section of the country have there resulted more serious consequences than in some of the States most directly responsible for the innovation.

So, Mr. Speaker, will it be if this amendment should become engrafted in the organic law of this country. Those responsible for it may be the first to have cause to regret it. The tendency of the times is such that if there ever was a period in our history when safe, sane, and conservative action was needed, now is the time. The people have begun to consider that the bridle is off and that there is no limit to their action. The Constitution is beginning to be regarded so lightly as to have little more dignity than an ordinary statute in which no penalties are prescribed. Even the fair maidens who have been engaged in the performance of those picketing duties, claimed as being so necessary in helping the Nation to win the war, regard a constitutional amendment in the light of a mere flirtation, to be embraced without giving it more than a passing thought. Where, I ask, will all this end? What purpose can a Constitution serve if it is to be stripped of its stability?

If the Constitution is to be altered or set aside to suit every fad or fancy, then it is plain to be seen that we are but a few paces behind Russia in the mad race to political ruin. Russia, it will be recalled, is the only one of the warring powers of Europe where woman suffrage has been put into full force and effect as a war measure. They have already won the war in Russia by giving one half their territory to the Kaiser, the other half to be divided between the Finns, the Ukrainians, and the Cossacks, with the mastery for Siberia to be hereafter contended for by the Teutons and the Mongolians. However, it is not my purpose at this time to discuss the relative merits or demerits of woman suffrage, but to simply voice a protest as to the forum in which that discussion is to take place. The passage of this measure can not be justified upon the ground "that the end justifies the means." If a man wants to enforce his legal rights, he must proceed in a legal manner. If he seeks to avail himself of an equitable right, he must first show that in attempting to do so he himself is doing equity and file his proceedings in a court of proper jurisdiction.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MASON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 10, 1918.

Mr. MASON. Mr. Speaker, I had hoped to speak in favor of submitting to the States the proposed amendment, but there was such a demand for time that I did not urge my claim, and am now taking the privilege given to extend, briefly, my remarks in the RECORD. I do so because I have not heard, so far, any special word of honor or praise given to the great author of the proposed amendment, Susan B. Anthony.

I consider it one of the great privileges of my life that more than 40 years ago I had the honor of the personal acquaintance of Miss Anthony, and, while the acquaintance was limited, I caught a glimpse of the truth of the things for which she lived. I have seen her at meetings under most distressing and trying circumstances and for years was forced to read the coarse wit of cheap and feeble-minded satirists who thought they were making great sport of this great-souled woman, with the calm

plain face, simple attire, and single-minded devotion to the cause of human liberty.

I can not let the opportunity pass without recording here, briefly, her life work and struggles for equal rights and spreading upon the records of the Congress of her country a tribute of devotion and praise.

Susan Brownell Anthony was born in South Adams, Mass., February 15, 1820. Her father, Daniel Anthony, a cotton manufacturer, was a liberal Quaker, who educated his daughters with the idea of self-support and employed skilled teachers in his house. After completing her education at a Friends' boarding school in Philadelphia, she taught in New York State from 1835 to 1850. Her father removed in 1826 to Washington County, N. Y., and in 1846 settled at Rochester. Miss Anthony first spoke in public in 1847, and from that time took a part in the temperance movement, organizing societies and lecturing. In 1851 she called a temperance convention in Albany, after being refused permission to a previous convention on account of her sex. In 1852 the New York State Temperance Society was organized. Through her exertions and those of Mrs. E. C. Stanton women came to be admitted to educational and other conventions, with a right to speak, vote, and serve on committees. About 1857 she became prominent among the agitators for the abolition of slavery. In 1858 she made a report in a teachers' meeting in Troy in favor of the coeducation of the sexes. Her energies have been chiefly directed toward securing equal civil rights for women. In 1854-55 she held conventions in each county of New York State in the cause of female suffrage, and since then she has addressed annual appeals and petitions to the legislature. She was active in securing the passage of the act of the New York Legislature of 1860 giving to married women the possession of their earnings, the guardianship of their children, and so forth. During the war she devoted herself to the Women's Loyal League, which petitioned Congress in favor of the thirteenth amendment. In 1860 she started a petition in favor of leaving out the word "male" in the fourteenth amendment and worked with the National Woman Suffrage Association to induce Congress to secure to her sex the right of voting. In 1867 she went to Kansas with Elizabeth Cady Stanton and Lucy Stone and there obtained 9,000 votes in favor of woman suffrage. In 1868, with the cooperation of Mrs. Stanton and Parker Pillsbury and with the assistance of George F. Train, she began in New York City the publication of a weekly paper called "The Revolutionist," devoted to the emancipation of women. In 1872 Miss Anthony cast ballots at the State and congressional election at Rochester in order to test the application of the fourteenth and fifteenth amendments of the United States Constitution. She was indicted for illegal voting and was fined by Justice Hunt, but, in accordance with her defiant declaration, she never paid the penalty. Between 1870 and 1880 she lectured in all of the Northern and several of the Southern States more than one hundred times a year. In 1881 she wrote, with the assistance of her coeditors, Elizabeth Cady Stanton and Matilda Joselyn Gage, *The History of Woman Suffrage*, in two volumes.

On the morning of Tuesday, March 13, 1906, Susan B. Anthony answered the last call, and almost without exception the pulpit, press, and public paid due respect to her memory and rendered just comment on her life's work.

I saw her at a meeting in Springfield nearly 40 years ago. It was very much like the antislavery meetings I used to attend with my parents 20 years before that. I remembered that the antislavery pioneers had lived to see the freedom of the slaves, and, being thoroughly convinced of the righteousness of her cause, I wondered if that pioneer would live "to wield the sickle in the ripened field." I am happy to say that she saw enough of the harvest to feel sure of the eventual emancipation of those for whom she labored, and with her very last words she placed the leadership of that cause in the hands of Dr. Anna Howard Shaw, and her last orders have been faithfully carried out.

I wish I had time and space to pay a tribute to all the brave women in public and private life who have contributed so nobly to this service.

I wish I had time and space to reply to some of the sophistries used in opposition to this amendment. I was thrilled when one of my colleagues mentioned the name of Betsy Ross and approved of the beautiful tribute he paid to her who sewed the first stars on our country's flag. It suddenly occurred to me that if Betsy Ross should come back my friend who was paying the tribute to her memory would say to her, "Betsy, you rendered a great service to your country, but if you are to stay here you will have to be governed by laws which you did not help to make and be classed in the matter of civil rights with minors, criminals, insane persons, and idiots." Mr. Speaker, Betsy Ross still lives; her name is legion. In the field, on the farm, in the shops, in the

hospitals, and in the homes they are making fast forever the stars which Betsy Ross first sewed in our flag. Betsy Ross of to-day works patiently, saves, sews, and knits. In all these activities this wonderful American woman, without threats or violence, some bearing the picket's banner and some with the knitting needles, all are weaving into the web and woof of our flag the colors of the new democracy, where everyone shall be equal before long.

Woman Suffrage.

EXTENSION OF REMARKS OF HON. CLEMENT C. DICKINSON, OF MISSOURI, IN THE HOUSE OF REPRESENTATIVES, Thursday, January 10, 1918.

Mr. DICKINSON. Mr. Speaker, the woman-suffrage resolution submitting an amendment to the Federal Constitution reads as follows:

SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

SEC. 2. That Congress shall have power to enforce this article by appropriate legislation.

Article XV of the Constitution of the United States, extending the right of suffrage to the colored race, was proposed or submitted to the legislatures of the several States by the Fortieth Congress on the 27th of February, 1869, and was declared, in a proclamation of the Secretary of State dated March 30, 1870, to have been ratified by the legislatures of 29 of the 37 States. This amendment reads as follows:

SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

SEC. 2. The Congress shall have power to enforce this article by appropriate legislation.

The adoption of this amendment was made possible by the Civil War and the abnormal conditions in the South during the days of reconstruction, when carpetbag rule dominated in the Southern States and controlled their legislatures, gave the three-fourths vote necessary for its ratification.

Forty years later, on the 12th of July, 1909, the sixteenth amendment was proposed by the Sixty-first Congress, and was declared ratified by announcement made February 25, 1913. This Article XVI reads as follows:

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

By virtue of this income-tax amendment, bitterly fought for many years, Congress has enacted its several income-tax laws, under which enormous sums of money are now levied, so necessary for the successful prosecution of the war and properly collected for the general needs of the Government in times of peace and war.

On the 16th of May, 1912, the Sixty-second Congress proposed the seventeenth amendment, which was declared ratified May 21, 1913. This Article XVII provides for the election of United States Senators by direct vote of the people, and, in the judgment of many, has made the Senate more responsive to the public will.

In December this Congress submitted to the legislatures of the several States for ratification the national prohibition amendment, which, as proposed, reads as follows:

SECTION 1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof, for beverage purposes, is hereby prohibited.

SEC. 2. The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.

SEC. 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

The woman-suffrage amendment is proposed as Article XVIII. It does not contain the seven-year limitation found in the prohibition amendment.

All amendments to the Federal Constitution are submitted under Article V of the Constitution, which reads as follows:

The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several States or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; provided, etc.

The fifteenth amendment, proposed for the purpose of extending the right of suffrage to the Negroes, then recently emancipated, was adopted, as also the thirteenth and fourteenth amendments, shortly after the Civil War, and during the reconstruction days, when a large part of the white population of the South was debarred from voting, and the adoption of these amendments was made possible at that time by reason of the fact that several of the Southern States, helping to ratify, were under what was known as carpetbag rule, and the legislatures did not then represent the educated and property-owning class, which, notwithstanding the fifteenth amendment, shortly regained and have ever since remained in full control in the Southern States as well as in the other States of the Union.

The recollection of the wrongs done in the days of reconstruction and the desire to make permanent and effective the control of the South by the white race by debarring this further extension of suffrage and thus giving the negro women the right to vote, I have no doubt, in a measure influences some of the Representatives here in their opposition to this woman-suffrage amendment, and they present with force and argument and some feeling their antagonism to any interference with the rights of each State to fix and determine for themselves all questions relating to the extension of franchise. The ghost of the days of reconstruction is still luminous in the memory of those who fear a possible repetition of wrongs against the States by Federal interference in its elections. I feel that they magnify the ills against which they inveigh.

I feel that the people are entitled to have submitted this amendment, as well as the prohibition amendment, and let the several States determine, in the manner and by the method provided by the Constitution, as to whether or not the Constitution of the United States should be so amended as to extend the right of suffrage to women as well as men. Three years ago I voted to submit both the prohibition and the woman-suffrage amendments, and my attitude to-day is the same as it was then with reference to their submission.

The sentiment in favor of woman suffrage has grown rapidly. This great war has helped to advance both prohibition and woman suffrage and has largely increased the sentiment for Government control and ownership of railroads. Mighty changes are going on, and while war and revolution stir all nations, a new world is being made. Old things are passing away, and I hope the world will be better by reason of changed conditions that will be thrust upon us.

In the great West the women are already voting. In November last New York State voted in favor of woman suffrage by over 100,000 majority, while only two years before it defeated woman suffrage by over 195,000. A marvelous change due, we must believe, to a great wave of sentiment and a knowledge that women were being called on everywhere and were pressing forward to do their share in this great crisis of world war. While lending their generous and necessary aid, without which this war could not be won, why not let them also have a voice in the affairs of the Nation.

Those who oppose admit that woman suffrage throughout the Nation is inevitable, but urge that its settlement should be left to each individual State for separate action, and that it is an invasion of the rights of the States to amend the Federal Constitution, and thus by this method give woman suffrage to all the States. Slowly it might come to all the States by separate action of each State, and so with prohibition, but would be much longer delayed. In a measure, the same arguments were made against the submission of the amendments to the Federal Constitution for Federal income taxation, to the election of United States Senators by direct vote of the people. Special interests strenuously opposed the adoption of these amendments, that by the levying of taxes upon large incomes the wealth of the country would be compelled to pay a larger share of the burdens of Government; and by popular election of United States Senators special interests would be less able to influence and name who should represent the several States in the Senate.

So, too, on the question of national prohibition, a heretofore powerful interest in this country cried aloud against the invasion of the rights of the States and fought bitterly and successfully the submission of the prohibition amendment, and only in December—less than a month ago—was this submission permitted, and then, on a close vote, made possible by the vote of the Southern States and by the presence of war.

The drift of public sentiment everywhere is toward a more equal distribution of the burdens of Government and an enlargement in its responsibilities. The trend toward popular Government is world-wide; a very stirring of the masses for fairer treatment, so that men and women, who bear the burdens may share in a larger measure the responsibilities of Government.

Let us get away from that condition in which the temperance laws of a dry State can be nullified by the agencies of adjacent wet States. When the prohibition amendment shall have been ratified, this condition should end; when both Federal and State powers can aid in making effective its mandate against the liquor power of the Nation. This power has been active in its opposition to woman suffrage, both State and National. For the votes of women will be largely cast against the manufacture and sale of intoxicating liquors, and it has not been unnatural for the liquor interests to oppose woman suffrage.

The anomaly of the situation here is the opposition of Representatives from prohibition States to submitting this suffrage amendment to the several States for their action under the Constitution. I have no desire to unduly criticize their attitude nor their votes in opposition to this amendment, that would give to the women of every State the right of franchise; but I am in opposition to having wet States and dry States, so am I likewise to having women-suffrage States and nonwomen-suffrage States. There will be still reserved to each State the right to regulate suffrage by educational and property and other qualifications as now, except as to sex—the same rights of suffrage to be accorded women as to men.

It is not an easy matter to amend the Federal Constitution, and properly so. The fundamental law of the land ought not to be easily changed. It is significant that only five amendments to the Constitution of the United States have been adopted within a century past, and, of these, three were adopted shortly after the Civil War, that ended in 1865, more than 50 years ago. Prior thereto the twelfth amendment was adopted in 1804, more than 113 years ago.

The very fact that it requires a two-thirds vote of both the House and the Senate before it can be submitted, and then requires it to be ratified by the majority vote of both houses of the legislatures of three-fourths of the States shows that it was intended by the framers of the Constitution that before this great instrument should be changed by amendments, that the sentiment in favor of such change should be strong and general throughout the Nation, so as to compel its submission and its ratification. And so amendments have come and will continue to be submitted, where the popular judgment is sufficiently strong to compel favorable action by those clothed with the authority to submit constitutional amendments to the judgment and decision of the people of the sovereign States of the Union, who will record their will through their own agents and representatives in their respective legislatures, and these legislators will be required to speak the will and judgment of those who make them agents and give them seats in these legislative bodies.

Revolutions do not go backward, and the progress in favor of suffrage has grown with remarkable rapidity, and whatever may have been the declarations heretofore made in party platforms regarding the rights of women to vote, when the several parties next meet in national conventions, they will all declare in favor of this woman-suffrage amendment. It will not be made a party question. It is not now and will not be then. The necessary three-fourths may be obtained before the next presidential election, and the controversy will have ended; and the evils predicted by those opposed will, in my judgment, not be in evidence, but that conditions will be helped rather than hurt by extending the right of suffrage to women in all the States.

I hope the resolution will pass both the House and the Senate, and when submitted that it will in the early future be ratified by the sovereign States of the Union.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. FRED A. BRITTEN,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 16, 1918.

Mr. BRITTEN. Mr. Speaker, now that the equal-suffrage amendment has been passed by the House I desire to insert in the RECORD a few speeches made by representative women of Illinois during their visit to the National Capital December 12, 1917, when a delegation of Illinois women headed by Mrs. Grace Wilbur Trout, Mrs. George F. Bass, and Mrs. James W. Morrison, met with the Illinois Members of the House and Senate.

The addresses made that day typify the very highest thought and endeavor of the women of Illinois who have so cheerfully

given of their time and money in bringing about the success of so worthy a cause, and the affirmative vote of the entire Illinois delegation in Congress for the equal-suffrage amendment was due very largely to the sincere and practical operation of these wonderful women. When this was an assured success they gladly lent their superior knowledge of practical politics to their sister workers in other States where each vote was carefully tabulated and cherished.

If any one woman in the country is responsible for a great measure of the success attained, I honestly believe that woman to be Mrs. George F. Bass, of Chicago, whose indefatigable endeavor and wise procedure must have been felt in every State in the Union.

Besides the women whose speeches I am inserting, I desire to especially compliment that all-practical little lady, Mrs. Joseph Baur, whose address to the Members of Congress was just full of what she termed "practical politics" and will be long remembered as a classic in this direction. I am sincerely sorry that I failed to procure a copy of it for preservation in the RECORD of this body.

The country owes a sincere compliment to such women as Mrs. Joseph T. Bowen, Mrs. Joseph M. Patterson, Mrs. Augustus Peabody, Mrs. Tiffany Blake, Miss Marie J. Rozet, Miss Caroline Kirkland, Mrs. Medill McCormick, Mrs. George Packard, Mrs. Charles Hamill, Mrs. R. T. Crane, Jr., Mrs. Dunlap Smith, Mrs. Arthur Ryerson, and Miss Cornelia Conger for their wonderful and patriotic labor in a glorious cause which must surely be recognized by that body on the other side of the Capitol.

The Illinois meeting on December 12 was presided over by Senator LAWRENCE Y. SHERMAN and was attended by Senator JAMES HAMILTON LEWIS, as well as by many Members of the House from our State.

Mrs. Grace Wilbur Trout addressed the delegation and said:

We are to-day facing a world crisis. If we talk democracy—fight for democracy—then certainly to be consistent we must live democracy. The passage of the Federal suffrage amendment is not merely an equal-suffrage question. It is a question involving a fundamental idea for which a world to-day is fighting.

We have in this country three times as many native-born women as we have foreign-born men and women put together. Certainly at this critical time the patriotic men of America need standing back of them these free, native-born patriots of America. With thousands of men being called out of the ranks of civic life into the Army and Navy, with thousands and thousands of them being sent to foreign shores, who is going to safeguard this country against the anarchism, the treachery, the unrest, and the discontent that always follow in the wake of war? Men who are left at home are going to have double burdens to carry. These men need standing back of them, with full political strength, the women of their households.

The vote is as effective a weapon as a gun with which to fight for the Government. Now is the psychological time to pass the Federal amendment. If we as a nation are going to live and become the hope of humanity, we must become a real democracy in spirit and in truth, a democracy representing all of our people, women as well as men.

Who is going to take care of, support, and nurse back to health and strength the thousands of men who are going to come back from this war? Who is going to do the work of those who never come back? Women to-day are frantically busy with their Red Cross work and other war relief work. Many of them think when the war is over their work will cease. It will only have just begun. Then, let us to-day pass the Federal amendment and give them that political freedom which will enable them to do their work in the most efficient way.

We talk conservation in this country. Let us conserve the woman power of the Nation. Truth strips the mask from hypocrisy and shows us things as they are. It is impossible to build without a foundation. Can we honestly expect that success that we so earnestly desire for our troops at the front, for our own brave men who are fighting and making the last great sacrifice, that the world may be made safe for democracy if we fail to stand for the same basic idea here at home?

The men in Congress to-day have the greatest opportunity ever offered to men in the history of our country, the opportunity to pass the Federal suffrage amendment, and make this Nation what it has always pretended to be but never has been, a real democracy. Men in voting for the Federal amendment are building up a constituency among women bound to them forever by indissoluble chains of gratitude. Statesmen who confer liberty upon humanity are never forgotten.

We believe that the Congressmen in Washington will see the vision and, uniting, will pass the Federal suffrage amendment, and by so doing help win the present war, for this Nation needs its full man power united with its full woman power in this hour of its great trial.

Mrs. Lyman A. Walton, of Chicago, then addressed the delegation, and said:

Mr. Chairman and members of the Illinois congressional delegation, we bring you the greetings of a million woman voters of the great State of Illinois. We bring you also the practical experience that a woman with a vote is a more effective factor in a community than the woman without. The summer after the women got the vote Chicago's garbage contract ran out. Mayor Harrison appointed a woman, Miss Mary McDowell, to head the new municipal garbage commission. Although we had tried for years to bring about the appointment of police women on the force, it was not until the women got the vote that Mayor Harrison appointed them. We now have 10. In the first aldermanic election six very bad aldermen were replaced by six excellent representatives as a direct result of the women's votes. To-day a request from one of our municipal officers is backed by our vote.

But our votes have also gained us strength in the State and in the Nation.

We have the unreserved indorsement of former Gov. Dunne and Gov. Lowden. In our first presidential election the women received the indorsement and praise of the national leaders in both parties.

To-day women are responding nobly for war work. They are backing up the Federal Food Administration. They are helping the Red Cross. England and France have been able to accomplish what they have by virtue of their heroic women as well as their brave men. And what they have done the women of America are ready to do. But, as always, women are not prepared to perform any special function with the greatest efficiency because they have not been trained. If it is true that our military training for our young men for national defense is inadequate when they come to the grim business of war, how much truer is this of women without any training at all? The women are asking for universal service for themselves as well as for their boys and men. In these grim months they will bear great economic and social burdens that will test them as severely as their men. Give them training! Prepare them for this service! But universal service presupposes universal responsibility and universal responsibility means the universal vote. The great womanhood of America is ready to serve, with the vote or without the vote. But the women will serve more readily, with greater enthusiasm and greater devotion, if they realize that they have a voice in the direction of America's affairs. Because of our past record and our offer of unreserved service, we ask the passage of the Federal amendment.

Mrs. James W. Morrisson, of Chicago, then addressed the delegation and said:

I realize and am very grateful for the knowledge that it is not necessary for me to attempt to convince our Illinois delegation of the justice and wisdom of passing the Federal woman-suffrage amendment, but I should like to give you for your information certain facts which you may find useful in answering the arguments of other men who are not so well informed or possessed of so keen a sense of justice.

We are frequently asked why we do not stop suffrage agitation and go in for war work.

Gentlemen, we are doing war work.

Dr. Shaw, our honorary president, is the chairman of the women's committee of the Council of National Defense. Mrs. Catt, our president, and Mrs. Stanley McCormick, one of our officers, are on that committee. As you know, the National Woman Suffrage Association was the first organization to pledge to the Government, even before war was declared, the support of its entire membership and to undertake on behalf of the Government war work along certain lines. That obligation has been kept, that pledge renewed.

Of our Illinois women, of the members of this delegation, Mrs. Bowen, former president of the Chicago Equal Suffrage Association, is a member of the State council of defense and chairman of its women's committee. Mrs. Cyrus McCormick is its treasurer. Mrs. Peabody is vice chairman of its committee on food production. Mrs. Ryerson, Mrs. Trout, and I are on the executive council of this committee and in no ornamental capacity. Mrs. Bass and Mrs. Fairbanks are members of the national liberty-loan committee, Mrs. Baur its Chicago chairman. As an illustration of the amount of work some of these women are doing, it may interest you to know that Mrs. Baur's committee was asked by the men's liberty-loan committee to sell \$750,000 worth of bonds. They sold well over seven million.

We are doing war work, and we are doing suffrage work as well. That means that we sleep a great deal less and that we hardly play at all. It is a double burden that we carry, and a very heavy one.

You will remember, gentlemen, that at the time of the Civil War the same plea was made to the suffragists of America, and they did drop all suffrage work and gave themselves whole-heartedly to the service of their country. What happened? After the war the negro was enfranchised and they were not, the country dismissed the question of suffrage and went to work on other things, and it has taken more than 50 years of continuous agitation to bring our great cause to the point where it now stands. Get it State by State some people say to us. Mrs. McCullough has told you of the difficulty of securing a suffrage amendment to the constitution of Illinois. Such amendments are even more difficult to secure in other States. The President himself, after being told of the obstacles in the way of a constitutional amendment in Indiana, admitted that to enfranchise Indiana women by that method was practically impossible. To amend the constitution of New Mexico you must have a majority of three-fourths of the voters, including two-thirds from each county. The Legislature of New Hampshire may not submit such an amendment at all. It is obvious that the Federal amendment is the only way to correct these inequalities.

If we who have partial suffrage stop our work for the amendment, now that victory is in sight, we practically say to these women in the States with ironclad constitutions: "We have enough suffrage to satisfy us, and we don't care what happens to you."

That is not fair; it is not loyal; it is not American. You would not wish to do anything of this sort. You will be told that we should follow the example of the English suffragists, who dropped all their suffrage activity at the beginning of the war. That statement represents a very common misapprehension. The militants, who are a comparatively small portion of the English suffragists, abandoned their militant tactics, thereby proving themselves both better patriots and better suffragists than the negligible number of militant suffragists over here, but all the English suffragists worked as they had never worked before. They have sent out seven hospital units to France, Serbia, the Dardanelles, and Italy. They undertook the care of alien women stranded in England; they registered for war service; they went to work in munition factories, on the farms, everywhere they were needed. They extended and perfected their organization and then used that organization to render a service to their country so magnificent that their most bitter enemies, Asquith and Lord Northcliffe, are now their most loyal champions. The woman-suffrage clause of the representation-of-the-people bill passed the House of Commons by the unprecedented majority of 7 to 1.

I do not pretend to say that the war work done by the women of America is as yet, after six months of war, comparable to that done by English women in three years, but I know, not from guesswork, but from my familiarity with the records of the Council of National Defense that we will be equal to any demands that may be made upon us.

There is an especial responsibility resting upon you gentlemen in connection with this Federal amendment. Because of our separate ballot, Illinois has been until now the one place in the world where the position taken by women on the questions that come up at election time is not a matter of guesswork, but of arithmetic. You will all vote for the amendment, I know; but if you do not do more than that, if you

are half-hearted in your support of it, you say to all the world that judging from our known record you do not consider us good citizens. I do not believe that you feel that way, but it will not be possible to put any other interpretation on your actions if you should be half-hearted in your support of a measure of justice of this kind.

I do not wish to take up any more than is necessary of your time, but I should like, in closing, to quote to you from a speech made by the premier of Denmark to the newly enfranchised Danish women.

As you know, there is probably no country in the world, with the possible exception of Holland, whose situation has been so precarious as that of Denmark—a tiny, defenseless nation surrounded by warring giants that could crush her at a blow. And yet, in the very first year of the war, Denmark enfranchised its women. After the bill had been signed by the King, the premier called together the leaders of the suffrage movement and told them this:

"There never was a time in the history of our country when the existence of our nation and our very lives depend as absolutely as they depend now upon the wisdom or the unwisdom of our conduct. That is a responsibility we can not face alone, and we have called upon you, women of the country, to share it with us and to render with us the last ounce of service of which you are capable in defense of the country in which we live."

Gentlemen, does not this same reasoning apply to us?

Blanche B. West addressed the delegation, saying:

The women of the down State are working to-day in the trenches that have been dug for us. We have that long suffrage trench that was dug many, many years ago, and then within the last year we have been given the Red Cross trench, the Liberty Loan trench, the food and fuel production and conservation trenches, and the public-welfare trench.

Every time an order from this city—Washington—has come to us we have gone "over the top." It is my privilege to be one of the commanders in the fourteenth congressional district, and I wish I had time to tell you how wonderfully the women in that district went "over the top" in the last Liberty Loan drive.

In my county—and the largest city we have has a population of only 5,000 people—our women not only sold Liberty bonds but they bought \$113,950 worth of bonds. The farm women used their butter, egg, and chicken money to buy bonds.

Now, we are needed—every minute of our time is needed—in these war trenches, because next year we must raise more chickens, larger gardens, and make more butter, and, if need be, husk the corn and dig the potatoes that our boys—the boys that we have so willingly and gladly sent "over there" into the trenches—may be fed, clothed, and cared for.

However, it is utterly impossible for us to desert or surrender the suffrage trench, because we know it leads directly into that trench of reconstruction in which we must work for many years after the war.

And so the women of the down State have sent to you the Macedonian cry for help. We are not asking you to win the battle for us, we are asking you only to furnish the one big gun that will help us "over the top" to victory, and then we will plunge back into the other trenches there to work and again and again to go "over the top" until democracy has been won for the whole world.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. JOHN M. BAER,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 19, 1918.

Mr. BAER. Mr. Speaker, I am in favor of equal suffrage. I do not think that I could express a series of arguments which would be more fitting at this time than an address delivered to the Congress of the United States by Carrie Chapman Catt, president of the National American Woman Suffrage Association. Receiving permission from Mrs. Catt to extend these remarks, I herewith offer extracts from her speech, which I respectfully request be made a part of the Record:

The maxims of the Declaration were once called "fundamental principles of government." They are now called "American principles" or even "Americanisms." They have become the slogans of every movement toward political liberty the world around; of every effort to widen the suffrage for men or women in any land. Not a people, race, or class striving for freedom is there, anywhere in the world, that has not made our axioms the chief weapon of the struggle. More, all men and women the world around, with far-sighted vision into the verities of things, know that the world tragedy of our day is not now being waged over the assassination of an archduke, nor commercial competition, nor national ambitions, nor the freedom of the seas—it is a death grapple between the forces which deny and those which uphold the truths of the Declaration of Independence.

Our "Americanisms" have become the issue of the great war! Every day the conviction grows deeper that a world humanity will emerge from the war, demanding political liberty and accepting nothing less. In that new struggle there is little doubt that men and women will demand and attain political liberty together. To-day they are fighting the world's battle for democracy together. Men and women are paying the frightful cost of war and bearing its sad and sickening sorrows together. To-morrow they will share its rewards together in democracies which make no discriminations on account of sex.

These are new times and, as an earnest of its sincerity in the battle for democracy, the Government of Great Britain has not only pledged votes to its disfranchised men and to its women, but the measure passed the House of Commons in June, 1917, by a vote of 7 to 1, and will be

sent to the House of Lords in December, with the assurances of Premier Lloyd-George that it will shortly become a national law. The measure will apply to England, Scotland, Ireland, Wales, and all the smaller British islands.

Canada, too, has enfranchised the women of all its Provinces, stretching from the Pacific coast to northern New York, and the premier has predicted votes for all Canadian women before the next national election.

In the words of Premier Lloyd-George: "There are times in history when the world spins along its destined course so leisurely that for centuries it seems to be at a standstill. Then come awful times, when it rushes along at so giddy a pace that the track of centuries is covered in a single year. These are the times in which we now live."

It is true; democracy, votes for men and votes for women, making slow but certain progress in 1914, have suddenly become established facts in many lands in 1917. Already our one-time mother country has become the standard bearer of our Americanisms, the principles she once denied, and—cynical fact—Great Britain, not the United States, is now leading the world on to the coming democracy. Any man who has red American blood in his veins, any man who has gloried in our history and has rejoiced that our land was the leader of world democracy, will share with us the humbled national pride that our country has so long delayed action upon this question that another country has beaten us in what we thought was our especial world mission.

THREE REASONS FOR THE FEDERAL METHOD.

We elect the Federal method. There are three reasons why we make this choice and three reasons why we reject the State method. We choose the Federal method (1) because it is the quickest process, and justice demands immediate action. If passed by the Sixty-fifth Congress, as it should be, the amendment will go to 41 legislatures in 1919, and when 36 have ratified it, will become a national law. In 1869 Wyoming led the way, and 1919 will round out half a century of the most self-sacrificing struggle any class ever made for the vote. It is enough. The British women's suffrage army will be mustered out at the end of their half century of similar endeavor. Surely men of the land of George Washington will not require a longer time than those of the land of George the Third to discover that taxation without representation is tyranny, no matter whether it be men or women who are taxed. We may justly expect American men to be as willing to grant to the women of the United States as generous consideration as those of Great Britain have done.

(2) Every other country dignifies woman suffrage as a national question. Even Canada and Australia, composed of self-governing States like our own, so regard it. Were the precedent not established, our own National Government has taken a step which makes the treatment of woman suffrage as a national question imperative. For the first time in our history Congress has imposed a direct tax upon women and has thus deliberately violated the most fundamental and sacred principle of our Government, since it offers no compensating "representation" for the tax it imposes. Unless reparation is made it becomes the same kind of tyrant as was George the Third. When the exemption for unmarried persons under the income tax was reduced to \$1,000 the Congress laid the tax upon thousands of wage-earning women—teachers, doctors, lawyers, bookkeepers, secretaries, and the proprietors of many businesses. Such women are earning their incomes under hard conditions of economic inequalities, largely due to their disfranchisement. Many of these, while fighting their own economic battle, have been contributors to the campaign for suffrage that they might bring easier conditions for all women.

Now, those contributions will be deflected from suffrage treasuries into Government funds through taxation. Women realize the dire need of huge government resources at this time and will make no protest against the tax, but it must be understood, and understood clearly, that the protest is there, just the same, and that women income-tax payers, with few exceptions, harbor a genuine grievance against the Government of the United States. The National Government is guilty of the violation of the principle that the tax and the vote are inseparable; it alone can make amends. Two ways are open: Exempt the women from the income tax or grant them the vote. There can be no compromise. To shift responsibility from Congress to the States is to invite the scorn of every human being who has learned to reason. A Congress which creates the law and has the power to violate a world-acknowledged axiom of just government can also command the law and the power to make reparation to those it has wronged by the violation. "To you, the Congress of the United States, we must and do look for this act of primary justice."

(3) If the entire 48 States should severally enfranchise women, their political status would still be inferior to that of men, since no provision for national protection in their right to vote would exist. The women of California or New York are not wholly enfranchised, for the National Government has not denied the States the right to deprive them of the vote. This protection can come only by Federal action. Therefore, since women will eventually be forced to demand congressional action in order to equalize the rights of men and women, why not take such action now and thus shorten and ease the process? When such submission is secured, as it will be, 48 simultaneous State ratification campaigns will be necessary. By the State method 36 States would be obliged to have individual campaigns, and those would still have to be followed by the 48 additional campaigns to secure the final protection in their right to vote by the National Government. We propose to conserve money, time, and woman's strength by the elimination of the 36 State campaigns as unnecessary at this stage of the progress of the woman-suffrage movement.

THREE REASONS AGAINST THE STATE METHOD.

The three reasons why we object to the State-amendment process are: (1) The constitutions of many States contain such difficult provisions for amending that it is practically impossible to carry an amendment at the polls. Several States require a majority of all the votes cast at an election to insure the passage of an amendment. As the number of persons voting on amendments is usually considerably smaller than the number voting for the head of the ticket, the effect of such provision is that a majority of those men who do not vote at all on the amendment are counted as voting against it. For example, imagine a State casting 100,000 votes for governor and 80,000 on a woman-suffrage amendment. That proportion would be a usual one. Now, suppose there were 45,000 votes in favor and 35,000 against woman suffrage. The amendment would have been carried by 10,000 majority in a State which requires only a majority of the votes cast on the amendment, as in the State of New York. If, however, the State requires a majority of the votes cast at the election, the amendment would be lost by 10,000

majority. The men who were either too ignorant, too indifferent, or too careless to vote on the question would have defeated it. Such constitutions have rarely been amended, and then only on some noncontroversial question which the dominant powers have agreed to support with the full strength of their "machines."

New Mexico, for example, requires three-fourths of those voting at an election, including two-thirds from each county. New Mexico is surrounded by suffrage States, but the women who live there probably can secure enfranchisement only by Federal action. The Indiana constitution provides that a majority of all voters is necessary to carry an amendment; thus the courts may decide that registered voters who did not go to the polls at all may be counted in the number, a majority of whom it is necessary to secure. The constitution can not be amended. The courts have declared that the constitution prohibits the legislature from granting suffrage to women. What, then, can the women of Indiana do? They have no other hope than the Federal amendment.

Several State constitutions stipulate that a definite period of time must elapse before an amendment defeated at the polls can again be submitted. New York has no such provision, and the second campaign of 1917 immediately followed the first in 1915; but Pennsylvania and New Jersey, both voting on the question in 1915, can not vote on it again before 1920. New Hampshire has no provision for the submission of an amendment by the legislature at all. A constitutional convention alone has the right to submit an amendment, and such conventions can not be called oftener than once in seven years. The constitutional complications in many of the States are numerous, varied, and difficult to overcome.

All careful investigators must arrive at the same conclusion, that the only hope for the enfranchisement of the women of several States is through congressional action. Since this is true, we hold it unnecessary to force women to pass through any more referendum campaigns. The hazards of the State constitutional provisions which women are expected to overcome in order to get the vote, as compared with the easy process by which the vote is fairly thrust upon foreigners who choose to make their residence among us, is so offensive an outrage to one's sense of justice that a woman's rebellion would surely have been fomented long ago had women not known that the discrimination visited upon them was without deliberate intent. The continuation of this condition is, however, the direct responsibility now of every man who occupies a position authorized to right the wrong. You are such men, honorable Senators and Representatives. To you we appeal to remove a grievance more insulting than any nation in the wide world has put upon its women.

2. The second reason why we object to the State process is far more serious and important than the first. It is because the statutory laws governing elections are so inadequate and defective as to vouchsafe little or no protection to a referendum in most States. The need for such protection seems to have been universally overlooked by the lawmakers. Bipartisan election boards offer efficient machinery whereby the representatives of one political party may check any irregularities of the other. The interests of all political parties in an election are further protected by partisan watchers. None of these provisions is available to those interested in a referendum. In most States women may not serve as watchers, and no political party assumes responsibility for a nonpartisan question. In the State of New York women may serve as watchers. They did so serve in 1915 and in 1917; nearly everyone in the more than 5,000 polling places was covered by efficiently trained women watchers. The women believe that this fact had much to do with the favorable result.

In 24 States there is no law providing for a recount on a referendum. Voters may be bribed, colonized, repeated, and the law provides for no possible redress. In some States corrupt voters may be arrested, tried, and punished, but that does not remove their votes from the total vote cast nor in any way change the results. When questions which are supported by men's organizations go to referendum, such as prohibition, men interested may secure posts as election officials or party watchers and thus be in position to guard the purity of the election. This privilege is not open to women.

That corrupt influences have exerted their full power against woman suffrage we know well. I have myself seen blocks of men marched to the polling booth and paid money in plain sight, both men and bribers flaunting the fact boldly that they were "beating the ——— women." I have myself seen men who could not speak a word of English nor write their names in any language driven to the polls like sheep to vote against woman suffrage, and no law at the time could punish them for the misuse of the vote so cheaply extended to them, nor change the result.

It is our sincere belief, based upon evidence which has been completely convincing to us, that woman-suffrage amendments in several States have been won on referendum but that the returns were juggled and the amendment counted out. We have given to such campaigns our money, our time, our strength, our very lives. We have believed the amendment carried, and yet have seen our cause announced as lost. We are tired of playing the State campaign game with "the political dice loaded and the cards stacked" against us before we begin. The position of such an amendment is precisely like that of the defendant in a case brought before an inexperienced judge. After having heard the plaintiff, he untactfully remarked that he would listen to the defendant's remarks, but he was bound to tell him in advance that he proposed to give the verdict to the plaintiff. From this lower court, often unscrupulous in its unfairness, we appeal to the higher, the Congress and the legislatures of the United States.

3. The third reason why we object to the State method is even more weighty than either or both of the others. It is because the State method fixes responsibility upon no one. The legislatures pass the question on to the voters and have no further interest in it. The political parties, not knowing how the election may decide the matter, are loth to espouse the cause of woman suffrage lest, if it loses, they will have alienated from their respective parties the support of enemies of woman suffrage.

Contributors to campaign funds have at times stipulated the return service of the party machinery to defeat woman suffrage, and as such contributors are wily enough to make certain of their protection, they often contribute to both dominant parties. Thousands of men in every State have become so accustomed to accept party nominations and platforms as their unquestioned guide that they refuse to act upon a political question without instruction from their leaders. When the leaders pass the word along the line to defeat a woman-suffrage amendment, it is impossible to carry it. It is not submitted to an electorate of thinking voters, whose reason must be convinced, but to such voters plus political "machines" skillfully organized, servilely obedient, who have their plans

laid to defeat the question at the polls even before it leaves the legislature. From a condition where no one is responsible for the procedure of the amendment through the hazards of an election, where every enemy may effectively hide his enmity and the methods employed behind the barriers of constitutions and election laws, we appeal to a method which will bring our cause into the open, where every person or party, friend or foe involved in the campaign, may be held responsible to the public. We appeal from the method which has kept the women of this country disfranchised a quarter of a century after their enfranchisement was due, to the method by which the vote has been granted to the men and women of other lands. We do so with the certain assurance that every believer in fair play, regardless of party fealties, will approve our decision.

Farm Loans.

SPEECH

OF

HON. SCOTT FERRIS,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 4, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the resolution (H. Res. 199) providing for the consideration of H. R. 7731, amending section 32 of the Federal farm-loan act.

Mr. FERRIS. Mr. Chairman, I am not a member of the Banking and Currency Committee, so what I shall have to say on the important subject of rural credits will not have very great weight. There are, however, a few homely facts that I have well in mind, and I feel that I do know:

First. On July 17, 1916, Congress did pass a rural-credits bill and it was signed and became a law on that day.

Second. I felt then and I feel now that its passage and establishment was eminently necessary.

Third. I felt then and I feel now that the six and a half million American farmers were entitled to have lower rates of interest and longer tenure of repayment.

Fourth. The legislation we enacted has accomplished both of these purposes.

Fifth. I felt that I knew then, and I certainly feel that I know now, that the American farmer was suffering from excessive interest rates, and men were being forced from the farm into the crowded centers, and that it was having a deleterious effect on the farming interests and the producing interests of the country.

We are told by the chairman of the Banking and Currency Committee, by the Treasury Department, and by the Farm Loan Board that unless we pass this legislation to-day, providing for \$100,000,000 per year for two successive years to be invested in farm-loan bonds, that the farm-loan business, so far as the rural-credits system is concerned, is practically at an end. I feel sure they state the facts, and it merits our attention. This rural-credits system, created a little more than a year ago, has taken individual applications to the number of 92,446 for a total amount of money aggregating \$219,760,740. Of these applications just referred to, 44,332 have been approved and they carry an amount of approved loans of \$105,136,529. Of this total amount of approved loans, money has been paid out on them to the extent of \$29,824,655.

Thus it will be readily observed that if we fail this day to pass this bill, that the Farm Loan Board and the farm-land banks will be embarrassed to the extent that they will not be able to pay out the money on approved loans aggregating \$75,000,000.

Who is there here to-day that wants to so embarrass these farm-land banks?

Who is there here to-day who would strike down this system by refusing to afford the relief asked?

The American farmer who has long sought reduced rates of interest and long tenure of repayment will earnestly look for and long remember the names of the Members who this day obstruct the passage and vote against this bill.

FARM-LAND BANK ACTIVITIES IN OKLAHOMA.

The farm-land bank located at Wichita, Kans., and which has jurisdiction over Oklahoma, has formed 86 loan associations in Oklahoma, and 32 more are in the course of formation. Two thousand eight hundred and four individual farmers have applied for loans aggregating the amount of \$6,075,157.

Of these loans only 913 have actually been closed and the money paid out. The loans so finally passed upon, and where the money has actually reached the hands of the farmer, aggregates but \$1,740,200. This leaves \$4,327,955 in loans still pending approval, still awaiting this relief, before they can finally be closed.

I repeat, this rural-credits system was needed at the start. It is needed now. It passed the House almost with unanimous consent. Two hundred and ninety-five Representatives voted for it; 10 voted against it. True, some of those who voted for it did it grudgingly and unwillingly, but their votes speak louder than their inward feelings on the subject in the passage of legislation.

I have felt just a trifle grieved to-day to hear the heavy artillery of the Republican Party in this Chamber turned against this farm-loan bill. The ablest speakers of the Republican side have made their ablest addresses, trying to strike this system down. Some have opposed it openly and without apology. Others have traveled via the Weeks amendment, which is but real opposition masquerading behind the Weeks amendment. It is but an effort to do indirectly what it is well known can not be done directly.

The Weeks amendment provides that of the appropriation of \$200,000,000 carried in this proposal none of it shall be used to take up existing mortgages. How frail must be the logic of those that would adopt it with a view of aiding. How frail must be the reasoning of those who would prefer to appropriate Federal funds for new investments and speculation rather than to afford the benefit to those involved in debt and extortionate rates that can not be borne without bankruptcy and abandonment.

I pause and ask who so much needs the strong arm of the Government as the man who is struggling under 10 per cent? The farm-loan bank tells us that of the business already transacted by the bank, 90 per cent of it has been to take up existing loans. Hence, judging the future business of the bank by the past, we may well assume that the Weeks amendment will incapacitate and strike down the business and efficiency of the land bank to the extent of 90 per cent.

From every corner of the Republic, from across the seas, from everywhere, there is a voice calling to the American farmer to plant more, to produce more. Still, those who are fathoming the Weeks amendment and opposing this legislation would strike down 90 per cent of the usefulness of this banking system, which was established but a little more than a year ago with but 10 dissenting votes from all the Representatives of the Republic.

TENANTRY WAS INCREASING BY LEAPS AND BOUNDS.

At the time this legislation passed a little more than a year ago interest rates were soaring, farm tenantry was increasing, farm ownership was decreasing, farmers were being pressed from their farms into the crowded cities, mortgages were increasing, farms were being depopulated, and it was absolutely necessary that something be done to check this unwholesome trend. The acreage of the individual farm was decreasing, while their indebtedness was increasing.

In the last 20 years the city population had increased 100 per cent, while the farm population had increased but 20 per cent. This, to the thoughtful person, can be none other than alarming.

NEW BANKING SYSTEM HAS REPLACED 8 AND 10 PER CENT WITH 5 AND 6 PER CENT.

No one living in any State where exorbitant rates of interest have prevailed will but testify that the establishment of the farm land banks one year ago has materially decreased the interest rates in every corner of the country. Farm-loan companies have been forced to reduce their rates and make more lenient their terms. Banks and bankers have likewise been forced to reduce their rates. In my State it has replaced 8 and 10 per cent with 5 and 6 per cent.

It is bringing farmers back to the farms. It has brought a low rate instead of a high rate. It has afforded a long term instead of a short term. It is begetting farmers with farms. It is increasing production. It is doing what we promised it would do. It is what the farmers needed. It is our duty to stand erect to duty the day that duty calls. Let not those who at the beginning grudgingly gave now willingly destroy. [Applause.]

Strong men here to-day unsympathetic with the producer have made severe and extravagant statements against the farmer and against this system, but the farmer has borne it all in the past and will bear it in the future.

Since the birth of the Republic Government funds from the Treasury have been deposited in commercial banks uniformly without security and until recently without interest. If this has been done for 140 years with safety and impunity, why is it now so unsound and unsafe to loan faith, credit, and even dollars from the Treasury itself to these farm-loan banks, which in turn are to loan it to farmers upon the land itself, the most stable of all securities?

How can it be so safe and sound to lend to commercial banks without security and with little or no interest and so totally

wanting in soundness and feasibility to lend to these banks for interest and with the very best of security?

No; I can not think it is unsound. I can not think the objections made here by the clearest minds on the Republican side of the House will find lodgment here or elsewhere.

They are but the usual objections made here by those unsympathetic and unacquainted with the real conditions of the real farmer on the farm. The American farmer cried aloud for this legislation a year ago. His necessity for it cries aloud for its perpetuation to-day. He has been the cornerstone and the builder of the Republic in which we live, and to-day he is asked to reach out his long arms across 3,000 miles of surging sea and aid the warring nations of the earth, who are grappling for their very existence.

No; for me and mine, I shall vote for this legislation and keep alive this land-bank system rather than vote against it, obstruct it, and destroy it.

It is the American farmer who must of necessity grapple with crop failure, the terrors of the drought, and the insects of the air. It is he who must be content with earning a little, while most occupations earn more. During all of his trials of the past I have elected to stand on his side, where I could understand what his side was, and I shall continue to do so, believing that I am acting in the public interest. [Applause.]

Frenzied Liberty.

EXTENSION OF REMARKS

OF

HON. ISAAC SIEGEL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 26, 1918.

Mr. SIEGEL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an extract from the address of Otto H. Kahn, delivered at the University of Wisconsin January 14, 1918.

The address is as follows:

We are engaged in a war, an irrepressible conflict, a most just and righteous war for a cause as high and noble as ever inspired a people to put forth its utmost of sacrifice and valor. To attain the end for which this peace-loving Nation unsheathed its sword, to lay low and make powerless the accursed spirit which brought all this unspeakable misery, sorrow, and ruin upon the world is our one and supreme and unshakable purpose.

That is the purpose of the people of Wisconsin as it is the purpose of the people of New York and of every other State in the Union. I give no credence to and have no patience with those who would measure as with a thermometer the loyalty temperature of our communities.

Some dreamers there may be, here as everywhere, so immersed in their dreams that the trumpet call of the day has not yet awakened them.

Some politicians there may be, here and elsewhere, so obsessed by the issues which heretofore were good election assets and so unable to shake off the inveterate habits and the formulas and calculations of a lifetime, that they are unable to recognize and to share in the sudden flaming manifestations springing from the deep of the people's soul, and, after a while, looking around for their usual followers, find themselves in chilly loneliness.

Some there are, a small minority always and getting smaller every day, among Americans of German birth or descent who lack the vision to see their duty or the strength to follow it, and who stand irresolute, hesitant, and dazed.

The vast and overwhelming majority have acted like true men and loyal Americans. They are entitled to claim your sympathetic understanding for the headache which is theirs, and they are entitled to claim your trust. It will not be misplaced.

I am taking very little account of that insignificant number of men of German origin who, misguided or corrupt, dare by insidious and underground processes to attempt to weaken or oppose the resolute will of the Nation. There are too few of them to count and their maneuvers are too clumsy to be effective. But let them be warned. There is sweeping through the country a mighty wave of stern and grim determination which bodes ill for anyone standing in its way.

One element only there is in our population which does deliberately challenge our national unity. I mean the militant Bolsheviks in our midst, the preachers and devotees of liberty run amuck, who would place a visionary class interest above patriotism and who in ignorant fanaticism would substitute for the tyranny of autocracy the still more intolerable tyranny of mob rule, as for the time being they have done in Russia.

If it were not for the disablement of Russia the battle against autocracy would have been won by now. As so often before, liberty has been wounded in the house of its friends. Liberty in the wild and freakish hands of fanatics has once more, as frequently in the past, proved the effective helpmate of autocracy and the twin brother of tyranny. Out-Czarling the Czar, its votaries are filling the prisons with their political opponents, are practicing ruthless spoliation and savage oppression, and are maintaining their self-constituted rule by the force of bayonets. Riot, robbery, famine, fratricidal strife are stalking through the land.

The deadliest foe of democracy is not autocracy but liberty frenzied. Liberty is not fool proof. For its beneficent working it demands self-restraint, a sane and clear recognition of the practical and attainable, and of the fact that there are laws of nature which are beyond our power to change.

Liberty can, does, and must limit the rights of the strong; it must increasingly guard and promote the well-being of those endowed with lesser gifts for the struggle for existence and success; it must strive in every way consistent with sane recognition of the realities to make life more worth living to those whose existence is cast in the mold of the vast average of mankind; it must give political equality, equality before the law; it must throw wide open to talent and worth the door of opportunity.

But it must not attempt in fatuous recklessness to make over humanity on the pattern of absolute equality. If and when it does so attempt, it will fall as that attempt has always failed throughout history. For an inscrutable Providence has made inequality of endowment a fundamental law of nature, animate as well as inanimate, and from inequality of physical strength, of brain power, and of character springs inevitably the fact of inequality of results. Envy, demagogism, utopianism, well-meaning uplift agitation may throw themselves against that basic law of all being, but the clash will create merely temporary confusion, destruction, and anarchy, as in Russia; and after a little while and much suffering the supremacy of sanely restrained individualism over frenzied collectivism will reassert itself.

Under the system of wisely ordered liberty, combined with incentive to individual effort whereof the foundation was laid by the far-sighted and enlightened men who created this Nation and endowed it with the most sagacious instrument of government that the wit of man has devised, America has grown and prospered beyond all other Nations.

It has stood as a Republic for nearly a century and a half, which is far longer than any other genuine republic has endured amongst the great nations of the world since the beginning of the Christian era. Its past has been glorious, the vista of its future is one of boundless opportunity, of splendid fruitfulness for its own people and the world, if it remains but true to its principles and traditions, adjusting their expression and application to the changing needs of the times in a spirit of progress, sympathetic understanding and enlightened justice, but rejecting the teachings and temptations of false though plausible prophets.

More and more of late do we see the very foundations of that majestic and beneficent structure clamorously assailed by some of those to whom the great Republic generously gave asylum, and to whom she opened wide the portals of her freedom and her opportunities.

These people, with many hundreds of thousands of their countrymen, came to our free shores after centuries of oppression and persecution. America gave them everything she had to give—the great gift of the rights and liberties of citizenship, free education in our schools and universities, free treatment in our clinics and hospitals, our boundless opportunities for social and material advancement.

Most of them have proved themselves useful and valuable elements in our many-rooted population. Some of them have accomplished eminent achievements in science, industry, and the arts. Certain of the qualities and talents which they contribute to the common stock are of great worth and promise.

But some of them there are who have shown themselves unworthy of the trust of their fellow citizens—ingrates, disturbers, ignorant or disloyal to the spirit of America, abusers of her hospitality.

Some there are who have been blinded by the glare of liberty as a man is blinded who after long confinement in darkness comes suddenly into the strong sunlight. Blinded, they dare to aspire to force their guidance upon Americans who for generations have walked in the light of liberty.

They have become drunk with the strong wine of freedom, these men who until they landed on America's coasts had tasted nothing but the bitter water of tyranny. Drunk, they presume to impose their reeling gait upon Americans to whom freedom has been a pure and refreshing fountain for a century and a half.

Brooding in the gloom of age-long oppression, they have evolved a fantastic and distorted image of free government. In fatuous effrontery they seek to graft the growth of their stunted vision upon the splendid and ancient tree of American institutions.

We will not have it so, we who are Americans by birth or adoption. We reject these impudent pretensions. Changes the American people will make as their need becomes apparent. Improvements they welcome, the greatest attainable well-being for all those under our national roof-tree is their aim, but they will do all that in the American way of sane and orderly progress, and in none other. Against foes within no less than against enemies without they will know how to preserve and protect the splendid structure of light and order which is the great and treasured inheritance of all those who rightly bear the name Americans, of which the stewardship is intrusted to them and which, God willing, they will hand on to their children sound and wholesome, unshaken and undefiled.

The time is ripe and overripe to call a halt upon those spreaders of outlandish and pernicious doctrines. The American is indulgent to a fault and slow to wrath, but he is now passing through a time of tension and strain. His teeth are set and his nerves on edge. He sees more closely approaching every day the dark valley through which his sons and brothers must pass and from which too many, alas, will not return. It is an evil time to cross him. He is not in the temper to be trifled with. He is apt very suddenly to bring down the indignant fist of his might upon those who would presume on his habitual mood of easy-going good nature.

When I speak of the militant Bolsheviks in our midst as the foes of national unity I mean to include those of American stock who are their allies, comrades, or followers—those who put a narrow class interest and a sloppy internationalism above patriotism, with whom class hatred and envy have become a consuming passion, whom visionary obsessions and a false conception of equality have inflamed to the point of irresponsibility. But I am far from meaning to reflect upon those who, while determined Socialists, are patriotic Americans.

I believe the socialistic state to be an impracticable conception, a utopian dream, human nature being what it is, and the immutable laws of nature being what they are. But there is not a little in Socialist doctrine and aspirations that is high and noble; there are things, too, that are achievable and desirable.

And to the extent that socialism is an antidote to and a check upon excessive individualism and holds up to a busy and self-centered and far from perfect world grievances to be remedied, wrongs to be righted, ideals to be striven for, it is a force distinctly for good.

Still less do I mean to reflect upon the labor-union movement, which I regard as an absolutely necessary element in the scheme of our economic life. Its leaders have acted with admirable patriotism in this crisis of the Nation, and on the whole have been a factor against extreme tendencies and irrational aspirations.

Trades-unions have not only come to stay but they are bound, I think, to become an increasingly potent factor in our industrial life. I believe that the most effective preventive against extreme State socialism is frank, free, and far-reaching cooperation between business and trades-unions sobered and broadened increasingly by enhanced opportunities, rights, and responsibilities.

Business must not deal grudgingly with labor. We business men must not look upon labor unrest and aspirations as temporary "troubles," as a passing phase; but we must give to labor willing and liberal recognition as a partner with capital. We must under all circumstances pay as a minimum a decent living wage to everyone who works for a living.

We must devise means to cope with the problem of unemployment and to meet the dread advent of sickness, incapacity, and old age in the case of those whose means do not permit them to provide for a rainy day. We must give heed to the problem of obtaining fair and fitting compensation for the professional man, the worker in every occupation whose life too often is oppressed by the gnawing care of how to find the wherewithal to provide for himself and his family.

We must bridge the gulf which now separates the employer and the employee, the business man and the farmer, if the existing order of civilization is to persist. We must welcome progress and seek to further social justice. We must translate into effective action our sympathy for and our recognition of the rights of those whose life in too many cases is now a hard and weary struggle to make both ends meet. We must by deeds demonstrate convincingly the genuineness of our desire to see their burden lightened. We must all join in a sincere and sustained effort toward procuring for the masses of the people more of ease and comfort, more of the rewards and joys and inspirations of life than they now possess. I believe this is not only our duty but our interest, because if we wish to preserve the fundamental lines of our present social system we must leave nothing practicable undone to make it more satisfactory and more inviting to the vast majority of those who toil—and I do not mean those only who toil with their hands—than it now is.

Even before the war a great stirring and ferment was going on in the land. The people were groping, seeking for a new and better condition of things. The war has intensified that movement. It has torn great fissures in the ancient structure of our civilization. To restore it will require the cooperation of all patriotic men of sane and temperate views, whatever may be their occupation or calling or political affiliations. It can not be restored just as it was before. Some changes, essential changes, must be made. The building must be rendered more habitable and attractive to those whose claim for adequate house-room can not be left unheeded either justly or safely. I have no fear of the outcome and of the readjustment which must come. I have no fear of the forces of freedom unless they be ignored, repressed, or falsely and selfishly led.

But this is not the time for settling complex social questions. When your house is being invaded by burglars you do not discuss family questions. Let us win the war first. Nothing else must now be permitted to occupy our thoughts and divert our aims.

When we shall have attained victory and peace, then will be the time for us to sit down and reason together and make such changes in political and social conditions as, after full and fair discussion, free from heat and passion, the enlightened public opinion of the country deems requisite.

Soldiers' Pensions.

EXTENSION OF REMARKS

OF

HON. ISAAC R. SHERWOOD,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 26, 1918.

Mr. SHERWOOD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following letter:

SEATTLE, WASH.

HON. ISAAC R. SHERWOOD, M. C.:

Never have we Civil War veterans who have kept out of the soldiers' home had so good and just claim for an increase of pension as we have to day, as every one of us is now obliged to give up at least \$15 per month in support of this present war on account of the high cost of living. Be his pension \$15, \$20, or \$30 per month, it is all the same. This is driving us nearer and nearer every day to the soldiers' home that thousands have struggled hard for many years to escape; in fact, many are now obliged to go and thousands more must go if they do not get relief soon; but once in, a man is then getting as good as \$25 per month better than the one who stays out, as he gets his full pension and his full support without cost and relieving him of all burden of this war.

We are a hard-hit lot of old men in this respect. Were we younger and able to work we could demand the increase of wages and get it, the same as they, and not feel this burden any more than they. Any veteran now in a soldiers' home and drawing a pension of \$30 per month is getting as good as \$55 per month. In view of this fact, would it not be more honorable and just to us that this Government allow us \$50 per month pension that we may still stay out of the home than to drive us in to be cared for at the same cost or more? By so doing, it will keep thousands out and at the same time take thousands out who are now in, not from choice, but from actual necessity. Of course, no member who stays in a home should be allowed this increase, as he is already getting it by being there.

Many years ago, when this Government agreed to allow each State soldiers' home \$100 per year for each member, and the State to pay the balance, the expense was then about equal; but to-day the States are paying more than double what the Government is. By giving us now \$50 per month, it will keep thousands out of these State homes and take hundreds out now in, and will relieve these States of this unequal burden. This Government has always encouraged the unscrupulous

ones to come to the homes, saying, "Come, boys, and I will allow you your full pension and your full support without price and without cost," and thousands have taken advantage of it, but could they see no advantage in staying they would move out in great haste.

In the annual report of the New York State home for 1916, in which it gives the names of all present and the date of entering, we find many who have been there for 25 years, some 30, 35, and two for 40 years. Compare those with us who have stayed out all these years and then ask if we are not well entitled to this increase that we may not be obliged to go now in our old age. It is never dishonorable to go to a soldiers' home when in need of one; far from it, but it is always honorable to stay out so long as one can and be comfortable.

All we ask of this Government is enough to live on outside of the homes when well, and when sick and unable to care for ourselves, give us the care and comfort of a home and we will willingly give up a part of our pension in support of this war, and all, if necessary, to win it. When this Government will raise the widows' pensions from \$12 to \$25 per month, as it so recently has, and in times like these, it leads us to believe that we, who faced the dangers and withstood the hardships, can easily get this increase if properly presented and rightly understood. This administration is not going to take from us now what others have allowed us and profited much by so doing, but we believe will go even better and show to the boys now going to war and to the whole world that we are still honored and appreciated for what we did 50 years ago.

As to the widows' pensions, thousands of them are now drawing pensions greater than thousands of veterans who served one and one-half, two, two and one-half years, and more, and some of them were not born at the time of the Civil War.

Perhaps it would be as well or better to allow all \$50 per month and deduct \$20 or \$25 per month from each member while in the home.

Very respectfully,

ISAAC T. CROSS.

News-Print Situation.

EXTENSION OF REMARKS

OF

HON. ARTHUR W. OVERMYER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 26, 1918.

Mr. OVERMYER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address on the news-print situation delivered by JOHN S. SNOOK before the convention of the Ohio City Editors' Association held in Columbus, Ohio, January 19 and 20, 1918.

The address is as follows:

The questions growing out of the production, importation, sale, and distribution of print and book paper, mechanical and chemical pulp have been challenging the attention of Congress and the executive branches of the Government for many years.

In 1908 the House of Representatives by appropriate legislation authorized an investigation of the subject by a subcommittee of the House Committee on Interstate and Foreign Commerce. This committee was headed by the Hon. JAMES E. MANN, and it conducted an investigation which occupied about two years. Hearings were held at Washington and at points throughout the country where paper and pulp mills were operated. The report of the proceedings of the committee and the testimony taken at the hearings fill four large volumes of more than 3,000 pages and furnish a great fund of information to the student seeking the last word on this interesting subject.

The members of the committee conducting this investigation unanimously agreed upon a report which, in its last analysis, contained but two recommendations. First, that the General Government and the various States should put forth every effort to encourage the production and protection of spruce forests for the supply of material in the future for the manufacture of print and book paper; second, that there should be a material reduction in the tariff rates on print and book paper, mechanical and chemical pulp, naming the particular rates of tariff which, in their opinion, should be assessed against the various classes and qualities of paper and pulp that might thereafter be imported into this country. In August following the date of this report Congress adopted the Payne-Aldrich tariff law, and it would seem that the recommendations of the committee making the investigation carried very little weight, as they seem to have been ignored in fixing the tariff schedules in this bill. In fact, conditions are changing so rapidly in this country that all the information gathered during this investigation seems lost or is obsolete, as I do not even find it referred to in the report of the last investigation on this subject conducted by the Federal Trade Commission. However, the question continued to be a live one, and for some time the main theme of discussion was, What tariff rate, if any, should be imposed on the importation of print and book paper, mechanical and chemical wood pulp, for there has been three changes in the tariff rates affecting these items since the passage of the Payne-Aldrich tariff law? First, in 1911, in the Canadian reciprocity act; second, in 1913, in the Underwood tariff law, and again in 1916, in an amendment of that act; the net result of which has been to place print paper valued at not more than 5 cents per pound and all mechanical and chemical pulp on the free list.

Owing to favorable conditions at the time of the last of the tariff revisions on this subject, in 1916, Canada was rapidly increasing the amount of her production, and therefore many persons thought that the adoption of the tariff amendment would settle the question, while others claimed that it would cripple the industry in the United States and eventually lead to increase in cost to the consumer in this country. The brief investigation I have made of the subject leads me to believe that neither prediction was correct, and this view is borne out by the findings of the Federal Trade Commission in their investigation, to which I shall soon refer. Be that as it may, after all this investigation, discussion, and change in tariff schedules, we find the users of

print paper, including the Government itself, clamoring for relief from a situation that threatened the very existence of the book and newspaper industry of the country.

Very soon after the Joint Committee of the House and Senate on Printing concluded its contracts for such print and book paper as the Government required for the year 1916, certain of the parties to the contracts began to besiege the committee for a modification of the requirements of their contracts. They claimed that conditions had so changed that they could not comply with these requirements and requested either an advance in the price or that they be allowed to cheapen the quality of the product. All these requests were refused by the committee.

At least six times during the summer of 1916 the Public Printer received bids for certain lots of paper needed by the Government and not included in the regular contracts. Very few of the manufacturers or dealers submitted bids and such as did placed their offers so high that none could be accepted by the Public Printer. On August 24, 1916, he asked for bids on 310,000 pounds of white machine paper and received only one bid of 11 cents per pound. He then brought the matter to the attention of Congress through a letter to the Joint Committee on Printing, in which he said:

"In view of the fruitless efforts to interest manufacturers of paper in submitting quotations for Government requirements, I feel that the situation is imperative enough to request that some action be taken whereby the Government will be enabled to purchase paper for the public printing and binding work at a reasonable price."

In the meantime the Senate adopted a resolution requesting the Federal Trade Commission to investigate the cause of the increase in the price of print paper.

The manufacturers joined in a request that such an investigation be had. Thereupon the commission took up the work and made an extensive and thorough investigation, submitting their report to Congress on June 13, 1917. The report shows that beginning with June 1, 1916, up to the date of its filing, while the advance in the cost of production was between \$5 and \$10 per ton, they used the following language to describe the prices imposed on the consumer during the year immediately preceding the filing of the report:

"Within the year prices to large consumers of print paper have been advanced from about \$40 per ton to over \$60 and \$70 per ton, and in some cases even up to \$90 per ton. Also, by concerted action the terms of contracts have been so changed as to shift a considerable financial burden from the manufacturers to the publishers. To some of the larger newspapers of the country this price increase means, in some instances, an increase in paper cost of hundreds of thousands of dollars. This, in many cases, will not only cause the loss of profits for the year, but a serious financial embarrassment of the publication itself.

"The smaller publishers have been forced to pay prices as high as \$150 and \$180 per ton. In addition to the above increase of prices among publishers of minor dailies and weeklies, it is complained that they found great difficulty in getting paper at any price, and to a large number of such publishers in the country the increase in the price means the difference between a living margin and the complete ruin of their business and the suspension of their publications."

Having these conditions in mind a number of bills were introduced in Congress intended to remedy the situation. First, there was the bill introduced by Senator ROBINSON. It provided that upon a hearing the Federal Trade Commission be authorized to fix a maximum price at which all print and book paper should be sold, and required every manufacturer and dealer to file with the Federal Trade Commission an account showing the prices obtained at every sale. It empowered the commission to make all orders and regulations necessary to carry out the law and imposed a fine of \$5,000 for each offense against the act. The joint resolution introduced by Senator SMITH of Arizona followed the recommendation of the Trade Commission, to which I shall refer later.

The bill introduced by myself, drafted on the plan of the food-control bill, seeks to carry out the same purpose as the Robinson and Smith bills, but by different methods. On account of the emergency arising out of the war it declares print paper to be a public utility. It provides for governmental control of the production and distribution of print paper, mechanical and chemical pulp, to be administered by the President through such agencies as he may deem proper, and authorizes him to enter into and effect such voluntary agreements with the manufacturers and distributors as he may deem wise for the purpose of carrying out such governmental control, thus affording an opportunity to effect control by a voluntary arrangement, if this can be done.

In a succeeding section it authorizes the control through a license system and provides that after the President shall so announce no one can engage in the importation, exportation, manufacture, or distribution of print paper, mechanical or chemical pulp without procuring a license under regulations to be prescribed by the President, and requires each licensee to make out and return a full report of the conduct of his business. The President is empowered to set aside any charge or rate proposed or made by the licensee for the sale of his product, and to name such charge or rate as he deems to be fair and just. To disobey any regulation made by the President or to sell print paper, mechanical or chemical pulp at a higher rate than that fixed by the President is made a crime punishable by fine and imprisonment or both. It will be seen that it is the intention of the proposed law to control the price first by voluntary agreement, if that can be done, and if that can not be effected, then through supervision under a license system, which gives the President full power to fix a just and fair price for all print paper, mechanical or chemical pulp manufactured, imported, exported, or sold. It was my thought that if all who were engaged in this industry knew that there was a law under which they would be compelled to make a full report of the cost of the product they had manufactured or held for sale they would be induced to voluntarily enter into an agreement that would insure a supply to all users at a fair and reasonable price, and that if this was not a sufficient incentive the fact that the President had the power to fix the price for them would cause them to see the light and to supply the public under an arrangement which would be just and fair, yet, as you will see, I deemed it wise if all this failed to provide a means by which the production and sale could be effectively controlled and regulated. When I began to gather information for the purpose of asking a favorable report from the committee on the bill I had introduced I found that the Federal Trade Commission, in the report of its investigations, found that there existed a voluntary association of the manufacturers of news-print paper, known as the News-Print Manufacturers' Association, which controlled the production and sale of approximately 86 per cent of all the news-print paper manufactured in North America. In describing this association the commission use the following language:

EVIDENCE OF VIOLATIONS OF THE ANTITRUST LAWS.

"SECTION 1. The News-Print Manufacturers' Association.

"Substantial evidence is in the possession of the commission tending to show violations of the Federal antitrust laws by certain manufacturers of news-print paper who are members of the voluntary association known as the News-Print Manufacturers' Association, with headquarters at 18 East Forty-first Street, New York City. Its membership includes practically all of the Canadian manufacturers as well as all the United States producers, except one large and a few smaller ones. About 86 per cent of the effective production of news-print paper of the North American Continent is included in the association. The five members of the executive committee of the association, who, with the secretary, manage its affairs, speak directly for more than one-third of the total news-print tonnage of the continent. Mr. George F. Steele, of New York, the secretary of the association, is its admitted active central agent.

"The organization has no articles of association and no by-laws. Its expenses are defrayed by assessments of members on the basis of tonnage output. Neither it nor its executive committee keeps any written minutes or records. Meetings of the executive committee and of the association are held at the call of the secretary, and usually in turn at New York, Montreal, and Chicago. Policies are decided upon at the various meetings or through correspondence between the secretary and different members. As a rule they are put into effect on notification by the secretary. The secretary, by frequent use of the telephone, also keeps in close touch with each of the members of the executive committee, as well as with certain distributing agencies and other persons prominent in the industry.

"Ostensibly the association is organized for the collection and dissemination of statistics. Actually, however, its principal energies have been diverted to other activities. The evidence in the hands of the commission, consisting largely of correspondence between the active parties and of interviews, tends to show that the acts of the association officers and members have transcended innocent purposes and resulted in substantial suppression of competition and restraint of trade."

As early as February, 1917, it became plain to everyone that the Trade Commission would make such a report, and, no doubt, influenced by such knowledge the representatives of manufacturers producing about one-third of the total output of news print in the United States and Canada entered into an agreement with the commission authorizing it to fix such price for news print as it might find fair during the period from March 1, 1917, to September 1, 1917, and agreeing to furnish users at the price fixed by the commission and to carry out all contracts that might have been made at a lower price, the finding of the commission being as follows:

"(1) That a fair and reasonable price for the sale of standard news-print paper in rolls by each of the aforesaid signatory manufacturers for use in the United States during the six months' period of time beginning March 1, 1917, and ending August 31, 1917, is the sum of \$2.50 per 100 pounds f. o. b. at the mill in carload lots and is the sum of \$2.75 per 100 pounds f. o. b. at the mill in less-than-carload lots.

"(2) That a fair and reasonable price for the sale of standard news-print paper in sheets by each of the aforesaid signatory manufacturers for use in the United States during the aforesaid six months' period of time is the sum of \$3.25 per 100 pounds f. o. b. at the mill in carload lots and is the sum of \$3.50 per 100 pounds f. o. b. at the mill in less-than-carload lots.

"(3) That no publisher or jobber who has an existing contract with any of the aforesaid signatory manufacturers for standard news-print paper at a higher price or prices than is hereby found to be fair and reasonable shall be entitled to receive or be given the benefit of such reduced prices unless he files with this commission prior to March 20, 1917, his written agreement to waive and release for sale and distribution to publishers only, who have no contracts, 5 per cent of the total amount of tonnage specified in such contract.

"(4) That if any extraordinary new conditions hereafter arise which make it unjust to the aforesaid signatory manufacturers to continue the aforesaid prices during the full period of said six months, this commission will readjust the same for the whole or any remaining part of the three months commencing June 1 and ending August 31, 1917: *Provided*, That said signatory manufacturers file with this commission their written request so to do: *And provided further*, That, in the opinion of this commission, the facts presented in such petition requires such action in order to prevent plain injustice."

While the Federal Trade Commission was carrying on its investigation the Department of Justice was also conducting an independent investigation to determine whether or not the manufacturers of news print had been violating the antitrust laws, and on facts thus obtained and information gathered by the Trade Commission procured indictments to be returned by the Federal grand jury of the southern district of New York against seven of the leading manufacturers of print paper. Thereupon the producers and dealers refused to carry out the agreement that had been made with the Trade Commission. With these cases pending, it seemed impossible to procure the passage of any legislation by Congress. The defendants were called for trial November 26, 1917, and refused to plead, but submitted to the finding of the court, which imposed a fine of \$2,500 on each of the defendants. Thereupon the Government filed a petition in equity against the companies which were members of the News-Print Manufacturers' Association, and which controlled a daily output of 5,755 tons, claiming that such companies were engaged in a combination in restraint of trade and commerce among the States and foreign nations.

On the same day that the petition was filed, by an agreement of the parties, a decree was entered finding the News-Print Paper Association to be an unlawful combination in restraint of trade, and an order was entered by the court dissolving the association and enjoining it and each of its members from thereafter entering into or engaging in such unlawful trade or practices.

At the same time the Attorney General of the United States, as trustee for the users of news print, entered into an agreement with parties engaged in the manufacture and sale of news print that from January 1, 1918, to April 1, 1918, the price of such paper should be as follows:

"From January 1, 1918, until April 1, 1918, for such news-print paper in rolls, \$3 per hundred pounds f. o. b. at the mill in carload lots and \$3.25 per hundred pounds f. o. b. at the mill in less-than-carload lots; and for such news-print paper in sheets, \$3.50 per hundred pounds f. o. b. at the mill in carload lots and \$3.75 per hundred pounds f. o. b. at the mill in less-than-carload lots." And that after April 1, during the war and for a period of three months thereafter, the price

should be fixed by the Federal Trade Commission after a hearing, with a right of review by the United States circuit judges of the second circuit.

It was argued by many that for the present this arrangement is satisfactory to all the parties interested in the matter; on the other hand, it is urged by others that this at best is only an agreement on the part of certain manufacturers and tradesmen that might be difficult to enforce, and that if a misunderstanding or disagreement should arise it could be enforced only by recourse to the courts, as provided under the agreement. This would mean delay, and in the meantime the users of print paper would be compelled to pay the old prices and suffer the same hardships they have in the last year or two; therefore many who had given the question study thought that, notwithstanding the agreement which had been made with the Attorney General, it was right to ask Congress to pass some law conferring on the President, if he should deem it necessary during the time of the war, authority to control the production, importation, and distribution of print paper and the price at which it should be sold.

The joint resolution proposed by Senator SMITH of Arizona and suggested by the Federal Trade Commission in its report was taken up for consideration. It had been reported to the Senate with certain amendments proposed by the committee. As originally drawn it empowered the Federal Trade Commission to control and regulate the production and distribution of print paper, mechanical and chemical pulp, by pooling the product in the hands of the commission during the term of the war, to be distributed by them at a price based upon the cost of production and distribution. The effect of the amendments proposed by the committee was to include importations within the control and eliminate the specific authority conferred on the commission and empowered the President to confer this authority on the commission whenever he should deem it needful.

The resolution was vigorously opposed in the Senate. Its opponents offered many objections to its passage, but the principal points made were that the Government was going too far in assuming control of the industries of the country, that paper was not one of the products directly used in or necessary to the conduct of the war, and that while some of the users of print paper might be compelled to suffer some hardship that even this was better than to subject the paper industry to governmental control. It was also urged that in any event there was no necessity at this time for control because the Attorney General had entered into an agreement with the producers, to which I have referred, which it was claimed would insure a price to the users as low as conditions would warrant. But the principal objection that seemed to be in the mind of those who opposed the resolution was the claim that if the distribution of print paper was placed in the hands of some agency of the Government, such agency might show favor to some papers and deny a supply to such papers as might incur its disfavor, and that in this way a censorship could be exercised over all the newspapers of the country.

The Senators who favored the passage of the resolution argued that the report of the Federal Trade Commission clearly showed that about 86 per cent of the effective production of news print in America was included in the News Print Manufacturers' Association and that it had been guilty of stifling competition, allotment of customers, curtailment of output, making unwarranted claims of increase of cost of production, division of territory for sales, and claims of shortage in the stocks of manufactured product, that by this means the manufacturers had been able in the past to control the market and secure a price for their product that was not just and fair to the user. That the commission at the time of the filing of its report described the conditions brought about in great part by these unlawful practices, and found that "some small publishers have already been put out of business and more are likely to suffer the same fate, and some large publishers will be financially ruined and many others will be unable to make any profits unless conditions are remedied."

That we are engaged in a great war and that success depends upon the fullest and best use of every resource at hand, and that while print paper is not actually used in the conduct of the war, in this struggle no single agency will count for more than the newspapers of the country. It is their mission to explain the reasons why we are engaged in this war, to make plain the aims and ideals for which we contend, to teach the supreme necessity of sacrifice, and to lead the people to a spirit of patriotism such as guided them in all other wars in which we have been engaged.

It was also contended that the history of this whole matter shows that every method used to insure fair dealing had failed, that the issue is so great and the industry affected is so important to the welfare of the country at this time that we can not afford to wait the uncertain issue of lawsuits.

And it was also argued by those who favored the passage of the resolution that there is no just ground for fear that those who would administer the law would act corruptly or unjustly toward any newspaper or that they would attempt to discriminate between publishers, and that if any such thing should be attempted it would work the destruction of those who undertook to carry it out. That it is up to the Government to make use of the most effective and certain remedy at hand to insure a constant supply of news print at prices as reasonable as possible so that the story of our part in this great conflict for liberty may reach every fireside in the Nation.

There is still another very forceful argument for governmental regulation which was not urged during the course of the debate in the Senate. The report of the Federal Trade Commission shows that there are about 2,500 daily and 14,000 weekly and semiweekly newspapers printed in the United States, that 119 of the larger dailies have 50 per cent of the entire daily circulation. It is also shown that many of these are able and have protected themselves by long-time contracts at fair rates and that some of them are engaging in manufacturing their own print paper. But the dailies with a small circulation and the weekly newspapers which are more than 15,000 in number, because they are compelled to purchase in small quantities, have not been able to protect themselves and have, as the Trade Commission points out in this respect, been compelled to pay as high as \$150 to \$180 per ton and higher. For this reason it is urged that it is these small papers that stand in need of governmental regulation.

However, as you now all understand, the Smith resolution was rejected by the Senate by a vote of 32 to 36, and this leaves the news-print situation standing just where it did when the Attorney General effected his agreement with the manufacturers. If the manufacturers live up to this pledge the trade is to be governed by the prices fixed in that agreement until April 1, and from that on, during the war and for three months thereafter, at prices fixed by the Federal Trade Commission.

Since the Senate has refused to adopt a law drafted along the lines suggested by the Federal Trade Commission, and was influenced largely by the hope that the agreement made with the producers by the Attorney General will protect the users of print paper, in my judgment it would be very difficult, if not impossible, to secure the passage at this time of any legislation which would effect a governmental control or regulation of the production and distribution of print paper. But if the war continues and the agreement fails to protect the publishers of the country, then, in my opinion, a concentrated effort should be made to secure the passage of some one of the measures now pending before Congress or some similar measure, if one shall be proposed.

In conclusion, I trust you will pardon me if I digress from the theme assigned me to speak briefly of the subject uppermost in the minds of all the people of the world.

A short time ago I mailed out to the people of my district a number of copies of a speech I had made on one of the laws adopted by Congress that had to do with the prosecution of the war. Very soon after I received a letter from a man in the district saying that he did not know why I had sent him a copy of the speech; that his time was too valuable to be occupied by reading such argument. He then went on to criticize me in such language, guarded, of course, as to leave the plain inference that he and many of his neighbors were disappointed at and disapproved of the course that I had taken in Congress in supporting the war resolution and in standing behind the President in the proposals he had made to carry out the war to a successful conclusion.

This letter set me to thinking and really wondering if it is possible that there can be many men like this in America, and forced upon me the one great necessity of the hour, if we are to win this struggle—the necessity of complete unity of thought, purpose, and action. If we are to act with purpose we must think. Thought is the conception of action. We need a spiritual revival of the thought of a great many of the people of this country. I appeal to you men to bring this about. We have reached that period in our development as a people when the newspaper has come to be the greatest force in the development and direction of public thought and sentiment, and say what you will, public thought and sentiment has become the greatest and most powerful factor in our public life. Therefore, if we are to be successful in this the most momentous of all the wars of all time we must be one in spirit and in truth.

I commend you unreservedly for what you have already done. The press of the country, with but few exceptions, both in what they have published and that which they have refrained from publishing, have shown a spirit of highest patriotism; but I believe you will agree with me that the letter which I received, and like incidents known to us, all force home the fact that the days to come are still full of opportunities worthy of the very best that there is in us.

I am sure that we have every incentive to spur us on in this work of uniting the people in this great cause we have undertaken. There is Russia, heir of the oppression of the ages, her people hungry, bleeding, and torn by revolution, in the midst of all this confusion traveling on to her destiny without chart or compass, yet with a soul afire with hope of eventually reaching the haven of democracy. There is Poland, of unhappy fate, bearing the scars of the centuries, crushed though she is, still dreaming of the freedom so often denied her. There is Belgium, living witness to the greatest crime recorded in history, her factories stripped, her treasures gone, her sanctuaries destroyed, her people outraged or in slavery, still crying to civilization for justice. There is France, whose people gave us courage to give utterance to the Declaration of Independence and made possible the adoption of the Constitution, engaged in a death struggle with an aggressor who respects no agreements, acknowledges no calls of conscience, and knows no remorse. It may well be said that her fate is decisive of the fate of democracy everywhere.

Then there are the wrongs, insults, and injuries to our own country. We remember the pledges that were broken, the vows that have been unfulfilled, the intrigues and diplomacy exercised to influence our neighbors to make war on us and our own citizens to repudiate their Government. We have the picture in our memory of the faces of our men, women, and children as they sink to their graves in the ocean, sent to their death for no fault of theirs. We have all these causes as incentive, to unite us as one man, laying aside every thought of revenge and conquest, to fight on until we attain a victory that will vindicate the honor of our country, insure the safety of the lives of our citizens on land and sea, and unite the world under a federation of the sane nations in a lasting peace under the rule of mercy, justice, and equality.

Death of Hon. John Gill, Jr.

EXTENSION OF REMARKS

OF

HON. J. CHARLES LINTHICUM,
OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 28, 1918.

Mr. LINTHICUM. Mr. Speaker, I ask leave to extend my remarks by inserting in the RECORD an article from the Baltimore Sun of to-day announcing the death of that able, distinguished Democrat of Maryland, my predecessor from the fourth congressional district, the Hon. John Gill, jr., who reflected credit upon Baltimore and our State by his able and efficient representation of our people and who retired from this honorable body in the year 1911.

JUDGE JOHN GILL DEAD.—PRESIDENT OF APPEAL TAX COURT OF BALTIMORE—FORMER MEMBER OF CONGRESS—SERVED IN BOTH HOUSES OF LEGISLATURE AND LED FIGHT WHICH SENT RAYNER TO UNITED STATES SENATE.

Judge John Gill, jr., president of the appeal tax court and one of the best-known men in public life in Maryland, died last night at his home, 1007 North Charles Street, following an illness of about a month from heart trouble. Judge Gill was 68 years old. His health had been failing for several years, but he had kept an active interest in personal

and political matters until the last few days of his life. Death came at 1.30 o'clock. His widow, Mrs. Nannie Kremelberg Gill, was at his side.

There were few men in Baltimore better known or better liked by the rank and file of all parties than Judge Gill. His long political career covered more than a decade, during which he held some of the most prominent positions in the State. He was a lawyer and until several years ago a member of the firm of Gill, Preston & Field, his associates being Mayor Preston and City Solicitor S. S. Field. This firm was dissolved early in Mayor Preston's term.

His political career began early in life. In 1873 he was elected from the second legislative district to the house of delegates and reelected in 1875, this time having been nominated by both the regular Democrats and the reform party. This was at the time of the fight against John Lee Carroll, who ran for governor. In 1881 Mr. Gill was elected to the State senate, sitting during the sessions of 1882 and 1884.

POLICE COMMISSIONER NINE YEARS.

The police commissioners in those days were elected by the State legislature. This body elected Mr. Gill commissioner to fill an unexpired term of three years, at the expiration of which Mr. Gill was elected again a full term. He served in this position for nine years.

In 1903 Mr. Gill was again elected to the State senate. In 1904 he was elected to represent the State in the lower House of Congress, beginning his term March 4, 1905.

During the years of Mr. Gill's public service he was instrumental in bringing about many important pieces of State legislation. His championing, as parliamentary leader, of the cause of Senator Bayner for the United States Senate brought him prominently into one of the fiercest fights for United States Senator that ever has been waged in the State of Maryland. He was the father of the sewer bill, which gave the people of Baltimore an opportunity to vote for or against that great improvement. He favored also the Haman oyster bill. He fought for the reduction of street car fares from 6 cents to the present fare of 5 cents. This was a generation ago; and the winning of his fight followed vigorous opposition at the hands of lobbyists and scheming politicians.

FATHER OF 5-CENT CAR FARE.

The bill for the proposed reduction of car fares had been hanging in the lower house of the State legislature for some time. One afternoon Mr. Gill left Baltimore for Annapolis at about 3 o'clock. That afternoon at the statehouse he drafted the bill, had it introduced in the senate, and, under suspension of the rules, so advanced the same day that it was sent to the engineering clerk. By 11 o'clock the next morning it had been read and passed and sent to the house.

Mr. Gill was born in Baltimore June 9, 1850. He joined the "Jr." to his name because of his grandfather, John Gill, who was connected with the Baltimore customhouse.

John Gill, Jr., attended several private schools in Baltimore and St. Timothy's Hall, Catonsville. In 1860 he entered Hampden-Sidney College at Hampden-Sidney, Va., where he continued for several years. In 1869 he began reading law in his father's offices. When the classes at the law school of the University of Maryland were resumed Mr. Gill attended this school for six months, when he finished his studies and was admitted to the bar in 1871.

Besides his widow, who was a daughter of the late J. D. Kremelberg, Austrian consul at Baltimore, Judge Gill is survived by three sisters, Mrs. John Jackson, mother of George S. Jackson, the grain administrator; Mrs. Elizabeth Earb, and Mrs. James Kinear.

MAYOR PRESTON'S TRIBUTE.

Mayor Preston was deeply grieved upon learning of the death of Mr. Gill.

"I feel his death deeply," he said. "The city has lost one of its most faithful and efficient officials. The keynote of his character was a rugged honesty and integrity. Politically and personally he stood always for the highest type of citizenship, and in the many years during which I was associated with John Gill and during my 37 years of professional life in Baltimore I have regarded him as having exemplified the highest type of manhood."

Personal Statement.

EXTENSION OF REMARKS

OF

HON. JAMES C. WILSON,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 31, 1918.

Mr. WILSON of Texas. Mr. Speaker, Mr. THOMAS L. BLANTON, of Texas, on the 8th of this month made a statement on this floor which was intended to and, if it is believed by anybody, does reflect upon my character. The remarks I complain of appear in the RECORD of that date on pages 698 and 699. He undertook to show that I violated a pair agreement I made with him on national prohibition. Also, Mr. T. A. CHANDLER, of Oklahoma, introduced a statement signed by the pair clerk, W. E. Small, Jr., of this House, on the 9th of this month, and which statement appears on pages 725 and 726. This statement is touching the same subject. The primary purpose of these gentlemen, I am willing to admit, is to build up or repair their political fences in their respective districts by offering an explanation and excuse to their constituents as to why they appeared not voting and not even paired for national prohibition when it was acted upon in the House the 17th of last month, but the thing I object to is—in order to build up or repair these political fences they are willing to malign and slander me; and that, too, in the permanent records of this House. The issue here really is between Mr. BLANTON and myself and involves our veracity.

I should have replied to these statements sooner. Whether intentionally or not, they each selected a time when I was absent to make them. Also about this time I sustained a broken rib, due to a fall on the ice, and have been slow in getting some of the records I wish to introduce in connection with my statement. On account of this delay I am including at the end of my statement the remarks made by Mr. BLANTON and the statement introduced by Mr. CHANDLER of Oklahoma. I want it so anybody interested in this matter can have it all before them consecutively. Also I want to put the Record in such shape that anyone desiring to send out either statement relative to this matter will have no excuse, other than a purpose to deceive, for not sending along all of the statements made about it.

Now, I will state the facts concerning this pair agreement and the condition to the agreement, how I complied with my part of the contract literally, and how it was the fault of Mr. BLANTON and the pair clerk, W. E. Small, Jr., that the agreement appeared not observed. On the afternoon of the 7th of December, 1917, I was sitting back there at the rear of the Democratic side reading a newspaper. The House had either adjourned or recessed. Mr. BLANTON came up and said, "I understand you are going to be away and not here to vote on either national prohibition or woman suffrage." I replied, "I may not; I am thinking of going to Santo Domingo." He then asked if I was opposed to the submission of the prohibition and suffrage amendments. I said if called on to vote at this time I would vote against both of them. He then proposed that I pair with him and Mr. TAYLOR of Colorado, they for it and I against it, and produced a pair agreement ready to be signed. I declined to sign it, stating to Mr. BLANTON that I was not sure that I would go; that I was thinking seriously of canceling my engagement because of these important votes coming up; that I thought I would have no trouble in arranging a pair after I knew definitely as to whether I would be here. Mr. BLANTON then appealed to me, stating that one party had disappointed him, and that he wanted to catch a train for Texas that was going to leave in a short while. He seemed very anxious; at least, told me he wanted to get away that afternoon. In response to his appeal—in fact, his begging—and as a matter of accommodation pure and simple to him, I said, "BLANTON, I will sign it with this understanding: If I am here I will have the right to vote, provided I get you a pair in my stead." Without hesitation, and as if delighted, he said, "That is all right. If either one of us is here, he will have that privilege."

I then signed it as against the prohibition amendment, and Mr. BLANTON and Mr. TAYLOR were to sign it as for the prohibition amendment, but neither had signed it when it left me. This was positively our agreement, and all of our agreement, and the words used in our conversation as near as I can recall them. When Mr. BLANTON appealed as he did, it occurred to me that he would probably not have time to get a pair if I turned him down, and, on the other hand, that I would have plenty of time to get him one in the event I decided not to go to Santo Domingo, and that if I failed I would merely lose my vote, but would appear paired, anyway—in other words, accommodating this man was my sole and only purpose.

About three days later I canceled my reservation with the Clyde Line Steamship Co., and my sole reason for doing so was that I thought it my duty to remain here to vote on those two important questions. The agreement specifically relieved any party to it who might be present and furnish a substitute name. I knew it did not have one feature of a live pair about it—on the contrary, it was a very dead pair. I knew it was not the equivalent of a vote in any sense, and I knew, as did Mr. BLANTON, full well that if I remained away, relying upon such a pair, that I would deny myself and my district any participation whatsoever in the decision of these two great questions.

Now, Mr. BLANTON concedes that there was a special verbal agreement qualifying the written agreement. In a Western Union telegram to me, dated the 20th of December, 1917, at Hondo, Tex., he says: "The only thing said about release was that if I returned then we could release and vote." That is a very unreasonable statement and would be a dishonorable agreement where three were involved. He says nothing about the return of the third party and nothing about my return, but he contemplates my presence. This feature of it merely shows that he understood from our conversation that I would likely be present to vote. But the gentleman contradicts himself in his statement before the House. In referring to this verbal agreement, the 8th of this month, he says: "Agreeing, however, that should all three of us be present whenever the vote was taken on either measure that then we should be released from the pair and all could vote." It is not necessary to point out the difference and the contradiction. In the first statement, if he returned and I should be present, it would be up to us even then

to release before we could vote. Under this last statement, if all three parties to the agreement return they are automatically released and can vote. We did not vote upon the woman-suffrage amendment during the holidays as we expected, but at the time Mr. BLANTON gave this last version of that verbal agreement we were soon to vote upon the question. Mr. BLANTON's last recollection of that verbal agreement made it mighty handy for him and Mr. CHANDLER, since they had both returned to Washington, to cast their votes on woman suffrage without consulting me and regardless of the pair agreement which covered suffrage. It just exactly fits the situation they were confronting at the time Mr. BLANTON made this last statement. Telegrams are generally drawn carefully, but I imagine Mr. BLANTON gave this last statement a little more study than his first. Either one of these propositions coming from Mr. BLANTON would be a poor answer to my suggestion that I would likely be present and my demand to vote if so, provided I furnished the pair in my stead, when I knew that Mr. BLANTON was about to leave for his district 2,000 miles away for the purpose of making a political campaign of his district with war as his topic, and knowing, with railroad congestion as it was, that he could hardly go to his district and return by the time the vote on prohibition was to be had.

So much for the agreement we made, but I want to call your attention to another statement Mr. BLANTON made before the House at the time I referred to, and strongly corroborating my position in this matter. He stated:

I sent a telegram to Mr. WILSON of Texas, urging him as his colleague and particular friend since college days, to support the prohibition amendment, thus permitting the States to pass upon the question once for all, and stated that if he would vote for prohibition to pair Mr. CHANDLER and myself with some other negative vote.

All of this statement is true except the vital part of it, the one fact intended to be conveyed and impressed, namely, that he authorized me to pair them with a negative vote, provided I would vote for prohibition. He sent me a telegram, but with no such condition; and, fortunately, I have the telegram to settle this issue between us. I read you the telegram to which he referred, which is as follows:

ALBANY, TEX., December 16, 1917.

HON. JAMES C. WILSON,
House Office Building, Washington, D. C.:

As your colleague and particular friend since college days, I urgently implore and beseech you to give the States an opportunity to pass upon the prohibition question. Period. If you are willing to make this sacrifice of your personal convictions by voting affirmatively, you will be granting the sacred right of petition to several million loyal, patriotic American men and women who are themselves now making every sacrifice to win the war. Period. Pair CHANDLER and me with some other negative vote, and don't deny the States this privilege.

THOMAS L. BLANTON.

The telegram has two periods in it, and I specifically call your attention to the last one and the sentence following: "Pair CHANDLER and me with some other negative vote, and don't deny the States this privilege." There is no "if" in this sentence; there is no such condition anywhere imposed in the telegram. "And don't deny the States this privilege" is an appeal and not a condition. I can submit this telegram to a thousand fair-minded people and would receive a thousand answers all alike—that there is no such condition in it; yet look at the statement the gentleman solemnly made before this House. Unfortunately, this telegram, though in my office, was not delivered to me until the morning after the vote. But I needed no such authority from Mr. BLANTON by telegram, as I had it through our agreement, as I stated. The telegram is exactly in line with our agreement. Mr. BLANTON sent this telegram before it appeared in the daily papers that he was not present when the vote on national prohibition was taken and was not paired. He was not mad when he sent this telegram nor scared about what his prohibition friends would think. He undoubtedly had our agreement correctly in mind when he sent it. Knowing that I would have the agreement in mind, he knew better than to send me a telegram with any such condition in it, as he now claims. In spite of the wrong he has done me in this matter, when I am charitably inclined toward this gentleman, I sometimes think he is really not able to remember from one week to another statements or promises that he does make.

The gentleman made his race against Judge W. R. Smith right next to the district I represent, and I heard that one of the principal talking parts of his platform was that Congress did not meet until 12 o'clock noon, and that he was condemning Judge Smith for not having stopped such a practice, and promising if elected he would bring about a reform in this respect and force the Congress to meet at 8 o'clock a. m. We merely laughed over our way about this, thinking possibly that he did not know that the work of attending the sessions is the smallest of a

Representative's labors. I even doubted the story, but later I was told by most reputable men that they had personal knowledge of it, and that it was true. When the special session was called, though, I noticed Mr. BLANTON permitted the House to adjourn day after day to meet at 12 o'clock noon by the unanimous consent of those present. I noticed he made no request for an earlier meeting, introduced no resolution, and did not even interpose an objection. In a few weeks at a meeting of the Texas delegation here Mr. BLANTON voluntarily denied these things in toto. I also understand that he voluntarily denied them in a speech before this House. Since these denials I am informed that many of his fellow citizens will make affidavits that they heard him speak upon this very subject. I do not claim to know the facts about this. The point is, it all shows that the gentleman who comes before this House and charges me with a dishonorable act is not a stranger to controversies where his veracity is involved.

Now, before I come to telling about carrying out my part of this agreement I wish to refer to the trouble and bitterness that came up between W. E. Small, jr., the pair clerk, and me. The statement introduced by Mr. CHANDLER was made by this pair clerk. Ordinarily you would expect a pair clerk to be a fair witness in such a controversy between two Members, but on the night that the vote was taken on prohibition I tried to get the pair clerk to substitute the name of Mr. Bathrick, of Ohio, for mine on this pair, and he declined to do so. It resulted in strong words and bitter feeling between us. I told him that night he would be to blame for these gentlemen not appearing paired, and I charged him with this the next morning. In making the statement he had a strong motive or interest. It is to make a case that will attach no blame whatsoever to him. His fitness is involved; in other words, his job is at stake, as he may more fully realize later. The statement was adroitly drawn up, as I am informed, at the suggestion of Mr. BLANTON. I know that Mr. CHANDLER had nothing to do with either inspiring it or wording it. The statement slanders me unmercifully, and the falsity and vice in it is not so much in misstatements as it is in making false impressions by leaving out things that actually happened between me and Mr. Small; in other words, by not telling the whole truth. For instance, every statement and contention of mine made to Mr. Small in order to induce him to enter the name of Mr. Bathrick, of Ohio, on the pair instead of mine are left out. As much as I plead with the pair clerk to substitute Mr. Bathrick's name for mine, you will not find Mr. Bathrick's name in the entire statement.

I will now proceed to state the happenings on the afternoon of the prohibition vote. After the pair agreement was signed on the 7th of December, I made no effort to get a substitute for my name until a little while before the vote was taken. That afternoon I went down to the pair clerk to see if I could get a pair and asked him how he was fixed on pairs against prohibition. He replied: "Plenty of them—about a dozen," and said, "If you need one, I can give you Mr. Bathrick, of Ohio," stating that he had received a telegram from Mr. Bathrick requesting that he be paired in the negative. Mr. Bathrick was sick at that time and has since died. He was a Democrat, a friend of mine, being on the Naval Affairs Committee with me. I made up my mind to substitute Mr. Bathrick on the pair, but did not even tell the clerk why I was making the inquiry. I merely wanted to satisfy myself that I could get a substitute pair. Just as they were commencing to call the roll I went to Mr. Small and told him to place the name of Mr. Bathrick on the pair I had with Mr. BLANTON. He said he could not, as it was a written and signed pair. I told him that I had a special agreement with Mr. BLANTON that in the event I were present I would have the right to vote and all I would be obligated to do was to furnish a substitute for my name on the pair. He said that Mr. BLANTON had not told him of this and that he could not accept Mr. Bathrick's name instead of mine. In Mr. Small's statement there is nothing about Mr. Bathrick and not a word about my telling him of this agreement with Mr. BLANTON and his reply that Mr. BLANTON had not told him of it. On the other hand, he says that I came to him two or three days before the vote was taken and told him that I desired the pair changed to some one else, and that he then informed me that I would have to communicate with Mr. BLANTON and Mr. CHANDLER before he could do that. This statement about me coming to him two or three days before the vote is either a mistake or false. The pair clerk presumably had some other pairs to look after besides mine—I had none but this, and there is no reason why I should not remember every detail about it. I never dreamed of any difficulty about getting a name substituted until Mr. Bathrick's name was refused. Mr. BLANTON himself says there was a verbal agreement in ad-

dition to the written agreement. It is most natural that I should have told the pair clerk about my recollection of this verbal agreement, yet he is entirely silent about it. He represents me as if I were merely wanting to violate a pair without any reason or even an excuse, except a desire to vote. When Mr. Small finally refused to accept the substitute because Mr. BLANTON had not told him of the agreement, I told him that I could not afford to lose my vote through the negligence of Mr. BLANTON and warned him that I had complied with my agreement and that I would vote when my name was called.

When the pair clerk became convinced that I was going to vote, he produced a telegram from Mr. BLANTON to Mr. KITCHIN, in substance releasing me if I would vote for prohibition. This telegram, unlike the one from Mr. BLANTON over in my office, but which I had not seen, really had the condition in it that I should vote for prohibition. This, of course, made me somewhat angry, and the words between Mr. Small and me waxed warmer. I told him in substance that it was none of Mr. BLANTON's business how I voted. Mr. Small will not deny this, yet he is very silent about it in his written statement. Not only is he silent but, taking his statement all together, he would make the impression that I acquiesced in this condition and then went off and violated it by voting against prohibition.

It took about 40 or 50 minutes to call the roll. Finally, the pair clerk said it would be all right so far as Mr. BLANTON is concerned, but what about Mr. CHANDLER? I then said, What has Mr. CHANDLER to do with this? The clerk then produced the pair with Mr. CHANDLER's name on it. After seeing the names I stated that I had no agreement with Mr. CHANDLER of Oklahoma; that my pair was to be with Mr. BLANTON and Mr. TAYLOR of Colorado. Mr. Small is also silent on this point. Not only does he leave it out but he has it as if presenting the pair to me with Mr. CHANDLER's name on it was confronting me with the goods to show that I had spoken untruthfully and leaves it as if I had nothing to say except to declare that I would violate the agreement. It may make no material difference to leave out parts of a conversation, but it does when the part left out makes the statement a false one.

Now, since Mr. CHANDLER's name was not mentioned to me by Mr. BLANTON, but only Mr. TAYLOR of Colorado, I felt that I would probably find some corroboration of this, and having the files of the Western Union looked up, I secured the following telegram from Mr. BLANTON to Mr. TAYLOR:

WASHINGTON, D. C., December 7, 1917.

HON. EDWARD T. TAYLOR, M. C.,
Glenwood Springs, Colo.:

KITCHIN advises House will vote on national prohibition 10th and woman's suffrage 20th. Understand you favor both; so do I; and want both of us counted. WILSON of Texas, strong anti, offers to pair, but under rules takes two for one. Please authorize me by wire immediately to enter pair of record. Also please agree not to call up your H. R. 4431 until January, as I may have to leave on urgent matter and won't leave without such agreement. Kindly agree and answer immediately.

(Signed) THOMAS L. BLANTON.

After the vote on prohibition I learned that Mr. TAYLOR was actually in Colorado the day I signed the agreement. There are two sentences in this telegram which show conclusively to any reasoning mind that at the time Mr. BLANTON sent it that he had my name signed to that pair, but that it was to be with Mr. TAYLOR of Colorado and himself. Look at this sentence: "WILSON of Texas, strong anti, offers to pair." Offers to whom? There really was no offer.

It is undisputed that I signed then and there, but my signing could be referred to as such. The other sentence, "Please authorize me by wire immediately to enter pair of record," shows that my signature was to it, and that there was nothing needed preliminary to filing except Mr. TAYLOR's consent. Was it not most natural that I should mention Mr. TAYLOR to the pair clerk, yet not a word in Mr. Small's statement about Mr. TAYLOR.

Now, it is most interesting to know what Mr. BLANTON has to say about my claim that my pair was with Mr. TAYLOR. In a Western Union telegram dated at Hondo, Tex., December 20, Mr. BLANTON said as follows:

What I told you was that I would furnish two votes against yours; that I had wired TAYLOR of Colorado and expected him to join me in pair, but if he didn't, CHANDLER would. Even if you didn't understand this, it was immaterial to you whether the second was TAYLOR or CHANDLER.

Look at Mr. BLANTON's statement to this House. Does he even mention Mr. TAYLOR's name? I want us to look at this statement of Mr. BLANTON's just a little. But before doing so will call your attention to two undeniable facts: One is that I had only one conversation with Mr. BLANTON about agreeing to the pair. He said so, and I say so. The other is that the telegram quoted above from Mr. BLANTON to Mr. TAYLOR of

Colorado is the first and only telegram sent to Mr. TAYLOR on this subject. Nobody, I presume, will contradict this, but if they should, the Western Union files and Mr. TAYLOR of Colorado himself, a distinguished Member of this House, could easily settle the controversy. If it is true that Mr. BLANTON sent the telegram to Mr. TAYLOR before he had the one conversation with me, the statement in it that I had offered to pair was not true and any reference to me manifestly baseless. On the other hand, if he sent it after his conversation with me and I had signed, then his statement in his telegram to me of the 20th of December, last quoted, that he told me in our conversation that he had wired TAYLOR of Colorado, is not true necessarily. Mr. BLANTON can put the telegram to Mr. TAYLOR before or after the conversation with me just as he likes. The truth is it was sent after our conversation. For that matter, I thought Mr. TAYLOR was in Washington at this time. On the other hand, if he told me he had wired Mr. TAYLOR, it necessarily was not true.

Also, as to his statement that he claims to have made to me that Mr. CHANDLER would sign if Mr. TAYLOR would not, Mr. TAYLOR was in Colorado; Mr. CHANDLER was in the city of Washington. If he had, previous to his conversation with me, spoken to Mr. CHANDLER, and he had given any such positive assurance, or, if he from any source knew that, why would he afterwards have gone to the trouble of wiring to a gentleman in Colorado, to whom he had not even mentioned the subject, to get the additional and necessary name on the pair, when the man who had agreed to sign it was then in the city? I merely make these suggestions for the reflection of the very few who may be interested in this matter.

Ordinarily it would have made no difference whether Mr. CHANDLER or Mr. TAYLOR, but in this instance the fact that it happened to be Mr. CHANDLER, a Republican, instead of Mr. TAYLOR, a Democrat, was ruinous to my final efforts to have Mr. Bathrick's name substituted for mine. Getting back now to the trouble between the pair clerk and me in this matter. Though I had entered no agreement with Mr. CHANDLER, I told the pair clerk it would make no difference to me if I could get Mr. Bathrick's name substituted for mine on the pair. I was not trying to get myself released, as Mr. Small in his statement says, because I knew I was released both legally and morally as soon as I offered, in accordance with my agreement, the substitute name. The thing I was trying to do was to get Mr. Bathrick's name put on the pair for the protection of these gentlemen and as an accommodation to them. Mr. Hollingsworth, the Republican pair clerk, here for the first time spoke up, and suggested if I would get some member of the Oklahoma delegation to assume the responsibility for Mr. CHANDLER that he would agree to substitute Mr. Bathrick's name for mine. When this was said I felt that I would get them paired, so I went to two Democratic members of the Oklahoma delegation and told them that an Oklahoma brother of theirs was about to be injured by not appearing paired on prohibition. They asked who it was. I replied, "Mr. CHANDLER." They laughed and said, "He is a Republican." This was the first I knew of his politics. They impressed me as not being excited about an Oklahoma Republican being hurt politically, and said to me to go to a Republican. I was not acquainted over there, and felt pretty certain then that any effort I would make would fail. But I decided I would try anyway, so I went to Mr. Morgan, of Oklahoma, and explained it to him, and asked him to assume the responsibility—to merely say that it would be all right. But he immediately shrunk from having anything to do with the matter. All this I was trying to do for the protection of Mr. CHANDLER—not for my protection—and that, too, when I had never met and have not met him to this day, and positively had no agreement with him.

Even after this I went to Mr. Small and further insisted that he enter Mr. Bathrick's name on the pair. I explained to him that it was a dead pair, so understood at the time, that all of us were to be out of the city, and that any party to it being present would be released, provided he secured a substitute; that all these gentlemen wanted was to have it appear in the Record and the newspapers that they were paired. Now, in this connection is one of the most infamous misrepresentations in the pair clerk's statement. He says that I came and announced that I was going to vote and asked to see the pair, and that after I had it I erased my name from it, and so forth. There is a vast difference in asking for this written agreement with an announced purpose and a concealed purpose.

Here are the literal facts: When he finally turned me down, I told him when the W's were called the second time that I was going to vote, and asked him to erase my name from the pair. This he declined to do. I then said, "Give it to me; I know how

to get it off"; and he then handed it to me, and, in the presence of quite a number there, I erased my name and handed it back to him. Not satisfied with this, after my name was called and I had voted, I went back to Mr. Small and insisted that he place Mr. Bathrick's name on the pair. I told him that he was mistreating Mr. Bathrick and also Mr. BLANTON and Mr. CHANDLER. There is no rule against this; just a matter of discretion. Their names signed to a dead pair should have been conclusive evidence with him that they wanted to appear paired with somebody—just anybody. On the other hand, though he had the telegram of Mr. Bathrick asking him to pair him against the amendment, yet all three of these gentlemen were left unpaired.

Now, I would like to know what more could have been expected of me than I did. It would have been an outrage for me to have been deprived of my vote when I canceled a very important trip and stayed here specifically for that purpose, on account of the negligence of Mr. BLANTON or the failure of the Oklahoma delegation to desire to favor Mr. CHANDLER, or on account of the bad judgment or no judgment of the pair clerk. I not only did not violate any agreement, but I am not subject to criticism, even remotely, for the course I pursued in this matter.

I want to say that when any Member of this House tells a pair clerk that he has an agreement with a Member with reference to a pair, that he ought not to be insulted by being asked for evidence. Too, it is serious for a Member to be slandered in the fashion I have been by an employee of the House. He was not satisfied with giving his version of the facts but went outside of this, as you will note in the finish of his statement, to indulge in conclusions that are slanderous, and that, too, when he knew his statement was being prepared for the RECORD. I tried to hammer it into his head that these men would be perfectly satisfied if they appeared paired in the RECORD and newspapers. He replied he did not know that they would. I submit it to you gentlemen whether they would or not, and as to whether all this disgusting controversy would have been avoided. The judgment used by the pair clerk in this matter was just about on a par with the judgment used by the sentry down here at the barracks, who recently killed the old carpenter in Washington because he was crossing the grounds in an unusual way; in other words, no judgment at all. I did not know much about this pair-clerk business until I got into this unfortunate controversy.

I want to say that during this war—in fact, any time—I think it is a shame for the party in power to keep a pair clerk. We have plenty employees who can do it and not miss the time. He draws \$1,800 a year and does not do 15 cents' worth of work a day, and any Member who doesn't know that can easily find it out. The work of the pair clerks of the minority party is laid out differently. They really have something to do and do something, and Mr. Hollingsworth, the Republican pair clerk, acted with good judgment throughout in this matter. He did everything that he could, not being in control of the situation. The Democratic pair clerk is supposed to do a good many other things besides attending to the pairs that infrequently come up; but, in fact, these other things are not done. The job is a fat one, and all this has caused me to wonder if the merit and efficiency of the pair clerk consists in his being a near relative of a distinguished Democratic Member of this House. In addition to being pair clerk, he acts as a private secretary. As to what salary he receives for that work, if any, I do not know, but the law permits it to be \$2,000 per annum.

Mr. Speaker, you informed these gentlemen that the House had nothing to do with pair agreements, that it was entirely a matter between Members, yet they have persisted in publishing these statements concerning this matter. They are taking an interest in extending this thing in a way I can not understand. Dead pairs can be entered into by Members for but one reason and legitimate purpose, and that is to show to the country and their districts how they stand upon a given question. Dead pairs are used for the purpose of deception by some. I have heard of some undertaking to impress their constituents through a dead pair that though not present and voting, their pair was the equivalent of a vote, in other words, had the effect of killing a vote on the subject as effectually as if they had been present and voted. This is true only with a live pair, where Members being present or in the city say one to another, "I will not vote if you will not." That sort of a pair has the effect of a vote. Who would contend that this was a live pair? I would hate to think that these gentlemen are thus trying to take advantage of this dead paid, yet Mr. BLANTON told me in substance that he would not have had this to have happened for a hundred thousand dollars. What happening did he have in mind? Was it his absence or his failure to vote that hurt him a hundred thousand dollars' worth? Or was it a failure to accomplish for prohibition the equivalent of a vote?

He was voluntarily absent. His own statement shows a dead pair. His telegram above instructing me to pair him and Mr. CHANDLER with some negative vote—just anybody, present or absent—shows he knew it was a dead pair. So we are almost forced to the conclusion that the happening he refers to was the information in the newspapers down in Texas the following morning that Mr. BLANTON was neither present nor paired. It is hard to think, though, that Mr. BLANTON would really attach such a value not to the substance but to a shadow of service to the prohibition cause. A Representative can not serve the cause of prohibition much by talking about it all the time in a district where all are for it. He can do much more good by being present when the voting takes place. I do not charge that these gentlemen are trying to put camouflage on this pair agreement for their constituents to look at—I leave that all to you. I do assert that when they left here, however, under such a pair, they knew the cause of prohibition was not only losing their influence but their vote. What cause they put above it I do not know. Mr. BLANTON, in his telegram to Mr. KITCHIN, appearing in the statement by Mr. Small, says:

Am making three speeches a day in my district, embracing 58 counties, in effort to wipe out all disloyalty and force absolute support behind Government.

Some might think he was down there to help himself politically; but, take him at his word, I would dislike to utter and place in the CONGRESSIONAL RECORD such a general reflection on my constituency. He had three constituents convicted of resisting conscription. I wonder how much he spoke in their community. I should think all the communities he spoke in would resent this. I am afraid his constituents will not excuse him from his post of duty for any such reason. It would seem like he is master instead of servant. Individual instances of disloyalty do not place the whole district under such a charge or insinuation. Mr. BLANTON's district at present was practically all, if not all, in my district as United States attorney when I was elected to Congress. I feel I owe it to them to turn aside here long enough to say there is not a more loyal or patriotic people in Texas or in any other district in the United States than in the sixteenth district of Texas.

Mr. Speaker, in this connection I wish to state to this House that already extra copies of the CONGRESSIONAL RECORD, which contains Mr. BLANTON's statement and the one he procured from Mr. Small and introduced by Mr. CHANDLER, are being circulated in my district down in Texas. They are being sent to strong friends of mine in the district, trying to stir up opposition to me in the coming campaign where none now exists, and an ex parte, a one-sided statement at that. Think of the injustice! Think of the unfairness! They can not hurt me with those who know me, but false impressions of my character may be made on strangers that will last forever. Why should I be pursued in this fashion over this matter? In fact, persecuted. How long is it expected that a man will be patient and forbearing? Is Mr. CHANDLER sending these extra copies of the RECORD to my district? Is it Mr. Small or is it some Member of the House not connected and not a party to this controversy? As to who here is a party to that, I leave for you to judge from activities. And think of it. I am getting into all this mess and trouble as a reward for an effort, as genuine as I ever made in my life, purely and solely to accommodate two gentlemen.

I have no quarrel with Mr. CHANDLER about this matter. I understand that Mr. BLANTON procured the Small statement and brought it to him and this was how he happened to introduce it. Mr. CHANDLER does not know anything about the facts in this matter, nor does he pretend to. I blame him only for carelessly handling a false statement about me. Also, up to this minute, he has not done me the courtesy of asking about my side of this matter. This, I presumed, he figured to be a gentleman's course and the return I deserve for an earnest and sincere effort to favor and protect him when none of his friends would and when I had no acquaintance or agreement with him. Neither am I concerned about any conflict between the pair clerk, Mr. Small, and me. The real issue here is between Mr. BLANTON and me, and it involves directly our truthfulness. You can readily see what opportunity either of us had for misunderstanding the agreement. Now, since we are both new Members and presumption is equal either in our favor or against us, if there is any Member here interested in this matter and still not satisfied, I would like for any such to inquire of those who know us both as to character. A man who is untruthful will generally have that reputation. There are those here who know us both. I do not know what they will say, but I will stand by the results you get. Ask them in confidence, in case of a conflict between Mr. BLANTON and me, involving our truthfulness, which one would be the worthier of belief.

Now, in order that no one may get a one-sided account of this matter, but all of the statements, I include the statement made by Mr. BLANTON before the House and following it the statement introduced by Mr. CHANDLER.

[Statement of Mr. THOMAS L. BLANTON, of Texas, Jan. 8, 1918.]

Mr. KITCHIN. Mr. Speaker, I desire to prefer a request for unanimous consent, and if it be granted, then, at the conclusion of the remarks to be made, I shall move to adjourn. I ask unanimous consent that the gentleman from Texas [Mr. BLANTON] be permitted to address the House for three minutes.

The SPEAKER. Is there objection?

Mr. ROBBINS. Mr. Speaker, on what subject?

Mr. BLANTON. I desire to explain my absence from the House at the time of the taking of the vote on the prohibition question. It is a personal matter.

Mr. Speaker, I have been criticized—by one not in my district, however—for being absent on the 18th day of December when the vote on the prohibition amendment was taken. Shortly after the convening of the present session of this Congress, learning that there would be few matters considered before the holiday recess, I had agreed upon a pair with my colleague from Texas [Mr. GREGG] on the prohibition amendment. Later on he informed me that he was inclined to support the resolution, that he had about made up his mind to support it, and I released him from the agreement. On the 7th day of December Mr. T. A. CHANDLER, of Oklahoma, Mr. JAMES C. WILSON, of Texas—my colleague—and myself signed a written agreement to pair both on the national prohibition amendment and the woman-suffrage amendment, Mr. T. A. CHANDLER, of Oklahoma, and myself pairing in favor both of prohibition and suffrage, and Mr. JAMES C. WILSON, of Texas, against both measures, agreeing, however, that should all three of us be present whenever the vote was taken on either measure that then we should be released from the pair and all could vote. This signed written agreement was filed with the pair clerk on the 7th day of December, 1917, after which I left for Texas and Mr. CHANDLER left for Oklahoma, both Mr. CHANDLER and myself relying implicitly upon our pair duly executed and filed.

Having in my district 58 counties running 566 miles east and west, from Mineral Wells to El Paso, and several hundred miles north and south, from Lubbock to Rock Springs and Presidio, with over 400,000 people in it, and being the largest district in the United States, while over 90 per cent of the people are loyal, patriotic, dependable citizens standing solidly behind their flag, President, and Government, yet because of socialistic propaganda and ignorance of conditions, there existed some disloyal seditious sentiment, three men having already been sent to the Federal penitentiary for such crime, and, moreover, many boys from my district stationed at Camp Bowie were dying, and some at Camp Travis were dying. I went to my district and drove in an automobile, through freezing weather part of the time, over 100 miles a day, making two, three, four, and even five speeches a day, and making a personal inspection of conditions at said camps, and upon one day especially I remember I drove 167 miles from Abilene, Tex., to Junction, speaking at Ballinger, Paint Rock, Eden, and Junction in behalf of our Government policies, no politics, however, being in any of my speeches. On the 15th day of December I received a telegram from Dr. A. J. Barton, president of the Anti-Saloon League of Texas, from Washington, indicating that the prohibition cause might be embarrassed by my pair with Mr. WILSON, and asking me to wire Mr. KITCHIN to change pair to some one else provided Mr. WILSON could be induced to vote for prohibition. I immediately wired Mr. KITCHIN on December 15 that provided Mr. WILSON of Texas would support the prohibition amendment, then to change my pair to benefit the prohibition cause.

Also, on December 15 I wired Dr. A. J. Barton that I had complied with his request and had wired Mr. KITCHIN, authorizing him to change pair if Mr. WILSON of Texas would vote for prohibition, and that if necessary to count Mr. WILSON's vote for prohibition I would return immediately. On the 16th day of December, from Albany, I sent a telegram to Mr. WILSON of Texas, urging him as his colleague and particular friend since college days to support the prohibition amendment, thus permitting the States to pass upon the question once for all, and stated that if he would vote for prohibition to pair Mr. CHANDLER and myself with some other negative vote.

The SPEAKER. The time of the gentleman has expired.

Mr. BLANTON. Mr. Speaker, may I have two minutes additional?

The SPEAKER. The gentleman from Texas asks unanimous consent to speak for two minutes additional. Is there objection? [After a pause.] The Chair hears none.

Mr. BLANTON. I received no reply from Mr. WILSON. Also, on December 16 I wired Mr. E. Y. WEBB, chairman of the Committee on the Judiciary, that in case Mr. WILSON would vote for the prohibition amendment to pair Mr. CHANDLER and myself with some one else.

Also, on December 16 I wired Mr. GREGG, of Texas, and others, urging that they support the prohibition amendment.

I refer to pages 8683 and 8684 of the RECORD of last session for remarks I made on October 5, 1917, in favor of the passage of the national prohibition amendment and predicted that it would pass the House early in the December session. I missed only seven days' sessions of the House, as during my entire absence the House met only on the 11th, 12th, 13th, 14th, 15th, 17th, and 18th days of December.

I will state on the prohibition question I am further already on record. On April 9 I introduced a joint resolution (H. J. Res. 40) proposing an amendment for national prohibition, which is practically the same resolution introduced by Senator SHEPPARD that passed this House on the 18th of December, and on the 19th of April I introduced a bill (H. R. 3565) to suspend the manufacture of and all traffic in intoxicating liquors for beverage purposes during the war. On May 8 I introduced an amended bill (H. R. 4248) to suspend the manufacture of and all traffic in intoxicating liquors for beverage purposes during the war, and on May 9 I got Senator KENYON to introduce a copy of this last amended bill in the Senate. These matters, I take it, place me upon record on this question as being unalterably in favor of national prohibition, and I ask unanimous consent that these documents may go into the RECORD in connection with my remarks.

The SPEAKER. The gentlemen from Texas asks unanimous consent to extend his remarks in the RECORD by inserting these telegrams, and so forth. Is there objection?

Mr. WALSH. Mr. Speaker, I think the gentleman's statement is sufficiently clear as to what the telegrams contain, and I object.

Mr. BLANTON. Mr. Speaker, if the gentleman will withdraw his objection—

The SPEAKER. But the gentleman objects, and it is not debatable.

[Statement by W. E. Small, jr., pair clerk, introduced by Mr. T. A. CHANDLER, Jan. 9, 1918.]

PAIRS.

Mr. CHANDLER of Oklahoma. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a statement by one of the pair clerks of the House.

The SPEAKER. The gentleman asks unanimous consent to print in the RECORD a statement from one of the pair clerks of the House. Is there objection?

There was no objection.

The SPEAKER. The Chair will take occasion to state that the House has absolutely nothing to do with pairs. It has gone as far as to allow them to be made a matter of record, but it is a private transaction. A good many Members think that the House has something to do with it, but it has not. If anybody wishes to know all about pairs, let him get Benton's "Thirty Years in the United States Senate" and see what he had to say about it when it was first begun.

HOUSE OF REPRESENTATIVES UNITED STATES,
Washington, D. C., January 8, 1918.

Messrs. THOMAS L. BLANTON, M. C., and T. A. CHANDLER, M. C.,
House of Representatives, Washington, D. C.

MY DEAR SIRS: On day before yesterday you requested me, as pair clerk of the House of Representatives, to make you a statement in writing as to the facts concerning the pair made between you and Hon. JAMES C. WILSON, giving the reason why the pair was not observed and did not appear in the CONGRESSIONAL RECORD.

About two weeks before the vote was taken on the constitutional amendment for national prohibition Hon. THOMAS BLANTON, Member of Congress from the sixteenth Texas district, came to me and stated that he had a pair upon the votes to be taken upon the constitutional questions of national prohibition and woman suffrage, Mr. BLANTON stating that he was for both these propositions and that Mr. WILSON would be against both, and that they would secure some other Member who would vote as Mr. BLANTON would in the matter. (Pairs upon these constitutional questions are in the same proportion as the vote, and as it requires a two-thirds majority for legislation of this character, it would take two Members for either of these amendments to protect one Member voting against.) On the next day Mr. BLANTON came to me with Mr. T. A. CHANDLER, Member of Congress from Oklahoma, and handed to me a pair which was out of the ordinary for the reason that it was a typewritten agreement, with the names of Messrs. BLANTON and CHANDLER voting for the prohibition amendment and Mr. WILSON voting against the prohibition amendment inserted in the pair and duly signed by each of them, and I told them, as pair clerk, that the pair would go into the RECORD.

Two or three days before the vote was taken on the prohibition amendment Mr. WILSON came to me and said he had expected to leave the city, but that as he had not he desired to have the pair changed to some one else who would vote as he would in order that he might vote.

Now, pairs are simply agreements between Members of Congress, the idea being that one vote will offset the other, and should one or all Members concerned in a pair or an agreement made between Members be absent, these agreements and pairs are observed. After such an agreement is made it is never altered by the pair clerks, except by the consent or permission of those concerned.

Therefore, when Mr. WILSON requested the pair clerks to release him we had nothing to do with it, as the matter was between Messrs. BLANTON of Texas, CHANDLER of Oklahoma, and Mr. WILSON of Texas. I told Mr. WILSON that if he would communicate with Messrs. BLANTON and CHANDLER, and they would agree to do so, of course it would be all right; otherwise I would put the pair up for the RECORD.

In the meantime Hon. CLAUDE KITCHIN, the Democratic floor leader, handed me a telegram from Mr. BLANTON, which is as follows:

"Am making three speeches a day in my district, embracing 58 counties, in effort to wipe out all disloyalty and force absolute support behind Government. If WILSON of Texas will support prohibition amendment, then change my pair to benefit cause, or if necessary I will return immediately."

Mr. WILSON came back to see me and said, so far as Mr. BLANTON was concerned, he was willing to release him (Mr. WILSON) from the pair. Mr. Hollingsworth, who represents the minority in the matter of pairs, who was present, asked Mr. WILSON how he expected to protect Mr. CHANDLER. Mr. WILSON said that he had no agreement with Mr. CHANDLER, and then we cited Mr. WILSON to the signed agreement, with all names filled in, and which is as follows:

"Mr. SPEAKER: We, the undersigned, have paired on the resolutions for the national prohibition amendment and the national woman suffrage amendment, THOMAS L. BLANTON, of Texas, and T. A. CHANDLER, of Oklahoma, each voting both for national prohibition and national woman suffrage and JAMES C. WILSON, of Texas, voting against both of these said resolutions, and we request that this agreement be printed in the RECORD.

(Signed)

"THOMAS L. BLANTON, of Texas.

"T. A. CHANDLER, of Oklahoma.

"JAMES C. WILSON." (Name later erased.)

Mr. WILSON then said that he intended to vote anyway. I went to Mr. FERRIS, of Oklahoma, and although it was late we made an effort to communicate with Mr. CHANDLER as to whether he wanted to hold Mr. WILSON to the pair, as it was my plain duty as pair clerk to have the pair as made announced for printing in the RECORD. Mr. WILSON came to the pair clerk's desk again, and with him was Mr. MORGAN, of Oklahoma, who stated that he was not willing to state whether or not Mr. CHANDLER would be willing to release Mr. WILSON from the pair, after the matter had been explained to him. Mr. WILSON then left and returned after a few minutes and said that he was going to vote and asked to see the signed pair, which he took and said as he intended to vote, would not have his name on it, and then erased his name from the agreement, which he had, according to his own statement, signed.

Mr. BLANTON's telegram released Mr. WILSON from the pair, provided he intended to vote for the prohibition amendment, and on the final vote he voted against the amendment, so that he had no release from Mr. BLANTON and did not claim to have any from Mr. CHANDLER. We, the pair clerks, could not put the pair into the RECORD because Mr. WILSON had erased his name and there was nothing to hold him to the agreement, as he had announced his intention of voting.

This is how the matter happened, and no one regrets as much as do the pair clerks that you both were left unprotected on the vote, as we knew when you left the city it was with the understanding that you would be taken care of.

With highest personal regard, I am,
Very respectfully, yours,

W. E. SMALL, JR.,

Suspension of Industry.

EXTENSION OF REMARKS

OF

HON. CALVIN D. PAIGE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 29, 1918.

Mr. PAIGE. Mr. Speaker, under leave granted me to extend my remarks in the Record the following letter, from one of the largest manufacturing concerns in the district I have the honor to represent, is submitted and is of the same general tenor as many others I have received on the subject:

AMERICAN OPTICAL CO.,
SOUTHBRIDGE, MASS., January 24, 1918.

HON. CALVIN D. PAIGE,

Room 167, House Office Building, Washington, D. C.

DEAR Mr. PAIGE: We believe that you may be interested in knowing the results of the order of the Fuel Administrator with reference to the consumption of coal at our plant during the period of shutdown. By way of comparison we state the amount of coal consumed by us during the same days in the week previous. The consumption was as follows:

	Pounds.	Pounds.
Friday, Jan. 11	102,310	
Saturday, Jan. 12	73,500	
Sunday, Jan. 13	71,230	
Monday, Jan. 14	104,625	
Tuesday, Jan. 15	105,600	
		457,265
Friday, Jan. 18	73,335	
Saturday, Jan. 19	45,635	
Sunday, Jan. 20	55,735	
Monday, Jan. 21	55,205	
Tuesday, Jan. 22	70,140	
		300,050
		157,215

This means that by maintaining our power plant merely for the purpose of keeping our pipes from freezing, and for a very small amount of necessary power, we were able to save about 15 tons a day. The loss in wages to our employees was about \$7,000 a day, and our loss in production and profit was obviously considerably in excess. The situation in our case was undoubtedly the same as many other manufacturers. We have sufficient coal on hand to keep our employees busy and to give them full compensation for their services. An order by the Railroad Administrator withdrawing transportation facilities would have meant the operation of our plant without financial loss. A system could have been devised by which the material which had accumulated for transportation could have been gradually released.

In connection with this unbusinesslike way of conducting affairs, we call your attention to what seems to us to have been a most indefensible act, to wit, the publication of a list by names and location and the kind of goods manufactured of all concerns which are working upon Government orders. If the whole procedure had been devised by the Prussian military authorities no better way could have been conceived to publish broadcast to all German agents the exact spots where their activities should be exerted. This is merely additional evidence of the absolute lack of appreciation on the part of somebody in Washington of the ordinary principles of common sense, as well as business judgment.

Congress should exert itself and justify its existence by a strict adherence to its obligations to the people and utilize the powers within its control to enact legislation which will bring order out of the present confusion.

Yours, very truly,

A. B. WELLS, Treasurer.

The Farmer's Burden.

EXTENSION OF REMARKS

OF

HON. HENRY A. CLARK,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 25, 1918.

Mr. CLARK of Pennsylvania. Mr. Speaker, in this world-wide conflict there have been more men under arms than there were men, women, and children in the United States at the outbreak of the Civil War, and the number increases.

This is a consuming, not a creative, force into whose devouring maw enters almost everything produced by human labor, and in immense quantities; add to this what is necessary for the sustenance of those who provide these supplies and for a moment stop, reflect, and consider the vast volume, from whence it comes, and by whom produced.

We do not and can not comprehend it all. We do know, however, that there is a force which creates, another which directs and distributes, and a very active one which consumes.

In the generous bosom of the earth we find the source of these supplies.

All purely military and naval activities, the work of an infinite variety of civic organizations incident thereto, of the manufacturer, of the miner, are absolutely dependent on one class of men—the farmer; without him, nothing except failure. This is a fact recognized by the highest officials in this country, by influential organizations, and by thousands of others whose visions on this point are clear and their judgment sound.

Let me recall a few of their expressions.

The President, in his address of April 16, 1917, among other things, said:

I take the liberty, therefore, of addressing this word to the farmers of the country and to all who work on the farms. The supreme need of our own Nation and of the nations with which we are cooperating is an abundance of supplies, and especially of foodstuffs. The importance of an adequate food supply, especially for the present year, is superlative. Without abundant food alike for the armies and the peoples now at war the whole great enterprise upon which we have embarked will break down and fail. * * * Upon the farmers of this country, therefore, in large measure rests the fate of the war and the fate of the nations. * * * The Government of the United States and the governments of the several States stand ready to cooperate. They will do everything possible to assist farmers in securing an adequate supply of seed, an adequate force of laborers when they are most needed at harvest time, and the means of expediting shipments of fertilizers and farm machinery as well as of the crops themselves when harvested.

Hon. D. F. Houston, Secretary of Agriculture, in a statement issued April 7, 1917, says:

The importance to the Nation of a generously adequate food supply for the coming year can not be overemphasized. In view of the economic problems which may arise as a result of the entrance of the United States into the war. Every effort should be made to produce more crops than are needed for our own requirements. * * * Recognition of the fact that the world at large, as well as our own consumers, must rely more strongly on American farmers this year than ever before should encourage them to strive to the utmost to meet these urgent needs. * * * The duty of the individual farmer at this time is to increase his production, particularly of food crops.

The farmers responded throughout the United States. I will cite one instance. The agricultural output in Pennsylvania, as estimated by the Department of Agriculture for that State, was valued for 1917 at \$640,000,000, as against \$400,000,000 in 1916. Farm wages, however, showed large increases, nearly 100 per cent over 1915.

The Secretary of Agriculture, complying with Senate resolution No. 26, adopted April 6, 1917, understood the farm-labor situation, and said:

The problem is not that of securing more land to cultivate. The difficulty confronting the farmer is rather that of receiving an ample supply of labor. In fact, one of the principal limiting factors in food production this year may be a restricted labor supply. The effect will be felt more in the Northeast in the neighborhood of the great industrial centers. * * * The time of special stress will be during the harvest season, and every step should be taken by the State and Federal agencies and organizations to furnish relief when it is needed. * * * A special effort will be made to ascertain the labor needs of the different communities and the available supplies of labor not fully utilized in the region, and also to ascertain these facts over large areas.

Prof. G. Stanley Hall has declared that "the Nation has recognized that it would be disastrous to upset industry, and especially the all-necessary agriculture.

Luther Burbank said:

It is well at this time to look first to the fundamental sources of our food supply, and it is fortunate, perhaps, that we have at last been so rudely awakened to the rapidly growing disproportion between the production and consumption of food. * * * The improvement of food-producing plans has hardly kept pace with the world's rapid increase in population. The production of food crops has now emerged from the old "hit-or-miss" plan to one of the most exacting of all arts.

Mr. Vanderlip, of the Advisory Commission of the Council of National Defense, on December 3 last, speaking at the Boston City Club, said:

Not only do the workshops need labor, but the farmers are desperately in need of labor.

Herbert C. Hoover, in his letter to the President of July 10, 1917, said:

Large masses of people in the consuming centers are being largely undernourished to-day, due to the exorbitant cost of living; and their conditions, unless some remedy be found, are likely to repeat themselves even in more vicious form at this time next year.

James J. Hill prophesied that "unless the drift from the farm to the cities were not checked hunger would follow."

In last spring's drive for increased crop acreages many urged it, the rural press were induced to advocate it; men with little knowledge of farming conditions and some with none, Pullman-car farmers, lime-light lovers, theorists, and faddists volunteered wonderful instructions, among others, "that worm fences be strengthened out so that fence corners could be utilized."

It seemed that everybody joined in spreading the propaganda of utilizing more land, and the slogan rose higher and shriller and ran over the country: Plant! Plant! Plant! "The man with the hoe" got busy under the impression that his crop would at least bring him as much as it cost him and in the belief that help from many suggested sources would be at hand at harvest

time. The increased acreage was secured, requiring long hours of toil and the employment of all the help available, but enlistments followed and conscription was added to the other causes which had been stripping the farms of needful labor, and its effects were keenly felt. The result was what might have been expected—a portion of some crops were not harvested and fall planting in sections is far below the normal.

Potatoes now in the ground, apples not gathered, grapes injured and left on the vines, shocked corn standing in the open field, discourage the farmer. There is a widespread feeling that there will be a shortage of production this current year.

The alarm has often been sounded by many persons from different sections. Business men of the Northwest, as late as December 28, 1917, voiced this feeling in a telegram to the President, and in part was as follows:

Because of adverse weather conditions not more than 25 per cent of the average fall crop acreage has been planted.

If wheat yield is to be even normal, enormous spring planting is necessary and more labor will be required. The farms are being stripped of workers, and the remaining youths are eager to leave for the war. Unless something is done quickly there will be an alarming slump in the agricultural production of this region. The West is called upon to produce the wheat surplus needed to feed our allies, but it can not do it unless a way be found to hold our young men to the soil. Some system should be developed whereby loyal service in the production of foodstuffs shall be impressively recognized. Some way must be found to better labor conditions and hold young men on the farm with a patriotic consciousness of honor and dignity. The crisis demands the immediate appointment of the ablest available man in the country as national war-time food-production administrator.

The National Grange, Patrons of Husbandry, in session November, 1917, took action as follows:

Whereas there is a great and growing scarcity of farm labor in this country, promising now to produce serious curtailment of acreage in the 1918 crop; and

Whereas the success of our armies depends upon the farmer more than anyone else; and

Whereas the removal of our young men from the farms for military service leaves a vacancy which can not be filled by unskilled labor: Therefore, be it

Resolved, That we request our national officers to immediately take up with the administration at Washington the paroling of farm boys to help win the war by keeping up the efficiency and supply of farm labor; otherwise, because of the unprecedented lack of help which can not be replaced by unskilled hands, the farmers of our country can not produce the usual crop in 1918.

In this very month of January the Federal Board of Farm Organizations, representing over 2,000,000 farmers, made an appeal to the President and said:

If food is to win the war, as we are assured on every side, the farmers of America must produce more food in 1918 than they did in 1917.

But unless present conditions are radically changed, increased crops next year are impossible.

Under existing conditions we can not equal the production of 1917, much less surpass it, and this for reasons over which the farmers have no control.

The chief causes which will inevitably bring about a smaller crop next year, unless removed by national action, are six in number—the shortage in farm labor, shortage of seed, prices below the cost of production, lack of reasonable credit, exclusion of the farmer from his right and necessary share in the conduct of the war, and deep-seated doubt whether he can raise the increased crops demanded of him and still support his family and pay his debts.

Many thousands of acres were left unharvested last fall because the necessary hands had left the farm. Already great numbers of farms near excellent markets lie idle for lack of a living return. Millions of acres will be wholly or partly idle next summer because the money to buy seed and subsistence will be lacking. Many of the farmers thus affected are tenants whom misfortune will compel to abandon the farm.

So far as we have learned, there is not a single genuine farmer, representative of the organized farmers of America, in any position of authority in the Food Administration, the Advisory Council of National Defense, or any of the other special boards charged with the conduct of the war.

Comparing their own small earnings with the huge war profits they see on every hand the farmers have lost confidence that the Government understands the needs and difficulties of the farmer. Unless that confidence can be restored it is useless to hope that we can maintain the food production of the last year and meaningless talk of increasing it.

A joint convention of the State Federation of Labor and the Pennsylvania Grange was held in January, 1918, and a well-known man of national reputation in attendance expressed himself thus:

Unless effectual measures are taken to make proper planting of crops and timely harvesting possible and the farmers given assurance of satisfactory prices for their products, the food production of the United States this year will be lamentably inadequate.

We must grow crops that are needed and in abundance. As things are moving now, and particularly in Pennsylvania, we are going to have a greatly decreased production of crops in the country this year instead of overproduction as we had all hoped for. All over this State one still can find corn standing in the fields. Thousands of farmers have lost a large portion of their potato crop because they could not dig the tubers before the cold weather came on and froze them. Last summer it was in some sections almost impossible to harvest wheat and other crops because of labor shortage.

As a result of this situation there is a tendency among farmers to grow only what they can handle profitably.

Not very many months since, delegates representing the agricultural interests of the Nation called upon the President at the White House, and the spokesman in a forceful, temperate,

and patriotic address made very plain the farmers' labor troubles, and among other statements was this, as I recall it:

Every industry is better manned than agriculture.

Is this not true? A farmer owning his land, or one of the 5,000,000 tenant farmers of the United States, his son, and a hired man can operate a fair-sized farm such as are found in many States. The hired man leaves for one of many reasons, attracted by higher wages in the factory, and the son enlists or is conscripted; the plant is crippled by the loss of two-thirds of its labor force.

The output is restricted either in planting or tilling or harvesting, and it may well be in all. What other industry is there that sustains such a loss, or if it did could operate? The case is not imaginary, but real, not of infrequent occurrence, but is found to an alarming extent all over the country.

The President assured that body of delegates that he recognized the seriousness of the situation, and that it would have the careful consideration of the best talent that could be found and was now having it. But, presumably because the plans had not been matured, no specific statement was made as to how the evil was to be remedied and the desired results secured.

Commenting on the President's address of April 15, 1917, heretofore mentioned, a financial organization in Washington, in a publication issued by it, declares that—

Every effort has been put forth by consummate statesmanship to steer clear of the boiling vortex now sucking in all that is best and noblest of earth's proud civilization. Long-suffering patience made plain to every man that right and honor and justice are the outraged guardians of our fight.

And, again, in discussing agriculture, asserts that—

From the strictly agricultural standpoint, crop conditions and prices are all very well; it is the ultimate consumer who sees the dark side of the picture. Farmers are getting almost outlandish prices for everything they raise, whether it be wheat or hogs or cattle. Even with a crop shortage they will fare far from badly, taking into consideration meanwhile increased prices they are called upon to pay for farming implements, fertilizers, and the like.

The imagination here takes the place of fact; the pen is mightier than the pitchfork—it is easier worked. The ink bottle is productive of a vast volume of literature, but you can not eat it, and it does not fill the mission of the plow.

The farmer has been unjustly criticized for crop shortages, unfairly censured for high prices, and assigned to the greedy profiteering class by some. Facts do not warrant this.

Those who do not know, who never had any experience, who have neither the aptitude, patience, or training for investigation and analysis and the acquiring of reliable information but are possessed of a feverish anxiety to get into print are the loudest in their denunciations. As to the farmers' profits, I read from an article in one of the Washington papers, published in September last. It will bear reading and reflection:

The price of wheat, fixed at \$2.20 per bushel, makes the cost of a barrel of flour \$11, as it requires 5 bushels of wheat to produce a barrel of flour. The difference in weight (wheat, 300 pounds; flour, 196 pounds) is 104 pounds of bran and middlings, which is at the present price (\$40 per ton) ample to pay expenses of milling and sacking.

A barrel of flour will produce four hundred 11-ounce loaves of bread, such as is retailed in Washington for 10 cents a loaf, making a total of \$40 a barrel for flour to the consumer.

"This is a difference of \$29 between the raw and finished product. Who is getting the difference?" Not the farmer.

Last season I read in the daily press that millions of baskets of strawberries on the eastern shore of Maryland rotted in the fields because the growers could not get from the buyers enough to more than barely pay for picking and the cost of baskets, and yet in Philadelphia strawberries were retailing at 15 to 18 cents per basket.

If a price is to be put on the farmer's output, place it proportionately on what he has to buy.

The prices on shovel plows, coal, wire, cultivators, binder twine, fertilizers, potash, drills, tractors, mowing machines, sugar, tea, coffee, and so forth, have increased in price from 25 to 300 per cent.

The disappearance of labor from the farm is not entirely of recent origin, but it has been greatly accentuated by the events of the last three years—dangerously increased.

The city population grows more rapidly than the country. In this respect compare the census of 1900 with the census of 1910.

		Per cent.
Population United States, 1910	91,972,266	100
Urban population United States, 1910	42,623,383	46
Rural population United States, 1910	49,348,883	53.7
Population United States, 1900	75,994,575	100
Urban population United States, 1900	31,609,645	40
Rural population United States, 1900	44,384,930	59.5
Number of farms in United States, 1910	6,361,502	
Average acreage per farm, United States	138	
Average value land per acre, United States	\$32.40	

Without burdening the RECORD with tabulated statistics, census reports show that the population of many townships has not increased but has grown less.

An examination of the census data reveals the fact that for years the country-born boy has gone to the city whose consuming population is growing more and more disproportionate to the food-producing force.

There were many reasons for this cityward influx—greater and better opportunities for the accumulation of wealth, social and educational advantages, professional attractions, the chance of mingling with men are some of them, and it must be admitted that the country boy made good. The American farm has been the birthplace of many of America's foremost men in all callings.

Add to the hitherto existing inducements war results, viz, high wages and conscription, one through the liberality of the Government and the other by compulsion, and the total impelling causes are producing results in the crippling of farm labor, so rapidly and of such a nature that the very foundation on which all war activities depend will be undermined and collapse will follow.

Agriculture is the tree the trunk on which all war industries depend for sustenance; they are limbs of the trunk which is being girdled and we are engaged in disconnecting, sawing off the branches.

A change must be made, a remedy sought, and quickly, too.

Many suggestions, some practical, impracticable, interesting, visionary, and useless have been made relating to labor and increasing crops and food supplies, viz, import Chinese farmers—there are 17,200 of them here now and 760 own farms; bring in Mexicans—they are coming in now, but not under the authority of law; encourage Porto Ricans to come; send out the boy scouts and the school children of the cities in vacation time and the holidays. Picket them singly on farms, the boy gets lonesome, homesick, will not stay; colonize them, put them in tents under the supervision of some person experienced in farming and also in the management of them, house them in tents; this works better, but the resultant gain is somewhat reduced by the size of the food bill—boys have men's appetites.

Let the courts suspend sentence on certain classes of offenders, put them on probation, send them to the farms, has been urged. I have just received a letter from a resident of my district. I quote the following:

I have been a farmer all my life and know that unskilled and city help for farmers is no good; the help must know how to handle horses and stock, as well as machinery, and in the busy season must not go on strike if asked to work at least 15 hours per day; neither can a farmer break in a green hand every few days or trust a team and machine to a boy that only escaped a reformatory by going out to work on a farm. Last year the farmers responded to the call to raise more food, and when the harvest came there was such a scarcity of help that crops were injured by late harvesting and some potatoes were not harvested at all. * * * America has now to feed the world, and it is a mighty big job—bigger, in fact, than our Government at first thought it to be.

At a meeting of a State board of agriculture of Pennsylvania held this month of January, various views were presented, such as employment of oriental labor, closing of factories to help farmers when necessary, shortening the school term two months, fixing wages and prices of foods, keeping skilled labor where it could do the most good, assistance of the Government in food production, guaranteeing a profit to farmers, protesting against the fixing of prices for wheat and not doing so on what farmers buy, and urging the organization of farmers. Along this latter line a brief statement of a plan that is simple and easily put into operation may be helpful.

Last spring I was appointed a member of the Pennsylvania Public Safety Committee and subsequently became chairman of the local branch, the food-supply committee.

It became my duty to help organize a committee to urge increased planting; to learn whether increased acreage was contemplated, and how many acres; to ascertain who had seed for sale and who in the neighborhood wanted it, how much and what kind; to find out who needed extra help and to what extent; and, the most important of all, to make careful inquiry as to whether within a given district there were any persons who would be willing to join what might be known as a "movable squad," to go from one farm to another, to help in emergencies, similar to what takes place at the farmers' "thrashing time" in many States, and thus secure a volunteer cooperative force of experienced men always easily reached.

The method of accomplishing all this was not in the least complicated.

In one of the counties of my district are 21 townships. A prominent citizen from each township was selected, and these men met, and each designated four others from each township and from different sections; these four gathered the information, reported it to the township representatives, and they to

the one in charge of the county and for use at State or National headquarters if necessary. The results of this experiment were very gratifying. Men of means and others were responsive to the labor situation and quickly saw the advantages of the plan and encouraged it.

Taking the county as a unit there are two things essential—a directing head and a place for the transaction of business, where information could be sent and requests made.

If no remedy is offered by intelligent legislation on this matter, any county can meet the situation, provided *the stripping process stops*. It is none too early to organize; try it, the results will be beneficial in any event.

Several bills have been introduced, others are being prepared, and it is hoped that some provisions will be made and relief secured.

President Wilson's Message to the Farmers.

EXTENSION OF REMARKS

OF

HON. THOMAS L. RUBEY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 1, 1918.

Mr. RUBEY. Mr. Speaker, I have just been granted leave by the House to extend my remarks. I have asked that privilege for the purpose of placing in the RECORD the very able message that President Wilson on yesterday sent to the farmers of the country. That message was delivered by President James, of the University of Illinois, to the farmers' conference in session at Urbana, Ill. Secretary of Agriculture Houston was to have represented the President at the conference, when the President's indisposition made it impossible for him to attend in person, but was prevented from participating by the tie-up in transportation facilities.

THE PRESIDENT'S MESSAGE.

The message reads as follows:

"I am very sorry indeed that I can not be present in person at the Urbana conference. I should like to enjoy the benefit of the inspiration and exchange of counsel which I know I should obtain, but in the circumstances it has seemed impossible for me to be present, and therefore I can only send you a very earnest message expressing my interest and the thoughts which such a conference must bring prominently into every mind.

"I need not tell you, for I am sure you realize as keenly as I do, that we are, as a Nation, in the presence of a great task which demands supreme sacrifice and endeavor of every one of us. We can give everything that is needed with the greater willingness, and even satisfaction, because the object of the war in which we are engaged is the greatest that free men have ever undertaken. It is to prevent the life of the world from being determined and the fortunes of men everywhere affected by small groups of military masters, who seek their own interest and the selfish dominion throughout the world of the governments they unhappily for the moment control. You will not need to be convinced that it was necessary for us as a free people to take part in this war. It had raised its evil hand against us. The rulers of Germany had sought to exercise their power in such a way as to shut off our economic life so far as our intercourse with Europe was concerned, and to confine our people within the Western Hemisphere while they accomplished purposes which would have permanently impaired and impeded every process of our national life and have put the fortunes of America at the mercy of the Imperial Government of Germany.

REALITY, NOT MERELY A THREAT.

"This was not threat. It had become a reality. Their hand of violence had been laid upon our own people and our own property in flagrant violation not only of justice but of the well-recognized and long-standing covenants of international law and treaty. We are fighting, therefore, as truly for the liberty and self-government of the United States as if the war of our own Revolution had to be fought over again; and every man in every business in the United States must know by this time that his whole future fortune lies in the balance. Our national life and our whole economic development will pass under the sinister influences of foreign control if we do not win. We must win, therefore, and we shall win. I need not ask you to pledge your lives and fortunes with those of the rest of the Nation to the accomplishment of that great end.

"You will realize, as I think statesmen on both sides of the water realize, that the culminating crisis of the struggle has come and that the achievements of this year on the one side or the other must determine the issue. It has turned out that the forces that fight for freedom, the freedom of men all over the world as well as our own, depend upon us in an extraordinary and unexpected degree for sustenance, for the supply of the materials by which men are to live and to fight, and it will be our glory when the war is over that we have supplied those materials and supplied them abundantly, and it will be all the more glory, because in supplying them we have made our supreme effort and sacrifice.

GREAT AGENCIES AT WORK.

"In the field of agriculture we have agencies and instrumentalities, fortunately, such as no other government in the world can show. The Department of Agriculture is undoubtedly the greatest practical and scientific agricultural organization in the world. Its total annual budget of \$46,000,000 has been increased during the last four years more than 72 per cent. It has a staff of 18,000, including a large number of highly trained experts; and alongside of it stands the unique land-grant colleges, which are without example elsewhere, and the 69 State and Federal experiment stations. These colleges and experiment stations have a total endowment of plant and equipment of \$172,000,000 and an income of more than \$35,000,000, with 10,271 teachers, a resident student body of 125,000, and a vast additional number receiving instruction at their homes. County agents, joint officers of the Department of Agriculture and of the colleges, are everywhere cooperating with the farmers and assisting them. The number of extension workers under the Smith-Lever Act and under the recent emergency legislation has grown to 5,500 men and women working regularly in the various communities and taking to the farmer the latest scientific and practical information.

"Alongside these great public agencies stand the very effective voluntary organizations among the farmers themselves which are more and more learning the best methods of cooperation and the best methods of putting to practical use the assistance derived from governmental sources. The banking legislation of the last two or three years has given the farmers access to the great lendable capital of the country, and it has become the duty both of the men in charge of the Federal Reserve Banking System and of the Farm-Loan Banking System to see to it that the farmers obtain the credit, both short term and long term, to which they are not only entitled but which it is imperatively necessary should be extended to them if the present tasks of the country are to be adequately performed. Both by direct purchase of nitrates and by the establishment of plants to produce nitrates the Government is doing its utmost to assist in the problem of fertilization. The Department of Agriculture and other agencies are actively assisting the farmers to locate, safeguard, and secure at cost an adequate supply of sound seed. The department has \$2,500,000 available for this purpose now and has asked the Congress for \$6,000,000 more.

FARM LABOR AND THE DRAFT.

"The labor problem is one of great difficulty and some of the best agencies of the Nation are addressing themselves to the task of solving it, so far as it is possible to solve it. Farmers have not been exempted from the draft. I know that they would not wish to be. I take it for granted they would not wish to be put in a class by themselves in this respect. But the attention of the War Department has been very seriously centered upon the task of interfering with the labor of the farms as little as possible, and under the new draft regulations I believe that the farmers of the country will find that their supply of labor is very much less seriously drawn upon than it was under the first and initial draft, made before we had had our present full experience in these perplexing matters. The supply of labor in all industries is a matter we must look to and are looking to with diligent care.

RESPONSE OF THE FARMERS.

"And let me say that the stimulation of the agencies I have enumerated has been responded to by the farmers in splendid fashion. I dare say that you are aware that the farmers of this country are as efficient as any other farmers in the world. They do not produce more per acre than the farmers in Europe. It is not necessary that they should do so. It would perhaps be bad economy for them to attempt it. But they do produce by two to three or four times more per man, per unit of labor and capital, than the farmers of any European country. They are more alert and use more labor-saving devices than any other farmers in the world. And their response to the demands of the present emergency has been in every way remarkable. Last spring their planting exceeded by 12,000,000 acres the largest

planting of any previous year, and the yields from the crops were record-breaking yields. In the fall of 1917 a wheat acreage of 42,170,000 was planted, which was 1,000,000 larger than for any preceding year, 3,000,000 greater than the next largest, and 7,000,000 greater than the preceding five-year average.

SHOULD EXCEED PAST ACHIEVEMENTS.

"But I ought to say to you that it is not only necessary that these achievements should be repeated, but that they should be exceeded. I know what this advice involves. It involves not only labor but sacrifice, the painstaking application of every tested practice that is available. It means the utmost economy, even to the point where the pinch comes. It means the kind of concentration and self-sacrifice which is involved in the field of battle itself, where the object always looms greater than the individual. And yet the Government will help, and help in every way that is possible.

"The impression which prevails in some quarters that while the Government has sought to fix the prices of foodstuffs it has not sought to fix other prices which determine the expenses of the farmer is a mistaken one. As a matter of fact, the Government has actively and successfully regulated the prices of many fundamental materials underlying all the industries of the country, and has regulated them, not only for the purchases of the Government, but also for the purchases of the general public, and I have every reason to believe that the Congress will extend the powers of the Government in this important and even essential matter, so that the tendency to profiteering, which is showing itself in too many quarters, may be effectively checked. In fixing the prices of foodstuffs the Government has sincerely tried to keep the interests of the farmer as much in mind as the interests of the communities which are to be served, but it is serving mankind as well as the farmer, and everything in these times of war takes on the rigid aspect of duty.

AMERICA'S GREATEST OPPORTUNITY.

"I will not appeal to you to continue and renew and increase your efforts. I do not believe that it is necessary to do so. I believe that you will do it without any word or appeal from me, because you understand as well as I do the needs and opportunities of this great hour when the fortunes of mankind everywhere seem about to be determined and when America has the greatest opportunity she has ever had to make good her own freedom and in making it good to lend a helping hand to men struggling for their freedom everywhere. You remember that it was farmers from whom came the first shots at Lexington that set aflame the Revolution that made America free. I hope and believe that the farmers of America will willingly and conspicuously stand by to win this war also.

GLAD WE ARE AMERICANS.

"The toil, the intelligence, the energy, the foresight, the self-sacrifice, and devotion of the farmers of America will, I believe, bring to a triumphant conclusion this great last war for the emancipation of men from the control of arbitrary government and the selfishness of class legislation and control, and then, when the end has come, we may look each other in the face and be glad that we are Americans and have had the privilege to play such a part."

A Trip to the Trenches.

Address delivered by Hon. Frederick C. Hicks at Mount Morris Theater, New York City, December 23, 1917.

EXTENSION OF REMARKS

OF

HON. ISAAC SIEGEL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 9, 1918.

Mr. SIEGEL. Mr. Speaker, when Congress adjourned in October, several Members of the House went abroad to study war conditions in Europe, and among them was my colleague, Representative FREDERICK C. HICKS, of Long Island. He promised me that when he returned he would make known his observations at an address to be delivered in my district. Accordingly, within a few days after his arrival home, he left Washington to come to New York in order to keep his promise. He spoke to over 1,600 people, and the New York newspapers considered it of such importance that they devoted several columns to it. No words of mine can depict the scene at the Mount Morris Theater as the story was unfolded in graphic and

eloquent language; but in order that it may be preserved, I have asked permission of the House to print it in full from the stenographic reports. It is a tale that should stir every American with vigorous action if he be not already giving every ounce of strength he has toward the prosecution of the war, and for those who have been doing their duty, it should rekindle and strengthen their interest in the conflict.

Following is the address:

ADDRESS OF HON. FREDERICK C. HICKS, AT MOUNT MORRIS THEATER, NEW YORK CITY, DECEMBER 23, 1917.

It would be very ungracious of me were I not to acknowledge the cordial welcome you have given me here this morning, and I thank you for it from the very bottom of my heart. I want to congratulate you who live in this great district of New York on having in Congress a man like ISAAC SIEGEL. Down in Washington we call him "Ike," and you do the same, because you love him. He and I went to Congress at the same time, and I want to say to you, his friends and neighbors, that I doubt if there is another man in Congress more efficient than the Congressman from this district, Mr. ISAAC SIEGEL. It has been very kind of him to introduce me in the complimentary way in which he did. I have come here to-day not merely because of a promise made on account of our friendship, but in order to bring a message to you sterling Americans in the city of New York. I bring this message to you not from Washington, not from Long Island, but I bring it from the battle fields of France and Belgium, where liberty and justice are striving for mastery at this very hour.

I am not here appealing to your Americanism—you are loyal Americans, every one—and all I desire to do, all I need to do, is to ask you to follow the dictates of your own hearts, the convictions of your own sentiments, the aspirations of your own souls. When liberty and freedom and enlightenment hang in the balance there can be no question of race, creed, or birth. Supreme to all is the supremacy of the flag we love, as in silent grandeur, floating over the homes of the living and over the graves of the dead, it appeals to us to maintain the principles for which it stands. The part which those at home must play in this great conflict is only a degree less important than the part which will be played by those at the front. Upon every man and woman in America there rests the obligation of service. This war can not be won by lip loyalty or stunted sacrifice. It can only be won by the united effort and unswerving determination no less of the thousands in the trenches, than of the millions back of the lines.

I will not attempt a discussion of economic, social or political questions; neither will I burden you with statistics or military problems. Very briefly and very simply I am going to tell the story of my trip along the battle fronts, taken in conjunction with several of my colleagues in Congress. First let me tell you a little story of the war. It shows how a Yankee is always up to the last notch. This Yankee, who had been over in France only a few days, happened to meet some Canadians. He went up to where they were seated at a table and sat down with them, at the same time drawing out of his pocket a door knob. The Canadians asked him, "Why do you carry that old door knob?" and he said, "That is an old pal of mine." "But why do you call it your pal?" "Because," said the Yankee, "the other day I was up on the firing line and was just entering a house; I put my hand on this door knob and just then a shell struck and blew the house away, leaving only this door knob in my hand."

There were 10 of us who left New York about the middle of October on this trip, with the purpose of learning from first-hand observation the needs of our soldiers and ascertaining conditions that might be beneficial for us to know in the legislative work before us this, as well as coming winters. We left about 5 o'clock in the afternoon, with dusk coming on, and the last thing any of us saw of our native land as we went down the bay was the brilliantly illuminated Statue of Liberty, lighted from base to torch, emblematical of the great struggle in which we are engaged to-day. The moment we passed out of the channel at Sandy Hook we realized that we were in war, for every light on the ship was extinguished, not even the running lights or red and green side lights were operated, and every porthole was bolted fast from the outside. We were not allowed even to smoke on deck for fear that the light of a match would disclose the location of the ship. Day after day we plowed across the deep with no incident other than the daily target practice and deck drills. Several hours of each day were devoted to this fire drill, a float being dropped overboard around which the ship manoeuvred as the gunners worked the guns. Our ship was armed with several rifles. The accuracy and swiftness with which the crew loaded and fired them, elicited our praise as well as our admiration. We had on board a unit of Red Cross nurses and a number of officers of various branches

of the service, splendid men and women anxious to do the part assigned them.

Two days before we landed, two destroyers met us and conveyed us into the harbor of Liverpool. I can assure you that it was a very welcome sight to see those American destroyers prepared to defend us in case of submarine attack. In Liverpool we saw several great ships discharging their human freight of American soldiers. It was inspiring to see our boys in their khaki uniforms marching through the streets of Liverpool, following the flag, 3,000 miles from home. From Liverpool we went to London, where we were met by Ambassador Page and Mr. Ian Malcolm of the British foreign office. The next day we were informally received at the American Embassy by Mr. Page and attachés. It is both a duty and a pleasure to pay a well-merited tribute to our representative in London and his staff. The United States has never sent to Great Britain a more popular or more able ambassador than Mr. Page, and the work he is doing and has done, reflects the greatest credit upon our country and is deserving of the highest praise.

London to-day is different from the London of peace times. We saw in the city and near-by towns, buildings partly completed and temporarily abandoned, for practically all construction work not incident to the war, was stopped at the outbreak of hostilities. You see on the face of everyone you meet that stern, set expression which means undying determination to win the war. There are soldiers marching up and down the streets, some wounded, others on leave of absence, and still others who are on their way to the front. At night almost total darkness prevails, just a faint glimmer in the streets, for only one out of three lamps is lighted, and these have great reflectors to prevent any glare shining upward. No shop windows are allowed to have their shutters open at night, and in the hotels the blinds are all tightly closed. It is a severe offense to open them when a light is burning. We had an interesting experience in an attempted air raid, and, while we were not bombed, we had all of the sensations. We were at a conference when suddenly we heard the cry "Take to shelter," "Take to shelter," as the Boy Scouts, who are in charge of this duty, ran through the streets warning the people. The authorities knew of the approach of these raiders, because when the airships fly over the channel, the moment they are spotted on their approaching land, it is telegraphed to London, and the officers have an hour's leeway in preparing for defense. When we started for our hotel the streets were almost deserted, the only sound being the scurrying of feet and the cry of those boys. The few people remaining were hurrying in every direction to shelter. All through the streets signs are posted with a directing finger to indicate "Safety zones"; "Fifty can be accommodated in this cellar," "Seventy-five can find shelter here." Stations in the tube, cellars, underground passages, every refuge that will afford protection, is utilized. I can assure you we did not waste much time going to our hotel. We finally reached our destination with the night air still resounding with the cry "Take to shelter." However, there was no raid that night, for the aeroplanes had been checked by antiaircraft guns some distance from London, and so we missed the experience of having bombs dropped upon us. You will naturally ask what is the object of bombarding London when the number of casualties is insignificant? Ten or fifteen persons killed a week would not win the war in a thousand years, and the material damage is also very slight. Then, why is it done? Because of the psychological effect on the minds of men and women; the suspense and ever-present fear that something is going to come out of the sky. It is the uncertainty which causes the nerve racking. It is this same dread of danger that can not be forestalled, which is so demoralizing in the hospitals which the Germans bombard. Remember, out in these hospitals there is little protection, only canvas or at best wooden or galvanized roofs over the heads of the nurses, which afford little or no protection.

In food supplies England is feeling the effect of the submarine sinkings, and there is a shortage of some of the staples, especially flour and sugar. The portions placed before one in the restaurants, though sufficient, are small, and strict limits are placed upon the quantities served. At breakfast, for instance, two pieces of brown war bread was the allowance, and two small lumps of sugar—lumps no larger than raisins—and if one ordered oatmeal the little pieces might be exchanged for the same amount of brown granulated sugar, and then one would have to drink one's coffee without being sweetened.

I want to speak for a moment of some of the great hospitals in London and especially the orthopedic hospitals, where they rebuild the human wreckage of war. It was one of the most depressing as well as one of the most encouraging sights I saw abroad. It was really marvelous to see the way in which surgeons at these institutions salvage the men who are sent there,

and it means much for the economic future of the nation. Some men come in without arms, some without legs, some are blind, others are so shattered in their heads or bodies that it seems impossible to do anything to remedy their pitiful condition. I have seen men with parts of the jaw fractured, others with nose and cheeks lacerated by a piece of shell. In restoring face wounds where the bone has been cut away, they take a piece of a rib of the wounded man to replace the loss, carefully fitting the new part into the cavity. Or, if this be impracticable they take the rib from a brother or sister or some other near blood relative. I saw one of these men after he had been treated for several months. They showed us a picture of him taken the day he was received at the hospital. The change was almost unbelievable—his nose, cheek, and one-half of his jaw had been blown away. When I saw him several months after the initial treatment, while there was still a frightful scar, he was able to use his jaw almost as well as you or I. He could speak, he could eat, and all without pain. One man who had lost a leg at the thigh and the other at the knee was so reconstructed by the use of artificial limbs that for several moments after I saw him I was not aware he was not using his natural legs. Another man had lost an arm at the shoulder and had an artificial one, which was so adjusted with contrivances and pulleys, that he could use it with almost the same power and dexterity as formerly. He was able to write, ride a bicycle, use a typewriter, row a boat, dig with a spade, and even shave himself. I saw him lift, at arm's length with the artificial limb, a 50-pound sledge hammer, and what was probably more startling was to see him take his pouch of tobacco from one pocket, which he held in one hand with his pipe, and then with the contrivance on the artificial hand, take a pinch of tobacco and pack it into his pipe. Many soldiers suffer from shell shock, due to the terrific bombardment to which they have been subjected. They may be physically sound and in perfect health except for dislocated nerves. Some are unable to walk; others can not use their arms or hands. For hours, volunteer nurses sit beside these men, searching with electric vibrators for a nerve which yet has life. Perhaps at first the dormant nerve will respond by only an almost imperceptible quiver, but by constant treatment, day after day, it will be restored to its normal condition. Then another nerve is treated, until finally the man can again walk or use his hands.

At the military hospital at Shepherds Bush 1,200 patients are cared for, and, in addition to medical treatment, when they are strong enough they are taught gainful trades, so that they may again become factors in the industrial life of the nation. In one of the wards I met a young fellow who had come to the hospital so terribly mangled that his case was considered hopeless. He had been buried for four hours by a shell explosion along the Somme. After months of careful treatment his broken body had been rebuilt and he was bright and cheerful. I asked him how he felt. "Oh, I am feeling fine. Better days ahead."

Great Britain cares for her blinded sailors and soldiers at St. Dunstons Hospital, where 350 of these unfortunates are quartered. The hostel is situated on the estate of Mr. Otto Kahn, of New York, who contributes the use of his property to this splendid work. Sir Arthur Pearson, himself blind, is the financial sponsor to the institution. The men are taught useful occupations and everything is done to prevent the blinded soldiers from falling into the slough of despond, which usually engulfs a man who has suddenly lost the sense of sight. Instead of this, his fighting spirit is aroused as he learns of the full and wonderful lives of usefulness achieved by others, and he realizes that closed eyelids do not mean lack of vision. He is inspired with the motto "What others can make of life I can also make." Gainful trades are taught, which will enable these sightless men to take their places in the economic world. Short-hand writing, telephone operating, shoe repairing, mat and basket making, joinery, gardening, poultry raising, and massage are the occupations in which these blind veterans find their opportunities to again become factors in the industrial life of the nation. Many volunteer workers give their time and patience to this noble work. The men are taught to read and write by the Braille system, and a short address I made to some of the workers was handed me as it had been taken down by the blind typist in this code of the sightless. The days are divided into class and lecture room exercises, shopwork, and recreation. In many of the workrooms the men were singing as their nimble fingers plaited the baskets and mats, and everywhere there was an absence of that depression and helplessness which is so often associated with a life of blindness.

In the shops, although there are sighted foremen in each department, the instruction is mainly given by men who are themselves blind. The more intelligent and apt soldiers are kept to be pupil teachers, in order to encourage the newcomer

by the fact that he is profiting by the knowledge of a man, who was himself blinded on the battle field only a short time before.

Manuel, former King of Portugal, is devoting his life as a volunteer to this work, and his wife is doing her part by scrubbing floors and performing every kind of work, no matter how menial. The amount of ingenuity that has been put into this salvaging of human beings is one of the marvels of the war. The science of medicine and surgery under the spur of necessity has made rapid strides in the past three years, and the knowledge and experience acquired will be one of the compensations for the sacrifices made. When the true history of this war is written in the perspective of future years it will tell of the movement of ships and of armies, of victories on land and sea, of heroism in the air and in the depths. It will speak also of that great human side of the conflict—the silent, prayerful sorrows of devoted mothers, wives, and daughters. It will tell of the men of genius and women of patience who gave every ounce of their strength and the full measure of their skill to the task of restoring human beings, of rebuilding the bodies and the minds of men seemingly hopelessly injured, and implanting in their shattered frames hope and confidence to fight life's battles anew.

Last summer I happened to have a neighbor living next to me on Long Island by the name of William Soloman, a banker, but I had to go to London to find out the philanthropic work he is doing and I want to pay my tribute to his generosity. In one of our trips I visited a magnificent house in Regent Park that had been turned into a hospital, equipped with a staff of nurses, doctors, and all the necessary appliances, and I was told that it was maintained by Mr. William Soloman, of New York City.

On our first Sunday in England a very gracious compliment was paid us. Under the escort of Mr. Ian Malcolm, M. P., we were conducted through Windsor Castle, the great halls of this ancient fortress-palace being opened as a special favor. We were first taken to St. George's Chapel, the meeting place of the Knights of the Garter, where we were honored by being seated in the stalls occupied by the knights when in attendance. At the close of the services the great organ, in deep, dulcet tones, peeled out the "Star-Spangled Banner," the first time in history that the American national anthem had echoed in this stately church.

The day previous to our departure for the Continent was a memorable one, for we had the opportunity of hearing Lloyd-George deliver in the House of Commons one of his masterpieces of oratory. This great commoner, every fiber of whose being responds to the call of democracy—alert, resourceful, courageous, and determined—delivered that day, on behalf of the sailors and soldiers of Great Britain, one of the finest, most inspiring eulogies that I have ever listened to. We lunched that day with many of the leaders of Parliament, and to my oft-repeated query, "What can America do to help bring this war to a speedy termination?" I invariably received the answer, "Build ships, aeroplanes, and guns." Transportation is undoubtedly the greatest factor in the struggle. On it depends not only the sending of soldiers but the shipment of supplies to maintain them. Transportation is vital also for the support of our allies. Both airships and artillery are almost as essential to the success of our cause as ocean tonnage. As Sir Charles Beresford, retired admiral of the British fleet, said, "We want guns, guns, guns; and then more guns." Mr. Lloyd-George was equally as emphatic about the need of ships, aircraft, and artillery. He said, "Do not overlook the supreme importance of a large number of guns of all sizes, especially the 3-inch caliber and larger."

Among other things we saw during our hurried stay in England was the censor bureau, where all mail matter leaving or entering Great Britain is examined. Five thousand persons are employed in this important service, 2,000 of whom are attached to the Liverpool office and 3,000 to London. All mail is divided into two great classes—social and commercial. Every package and every letter, 114,000,000 pieces a month, are examined by the readers. A great staff of language experts is employed, capable of translating 150 different languages and dialects. The newspapers, books, medals, photographs and merchandise condemned for violations of the censorship or contraband regulations, fill warehouses. Many were the ingenious devices employed to send rubber into Germany. It was sent in the form of candy, macaroni, and even gilded jewelry. We were shown one of the medals struck off to commemorate the sinking of the ill-fated *Lusitania*, as well as badges bearing the portrait of the deposed King of Portugal, which had been sent to Lisbon in the hope that this would stir up civil strife and thus weaken one of the allies.

From London we proceeded to Folkestone to take the morning boat to Boulogne, but a heavy gale was blowing and the sea was running so furiously that the authorities closed the port.

We had to await the abatement of the storm and it was not till afternoon that the ship was finally permitted to sail. Then followed two hours of misery. Sixteen hundred soldiers and 100 civilians made up the passenger list and out of that 1,700 I think at least 1,699 were seasick. Our passage was protected by English gunboats and aeroplanes. Through this lane of destroyers men and supplies in ever-increasing numbers are sent to France.

As they are not operating sleepers on any of the railroads, we had to sit up all night on our journey to Paris. We were received in France with the same courteous attention and the same hearty welcome that had been extended to us in England. After paying our respects to our ambassador, Mr. Sharpe, we made arrangements for our trip to the front. Before leaving for the battle line we visited the tomb of Lafayette in its obscure corner of the old cemetery. We placed a wreath entwined with red, white and blue ribbons upon the grave of this great patriot and companion of Washington. The tomb of Napoleon, about which cluster such memories, such associations of the great conqueror, was opened to us. In the courtyard of the Invalides, just in front of the chapel where lie the remains of Napoleon, a vast collection of war relics has been deposited. In the place of honor, decorated with flowers and rosettes, stands the aeroplane of Capt. Guynemer, the "Vieux Charles." In this machine the gallant Guynemer, the idol of France, brought down 16 enemy machines before fate overtook him.

That evening we were the guests of Gen. Pershing and his staff. The impression made upon us by Gen. Pershing was that of an officer of ability, force and courage, capable of leading our troops to victory. We had the keen pleasure of meeting our colleague, Congressman LA GUARDIA, of New York, now a captain in the Signal Corps of the Army. Last summer Congressman LA GUARDIA, who had in the few months of his membership in the House, won distinction for his activities in legislative work, enlisted in the Aviation Service. His patriotic and unselfish action, placing his loyalty to country above his personal interests, won for him the praise of every Member of Congress. He is now stationed at the American training camp just outside of Naples, Italy, and I feel confident that he will bring credit to his uniform and honor to himself.

Paris to-day presents almost the same appearance that it did before the war. It is true that the streets are full of soldiers, and that women and old men have to a very large degree taken the places of men in the stores, but the streets at night are as brilliantly lighted as formerly, the restaurants and theaters are open, the shops offer their usual display of attractions and business goes on in much the same way as it did in prewar days. Underlying it all there is that ever-present nervous strain and the faces of the men and women show the tension under which they are living. They are economizing, too, and husbanding their resources, as France, for three and a half years, has borne the brunt of the conflict. Think for a moment of her burden; think, too, of the rekindled heroism of her people that carried forward her soldiers under the most terrible blows of war ever known. One and a half million of her sons dead, one and a half million more either prisoners or so injured as to be of no further military service; thousands of her women and children victims of the savagery of war; scores of her cities and towns shapeless ruins; hundreds of acres of her rich soil desolate wastes; her churches desecrated, her homes destroyed, and yet the spirit of France rises supreme to the horrors, the losses and the sacrifices that she has made and will continue to make. The heroic nation, bleeding and maimed, yet stands steadfast between Prussia and her ambition to rule the world. It is the soul of France that speaks through the tears and gloom, giving a promise, like the rainbow in the heavens, that democracy is safe in her keeping.

Early on the morning of November 3 we left Paris under the escort of Col. Parker, United States Army, and Lieut. Count Le Marois, of the French Army. Our first point of interest was reached about 20 miles east of Paris, when we came to the battle field of the Marne, where France rose to the fullest height of her courage, stood fast and won the greatest victory in her history. In that famous retreat of the allied armies from the Belgian frontier they had been overpowered but not crushed. Under the deadly hammer blows of the German drive they had been forced back but always in perfect order. There was neither rout nor panic under that smashing offensive, and every inch of abandoned ground was valiantly contested by the soldiers of Gen. Joffre and Gen. French. For weeks, success had crowned the attacking German columns and their marvelous fighting machine, perhaps the best disciplined and trained military organization of which the world has any knowledge, seemed to be invincible. But the onrolling tide was at the height of its flood; the German Army had reached the extreme limits of its range when it crossed the banks of the Marne.

Gen. Joffre on the morning of September 6 issued to his troops the spirited command:

At a moment when a battle on which the welfare of the country depends is going to begin I feel it incumbent upon me to remind you all that this is no longer the time to look behind. All our efforts must be directed toward attacking and driving back the enemy. An army which can no longer advance must at all costs keep the ground it has won and allow itself to be killed on the spot rather than give way. In the present circumstance no faltering can be tolerated.

It is estimated that 3,000,000 men faced each other on that bright Sunday morning, when the great battle opened. I will not attempt a description of the fight except in a general way. The German advance was in five main divisions, with Gen. Von Kluck on the extreme right, nearest to Paris. Next to him was Gen. Von Bulow's army. Opposed to them were the allied forces under Gen. Joffre, with Gen. Manoury commanding the Sixth French Army facing Gen. Von Kluck. During the night the famous "taxicab army" of some 5,000 or 6,000 men joined Gen. Manoury's forces. This army had been rushed from Paris by Gen. Gallieni, who commandeered motor buses and wagons for its transportation to the battle field. Gen. Manoury's army engaged so vigorously that Von Kluck, evidently thinking he was opposed by a heavy force, deployed to the westward in order to meet the attack without endangering his flank. This caused Von Bulow to swing over to the support of Von Kluck, leaving an opening in the center. Gen. Joffre, quick to see his advantage, ordered Gen. Foch, who commanded the French center, to take the offensive. His divisions broke through the gap, rolled back in panic the German columns, and the advance on Paris was ended. This battle will go down in history as one of the decisive battles of the world. There is little left to-day to tell the story of that great victory, for in this stage of the war the fighting was more in the old, open formation rather than in the trench method, later resorted to, when armies "dug themselves in." The sturdy French peasants in the three years which have elapsed since the booming of cannon rolled over the countryside have repaired the villages, rebuilt the roads and restored the land to its former state of cultivation.

The first real battle front we saw was at Soissons, where there was a terrific bombardment last summer. It was here at Chemin des Dames, "the road of the ladies," a long, low, nearly level ridge, that the French in seven days' fighting expended \$100,000,000 of ammunition. As we approached the line the highways became choked with the moving mass of men, guns, and trucks. There was no shouting or singing by these silent, grim, determined soldiers. No hands played, no colors waved, no sound save the thud of marching feet and the clank of moving wagons. The men appeared well fed and clothed, and the horses were in superb condition. We found this true along the whole battle front and especially among the British troops. There is something inspiring about great masses of men; something that stirs one's blood at the thought of the power of a mighty army. All the way from Paris we had met and overtaken large numbers of autotricks, called "lorries," which go back and forth carrying ammunition and supplies. We passed thousands of British and French troops on their way to Italy to reinforce the Italians after their reverse. As we approached Soissons we obtained our first view of aeroplanes operating in the war zone. Soaring above the rolling country, like great eagles, these daring bird men—the cavalry of the air—whose fields of battle are the clouds, darted hither and yon across the line, scouting for the enemy. For miles here and on our way to Rheims we passed along camouflaged roads, protected from aircraft observation by great screens of woven grasses and artificial hedges.

Soissons was first bombarded in September, 1914, and on every side are desolate evidences of the destruction wrought. Under that terrific fire, walls collapsed as though they had been made of pasteboard and women and children were buried beneath the ruins or blown to fragments as they sought safety in the streets. From Soissons to Rheims the road was all but blocked by the cavalry, infantry, artillery, ambulance and supply trains. Despite the heavy traffic and the incessant rains, the roads were in splendid condition. The French take good care of their highways, for they know how essential it is to an army to have open communications. Negroes from French Africa, Cambodians, Algerians and the peoples from Indo-China, as well as German prisoners, are employed in keeping the roads in repair. Mile after mile of dugouts, many of them still in use, lined the roads, while wire entanglements and trenches ran in every direction. These labyrinths of ditches, stakes, and barbed wire cut and sear the land from the Alps to the Channel. We saw piles of timber cut and trimmed, ready for the trenches and underground work, with here and there great depots stacked high with shells and ammunition.

As we neared Rheims I happened to see several dark puffs of smoke smudge the leaden sky over the lines. Col. Parker, who was with us, said that they were shells from anti-

aircraft guns. While we were looking, one of the shells struck home, for the great black envelope of a French balloon silhouetted itself against the clouds. Like a handkerchief cast to the winds, the torn bag flattened itself out, and in fantastic curves slowly sank to the earth, a mass of flames. Late in the afternoon, when the lengthening shadows of a gray November twilight were casting their somber hues upon the battered and broken walls, we entered Rheims—ill-fated, battle-scarred Rheims—the center of an ancient civilization and for ages the sought-for prize of military aggression. What memories and associations of the past; what pathos and sorrows of the present are awakened by that name! History, religion, art, romance, and chivalry—the epitome of human endeavors and aspirations—crowd the centuries of her existence. Rheims to-day is a melancholy ruin, a city of the dead, abandoned and closed to the outside world. Houses demolished, streets torn up and filled with debris, crumbled walls, and battered pavements tell the story of the bombardment of Rheims.

Surmounting all, a pathetic monument to the wreckage and frightfulness of war, stands the shattered cathedral. For 800 years this masterpiece of architectural splendor has been the shrine of countless thousands. But yesterday the pride of France, to-day a bleak and broken relic of its former glory. Birds flight their passage through the empty windows, once studded by the noblest product of the glazier's art; gothic arches and chiseled columns, rich with the tracings of a master hand, lie as heaps of dirt upon the pavement, mixed with bits of glass and fragments of holy figures. A pile of debris now defiles the altar where stood Joan of Arc when her King was crowned. Ah, the pity, the pathos, and the wantonness of it all!

Cardinal Luçon, gray haired and benign, to whose care the sacred edifice and its service have long been intrusted, extended to us a sad welcome. In the gathering gloom of his ruined church this patriotic and devoted prelate, who has remained steadfast at his post, came forward to meet us. He grasped the hand of each and in a few simple words expressed gratification at America's entrance into the war, "For," he said, "it will mean the restoration of my devastated country." A total of 305 shells have struck the edifice since the beginning of the war, 64 of which were fired within the last few months, and the ancient church is yet a target for the artillery, each shell taking its toll of carved statue and molded arch.

During its early bombardment the cathedral was used as a hospital, Red Cross flags flying from its spire. But this did not save it from destruction, despite the fact that it was filled with wounded German soldiers. A scaffolding which had been erected for repair work was fired by an exploding shell and the flames spread to the woodwork above the main entrance. Soon the interior became a raging furnace, which threatened to incinerate the helpless men within. The old cardinal and a young priest began the work of rescue. By this time a great crowd had gathered outside. Suddenly one of those strange and unaccountable phases of mob fury seized the throng made frantic by suffering, the killing of relatives and friends and infuriated at the sight of their beloved church in flames. The mob rushed to the entrance, demanding that the German soldiers lying on their cots be compelled to die in the hell created by their comrades in arms. It is related how the aged cardinal stepped forward and confronted the angry crowd. Placing himself between the mob and its intended victims, with hands outstretched in appeal, he said to them, "Very well, my children; but you must kill me first." Silence and shame fell upon the frenzied crowd; madness gave place to reason, revenge to sympathy. With a mighty impulse, as their hearts were moved to pity by the benevolence of the cardinal's act, they sprang forward vying with one another in their efforts to rescue their hated enemies in distress. As we lingered in the presence of these doleful scenes, the only sound that broke the stillness of the deserted streets, was the deep intonation of distant guns, booming on the battle front. That, and the echo of one's foot-fall on the stones and the throbbing of one's own heartbeats as the terrible sacrifices and the suffering of it, all struck home!

Passing through the country around Soissons and Rheims, we noted the seeming indifference of the inhabitants to all personal danger. Old men and women were working their farms close up to the firing line. Occasionally a shell would burst overhead, but they kept right on at their work, oblivious to all danger, so accustomed have they become to the artillery. On our way to Verdun we passed acre after acre of vineyards, which have made this part of France famous for its wines. For miles before reaching the historic fortress of Verdun, we saw grim evidences of the titanic struggle. Houses destroyed—they are always the object of attack—bridges wrecked, trees felled, and everywhere soldiers, supply trains, and motor kitchens. The very air was laden with depression—a silence of dejection reigned over all as if the spirits of those in the ranks were

stilled by the memory of those who had made the supreme sacrifice.

One of the peculiar sensations of the battle front is the feeling of loneliness. Back of the lines one sees soldiers by the thousands, but close to the firing line one sees or hears none. Except for the roaring of the guns and the whining of the shells, one might imagine one's self in a desert land. When standing on the hills at Verdun, knowing that there were thousands of soldiers near by, we saw not one of that vast army. The men were concealed in dugouts, trenches and underground galleries. Without the blare of trumpets or the waving of banners, they silently awaited the command to "Carry on!" This war is devoid of all the glamor, glitter and romance—yes, of all the chivalry, too—which in the past has been associated with great military movements. No flags float above the clouds of smoke and mist, inspiring men's hearts with love of country; no martial music stirs their drooping spirits; no strains of national anthems thrill their souls and steel their courage for the coming charge. Everywhere it was the same. Once only in that long journey along the line, did I hear music, and then it was a single fife and drum corps marching with its company to a reserve camp, miles behind the trenches.

We reached Verdun at noon and dined with the commanding general in a vaulted mess hall, deep in the recesses of this ancient fortress. Miles upon miles of galleries have been constructed in the fort, 40 and even 60 feet below the surface. As we ate our war lunch the plates and glasses on the table trembled when the French guns answered the German artillery, for the bombardment still goes on. Verdun stands at the apex of a great triangle where the hills crowd down to a narrow pass. It is like the prow of a great snowplow, and here the French hundreds of years ago, built this great fortification to guard their eastern frontier. Verdun, the rock of destiny, against whose slopes were hurled the mightiest assaults in the history of man! Verdun, whose hills burst asunder beneath the shock of the heaviest cannonading that the world has known! My friends, think often of this heroic spot, for it was here that civilization paused before that impact, then tottered and fell as the Prussian hosts swept onward; then rose again as the dauntless soldiers of France responded to that watchword of liberty, "They shall not pass," and rolled back again, and yet again the onslaught of the Huns! For ages that name will be the brightest page in the history of France, and you, little children, as long as you live, will know of the glories of Verdun.

The great battle of a year ago took place on the hills which encompass the city. We went out to Fort Souville, 5 miles from the citadel. The hill on which it stands has been blasted almost to its base. Everywhere are trenches, wire entanglements, camp equipment, broken gun carriages, shells, guns, hand grenades and pieces of shell. Here is the most stupendous, the most terrible example of the waste and destruction of war imaginable. I have seen the ruins of Port Arthur, in Manchuria, and have been to the top of 303 Meter Hill, where the Russians and Japanese fought for supremacy, but what I saw at Verdun was ten times more awful than the ruins of Port Arthur. The whole hill has literally been blown to pieces and is a desolation of shell holes and craters, filled with cartridges, unexploded bombs and pieces of rifles. The ghastly wastage is appalling. When the Germans made that terrible attack they swept on over these hills and came up the crests, line after line, like waves of the sea. Where once a forest had stood, now nothing but blackened stumps remain. Fifty yards from where we were on the summit, was a shattered tree trunk, torn and blasted, which marks the high-water mark of the German advance. One remarkable occurrence of that onrush was related to us. The infantry attack had been preceded by a heavy artillery fire, which buried in the ground a French machine gun and its crew, over which swept the first line of Germans. These Frenchmen dug themselves out of the debris, set up their machine gun, and began firing at the Germans from the rear. Caught between two lines of fire the advancing Germans, not knowing the strength of the attack, became panic stricken and fell backward. The few who managed to escape were glad to seek refuge behind their own lines. All of the men at this machine gun were killed, but they saved the day for France. Eight hundred thousand men laid down their lives at Verdun—500,000 Germans and 300,000 Frenchmen. We saw cemeteries containing 35,000 graves. I asked where the rest were buried, and the commandant replied, "Here they lie beneath your very feet, ground back into the elements." Five men were killed for every 9 square feet of earth on this blood-soaked hill! The battle field extended over about 3½ square miles; every hill and every valley tells its story of tragedy and death. A beautiful tribute was paid the memory of his sleeping comrades by the general, who in reverence saluted the graves as he passed. At the present

time the firing line is several miles distant, but the French artillery all around us were firing at the German trenches and the German guns would respond. Every few minutes we heard the sharp report of a Boche gun as a shell was hurled toward us. There was a constant roar of artillery, our conversation at times being interrupted by the din. No greater glory will ever come to France, than the victory of Verdun; no greater honor will ever come to a Frenchman, than for him to be able to say "I, too, fought at Verdun." To-day, with all its devastation and ruin, with all the sacrifices of life, with all the sorrow it represents, Verdun stands forth as the greatest monument to courage, bravery and determination, of which the world knows. Let us hope, too, that it is the sepulcher for the hopes and ambitions of Prussian military autocracy.

From Verdun we went to the headquarters of the American Army, traveling all night in our machines, the darkness unbroken by any lights for fear of aeroplanes. Mile after mile we sped along, passing train upon train of army supplies, artillery, and regiments of soldiers. We had dinner at Bar le Duc, an old French town, famous for jams and jellies. This once prosperous city of 30,000 is now only half populated, for the incessant bombardment of the town by German aircraft, has driven away thousands of citizens. A large number of people were killed the day before we arrived. At the American Army headquarters we met the general staff who are planning the campaigns for our boys. They told us of their plans and how they were caring for the men and arranging the details of future battles. From there, we went to Gen. Sibert's headquarters, passing en route Domremy, the birthplace of Joan of Arc. The little house in which she was born still stands, and in the room where she first saw the light of day, is a cupboard she used and a few personal relics. Gen. Sibert took us to the training school where our soldiers are being taught trench warfare. They are building great cantonments here and everything is being done for the comfort and welfare of our men. I talked to many of them and they were all full of courage and snap, only chafing at the delay in getting to the front. I asked them how they were being fed and clothed, and they said "all right." "How are your quarters?" "Fair, but we realize the difficulty of getting supplies." "Have you any complaint?" "Yes, the delay; for God's sake, give us a chance to fight!" Fear not, oh, my friends, of the result. Fear not for the honor of the flag, when these brave boys from America, meet man to man, the men on the other side. In my car I carried a large American flag, and as we went past squads of American soldiers, salute after salute was given to the Stars and Stripes. In referring to our boys let me quote from Gen. Odium, of the Eleventh Infantry, Fourth Canadian Division, C. E. F.:

We have recently had quite a number of American officers attached to us. They are splendid fellows. The Canadians have taken to them at once. We have a great deal of faith in them, and we wish we were working together. The Americans are making a splendid impression over here.

That night we slept at Chalons and in the morning proceeded to Amlens, in northern France, where we were met by British officials, who escorted us to a chateau used for the entertainment of visitors. On the way to Amlens we drove along the Valley of the Marne for several miles. After crossing the Marne, we passed numbers of villages partly destroyed by shell and bomb fire. Crossing the Aisne River, we came upon a part of the battle field of the Aisne, where we saw wire entanglements and old trenches and piles of worn-out army paraphernalia. For miles these plains are marked by the devastation of war. Innumerable dugouts line the road on either side, just as they were when they were abandoned. Two miles north of the river we passed a village blown to atoms, with not a house standing; nothing but foundations, with broken walls a few feet high. I saw not a living thing in that city of once happy homes. Yes; I did see one living thing. It was a raven on the stump of a tree, the only inhabitant of this city that had been destroyed by German artillery.

We lunched at Noyon, which, owing to the rapidity of the evacuation of the Germans, has been but little damaged. On leaving Noyon we entered the battle field of the Somme, where, in the late summer of 1916, it is said the English suffered 320,000 casualties and the Germans 500,000. We passed mile after mile of complete devastation, where hardly a house remains. A cold drizzling rain was falling, which added to the depressing effect of the frightfulness that stretched away in every direction. Just as night fell we reached a spot where once stood the city of Chaubaines, with a population of 10,000, now a mass of bricks, without even the semblance of a house standing. We stood on piles of debris at what was once the center of the city; the sight in that dead silence and in the gathering darkness was of the ravages of the demon of destruction, in his full power of annihilation. Not a sound save the

sighing of the winds and the falling of the rain, where but a few months ago the laughter of children rang out; not a light piercing the night, where only a little while ago the lamp on the table, in even the humblest home, welcomed those children to the family fireside. Words fail to describe the anguish and the sorrow of it all. In one corner of a wall we saw three mounds marked by the tricolors of the Republic. They are the sentinels of the tomb watching over the city of the dead, where the solitude is broken only by the wind, moaning as it were, a requiem over the graveyard of homes and happiness; every gust whispering of suffering, sadness and sacrifice.

Before reaching the chateau, we visited a Red Cross hospital under the direction and care of Americans. It was near here that a few months ago a young Boston doctor was wounded in a bomb raid; both legs had been cut off, and, owing to his condition, it was necessary to operate upon him four times. I talked to him as he lay in his bed. He was cheerful and bright, in fact this cheerfulness prevails in all of the hospitals I visited. To my oft-repeated queries of "How do you feel?" these brave boys would answer, "I am all right, don't bother about me, we are going to win." And in speaking of these wounded soldiers in the hospitals, let me read to you extracts from letters penned by a Canadian volunteer, written to his loved ones at home from his cot, where he lay with both legs paralyzed after the drive on Calais:

Capt. Morris, of the Queen's Own, of Toronto, led an attack on the Germans with two companies. He got an alignment of an X nature, got within 200 yards when his arm was shot. "Come on, boys," he said, and waved his arm, only to get a mortal wound.

He told of a joke, how one of the boys in writing to his grandmother related that they "drove out the Germans" from a certain town. "Drove them out," said the old lady. "If I had been there I would have made them walk."

Again he wrote:

It is noticeable that officers never ask men to go on a hazardous duty that they wouldn't do themselves. It was never too rainy a night for our captain to go out on listening patrol.

Everything in England is self-sacrifice, cheerfully rendered, from newsboy to banker and railroad president. The farmers gather their eggs and produce and take them to place on the altars of their churches, to be forwarded to the hospitals and wounded. The children give their pennies to the tobacco funds, Belgian, or patriotic funds. It's a fine old world, and I sincerely hope St. Peter is blind, tired, and forgetful in opening the gates for any of our army.

Col. —, of Toronto, called to his men, "Center close." Only 196 responded out of 887. The poor old colonel wept, the boys said, as he remarked, "Boys, there will be many sad homes in Canada to-night." He had fought with rifle and bayonet, too.

I never heard of the Scotch running away, or a Canadian. They stand as steady as wildcats. God, how they die! They must think and know they live again.

There is a Scotch corporal here, who is much of a fatalist—always saying that when your time comes, it comes. He was going over the top one night, and we twitted him about covertly putting an extra pistol in his pocket. He said, "Weel, Ah might meet wi' er German whose last day haed come."

By the way, have you heard the latest gossip about Kaiser Bill? The boys say they are going to bust the mainspring of the "Watch on the Rhine." We hear he has bought up all next year's crop of Georgia watermelons so he can feed his men on the Rhine.

From the chateau we visited Calais, the great distributing point for a part of the British Army. Here is where the supplies are received and sent forward—ammunition, food and everything that is required at the front, from pins to projectiles. Many Chinamen are employed in these great storehouses loading and unloading ships and trains. They told us a very interesting story about these Chinamen, who, by the way, come from northern China. This town is frequently bombarded from the air. After these Chinamen had been here a short time they became panic-stricken and went to the boss and told him "We came contract to work, no contract bomb." I do not know how they settled the strike, but the Chinamen remained. One day, when a very heavy bombardment was going on, an officer happened to look up at the trees and was amazed to find them full of Chinamen who had conceived the idea that it was the safest place to be. To assist them in their scramble to the branches, the Chinamen had left their shoes behind at the base of the trees. As the officer approached he noticed one Chinaman coming to the ground and he said to him, "What is the matter; are you coming down for your shoes?" "No," said the Chinaman, "me no wantee shoes, me wantee tallee tree."

At Calais are great reconstruction works where everything from the battle fields that can be of service is made over and sent back to the lines. Immediately after a battle the first consideration is the care of the wounded and then of the dead. After this the salvage corps, depending, of course, upon conditions, come with their lorries and gather up everything that is of value—helmets, rifles, gas masks, bicycles, wagons, artillery, and shoes. I was much impressed by one shop employing hundreds of persons, where they reconstruct 25,000 pairs of shoes a week; they are disinfected, patched, oiled and then turned over

as good as new, and strange enough the soldiers prefer these secondhand shoes to new ones. If some one should ask me as to one of the many things that impressed me from a business man's standpoint, I would say that it was the system with which this war is being conducted, not only from a military standpoint but from an industrial one. It is organized efficiency on a grand scale, where nations, not armies, are making a business of warfare. Great Britain, France, and Italy realize they are not fighting a war as wars have been fought in the past. Today it means mobilization of all man power and the utilization of all resources. Sacrifice and economy are synonymous terms in this great struggle.

One of the most impressive facts along the battle fronts as well as behind the lines, is the order which prevails everywhere and in everything. There is neither confusion nor hurry. Every man has his appointed task to do and he does it methodically. Nothing is left to chance, for every action of the soldier, every movement of the guns or supply trains, every action on the land or in the air, goes forward according to a regular, closely dovetailed plan. When a barrage is lifted and the charge takes place, it is timed to the second, the watches of the commanding officers being regulated to the exact time. Here let me deviate a moment from my narrative and speak of the deadly gases, the horror of the trenches. A new chapter of warfare was opened when the Germans introduced the use of poisonous gases. It was at the second battle of Ypres that this instrument of death was inaugurated. They first used large steel tanks containing the liquified gas. These were set up on the outer edge of the trenches, with the nozzles pointed in the direction of the British lines. When a favorable breeze sprang up, the gas was released, which was carried down with the wind. The method of installing the gas containers was soon recognized, for the preparations were always visible, and it became easy to destroy them by artillery fire, which frequently did great damage to the Germans themselves. The present method is to fill shells with the liquid gas, which are fired from the guns in the same way as other shells. For short range a special gun has been devised.

Upon our return to the chateau that night we had the pleasure of meeting Gen. Fawkes and the judge advocate general of the British Army. The next morning we drove to Arras, which has been badly damaged by shell fire. The great cathedral is a mass of ruins, only one arch remaining over the lofty aisle. Wherever there had been a bronze tablet or statue in any church or upon any monument they have been chiseled off by the Germans for the manufacture of cartridges and fuzes. Many troops are stationed in Arras, it being close to the firing line. From here we went to the American engineers' camp, some distance away. There we met the boys from home, many of them from the city of New York, and it was a keen pleasure for us to meet them and, I feel, for them to have met us. They were comfortably housed in galvanized roofed barracks, ceiled with wood and warmed with stoves. They were happy in their condition and satisfied with their equipment and food. They were laying railroads, digging ditches and building bridges, preparing for the great forward move which will mean victory to our arms. We went from here to Vimy Ridge, passing on the way, innumerable dugouts and abandoned barracks. I was much amused by many of the signs in these barracks, for the British and Canadians had marked the crude streets with names from home. One street was called "Picadilly," another the "Strand," while yet another was "Manitoba Boulevard." One sign in particular caught my attention. It read, "To Petrograd," with a finger pointing to that far-off capital.

In one of the early campaigns, when the British were using more oriental troops than at present, it is related how a stranded Sikh, arms upraised, walked over to the German first-line trench. He had been surprised in a "starlight" in "No Man's Land" and with oriental cunning decided he would have no recourse but to surrender. Upon reaching the Boche trench, he assumed an attitude of high glee at being freed from bondage (?). Scores of his comrades, dissatisfied and in revolt, were ready to desert, he said. The Germans were delighted at the news and gave him a fine night and suggested his going back to the allied lines to bring over his comrades. He reached his own first-line trench, telling his officer in command of his adventure and ruse, to get back to his friends. For this he was gazetted for a commission.

We saw troops going into the lines and troops returning from the trenches, the latter very grimy and dirty; but they were swinging along the roads in that happy-go-lucky way, which tells that they are in this fight to the finish. We climbed up Vimy Ridge, passing by a great gun which had taken part in the bombardment only the day before. From the summit of Vimy we obtained a splendid view of Lens and could see the German

lines in the distance. The hill was a mass of shell holes, filled, as at Verdun, with the relics of war. In one hole I saw the skeleton of a poor soldier whose life had been given in the cause for which he fought. We could see the flash of the German guns, hear the shriek of the shells and then would come to us the roar of the explosion. We could see where the shells struck, for great masses of brick and dust would be thrown into the air as the projectiles exploded. The allies' guns would respond, and flash after flash, followed by the roar, came to us as we stood there watching this scene of actual warfare. Above us in the clear sky, many airships circled about, taking observations and noting the effect of the artillery fire. Vimy Ridge will forever stand on the roll of honor of Canada's fight for home and freedom. Here the blood of the Dominion soldiers was given like water when these brave boys from across the border marched up these heights and drove back the Germans. Vimy Ridge will stir the blood of Canadians for generations to come, for it represents the heroism and courage and the supreme sacrifice of Canadian manhood in the great struggle to make the "world safe for democracy."

The next day we went to Albert, which has been only partly destroyed. The great modern cathedral, however, is a mass of ruins. This famous church of Notre Dame de Bebrieres is crowned with a statue of the Virgin, which has bent forward and is now hanging from the campanile with the face of the Madonna gazing on the ground. The French have the belief that the statue will not fall until the war ends in their triumph. From there we went to Fricourt, or at least to what had been that city, for it exists no longer.

The whole country shows the effect of the battles that have been fought here. For miles and miles it is nothing but desolation, with the ruins of houses, broken trees, and implements of agriculture standing out in the weather, going to decay. In many places in this valley of the Somme the land has been so torn up, that it is not possible to raise enough to support a single family. It must all be leveled and cleared of the debris before people can live here again. We went over many parts of this battle field, picking up pieces of shell, grenades, and belts. We went down into many of the dugouts, great rooms excavated in the chalky earth, 30 or 40 feet below the surface. Everything is just as it was when the battle swept over the field, save for the rescue work of the hospital staff and the activities of the salvage corps. The underlying strata of the ground along the Somme is chalk, which, under the heavy downpours, is turned into slimy mud. As John Buchan wrote:

It filled the ears and eyes and throats of our men: it plastered their clothing and mingled generously with their diet. Their grandfathers who had been at Sebastopol could have told them something about mud, but even after India and South Africa the mire of the Somme seemed a grievous affliction.

Let me give you a description of this battle, where Briton and German contended for mastery.

"All night long, without cessation, the batteries of both sides, knowing exactly their opponent's range, fired perpetually. All night long searchlight bombs were thrown. All night long golden and red and yellow streams of flame or the sudden jagged flash of an explosion lit up the black smoke of burning buildings and fields in the valley or showed the white pufflike low clouds of the bursting shrapnel. Not for an instant did the roar diminish, not for a second was the kindly veil of night, left unrent by a fissure of vengeful flame. Yet all night long, as ceaselessly as the great guns poured out their angry fury, so did men pour out their indomitable will, and in that hell light of battle flame, engineers labored to construct bridges, small bodies of troops moved forward to join their comrades in the trenches, who had been able to make a footing the day before, and all night long those ghastly yet merciful accompaniments of a battle field—the ambulance corps—carried on their work of relief. The searchlights swept up and down the valley like great eyes that watched to give direction to the venom of war."

At Peronne we visited the citadel and saw the city a complete mass of ruins, where the devastation had been planned and consummated by the German Army. Some shelling, as at Albert, had been done by the attacking allies, but the bulk of the destruction had been wrought by the Germans when they evacuated the place. The favorite way of demolishing a house was to blow out the front wall, which would let in the elements and eventually cause the whole building to collapse. Street after street presented the terrible spectacle of frontless houses, and here in the deserted rooms we saw beds, bureaus and chairs, with the carpets still on the floors and pictures on the walls. I went into many of these former homes and saw hanging on the hooks clothing and hats, just as they were left when the poor people were driven out. In one house I saw lying on a table, a child's tin horse, dented and marred by the little infant who had played with it. Where, my friends, to-day is that little tot?

From here we went to Bapaume, another town deliberately destroyed. The huge cathedral, as in other cities, was a mass of ruins. While we were here, we could hear the bombardment at Cambrai, for we were not many miles away from the firing line. It was here, that squadrons of tanks, those terrible engines of war adapted from American tractors, were used with such deadly effect. The general in command of the corps sent before the battle, to every officer and man of the tanks, this order of the day: "The Tank Corps expects that every tank this day will do its damndest." They did. As the pilot of one of them told me, they played "merry hell." "They moved forward in small groups, several hundred of them, rolled down the German wire, trampled down its lines and then crossed the deep gulf of the Hindenburg main line, pitching their noses downward as they drew their long bodies over the parapets, rearing up again with their long forward reach of body and heaving themselves on to the ground beyond. The German troops knew nothing of the fate that awaited them until out of the gleam of dawn they saw these great numbers of gray, inhuman creatures bearing down upon them. A German officer whom I saw to-day, one out of thousands of prisoners who had been taken, described his own sensations. At first he could not believe his eyes. He seemed in some horrible nightmare and thought he had gone mad. After that from his dugout he watched all the tanks trampling about, crunching down the wire, heaving themselves across his trenches and searching about for machine-gun emplacements, while his men ran about in terror, trying to avoid the bursts of fire, crying out in surrender."

On our way back to Amiens we stopped at the Butte de Warlencourt, which the French Government has reserved as a national monument. It is a low salient, only about 45 feet high, and here was witnessed some of the most terrific fighting of all. Nothing has been touched on this blood-soaked hill. Shells and rifles lie about just as they fell, and dead men too; a simple cross crowned with a helmet or twisted rifle marks the spot where a nameless hero, a lost but not forgotten son or brother, sleeps the eternal sleep. The view from the top is awesome. Ruins everywhere as far as the eye can see, an unbroken stretch of desolation, destruction, chaos, with the land so cut up that one can walk over it only with the greatest difficulty. Shell holes and craters, craters and shell holes crowd one upon the other in this inferno of man's making. Every foot of land scarred with pits like poxmarks, as if nature herself, under the carnage wrought on her bosom, had sickened and died of this dread disease. Near by were several abandoned tanks, those great caterpillars which have been so effective in many of the engagements. We saw one of them that had been destroyed by an explosion, which had burned the interior and, of course, killed the crew. In front of it were the graves of the men who had manned it. There they lie by that great engine of war, with the machine they operated standing as their monument! Farther on was a great crater, about 30 feet deep and 200 feet in diameter, the result of the industrious work of the British sapper. Above this hole at one time stood some German barracks, but when the explosion took place soldiers, wagons and mules were thrown into the air, lost forever to the German cause. Men are not only killed in these mine explosions, but their bodies are dismembered—bleeding fragments of men and animals, equipment and trench paraphernalia mingle in a gruesome heap. As an officer, who had seen the explosion, said to me, "Some of those Germans haven't come down yet." An observer with the Australians has described the unceasing bombardment on the Somme as follows:

"Hour after hour, day and night, with increasing intensity as the time went on, the enemy rained heavy shells into the area. Now he would send them crashing in on a line south of the road, eight heavy shells at a time, minute after minute, followed by a burst of shrapnel. Now he would place a curtain straight across this valley or that, until the sky and landscape were blotted out, except for fleeting glimpses seen as through a lift of fog. Day and night the men worked through it, fighting the horrid machinery far over the horizon as if they were fighting Germans hand to hand; building up whatever it battered down, buried some of them, not once, but again, again and again. What is a barrage against such troops? They went through it as you would go through a summer shower, too proud to bend their heads, many of them, because their mates were looking. I am telling you of things I have seen. As one of their officers said to me: 'I have to walk about as if I liked it; what else can you do when your own men teach you to?'"

One of the striking features of the battle line are the huge concrete "pill boxes" in which the Germans mount machine guns. These deadly bomb-proof structures, with walls many feet in thickness, connect with the communicating trenches and are always a serious menace to charging troops.

Even at the risk of tiring my audience with a narrative which I feel is already too extended, I can not omit mentioning the noble work being done by the Red Cross, the Young Men's Christian Association, the Knights of Columbus and other kindred organizations. This war, which is a battle of nations, fighting not alone on the firing line, but throughout their length and breadth, calls to humanity for help and the Red Cross has answered generously, ably and fully. Its workers minister to the sick and wounded, reconstruct villages, purge towns of disease, supply farm implements and seeds, and carry on relief wherever it is needed. It has established canteens and bath-houses on the firing line, supplied milk to babies and food and clothing to the old and feeble. In the operating rooms, in tuberculosis wards, in tenements, in devastated villages, in stricken homes, it has made France, Belgium and Italy know that America from across the seas is at their side and will be with them till the end. In addition, and primary to the practical relief to the military and civilian population of our allies, the Red Cross stands ready to care for our own soldiers and sailors on duty, wherever and whenever that care may be needed. It is co-operating with the Army and Navy for the protection of the health and welfare of soldiers in camps and cantonments and has established agencies for the care of dependent families of men in the naval and military services.

Closely allied to the Red Cross are the Young Men's Christian Association and Knights of Columbus organizations. They are the foster mothers to these faraway boys of ours, supplying the home influences to the men in uniform, giving to our valiant fighters a spark of spiritual life, cheering them in the performance of their duty, comforting them in their loneliness and stimulating their mental and social instincts under proper guidance. It is impossible to more than touch upon the varied activities of these splendid institutions; of the hotels and restaurants maintained for soldiers arriving or on leave of absence; the huts with dining rooms, sleeping accommodations and reading rooms supplied with American papers and magazines where men can read, and write to their families at home; the portable lunch counters awaiting incoming trains; the rest stations and bath-houses near the front; refreshment booths; the canteens which supply wants; the entertainments and moving-picture shows; the circulating libraries, concerts, lecture courses, religious and educational classes; sports and sight-seeing trips, and the ever-present offer of friendship, sympathy and assistance to all in distress or perplexity.

On our return to Paris we were given receptions by the President of the French Republic and by the Speaker of the Chamber of Deputies, as well as by the premier. Nothing was left undone to make our visit both instructive and enjoyable. From Paris we went to Belgium—desolate, almost annihilated Belgium. If there were a map of Europe on the screen, the little part that would represent Belgium as it exists to-day would probably not be distinguishable by those up in the gallery, for to-day Belgium is only 26 miles long and 6 miles wide. It is not as large as my own Nassau County, but there in that little remnant of a nation resides Albert, the heroic King of Belgium, who will not leave his native soil. It was on his birthday that we arrived in Belgium, and he invited us to come to his simple house. We were dressed in our trench clothes. I had on a pair of blue overalls, heavy tan shoes, an old flannel shirt and a sweater; and I assure you it was hardly court attire for a reception. But the King was glad to see us, because he knew we came as sympathizing friends and that we were representing the power, the prestige and the purposes of the great Republic of the west, with its 110,000,000 of free and determined people. That great democrat, King Albert, 6 feet 6 inches, stood in his home and welcomed us in a most democratic manner. He said, "We are going to continue the fight until every Belgian is killed and Belgium is no more." I asked him what message I could take back with me to America. He laid his hand on my shoulder, and said, "Take this message to your people: Tell them that without their generous aid my people would have starved to death and from the bottom of my heart I thank them." When we left the headquarters of the King it was about 6 o'clock in the evening, and as we came out into the darkness, the sky to the northeast was bespangled by the flash of guns on the firing line and there was an incessant roar of cannonading which shook the ground on which we stood.

We went to our hotel but a few miles from the line and at 2.30 a. m., my room being on the side of the hotel facing the line, I was awakened by the roar of a terrific bombardment. It kept up for 45 minutes as the big guns along the battle front saluted each other with deadly shells. We had breakfast at 4.30 and with darkness still about us set out for the trenches. We arrived about daybreak at the point where we were to enter the communicating trench which led to the front line on the Dix-

mude sector. We found that the bombardment of the morning had destroyed many parts of these trenches. There were great holes in the road, and a few dead horses were lying about. We saw, too, soldiers who had been killed within an hour being carried back to the cemetery. We were all provided with gas masks and steel helmets in case of an attack, for we were going to the frontier of "No Man's Land." The fields we passed were desolate, ground torn up, fences down, trees broken and shattered, for the country surrounding this section of the line has been for months in the war zone. Every house had long since been pounded into fragments, the only habitations being the rude, impoverished shelters erected by artillerymen from the debris that lay scattered about.

Just as we entered the communicating trench two gray German airships swept over our heads, and as our costumes were of a different color than the uniforms of the Belgian soldiers, we felt certain that our presence was known. The trenches were a mass of mud, slimy and treacherous. Crude wooden revetments lined the bottom of the zigzag ditches, over which we slipped and stumbled. We passed many dugouts—concrete bombproof structures—in which men were sleeping on straw or blankets spread on the wet ground. Here a few soldiers performing their morning toilet from a bucket of water, there a group preparing breakfast over an improvised stove of stones and discarded tin cans. Everything was mixed with dirt, mud and slimy water, but the men were cheerful and bright and looked healthy despite their comfortless surroundings. They all saluted us, for they knew we were Americans and that our Nation had come to help their crushed country.

As most of us were fairly tall we had to keep our heads well down, for these trenches were built for Belgian soldiers who are not as tall as we, and we knew that "somewhere in Flanders"—and that less than 100 yards away—the Boche had declared an open season for Americans. These trenches are different from those we had seen elsewhere, for as the land here is low and wet they are built above ground, being constructed by piling up bags of dirt which are reenforced by wooden stakes. "No Man's Land" was a great lake, with several feet of water and mud between the opposing lines, for the Belgians, to prevent an infantry attack, had flooded the land between the trenches. Finally we came to the front-line trenches, with the Germans only 40 yards away. We were among the men charged with the duty of holding the line or dying in the attempt. Then came to me that admonition of Demosthenes to the Athenians:

Go yourselves, every man of you and stand in the ranks and either a victory beyond all victories in its glory awaits you or falling you shall fall greatly and worthy of your past.

Trench mortars, machine guns, rifles, hand grenades, cartridges, gas masks, helmets, all in place ready for instant use. That we had been discovered was soon evident, for we had hardly reached the front trench before the Germans opened fire. We crouched down in a heap as the machine guns and the snipers concentrated their fusillade upon us. Zip, zip, the vicious bullets flew over our heads or with a thud embedded themselves in the soft dirt of the trench a foot or two from us. We were splattered by mud, but fortunately none were hit. Then they opened with howitzers. The whine of the shells is an uncanny sound, half moan, half screech, and it is a peculiar sensation to have these projectiles, intended for your destruction, come screaming toward you. First you hear the sound on the left, then on the right, then it seems as though the shell were directly overhead, the roar gaining in intensity until the shell strikes the earth. Fortunately all of the projectiles passed over us and exploded in the mud several hundred yards away. The captain who had escorted us to the front deemed it unwise for us to remain longer, so we retired to safer ground. The one great trouble about these visits to the trenches, aside from the personal danger, is the fact that after the visitors leave, the poor soldiers who remain at their posts must endure the bombardment. While we were in this front line an officer was killed just next to us and a soldier wounded.

That morning's bombardment—the one which had awakened us—had destroyed parts of the communicating trench, leaving great gaps fully exposed to the enemy's fire. Coming in, as there was no firing, we did not realize our danger but on our return, knowing that the Boche were aware of our presence, these gaps became real danger spots. We would wait a moment on one side of the broken trench and then throw ourselves across the opening in the hope that the sharpshooters would not have time to bag us. At one gap I asked the captain where one of the machine guns which was playing on us, was located. He said "Just over there where you see the old foundations of a mill." I peered around the open space—I can assure you my head did not protrude very far—and looked in the direction the

captain indicated. There, sure enough, about 60 yards away I saw the machine gun resting on the wall of the old mill and could see the flames spurt from the barrel as the gunner blazed away at us. We then visited the northern part of the line and met the major in command. He invited us to his palace. We found it a miserable little lean-to, built against the only remaining wall of a house, just large enough for two or three people to squeeze into. We told him that after the war we would visit him in his headquarters in Brussels. "Surest thing you know," he replied in perfect American, and we felt very much at home.

From the trenches we went to a Belgian observation station, from which they send out aeroplanes equipped with photographic apparatus to make pictures of the enemy lines. We saw photographs taken from high elevations, and it was most interesting to hear the officers explain from these photographs the various objects that were shown and which to the untrained eye meant nothing. Bidding good-by to our Belgian friends, we went to Boulogne and took the steamer back to England. Most of our party returned to America immediately upon reaching London; but two or three of us remained and went to Scotland, where we were accorded a review of the great fleet. By strange good fortune we had the opportunity of seeing, not only the fleet at anchor, but the return of a large number of the ships from a victorious encounter in the North Sea. The motor launch on which we were crowded plowed her way through water, spume, and spindrift, when suddenly the curtain of mist and spray was broken by the form of a big oncoming gray ship. More followed, and then more, destroyers, battle cruisers, big men-of-war, steaming quietly along on the crested waters. Then, from the turrets and engine rooms of the ships at anchor men poured to the decks and the scene was alive with seamen, cheering the boys on the returning ships. Silent, grim, and battle scarred, coming in, with perfect formation through those ships at rest; and as they passed one ship after another, the crews raised tremendous cheers, cheers which carried over the gale. Here a cap was raised from the bridge, here an arm waved in recognition, but absolute silence from the fighting, victorious forces. Signs of burnt paint and marks of shell fire and muzzles of uncovered guns, yellow and brown, told of the fight.

Our next visit was Glasgow, where we had the opportunity of seeing the shipping of the port and the great shipyards on the Clyde, where they are turning out in ever-increasing quantities destroyers, submarines, aeroplanes, tanks, and munitions of all kinds. At the Singer Sewing Machine Co. works we saw them manufacturing shells and fuses, nearly all the work being done by women. Great 16-inch shells weighing, in the rough, a ton were handled by these women as though they had been pieces of kindling, so perfectly adapted are the lifting devices. I am not at liberty to state the weekly output of these plants, but if Germany thinks Great Britain is short of munitions, she will have to revise her estimates.

From Glasgow we went to Carlisle, and there saw the wonderful powder plant that employs 20,000 persons, one-half of whom are women. Eighteen months ago there was nothing here but a green pasture. To-day over 60,000 people have their homes in this locality. They have schools, lecture rooms, stores, theaters, bakeries, electric lights—everything that a complete city has. We went through the houses where the employees live. The girls, if they are without their families, are quartered in large wooden buildings called "cubicals," one-story dormitories accommodating 96 girls, each in charge of a matron and an assistant. Each girl has her own little room, partly inclosed, furnished with a bed and bureau, and there is in each cubical a general assembly room for reading and social meetings. Everything in this plant is carried on with mathematical precision. Every ounce of powder is an exact ounce, for any variation in the quantity anywhere along the line would upset the range of the guns on the front. At first they had great difficulty in making the girls realize the importance of accuracy, and many cases were reported of overcharges. When spoken to, the girls would reply, "What difference does it make? It's all for Jock, and a little extra good measure will help him win the fight." Here let me pay my tribute to the splendid womanhood of Great Britain; to the women who, irrespective of social position or financial standing, are doing their part in the great struggle. Each is doing her bit, the best she knows how, heroically, nobly. No sacrifice is too great, no hardship too severe; whether it be in the hospitals, in the workshops, on the farms, in the offices, their determination, their zeal and their courage surmounts all difficulties and nerves them to face sorrow and suffering without a murmur. Ambassador Page related an instance which happened to him. He knew a lady and gentleman of rank and wealth, who had an only son. This boy volunteered in the army. One day Mr. Page met the lady at a reception, and with a smile on her face she came up to him

and said, "Mr. Page, have you heard of the great honor which has come to my husband and myself?" He, knowing of the promise of the boy and the brightness of his future as well as of the hopes they had in him as the heir of their title and wealth, supposed, of course, she referred to some promotion. He said, "No; I have not heard of the honor." She replied, "Our boy has been killed fighting for his country." My friends, when you think of what this must have meant to that woman, when you think of what the heartache must have been as she faced the future, you can realize what courage means when the supreme test comes, and her case is only one of thousands. From the mansion to the hut, the poor and the wealthy, the high and the low, meet on common ground in the great democracy of patriotism and death.

Let me account another pathetic story, or at least one showing the splendid spirit of these magnificent women. While in Flanders I became acquainted with an auto driver, a young soldier who had been in the regular army, had been wounded and honorably discharged and then had volunteered as chauffeur. He asked me which way I was going home, and I told him by way of Liverpool. He said, "I have a mother in Chester, and would it be asking too much if you would go and see her?" I told him if I were to be in Liverpool I would also be in Chester and that I would call on his mother. I did so, and found the address he had given me in a very lowly part of the city. It was a simple house, an humble home. I knocked at the door and an elderly woman with pleasant face and kindly manner greeted me. Sleeves rolled up and a great apron showed that she was at work in her kitchen. I told her I came with a message from her boy, and her face became radiant as the sun this morning. She invited me to the kitchen where she was preparing dinner, and I met there her five daughters, who had come home from their work to take lunch with their mother. I told her her boy was safe and happy and had sent his love to her and his sisters. She said, "Oh, he is a good boy; he is the hope of my life. I have been his father as well as his mother, because my husband died when he was only 2 years old. When the war came he was determined to do his part and enlisted. I did not try to stop him. After his honorable discharge on account of his wounds I thought perhaps he would stay at home, but he was not satisfied because he thought there was still some work he could do and so he enlisted in the auto service. I did not argue with him, for I knew where his heart was and mine was there too; it was the call of duty." She told me that her five daughters were all in the service, one in an ammunition plant, one in a gun factory, one a conductor on a trolley car. I have forgotten what the other two were doing but they were all doing their "bit" in the war; and then the mother said, "husband gone, one son at the front, five girls at work, my only regret is that I have no more children to give in the cause of my country."

Fellow New Yorkers, fellow Americans, that is the spirit of the hour to-day in France and Great Britain, in Canada, in Australia, in Italy. It is the spirit of freedom and liberty ringing out from brave hearts. That is the spirit which inspired Washington and the patriots of our own Revolution. It is the spirit, too, of America of the present, calling to her sons and daughters in this hour of trial. That is the spirit that impels men to follow onward and plant the Old Flag forward in the fight.

Before leaving London, I spent several hours with Admiral Sims, discussing the part being played by the Navy of the United States in the great conflict. He is an officer of unquestionable ability, possessing a thorough grasp of the situation and it was gratifying to learn from British naval men, of the high esteem in which he was held by them. The snap and dash of the American is typified in Admiral Sims and by all the officers under his command. Despite submarines and mines, despite raiders and aeroplanes, whether lying in wait for an attack or convoying ships across the war zone, wherever they may be on the surging seas, the navies of the allied nations are still the masters of the wave.

We found Liverpool congested with ships and for three days after we boarded our vessel, owing to the submarine activities, we laid at anchor in the Mersey. Finally in the teeth of a gale at midnight we sailed out of the harbor and after a most tempestuous voyage reached again the homeland.

You will ask me, how many men will it take to win this war, and I answer I do not know. You will ask me, how long will it take to win this war, and again I answer, I do not know. But I do know that no matter how many men it will take or how long it will last, this war will go on, backed by all the resources and by all the men of America, until we win it for justice, humanity and liberty. The pathway we will follow, will be a pathway of sacrifices, sorrows and hardships; it will be a road which will lead by the graves of sons and brothers, heroes who have

fallen in the fight. It will pass down into the darkness of suffering and into the shadows of tears, but it is the pathway to that victory which will mean a permanent peace and the supremacy of the principles of our great Republic now and for evermore.

THE SONS OF THE FLAG ADVANCE.

Here's to the Blue of the wind-swept North
When we meet on the fields of France,
May the spirit of Grant be with you all
As the Sons of the North advance.

And here's to the Gray of the sun-kissed South
When we meet on the fields of France,
May the spirit of Lee be with you all
As the Sons of the South advance.

And here's to the Blue and Gray as one
When we meet on the fields of France,
May the spirit of God be with us all
As the Sons of the Flag advance.

George Morrow Mayo.

ADDENDUM.

Having had many inquiries in relation to the resources and fighting strength of the nations at war, as well as to the numbers of killed and wounded, I give below a series of tables, some of which were published by the Bankers' Trust Co., of New York. Many of the estimates were compiled by the New York Times. Of course, definite figures as to the number of men now under arms, or of those killed and wounded, can not be ascertained and at best are largely approximations:

Arca, population, wealth and debt, Aug. 1, 1917.

¹ Not given.

To December 31, 1917, the estimated cost is placed at \$121,000,000,000.

Belgium with a population of 7,600,000 in 1914, with men of military age in proportion, has been all but annihilated and her army now does not exceed 150,000 soldiers. As soon as the call came from France, England rushed over her regular army, the "contemptible little army" as the Kaiser in derision dubbed it, an expeditionary force of 160,000 men. It fought at Mons and at the first battle of Ypres. Its losses were appalling. In one engagement a division of 12,000 men and 400 officers came out with only 3,000 men and 50 officers. Then Great Britain began the raising of a mighty army, which on August 1 last, including troops from her overseas possessions, was estimated to number nearly 5,000,000 men. Since these tables were compiled, the casualties on both sides, the result of the terrific fighting of last summer and fall, have been colossal.

The total cost of the war to both sides on August 1, 1917, is given as \$98,500,000,000, and it is estimated that should the war continue until August 1, 1918, this amount will approach the staggering total of \$160,000,000,000, a sum larger than the national wealth of any nation in the world with the exception of the United States. To bring these expenditures to a comparison of figures, the cost of the war on August 1, 1917, was over three times the total deposits of all the banks in the United States; seven times the annual value of our agricultural products; and fifteen times the value of our yearly foreign trade. For every month the war continues it means an expenditure of money greater than that expended during the entire Russo-Japanese war, which lasted 18 months. It means that the cost of the Franco-Prussian war is being spent every five weeks. It means that our Civil War, hitherto the greatest conflict in the history of the world and which lasted four years, is being duplicated in cost every 85 days.

To visualize \$98,500,000,000, that amount would construct 258 Panama Canals; it would build a railroad which would encircle the earth at the Equator 56 times; it would build such a vast number of standard steel ships that, placed bow to stern, they would make an unbroken floating bridge from New York to Liverpool and from New York to Panama; it would construct 2,042 stone highways of standard specifications across the United States; it would purchase 221,000,000 Ford automobiles; and, if laid out in \$1 bills placed end to end, it would make a chain of notes that would encircle the globe 464 times and would make 48 bands of money between the earth and the moon. That stupendous sum represents a daily expenditure of \$138,240 for every day that has passed since the beginning of the Christian era, and, if distributed equally among the hordes of humanity, would give \$66 to every man, woman, and child upon the earth to-day. It would build 6,560 National Capitols at Washington, and, if laid out in \$1 bills, 2,224 years would be required to count it, the operator working at the rate of five bills per second, and eight hours per day for every working day.

History records no other war or combination of wars which offers a parallel in the expenditures of money to the present conflict. In fact, the total direct cost of the six greatest wars which occurred during the 125 years which preceded the present world war was \$21,000,000,000. One of these six wars lasted 21 years and another 4 years, yet this sum equals the cost of but 8 months' fighting at the present rate of expenditures.

The direct cost to the United States for the year 1917 is estimated at \$6,700,000,000, of which amount \$3,000,000,000 are loans to the entente allies. The amount of money appropriated by the last Congress for expenditures and authorizations was about \$18,000,000,000, which represents a daily gross cost of the war to the United States of \$49,000,000.

Shortage of Coal.

EXTENSION OF REMARKS

OF

HON. LOUIS T. McFADDEN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 5, 1918.

Mr. McFADDEN. Mr. Speaker, a more close study of the coal conditions of this country indicates the vast and complicated difficulties encountered by the United States Fuel Administrator in his efforts to stimulate production and thereafter to make a proper and equitable distribution throughout the country in keeping with each section's requirements. All those in position to know are clearly of the opinion that there is a legitimate shortage of coal, resulting in innumerable complaints from all classes of users. The complaints are in large measure due to a lack of knowledge of the chaotic conditions generally prevailing, and as well are due to the fact that those making the complaints are not cognizant of the difficulties which have confronted the Fuel Administrator in his efforts to supply all the coal required under unusual conditions.

To go back to the time when the Government first became fearful of the fuel conditions: During the month of July, 1917, Mr. Peabody was selected for the purpose of obtaining the co-operation of the coal operators in an effort to reduce the prices then prevailing. After a series of meetings, at which a very large percentage of all the coal-producing companies was represented, the operators agreed to a reduction of prices ranging from \$5 to \$7.50 per ton, then in effect, to \$3 per ton flat. The coal operators were actuated to do this for the reason, as given by them, that they were as patriotic as any other class of men, and recognized that concurrence on their part in the suggestion of Mr. Peabody might prove beneficial in the prosecution of the war and in the preparations then being made for it. The attitude of the coal men thus taken was at that time highly commended by Secretary Lane in a public declaration. The price of \$3 per ton agreed upon was not a fair one, applying, as it did, to all regions and all operations, independent of the thickness of the vein, the quality of the coal, and the relative cost of production. Nevertheless it was a step in the right direction.

The agreement of the coal men to follow Mr. Peabody's suggestion, approved as it was by Secretary Lane, had hardly been announced when the Secretary of War and the Secretary of the Navy, supported by Mr. Colver, of the Federal Trade Commission, entered a grievous protest against it, basing this protest on two grounds—(a) that the price of \$3 was still too high and that there was too much profit to be made by the operator at such price, and (b) that it constituted an agreement between the operators concerned in violation of law. This latter reason was made potent by the statement of Attorney General Gregory, made to the press, to the effect that he would prosecute any body of men who did anything in carrying out the arrangement thus made.

At this juncture the coal men were at sea as to what should be done. On one side stood one Secretary of the Cabinet commending their action; on the other side two Secretaries condemning it, and the Attorney General threatening prosecution if they attempted to do that which they had been urged to do by those representing the Government itself.

Later the President, under the authority conferred upon him by law, fixed the price of bituminous coal generally over the country at \$2 per ton, and appointed Dr. Garfield as the administrator. The fixing of the price of \$2 was a great shock and surprise to the coal men, because this price was so much

lower than what they had been receiving in the market; then, again, there were many operations in regions which could not produce coal at this price and show profit. In fact, the price of \$2 as fixed immediately resulted in the suspension of operation of a large number of mines which could not meet the issue. The operators lost confidence in what the Government was likely to do in the future, and as a result decided to maintain the statu quo rather than pursue a policy of extension and improvement, thus decreasing rather than increasing production. This uncertainty as to the attitude of the Government, coupled with the uncertainty of the operators as to the future prices of all commodities which entered into the production of coal, made the outlook unpromising and highly speculative.

Subsequently, prices were adjusted in certain regions, such as Michigan, Alabama, and so forth, and later the administrator conceded an addition of 45 cents per ton in price, subject, however, strictly to the provisions that the increased wage rate demanded by labor at that time, and amounting to practically 45 cents per ton, be conceded to the men. This, as will be seen, gave nothing to the operator.

Reverting to the time when Dr. Garfield was appointed, it may be said that he inherited some of the remnants of the Peabody organization. While some of them were coal men, versed doubtless in the business conditions of the limited territory in which they operated or were concerned, it was conceded that at that time there was no one on the staff who had a general knowledge of the coal business the country over. The result was that when these men were required to take up, consider, and adopt a policy for sections of the country with which they were not familiar, or to make orders and rulings concerning distribution and other matters with which they had never had any experience, many disastrous, unwise, dilatory, and improvident courses were taken. Many errors of omission and commission were made. Delays were encountered and the whole situation became decidedly chaotic. Of course, since that time, Dr. Garfield's staff has been augmented and improved, but even now, after a number of months of operation, he is laboring under the disadvantage of having many upon whom he is compelled to rely who are not, in any measure, coal men and who have had little or no experience in the line of work they are attempting to do.

It is quite generally believed that the appointment of a Fuel Administrator was wise and prudent, and this is the judgment of honest coal men, because if they, the coal men, had been required to supply coal to the whole country under the conditions which have been prevailing, they, too, would have probably failed in many instances, not as seriously as the failure has been, but, nevertheless, coal could not have been supplied to everyone at this time, because of the lack of transportation and the lack of coal itself; thus the odium now being suffered by the Fuel Administrator and his department would have fallen upon the coal men, with even greater vehemence.

Conditions under which the country is suffering are due, it seems, primarily to three causes:

First. Priority orders issued without an intelligent knowledge of the coal produced and coal required under war conditions.

Second. Lack of transportation facilities.

Third. Weather conditions.

1. PRIORITY ORDERS.

Priority orders have been issued indiscriminately without due regard to the field of the operating company, the character of the coal produced, its suitability for special purposes, or to any other thing which ordinarily enters into the use of coal under ordinary conditions. These priority orders, it is said, were based in some instances upon the production of the mine during the previous year, and in other instances on the rating of the mine as made by the railroad company supplying cars to it. The fallacy of this method is apparent when it is understood that in many instances the mine is not producing as much coal this year as it produced last year; and, secondly, because the railroad rating is not at all times a true indication of the amount of coal which can be produced from any one mine.

The New England priority order issued by Dr. Garfield, after pressure brought to bear upon him by a delegation of Congressmen and Senators from New England, and which order was approved by the Secretaries of War and Navy and the Director General of Railroads, is a marked illustration of the disarrangement of business and transportation which could be effected by ill-advised and economically wrong priority orders. This order required the bituminous operators to ship 500 cars of coal to this section and required also the anthracite operators to ship 500 cars of coal to this section each day. As a consequence, a very marked congestion in movement took place in New England; the gateways to that section were blocked and clogged; coal did not reach those for whom it was intended;

cars were allowed to remain on sidings and the carrying capacity reduced because of the marked delay in the return of empties to the mines for reloading. Not only was the order improvident from this standpoint, but also for the reason that it is generally conceded by coal men that New England is not able to assimilate so much as 50,000 tons of coal each day, moving all rail.

Under the operation of the order, coal-producing companies which had contracts to supply munition manufacturers and other essential industries in New England were required to suspend shipments to their contract holders and comply with the Storrow order. Mr. Storrow, no doubt, made every effort to distribute the coal where it was most needed, but, not being a man with coal experience, the distribution was made in a way that did not produce the results that were so greatly desired, but instead caused confusion and demoralization that affected the earnest efforts of others, and, as has been said, certain plants were receiving coal which already had an ample supply on hand, while others engaged in important business were neglected and running with little or no reserve supply; in other words, from hand to mouth.

A number of operators were prohibited from shipping on their contracts with public-service corporations in New England, and at the same time required by Mr. Storrow to send their coal to other public-service corporations in New England. While both of the public-service corporations mentioned received the coal, the operator was penalized by being compelled to forego shipping on his contract to the public-service corporation with which he had relations, and ship to another at the Government price, thus being compelled to lose the difference between his contract price and the Government price permitted to be charged.

It seems that if a producing company had a line of contracts for New England, it should have been permitted to supply the coal under these contracts. On the other hand, companies which did not have any New England contracts and who were not carrying other contracts for its output, but had what is known in the trade as "free coal," should have been required and called upon to supply any deficiency in New England which may have resulted after all the contracts had been complied with.

It would not be surprising if it were found that under the Storrow order many concerns were receiving coal which they did not need, and other concerns were deprived of coal which they sorely needed.

2. TRANSPORTATION.

The transportation service being rendered by the railroads is perhaps as good as can be expected in the absence of the Government's permitting to advance their rates in keeping with the advance in the price of materials and labor, when they would have had the funds to acquire the necessary power and equipment and enlarge their facilities.

3. WEATHER CONDITIONS.

The weather has been severe and affected not only transportation but the production of coal to some degree.

While not directly the cause, it must impress seriously anyone giving consideration to the matter, that the present price condition is responsible indirectly for much of the trouble now being encountered. It is not indicated that some of the regions are getting more than they are entitled to, but it is asserted that those sections in which a thin vein of from 3 feet 6 inches to 3 feet 10 inches is found can not produce coal at the Government price at a profit. The operator has long been aware of this, and this knowledge has resulted in a loss of interest and effort. Then, again, when a flat price prevails in every section, without regard to quality or preparation, there is a very decided tendency to ship anything that will burn with all of the impurities in it as it comes from the mine, so that there is coal now going to market carrying anywhere from 20 to 30 per cent of refuse matter which has not heat value. This, as can be readily understood, requires car capacity in being transported to market, unnecessarily burdens the roads, and engine failures result from poor quality. Not only is this true of the railroad situation, but when a ship is loaded with coal as it comes from the mine and without preparation, that ship is carrying from 20 to 30 per cent of matter that has absolutely no value for steam-making purposes, but, as well, in the use of it, retards the speed of the ships many knots an hour. Many ships leaving to go through the U-boat zone are carrying coal from the use of which steam failures can very likely result. Such coal should be used in plants and establishments where a steam failure is not vital and material, but should never be used on ships, if possibly avoidable, where such engine failures may result in the loss of life and property.

If a transport is loaded with poor coal and is sailing with other transports loaded with good coal, all convoyed by battleships

properly coaled, the speed of the fleet is no greater than the speed of the slowest ship. Therefore if the battleships and the transports are able with their fuel to travel 15 knots an hour with the exception of one, which because of poor fuel can travel but 8 knots an hour, there is decided danger, to say nothing of a very decided delay under such conditions.

It therefore seems that ships should have the best grade of coal properly prepared, and that there should be some regard given to the distribution of these coals. All the good Pennsylvania coals which have been properly prepared should be subjected to steamship purposes and devoted to that end.

It was intimated some time ago that the Fuel Administration had under consideration advancing the price of the thin-vein coals produced in the Clearfield region of Pennsylvania, running from 3 feet 6 inches to 3 feet 10 inches in thickness, but notwithstanding the urging of the operators the Fuel Administrator is silent on the subject. In the meantime the operators are not proceeding with the improvements that will aid production, as they feel that they are entitled to that same measure of profit as is enjoyed by the producers of other basic commodities—copper, steel, iron, and so forth—and if these advances were made where they justly belong there is no question but that increased production would quickly follow. It is generally recognized by the consumers, both large and small, that the price set to-day for Clearfield coal is far short of what it ought to be. Indeed, they are willing to pay a very much higher price, but the operator is begging for this increased price that will permit him to make these improvements and produce the coal. However, the Fuel Administrator, Dr. Garfield, is standing obdurately between them and refuses to recognize the request of either party, and in pursuing this attitude he is assuming grave and serious responsibilities, retarding progress rather than speeding up what we are trying to accomplish. Under the prices fixed by Dr. Garfield there is a premium placed upon the production of poor coal. That is, the price is the same for all regions, all mines, and all qualities. The price of coal in the Clearfield region for 3 to 4 foot vein coal should not be less than \$3.50 per net ton, and there should be a premium paid for quality and preparation. The consumer will get a better grade of coal, do with less labor at his plant for firing, and the transportation lines be greatly relieved of carrying this large percentage of foreign matter that is noncombustible and which is so vitally affecting the motive power of the carrying lines owing to engine failures.

The weather conditions in this thin-vein region in the Clearfield territory have so affected mines there that I venture the opinion that for the past 10 days every pound of coal they have produced has cost them at least twice the price fixed by the Government. This is due to stoppages, interruptions on account of the weather, no cars, and so forth, and at the same time they had to meet their overhead and other fixed expenses.

It would, therefore, seem to me advisable that more care should be taken to select proper coal for our transports and warships, so that when they are loaded with precious cargoes of our soldier boys and foodstuffs that they be not delayed because of poor steaming coal, and also subject them to additional danger of attack by submarines because of being slowed down in the danger zone because of no steam caused by poor coal.

Mr. Speaker, I insert herewith an editorial from the Philadelphia Public Ledger of February 2, 1918, in support of my argument above set forth:

AMATEUR ADMINISTRATORS.

Congressman McFadden, of Pennsylvania, is right in pointing out that ill-advised and unscientific price fixing is largely the cause of the coal famine and that it goes back to the time when Secretary Baker overturned the Lane-Peabody agreement many months ago. Of course, the natural result of too great price curtailment was to discourage production. Indeed in the case of innumerable small mines, even down to the "wagon mines" supplying neighborhood towns, nothing was left them but to shut down entirely. Add to this the failure of the Government to recommend and even enforce coal hoarding during the hot weather and its incredible lack of foresight in wandering along without any comprehensive coal policy until finally jolted by disaster, there is thus completed a grotesque picture of how authority, without wisdom, knowledge, skill, and energy, can create artificial and gratuitous calamity.

Reflection upon the coal situation impresses the mind with the great danger of tampering with the operation of economic laws. In the modern world the crude working out of these laws must be mitigated in many ways for social betterment; but woe betide the nation if its authorities attempt to tamper with the free play of economic law unless they are armed in advance with the wisest and most highly perfected practical plans. Price fixing and profit limiting are as different as Government ownership and Government supervisory control. The limitation of profits and the supervisory control of many activities may be good for the Nation; but neither of them can be otherwise than disastrous if they are undertaken in a spirit of jaunty self-confidence rather than in prayerful reliance upon the earnest joint study of each problem by the minds best able to view it wisely from every angle. A bull in a china shop has the deft tread of a house cat in comparison to a cocksure theorist in a great industry.

Agricultural Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. CLEMENT C. DICKINSON,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 1, 1918.

Mr. DICKINSON. Mr. Speaker, I desire to briefly make some remarks regarding food production referred to in the report filed with this Agricultural bill, and now of such momentous importance to the country because of the food needs for this and next year. Never in the history of the Republic has the food condition been so acute as now. The abnormal conditions growing out of this world war call for increased production to meet the absolute necessities of our own country and of our allies in Europe, who are appealing to us for the surplus food products of the United States.

It is a tremendous task under present conditions to feed the millions here and abroad, who are dependent upon the farmers of this country for the very necessities of life. We must not only conserve but we must largely increase food production. The task of the farmer has not been an easy one, even in peace times. The constant drift for years past of the labor and the youth from the country districts to the great cities has made it difficult to secure the labor necessary to meet the ordinary demands of the farm in normal times; and now, when the world is at war and production elsewhere has enormously decreased because of the war demands for man power, the food surplus is not sufficient, and the supply must be increased to meet the demand that grows as this mighty struggle continues. Battles can not be fought and wars won without food.

Every Government machinery should be speeded up in aid of production, and wherever possible the labor to produce and garner the crops must be secured. The drift from the farm to the cities must be stayed and the farm must be favored in every reasonable way, so that there may be a larger surplus to meet home and foreign demands. The war will be won if food and transportation be furnished.

The two great questions to-day are labor and transportation. The production of food products and the saving of them must have the first thought of the Nation, and then it must reach every market, domestic and foreign. While the war lasts the productive agencies of the country must not be neglected. The country as a whole yielded abundantly last year; enormous crops resulted from the toil and industry of the farmer and favorable seasons, and yet the scarcity of labor has prevented the gathering of the great crops of grain grown and much loss has resulted. The lure of the cities and the call to arms have drained to an alarming extent the farms of the labor so necessary in this great world crisis.

We know already that a large crop is absolutely necessary for next year's demands.

Let all classes everywhere do their part. Let there be no idle hands anywhere. Let those who fight be fed, and those who fail to go to the front should help to supply the food needs of the Army. If a large part of the youth of the land is taken into the military service to defend the honor, integrity, and safety of our country and to save the liberty and civilization of the world, then let every dollar and every muscle everywhere do its full part to sustain our armies in the field.

The farmers in the Revolutionary and in every war have done their part to make glorious the history of our Republic, and I know they will do their full part in this great war, both in the active service of war and on their farms, fighting when necessary and furnishing food where needed. Let not the drain be too heavy, as labor is needed and is being drafted to meet every demand of the war. Let the Government see to it that the demands of the farm be reasonably and amply met, to the end that the strength of the Nation may not be weakened by a failure to properly safeguard the productive capacity of Mother Earth, without whose kindly aid the war can not be won, and, if neglected, defeat will surely come.

If liberty and civilization be saved to the world, it must come by the aid of the farm as well as the factory. The life and strength of the nations banded together for safety must be preserved. Arms and munitions of war we will have in abundance, but well-fed man power we must have, and food and transportation must be provided to meet every demand, and thus make sure and certain that victory that must come if justice and right are to prevail.

Food will not be cheap while the demand is as great as now. The great law of supply and demand will continue to fix prices, influenced in a measure by other agencies. An enlarged per capita of money makes cheap money as a purchasing agent. Corn will never be used again as fuel in the West, but with improved transportation facilities will help feed the world and command in the market a higher price than heretofore. All that a farmer raises must bring good prices, for the demand is great and labor cost is high.

It is believed that under the new draft regulations the farmers of the country will find their supply of labor much less drawn upon than under the first draft. "Necessary skilled farm labor in necessary agricultural enterprise" is now found in class II, a class not liable to be called into service for some time, if at all. I hope that "necessary skilled farm labor" will be at least as liberally construed as "necessary skilled industrial labor," so as to save food production all the labor to which the farm may properly be entitled.

Second to none is the transportation question. To produce large crops and then not be able to send the surplus products to the domestic and foreign markets makes a most serious condition for the country. The demands of commerce have not been met by the carriers of the country. The railroads, in a large measure, have broken down. The Government has been compelled to take control, at least during the war. The failure to furnish cars for shipment of farm products has been in many instances criminal neglect. There is car shortage, and more rolling stock should be provided as rapidly as possible.

The conduct of those in control of the great railroads has been an outrage upon the public, causing enormous losses, because transportation was not furnished when demanded. The shipping public is entitled to relief, and if private ownership of the great public carriers will not more readily respond to the just demands of the public there will be an increasing demand for public ownership of railroads and all public utilities.

The Government is calling loudly for increased production, and those who respond to this call will demand that their surplus products be taken to the market and handled with expedition, so as to prevent unnecessary loss. More cars are needed to carry from the farm and factory these products, and more ships to carry abroad the surplus to meet foreign demands, and put an end to the congestion that comes from want of cars and ships.

The arteries of commerce must be kept open and every energy of the Government must be directed to avoid the mistakes and criminal neglects of the past, so that just complaints may not be heard throughout the land. Solve the labor and transportation questions and all other questions will be easily handled. Solve these questions and the other problems of government will find ready solution. Solve the two great questions and contentment will be found, when otherwise discontent and complaint will abound.

When the sacrifices of the war have ended and normal conditions come again we can better solve many questions now difficult of solution because of present disturbed and abnormal conditions in almost every line of business.

It is the duty of the Government to use every agency to meet the reasonable demands of the toiling public, and I hope that conditions will so improve that in the early future there will be less cause for complaint. The public, however, must understand, and does know, that these are abnormal times and that while the war lasts the burden to be borne is a heavy one, and many delays and inconveniences must be suffered and losses sustained, for the demands upon Government agencies are enormously great and patience and endurance must respond to the necessities of war.

Let us put aside all harsh criticism of those who are doing the best they can under great difficulties. There is no perfection in human life—such is the teaching of Holy Writ and known to all men—and it is natural to criticize public officials in high or low degree; but when criticism is due, let it be just and friendly criticism in the interest of improved conditions. Harsh, bitter, and unjust criticism in these times of stress and mighty effort is criminal. Mistakes will be made of necessity when haste is required. Criticism is a great weapon; properly exercised it may help, but when improperly and unjustly done may do great harm and will help to break down every effort of accomplishment. The dastardly strike from behind by the hand of a supposed friend may cause greater harm and disaster than the onslaught of the enemy on the front of battle.

We ask for no hero worship in this Republic of ours, but we ask and have a right to demand justice and loyal support of every honest effort made for the accomplishment of a great end. Let politics and partisan speeches be thrust aside while this war lasts. And while our sons risk all in the service of their country let us not wrangle unduly over mere party preferment.

Put country first and win this war by united effort and postpone politics until success has come and peace been restored.

The hardships that come in these abnormal times fall most heavily upon those who are sacrificing the most by giving their service to their country, taking the chances of life and death in defense of the honor and integrity and life of the Nation. Let us have cheer and courage and patriotic confidence in the final success that must come from the united effort of a patriotic Nation. A great character is at the head of affairs. The power of the Nation is centered in the Chief Executive whom you have elevated to power. He is your President, and he is the head of the Army and the Navy. You have trusted him with this great power; now help sustain him by energy and sympathetic utterance. Add to his courage and strength by giving him the united support of the hundred millions of our great Republic. Remember that the eyes of the world are on our Chief Executive. To-day he holds aloft the torch of liberty, and to his strong hand and courageous heart the lovers of freedom everywhere look with hope and confidence. The successful efforts of this strong man rest upon the sustaining power of this mightiest Republic of all time. The country trusts him; and we will not fail in this war if the full power of all the people backs the courageous efforts of our great President, Woodrow Wilson.

A dark page of history is being written and a black record of dastardly deeds thrust upon the world to satisfy the greed of an ambitious and unscrupulous military despotism, seeking power and domination over the civilized world. Against this cruel military power this war must be won on land and sea. When victory comes to our arms and allies, a lasting peace will be our heritage; without victory will come sorrow and degradation.

The Coal Situation.

EXTENSION OF REMARKS

OF

HON. CALEB POWERS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 5, 1918.

Mr. POWERS. Mr. Speaker, on August 1, last year, when the bill authorizing the President to fix the price of coal and, if he saw proper to do it, to commandeer the labor of miners and the coal plants of operators was before this House for consideration, I said in a speech:

Why, the President has got the power to take over the coal mines and all the coal of the country. My understanding is, as I gather from the public press, that it is the purpose of the President to fix a uniform price of coal at the mouth of the mine. He expects thereby, it is said, to solve the high price of coal to the ultimate consumer, to increase the output of the mines, to greatly strengthen our national defense, and to bring unalloyed relief and joy to the citizenry of the entire country, save and except the operators themselves. Delusive dreams, Mr. President, delusive dreams! Judging from the statements in the public press, the President has said that \$1.50 per ton ought to be the price of coal at the mouth of the mine. I want to say this, that if the President of the United States fixes a uniform price of coal at the mouth of the mine at \$1.50 per ton, or anything akin to that price, I predict for this country the greatest calamity that it has ever had. Such a course will put the operators of small veins of coal and many small operators out of business, if not many larger ones. The small operators produce about 50 per cent of the entire output. What will this country do with its output of coal reduced 50 per cent? The production of coal is the crying need of the hour. While the price of coal ought to be reduced, the production of it is the real demand of the times; and you can get more milk by feeding the cow than you can by twisting her tail.

What will become of this country from the standpoint of the home user of coal? What will become of it industrially, what will become of it in the conduct of the war, if such action is taken here as will materially reduce the output of coal? Out of 300 working days the mines ran last year but 230. By permitting them to run at their full capacity 259 days this year they will produce enough coal to supply the needs of this country generally and the needs of the allies in the conduct of the war. But you have got to permit them to run. The operators have got to have men and they have got to have cars. They have got to have such a price for their coal as will permit them to operate. Fix the price of coal at \$1.50 per ton at the mouth of the mine! Does the President propose to fix the same price for all the mines, not taking into account the quality of coal, not taking into account the thickness of the vein, not taking into account the labor conditions? Is the price going to be uniformly fixed? If so, the plan is already doomed to failure.

No remedy will be effective that does not include constant employment to labor and at fair wages, maximum production of all equipped mines, fair profits to all mine owners, and prompt, equitable, and economical distribution to all consumers, both domestic and industrial.

How do you expect and how does the President expect to solve the coal problem by merely fixing a price on coal? This bill does not attempt to solve the problem of transportation, yet the coal problem can not be solved without it. My district is rich in coal. My constituents

are vitally interested in the coal provisions of this bill; the operators are interested; the miners are interested; the farmers are interested; my district generally is interested; and I shall vote against any conference report that treats unfairly the constituency I have the honor to represent. [Applause.]

All the things I predicted in my speech last August have come true. My position has been completely vindicated. The President fixed a uniform price of coal at the mouth of the mines at \$1.95 per ton. The operators of small veins of coal went out of business; their labor was turned out of employment; production ceased. Later the Fuel Administrator, seeing his mistake, raised the price, but not until unreparable injury had been done. To-day the country is short 50,000,000 tons of coal by reason of the inexcusable blunders of the Wilson administration. They said that the fixing of the price of coal by the President would lower the price to the ultimate consumer. Upon the contrary, the price has gone up. They said it would greatly stimulate production. Upon the contrary, production has greatly decreased. Says Leslie's Magazine:

Our disappointing experience with coal is that price fixing has decreased rather than increased production.

Many months ago I told this House that that would be the result. The fact is that there is such a shortage of coal that Dr. Garfield, the Fuel Administrator, issued an order a few days ago forbidding the use of coal for a certain period by practically all industries east of the Mississippi River, and, according to the Washington Post, "industrial paralysis descended upon the country."

The New York Herald, in commenting upon the order, said:

We can not imagine what Mr. Garfield was thinking of when he issued this order, nor can we understand why President Wilson permitted him to issue it. The order in itself is a confession of incompetency. There can be no more damning indictment of a Fuel Administrator than the wholesale suspension of industry on account of a temporary shortage of coal in a country that has more coal than any other.

The Washington Post said editorially:

The fatal error of fixing the price of production too low can not be wholly overcome, but production can be greatly and quickly increased, nevertheless, and it is the duty of the Government to stimulate production in this crisis.

It was a foolish order on the part of the Fuel Administrator closing up the business houses of the country and shutting down its industries on account of the shortage of coal.

The Fuel Administrator ought to know that the thing we need is the production of more coal, including, of course, transportation.

I said in a speech here last August: "The production of coal is the crying need of the hour—the real demand of the times," and that "no remedy will be effective that does not include constant employment to labor at fair wages, maximum production of all equipped mines, fair profits to mine owners, and prompt, equitable, and economic distribution to all consumers, both domestic and industrial."

This tells the story in a nutshell, and if the Fuel Administrator and President Wilson will turn their minds to these things instead of closing down the industries of the country, which means a loss of hundreds of millions of dollars in wages and in products, besides a calamitous demoralization of our industrial needs and developments, this country will be better off and the people will no longer be freezing and starving to death by the thousands on account of the lack of wages, the lack of coal, and high prices generally, which the widely advertised and much-praised food-control bill and law has utterly failed to bring down. The days of Democracy are numbered.

Liberty Loan.

Address delivered at the Citizens Opera House, Defiance, Ohio, October 10, 1917, by Mr. J. A. Deindoerfer, editor of the Herald (German), Defiance, Ohio.

EXTENSION OF REMARKS

OF

HON. JOHN S. SNOOK,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 6, 1918.

Mr. SNOOK. Mr. Speaker, during the two liberty-loan campaigns* very many patriotic speeches were made by the citizens of the country. Among the many delivered, I wish, under the leave granted me, to have printed one made by Mr. Deindoerfer. This speech shows a very high spirit of patriotism and confirms what I have always contended, that a large majority of Americans of foreign birth or parentage are as loyal as native citizens, and, as Mr. Deindoerfer puts it, "They will not permit

any American to love this country more than they do. They will not evade any sacrifice or fail to render any assistance required by this Government to bring this war to a successful termination as speedily as possible."

[The address by Mr. J. A. Deindoerfer, delivered at Citizens Opera House, Defiance, Ohio, Wednesday evening, Oct. 10, 1917, on the second liberty loan.]

It is needless to say that I am glad to be with you on this auspicious occasion—glad because I believe it is the duty of every American citizen in these troublous times to lift his voice in admonition, exhortation, and encouragement—glad also because of the opportunity it affords me to talk especially to those with whom I have been intimately acquainted for many years—the members of my newspaper family—men and women who have been accustomed to call on me for advice for years; who have never appealed to me in vain; whose sorrows and joys I have shared; whose confidence I am proud to possess, and whom I hold in the highest esteem. So, when the liberty loan committee honored me by an invitation, I gave them my acquiescence without a moment's hesitation. It is but just to you and to myself to mention that while the conflict concerned only foreign nations, my sympathies naturally were with the land of my forefathers. But from the moment which announced the severance of diplomatic relations between the United States and Germany, my decision was made, and it is irrevocable.

I am an American by birth. What I am and have I owe to this country. I am in honor bound to place what I am and what I have at the disposal of my country. I know only one flag—Old Glory, the emblem of liberty, justice, and equality. I owe allegiance and render homage to no government save and except that of the United States.

THIS IS MY HOME, MY ONLY HOME.

No man can serve two masters. This was written over 2,000 years ago, and stands as firmly now for our guidance. And so it may stand unchallenged and undeniable that no man can be loyal to this country and claim to be an American, while at the same time aiding and abetting her enemies, no matter who and where they may be.

I want to address myself especially for a few moments to all those of foreign birth in this audience. Not that I in the least doubt their loyalty and patriotism, but to give them my views on the duties we owe this the country of our adoption. This is not the time to discuss the question whether this war could have been avoided, for us or any one who really has the interest of his country at heart. We are at war, and our plain duty is to stand by our country in her time of need, as she stood by us in our hours of need and offered us shelter and a home when we bade farewell to the old fatherland. Safety first should be our motto. If a man rocks a boat and the occupants are floundering in the water staring death in the face—a fool the man who would stop to argue the point whether the accident could have been avoided. Or if a house is being destroyed by fire no man with judgment and good sense would stop to ascertain the cause. His first duty is to save, to assist, to prevent loss of life and property. And so in the crisis before us our duty is to assist, to do our bit along every line suggested by those whom we ourselves have intrusted with the guidance of the ship of state. In the words of the immortal Grover Cleveland: "This is no longer a theory but a condition, an appalling fact." And we must meet it with fortitude, with a firmness of purpose and an earnest determination to do our full share to achieve success. And judging the future from the past, we will not fail of our duty. Our citizens of foreign birth have never failed to do their full duty, and they will not fail now.

From the day when Baron von Steuben took charge of the tattered and torn and discouraged army of Washington, reorganized them and instilled into them the fighting spirit which made our independence possible; from the time when Pastor Mühlberg, after an eloquently patriotic sermon, cast aside his clerical robe and stood before his congregation in the uniform of a soldier ready to lead a company to conflict and victory; from that time on down through all the pages of our history covering more than a century, the men of foreign birth have vied with those of native birth in deeds of patriotism, loyalty, and heroism. And in times of peace as well, in prosperity and adversity, they have been true to the land of their adoption and left their mark in every walk of life on the pages of the history of our country. We have given this country statesmen and generals of eminence, scientists, inventors, captains of industry, men versed in pedagogy, artisans, and hundreds of thousands, yes, millions of successful tillers of the soil. Northwestern Ohio, our home in a local sense, is largely populated by people of foreign birth. We came here of our own choice—some to escape militarism, some to avoid political persecution, some to find religious liberty—all to better their condition. And we were not disappointed. True, we found swamps festering with miasmatic poisons and almost impenetrable forests. But with keen foresight they saw visions of great possibilities, of a grand future. They were received with open arms. We were given a place equal in rights and privileges with every son of native birth. We went to work with a will. Oh, the hardships, the privations we had to endure. But as time rolled on the swamps were drained and the forests felled. The ox cart gave way to the farm wagon, the farm wagon was relieved by the buggy and the surrey, and now the automobile holds full sway. The log hut of half a century ago is a mere memory. Handsome structures with modern conveniences and up-to-date sanitary conditions stud the beautiful landscape. The erstwhile wilderness has been converted into a veritable paradise. Nothing is lacking to make life worth while. Schools and churches everywhere are living witnesses of a progressive and God-fearing populace. We men of foreign birth have been honored by high offices, we sit in the councils of our fellowmen, we are honored and respected as our conduct merits. Thousands of us are wealthy beyond our fondest expectation at the time of our arrival in this land of promise. Every man is a king in his own domain. Truly, friends, we have not been disappointed in this the land of the free and the home of the brave. True, we have worked for all we have. We have toiled early and late, we have applied that frugality and tenacity which is characteristic of our race. But the opportunities offered us were characteristic of the country of our adoption. And I say without fear of successful contradiction that in the land of our birth we could never have achieved and accomplished for ourselves and our children what we are proud to call our own to-day.

And now, after we have, for lo! these many years, shared alike with all Americans the manifold blessings of this country and our system of government, and we are asked to assume an equal share of the responsibilities, of the burdens, are we going to hesitate? Are we going to be found ingrates? Shall it be said of us that we failed of coming up to our full measure and the accepted standard of good citizenship?

I SAY NO! A THOUSAND TIMES, NO!

This is a matter of duty and honor, and honor and duty have always been held in high esteem by us. We have taken the oath of allegiance of our own volition. It is a home we sought, and we have found it in all that the word implies. We said with the poet:

We need not power nor splendor,
Wide hall or lordly dome.
The good, the true, the tender—
They form the wealth of home.

We have found all this and more. Our pledge of allegiance must and will be inviolate.

Friends, I am firmly convinced the American of foreign birth will be fully mindful of his obligations. He will come over with clean hands and with a heart full of fervent love for his new home, the home of his children, ready to make any sacrifice needed to preserve this his and your home.

We will not permit any American to love this country more than do we.

We will not evade any sacrifice or fail to render any assistance required by this Government to bring this war to a successful termination as speedily as possible.

We are just as eager as any good citizen that our children should enjoy the priceless, countless benefits of a permanent world peace.

Listen! Germany was our mother—America is our bride, whom we have promised to love and cherish and protect with the last breath of life and drop of blood, with whom we share the joys and sorrows of life's journey, to whom we are joined by bonds which only death shall sever. Fond memories oftentimes carry us back to the days of our childhood, when mother was our only haven of comfort, of refuge, of solace, of rest. Do not chide us for this. Show me a man who does not cherish his mother's memory, and I will show you a man without a spark of love for his wife. Show me a man who curses the land of his birth, the people of his own flesh and blood, and I will show you a man who is either a fugitive from justice in the land of his birth or utterly devoid of loyalty to anybody or anything. But, my friends, if there must be a parting of the way, if a man must needs decide between his mother and the wife of his bosom for good and sufficient reasons, then the bride must win the day. For us the day of parting has come and the verdict is:

America alone and forever for all Americans—no matter where their cradle may have stood—no matter of what nationality their parentage. Our every effort, all we are and possess, we lay at the feet of our country if her existence is in jeopardy.

And this time, friends, is now. Our boys are enlisted in the war for a universal democratic form of government—a government of the people, by the people, and for the people.

Our women and girls are engaged in Red Cross work and the manifold and various other activities made necessary and imperative by actual warfare.

All of us are asked, at this the inauguration of a campaign for the second Liberty loan, to come to the financial aid and assistance of our Government.

Every war in which this country has engaged was for a higher ideal. The first great war we made for liberty was a success, because it was just. The second great war was waged to maintain a Union inseparable, which was threatened because we had wiped from our flag the stain of slavery. Passing over the wars of minor importance, this the present war is being fought for the perpetuation and universalization of our democratic form of government—a government of the people against autocracy and a government by force of arms. To win this war, to accomplish this purpose, to further and perpetuate these high ideals, this country needs money. A great general once said:

"Three things are essential and absolutely necessary in warfare: First, money; secondly, more money; and, thirdly, much more money."

Our Government needs money for the equipment of the men under arms, for ammunition, for ships, for food and clothing, and for innumerable other things. Part of this money is raised by taxation—by a war tax on profits, incomes, spirits, tobacco, and many other articles.

And then, again, the Government comes to us, her children, who claim to be loyal and patriotic, and asks us for a loan. An application for such a loan in the amount of \$2,000,000,000 and bearing 3½ per cent interest was made to the American people several months ago. We responded nobly and offered the Government \$1,000,000,000 more, or, to be exact, 52 per cent more than was required at that time. Over 4,000,000 people subscribed to this loan, 3,960,000 of them in smaller amounts. Of this loan Defiance County subscribed for over \$350,000.

A second application for a loan is now made to the people of this country. This time the call is for \$3,000,000,000 and at a rate of 4 per cent interest. It would be perhaps an easy matter to raise the entire amount required in a few of the larger cities, but our Government desires that as many people as possible participate, reasoning that as a man's financial interests lie so will the trend of his activities be. "A bond in every home" is the slogan in this campaign.

These new bonds are issued in denominations of \$50, \$100, \$500, \$1,000, \$5,000, and \$10,000 for coupon bonds and in denominations of \$50,000 and \$100,000 for registered bonds. They bear interest payable semiannually from the 15th of November, 1917. These bonds are due on November 15, 1942, and are redeemable at the option of the United States at par and accrued interest on and after November 15, 1927. In subscribing for bonds you are required to pay 2 per cent at the time your subscription is made, 18 per cent on November 15, 1917, 40 per cent on December 15, 1917, and the remaining 40 per cent on January 15, 1918. These bonds are entirely exempt from State and local taxation, except inheritance tax, and exempt from income tax, excess profits and war profit tax up to \$5,000. This makes them equal to an investment bearing from 5 to 5½ per cent interest, according to the rate of taxation in the respective tax district and the honesty of the investor.

Our Government does not come to us for a donation for a selfish and questionable purpose; it offers us an opportunity to make it a loan in the furtherance of a high and lofty ideal. Everyone who can should respond. This should be done as a matter of loyalty, as a matter of duty, and should be esteemed a privilege.

As a matter of loyalty, because the bond issue is in the interest and for the benefit of a country we profess to love.

As a matter of duty, because we have sworn to obey the laws of our country, and the bond issue is authorized and made lawful by act of Congress, representing the people.

As a matter of privilege, because we should be glad to give at least a little in return for the many good things we have received, and especially also because of the repeated avowal of our administration that a furtherance of the high ideals represented in our form of government is the real issue.

Are these bonds good? we are often asked. We ask: Do you think your Government is good? Did you ever hear of a Government bond of the United States going begging or being repudiated? These bonds are a mortgage on the United States representing a money value of perhaps \$300,000,000,000. The bonds are a better investment than the money of our country, because they are, as set forth above, practically exempt from taxation, while money is not. Bonds draw interest, and money draws taxes. Both money and bonds fall and fall with your Government. And this Government will endure so long as there are men and women good and true, willing and ready and eager to sacrifice time, money, and, if needs be, life itself for its maintenance.

You may subscribe at any of the local financial institutions for a Liberty bond. You may, if you can not meet the payments exacted by the Treasury Department, pay down such an amount as you have at your command and arrange to pay the balance in weekly or monthly installments. In this way we can all do our bit and at the same time lay up for ourselves and our children a sum of money, safe and bearing a good rate of interest.

Defiance County's quota of these bonds is, as I understand it, \$400,000. We have just recently raised \$100,000 for a college endowment fund—a very laudable and commendable thing. Within four days \$300,000 were subscribed in Defiance for a new industrial enterprise. Let us analyze briefly just what \$400,000 means from our county. We have 6,500 voters in this county. If every voter in the county subscribed but one bond of \$50, we would have \$325,000 and be within hearing and seeing distance of the goal. A conservative estimate of the property in Defiance County, both real and personal, calls for \$40,000,000. How much of this does our Government want to borrow? Just 1 per cent. One per cent is all. Is there an American with red blood in his veins who would not be willing to give his country a measly 1 per cent of his earthly possessions at this time of such momentous crisis? I believe not. How much more ready and willing, then, should we be to lend our Government such a mere bagatelle on an absolutely secure and very profitable proposition like the Liberty bond? The mere announcement ought to suffice to bring forth more than enough to cover the call.

Friends, \$3,000,000,000 subscribed now means more to our country than a great battle won on the field of carnage. And, on the other hand, the life of one single American boy means more to his mother than \$3,000,000,000. So, I say, let Defiance County do her full share. It will not be a hardship on anyone, if I read the reports of the financial institutions correctly. Buy a Liberty bond. Not because you hate Germany, but because you love America; because you want to see our institutions endure so long as this world shall last; because you want the world to enjoy liberty and to attain all the benefits of self-government.

Friends, in conclusion, let me say: I can see, as in a vision, much good resultant from this conflict. To me it seems that it must mean a return from the sodden and crass materialism, selfishness, self-sufficiency, and disregard of the duties we owe one another to a full realization of our individual duties to our country, to our fellowmen, and to our God. Many of us have learned in the last few months fraught with so much unrest and anxiety to look upon the words, "Nearer, my God, to Thee" and "I need Thee every hour" with different eyes and to meditate upon them with different mind and heart. The words,

"So long Thy power hath blessed me, sure it still will lead me on
O'er moor and fen, o'er crag and torrent, till the night is gone,"

have gained for many of us who have been thoughtless and frivolous a wonderful and uplifting significance.

And while order is being wrought from the chaos which is engulfing the world, it is mete and proper that we all in this Christian land lift up your eyes to the mountains from whence succor cometh and send forth in these trying hours of darkness and uncertainty this fervent supplication:

"Abide with me! Fast falls the eventide,
The darkness deepens; Lord, with me abide!
When other helpers fail and comforts flee,
Help of the helpless, oh! abide with me."

Conscription of Aliens.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 6, 1918,

On the bill (H. R. 5667) to provide for the deportation of certain aliens, and for other purposes.

Mr. LONERGAN. Mr. Speaker, I voted to suspend Calendar Wednesday so as to give the Department of State opportunity to complete its negotiations with our cobelligerents. But as the House has voted in the negative and further voted to consider the pending act, I feel obliged to support it when amended, notwithstanding the fact that I regret we did not postpone action until February 27, as requested by the gentleman from Virginia [Mr. Flood]. I hope that the pending treaty negotiations will be completed during the present month. We ought not to violate existing treaties; they are sacred obligations of our country. The pending act should contain no provision that could be construed as violative of any treaty agreement of the United States.

All Connecticut, and particularly Hartford County, is intensely interested in the proposed measure, for it vitally affects the whole State, and especially the industrial centers.

I quote from my remarks in the CONGRESSIONAL RECORD of October 2 last:

"Mr. Speaker, when I cite the official statistics in the office of the Provost Marshal General of the Army as showing that of the 159,955 registered on June 5 in Connecticut under the selective-conscription law 58,631 were aliens, I think the reason for my remarks on so important a subject as the conscription of aliens is immediately clear. It must also be borne in mind that these 58,631, while classified as aliens, do not include aliens who have taken out their first citizenship papers, and who, if they insist, are exempted from military duty with our troops under existing treaties between the United States and the respective mother country of the different men. With 36.6 per cent of the total men of registered age exempt legally and a probable addition of several per cent exempt by insisting on treaty rights, we have at once a condition wherein nearly half the total registered men of the State are beyond the law. The corollary is that American citizens are doing twice their share. Where one American citizen should be marching into camp side by side with one foreign-born resident, who perhaps has long enjoyed the hospitality of this land, two Americans are actually going into camp, leaving the alien behind to smile, to enjoy the high wages necessarily following on manufacturing prosperity, to hold the positions from which the citizenry has been called.

The unfairness of this is too manifest to need proof. Connecticut is an industrial State. Which brings me directly to another feature of the draft not to be passed over in silence. I note that the estimated population of the State, on which the quota of 18,817 men was established, is placed at 1,719,623. If there are 1,719,623 people in Connecticut to-day, 300,000 of them are located where no one but the man who estimated that population can find them. The governor of the State can not ascertain their whereabouts. The mayors of the different cities do not know where they are. The State council of defense never heard of them. They were not around a few months before, when an official State census of men able to bear arms was taken. Hartford, my home town, and the capital of the State, is credited with 180,697 inhabitants, while the whole city knows that if we had more than 150,000 we would declare a legal holiday and celebrate. New Britain, the second largest city in the district which I have the honor to represent, is credited with 76,942, but as much as the proud residents would like to have it so, modestly they must admit they are several thousand below that figure. So it is in all industrial centers.

While all this is looking toward the future, something must be done now. Drafting the alien, while it will not correct any overestimates of population, will make more equitable the obligation to service. It will relieve the drain on American manhood. It will bring home most quickly to the stranger within our gates that if the blessings of our democracy are invaluable in times of peace, the duty one owes that democracy is all important in war. It will, moreover, be a strong assurance to the foreign-born already-made citizens that their neighbors by neglecting citizenship are not by this neglect to be encouraged to become slackers.

The country is on the eve of another draft.

Connecticut stands ready, as she has always, to contribute her fair share in men and treasure to the cause of sustaining our rights as a Nation. But she does insist, and insist most emphatically, that her citizenry shall not be called upon to send their own quotas to the colors, and then add to this number, while "alien slackers"—owing, we might say, allegiance to no flag, no land—stand by and make of the war an opportunity for their own aggrandizement. This war must be fought to victory. The troops in the field must be sustained by the men at home, and the whole war machinery can be effective only so long as public opinion is with our leaders.

Public opinion will be with our leaders only so long as the law demands that every man, whether our country is his by birth, adoption, or habitation, does his duty.

This country can not too quickly take action that will make aliens of conscript age liable to military service.

Let us hasten the day.

Supply of Print Paper.

SPEECH

OF

HON. WILLIAM H. KING,
OF UTAH.

IN THE SENATE OF THE UNITED STATES,

Tuesday, January 15, 1918.

The Senate had under consideration the joint resolution (S. J. Res. 101) to provide further for the national security and defense by insuring to the Government of the United States an adequate supply of paper at a fair price and by insuring a supply and equitable distribution at fair prices to the industries of the United States.

MR. KING. Mr. President, I am opposed to the joint resolution under consideration, not only to the procedural features of the same but to the fundamental principles upon which it rests. The resolution declares that a state of war exists and that in order to provide for the national security and defense this legislation is required. I shall, before concluding my re-

marks, analyze some of the provisions of the resolution. At this point I will content myself by saying that the salient provisions of the resolution are that the President may direct the Federal Trade Commission to supervise, control, and regulate the production and distribution of print paper and mechanical and chemical pulp and their products, and that all mills producing, and all agencies distributing, such paper and pulp, together with their products, shall be "operated on Government account." The resolution further provides that the products of the mills shall be pooled in the hands of the Trade Commission and distributed at a price based upon cost of production and distribution, plus a fair profit to be determined by such commission. In other words, the executive department of the Federal Government enters into a field of private activity and undertakes to conduct business enterprises which are peculiarly within the province of private endeavor. The Government under this resolution goes into the States, nullifies State laws, takes from individuals their business plants, and their capital, disregards the vested rights of individuals, and enters into the domain of industrial enterprise heretofore and now occupied by private individuals. Because some fancied or real evil exists in the production and distribution of print paper, we are to pass an unconstitutional law, constitute the Government a business proprietor and supervisor, destroy private initiative and endeavor, deprive individuals of the control of their property and business enterprises, constitute the Government a stupendous paternalistic autocracy, and set the compass of our industrial and national life in the direction of undisguised State socialism. The Senator from Illinois [Mr. SHERMAN], in his strong and forceful address in opposition to this resolution, challenged attention to the present unmistakable tendencies toward a powerful consolidated Government; and to the dangerous policies, governmental and economic, which are being zealously supported in many quarters, the adoption of which will result in an oppressive bureaucracy, to the irreparable hurt of our industrial and political life, or in a corroding, enervating socialism, which will destroy alike Governments, State and National, and the glory and pride of American manhood.

To those who regard the Federal Constitution as a living and vital instrument, and who regard the States as indestructible sovereignties intrusted with great powers for the domestic peace, tranquillity, and general welfare and happiness of the people, some of the legislation enacted by Congress in later years, and much that is proposed since this great world conflagration was started, can not be viewed other than with profound regret, accompanied at times with a spirit of irritation. In this hour forces are knocking at the doors of Congress; demanding legislation which is destructive of individualism, and is in direct contravention of the rights of the people and the States and violative of the Federal Charter.

And in many quarters influences are at work for the aggrandizement of the executive branches of the Government and in total disregard of the limits prescribed by the organic law. Strange and unfamiliar cries are heard in the land, and voices tumultuous and incoherent beat the air, crying for regulations, laws, executive orders, decrees, and edicts, which, it is contended, will cure all evils, real or imaginary, supposed to exist in the industrial, social, and political life of the people.

I conceive it to be the solemn duty of those who have subscribed an oath to support and defend the Constitution of the United States to examine with greater caution than ever before the propositions submitted for their consideration and to scrutinize with quickened conscience every measure affecting the Nation and the welfare of the people. This is not a time for hysterical outbursts in legislative halls, nor for the enactment of laws of questionable character or of doubtful constitutionality. One great judge stated that whenever there was any doubt as to the validity of a proposed enactment it should not be passed. It is almost axiomatic that in periods of stress and in a great national crisis, or when some stupendous war overshadows the people, unwise and dangerous legislation is proposed and often enacted, and safeguards that have been erected to preserve the rights of the people are forgotten and usurpations and governmental infringements are often suggested, and not infrequently occur. Almost every wild, visionary, and extravagant scheme is justified as a war measure. And a mighty contest such as that in which our Nation is engaged, where not only our rights and liberties are involved, but the rights and liberties of other nations are at stake and the life of civilization itself is threatened, is calculated to divert attention from the ideals and high principles of morality and justice which lie at the base of free government.

The American people, inspired with the highest patriotism and eager to bring this war to a triumphant and victorious conclusion, may not always, with that cool and dispassionate

judgment which guides them in normal times, analyze the multitudinous measures proposed or ascertain the motives behind some of the movements appearing in the political or economic life of the people.

And so dreamers and schemers struggle in the conflicting waves of our daily activities, striving to realize success for their projects. In such periods as this the lamp of experience is too often flung by the wayside, its light extinguished. The precepts and commandments of sages and prophets are read with dull ears and deadened perceptions. We forget the words of a great judge who said, "Let us never forget that our constitutions of government are solemn instruments, addressed to the common sense of the people and designed to fix and perpetuate their rights and their liberties. They are not to be frittered away to please the demagogues of the day. They are not to be violated to gratify the ambition of political leaders. They are to speak in the same voice now and forever. They are of no man's private interpretation. They are ordained by the will of the people and can be changed only by the sovereign command of the people."

This malady of which I am speaking affects all sections of our country and disturbs the normal condition of many people. Of course, those who do not believe in "a government of law rather than a government of men" welcome assaults upon the citadels of our liberties and upon all constitutional guaranties.

The extreme socialists, those who would make the Government a stupendous industrial machine, and who advocate that it shall own and control properties and industries, acclaim this is the hour for the consummation of their purposes and the realization of their dreams. Those who do not believe in orderly development and in the slow but constant growth of the social organism, seek the destruction of our institutional life and those formulas upon which a true democratic government rests.

There are many who forget "that the greatest problem of men in all history has been the question how to secure both government and liberty; how to preserve order without suppression of the individual; how to promote common good without depriving the individual of initiative; how to weld men into mass, into a new and higher order, without destroying personal identity—that problem in its most serious sense is ours."

Governments and institutions do not spring full panoplied from society and struggling humanity. Philosophy proves the universality of law—a progressive evolution that finds expression in the social, industrial, and political world. Truth abstract, absolute truth, no doubt is self-existent, eternal. The great spiritual truths that come from God rise above these evolutionary forms of development and growth of which I am speaking, but the great ethical and moral principles and truths which have led humanity from darkness into light have not been comprehended in part nor in their fullness in any one generation or in the life of any one nation. Humanity is not static, and governments must conform to the inexorable law of evolution. There are atavistic recurrences among nations. There is often painful retrogression. There are frightful convulsions, the result of ignorance or sinister and diabolical purposes, which often overwhelm and apparently destroy the forces that are propelling humanity forward; but when the sulphurous smoke of the conflict is cleared away it will be found that the general level, the mean level, of the moral forces of the world has slightly risen. This Republic is the product of civil and religious evolutionary development. It possesses seeds of progress and perpetuity. As the common law founded upon the principles of justice and individual liberty and freedom is a great ocean from which the English peoples have drawn inspiration to enable them to meet the changing conditions in the world, so our Constitution and the great principles upon which our institutions, the sovereign States, and the Nation itself rest possess those enduring and flexible and expanding qualities that will prove adequate to meet whatever mutations are encountered or whatever economic or world-wide changes may occur.

Lincoln, in his first inaugural address, said that "in contemplation of the universal law and of the Constitution the Union of these States is perpetual. Perpetuity is implied, if not expressed, in the fundamental law of all national governments. It is safe to assert that no government proper ever had a provision in its organic law for its own termination. Continue to execute all the express provisions of our National Constitution and the Union will endure forever, it being impossible to destroy it except by some action not provided for in the instrument itself."

I referred to the irrational and at times destructive measures proposed and the efforts to pervert our form of government from the sure foundation upon which it rests. We read of

organizations being formed in order to influence Congress to enact legislation that can not be supported in morals or in law. The executive department of the Government is importuned by multitudes to formulate regulations and promulgate rules and decrees for which there is no legislative authority and which if carried into effect would be destructive of our form of government, and appeals are made to the legislative branch of our Government to enact laws which would invade the rights of the States, paralyze individual initiative, and convert this Government of sovereign States into a centralized power. Temporary expediency, fancied immediate benefits, evils more or less acute, conditions natural to human institutions and the best form of government—these are regarded as the justification for the unreasonable, extraordinary, and unconstitutional demands so often made upon the Federal Government.

It would seem that many of the American people have forgotten the history of the past and the struggles out of which emerged this splendid Republic. Tyranny and oppression, darkness and ignorance, have always been the foes to progress. Heroic men have now and then struggled against the oppressions and the tyrannies of governments, and through the sepulchre of martyrdom they have advanced slowly but with certainty the cause of freedom.

Herbert Spencer, in one of his great works, refers to the progress which has been made toward liberty and right. Formerly all power was in the King and the lives of all the people, together with all that they possessed, were subject to his will. Then Parliaments came, and the "oil of anointing" passed from the King to the Parliament. Finally there was a day when the light of liberty shone upon the world, when the "oil of anointing" came to the heads of the people.

Those who laid the foundations of this Republic proclaimed the sovereignty of the individual, the inviolability of the human soul.

Montesquieu and Rousseau and some of the encyclopedists of France had glimpses of the new day and of the new faith resting upon the proposition that all power is in the people and that "governments derive their just powers from the consent of the governed."

Nowadays, as I have stated, there are those who would enter upon a retrograde path. The individual is to be subordinated; his creative force and latent powers, the assertion of which are imperative to the development of the proper unit in the State, are to be submerged, if not destroyed, by the development of a government, paternalistic and bureaucratic, into whose hands all power is to be committed. Efforts are made to weaken the independence of the people and to sap the vitality and strength of the States. Constitutional checks and balances seem to be forgotten and States and people apparently are willing to bestow unlimited power upon the Federal Government.

It is astonishing to note the demands made for governmental influence and control in private affairs and in matters exclusively within the province of the States. It would seem as though there is a propaganda being conducted in our Nation to weaken individualism, overthrow our form of Government, and consolidate all power in the Federal Government, and particularly in the executive department. The President or Congress, or both, are petitioned to take over the local affairs of the State and to assume the functions and burdens belonging to the States themselves.

It must be manifest to observers of our present conditions that the States are becoming atrophied, and if this process is progressive the destruction of the States is inevitable.

Many writers of standing in our Nation declare in substance that the States are merely shells—without vigor or life or power. Various reasons are assigned by students and writers for this metamorphosis. Many approve of the gradual assumption of power by the Federal Government and the corresponding loss of such power by the States. Others with real regret challenge attention to the gradual submergence of the States in the sea of Federal authority.

I recall a very strong speech made a few years ago by Elihu Root, in which he referred to this tendency toward consolidated government and deplored the attitude of the people which permitted it. In his speech he used these words:

I desire to impress upon you with all the earnestness I possess that there is but one way by which the States of the Union may retain their power and authority, and that way is an awakening upon the part of the States to a realization of their own duty to the country.

This bugle call to attention has not been responded to by the States. Indeed, there seems to be a greater paralysis of the functions of the States now than ever before. Great Commonwealths abdicate their sovereign powers and apparently seem anxious to devolve their functions upon the Federal Govern-

ment. And, as just suggested, there seems to be a persistent propaganda to weaken the States and turn the eyes of the people to the Federal Government and toward Washington, the seat of power. Mr. Laski, an English writer of keen discrimination, has recently called attention to these manifest conditions, and he points out with remarkable clarity what may be lost by the transfer of power from people and state to a centralized government. In a sentence of deep philosophy he says:

In a democracy the surest guaranty of civil responsibility seems to lie in the gift of genuine functions of government no less to the parts than to the whole.

He calls attention to the views of Mr. Justice Brandeis, who contended that certain business units may become so large as to be physically incapable of administration, and then declares that he would urge that a similar law of diminishing returns applies also to the sphere of government.

It becomes more and more obvious that we must recognize certain natural units of political administration, but also see to it that we do not duplicate that power. . . . We seem in genuine danger of going back to an ancient and false worship of unity, to a trust in an undivided sovereignty as the panacea for our ills. Surely the vitality of political life depends rather on the conference of final responsibility where there is the willingness to assume it and the capacity to assume it wisely. Only thus can we prevent Washington from degenerating into Dublin Castle.

Mr. Laski recognizes that there is great gain in local government, and that to some extent centralization may result in unity of power too big for liberty and progress and, indeed, efficiency. He states that one of the fundamental problems of Great Britain, which she will have to face, is her "local life, which will have to be made real and undergo revivification;" that her local units will have to "receive a sovereignty that is something more than an anemic reflex of the central power. An interest in local problems will have to be aroused not less keen and vivid than the interest in national problems." He also declares that in France her local group life has been "sacrificed to the absorptiveness of Paris;" that the result has been that France has been striving since Napoleon's fall "to regain the local creativeness now stricken with impotence."

Many causes are assigned for the marvelous growth and development of this Nation; but I think it will be conceded by most students that our development, not only industrially but socially and politically, has resulted primarily from the vigorous and healthful condition of the units constituting the States of the Union. Our development is due to the spirit of democracy and to the freedom of the individual, to the strong spirit of local self-government, to the development of those forces which manifest themselves in vigorous local subdivisions and vital, aggressive communities. The wholesome rivalry between communities and between States; the diversified conditions, in part due to these local forms of government; the training in government resulting from active participation in these political organizations or units, have been strong and potent factors in our political and industrial advancement. Bryce, De Tocqueville, and others, who have written upon our Government and political and industrial conditions, have called attention to the tremendous influences exercised by the town meetings and the small political subdivisions. We turn with admiration to the little republics in New England and read the proceedings of the meetings in the towns and villages with increasing admiration and wonder. They developed a spirit of independence, a love of freedom, a regard for law and orderly development that have profoundly affected this great Nation. And, of course, the results were marked in the participants in these activities. A strong, vigorous, sturdy, independent citizenship was developed. Self-initiative, the preeminent characteristic of the Anglo-Saxon race, flowered and developed in such circumstances. Each citizen felt that he was a sovereign, and recognized that all power rested in the people. He felt that whatever the conditions he was in part at least responsible for them. The form of taxation, the character of the schools, the industrial relations, and every part of the social and political life of the community became an object of his solicitude, because he was charged with the responsibility of determining all questions relating to these vital and important matters. Our history proves the educative power of local self-government. From small communities have come statesmen and leaders to guide the Nation in its darkest hours.

But I was speaking of the self-initiative, the virility, the strong individualism of the people of New England. It can be truthfully said the same sterling virtues were common to all of the colonists.

Mr. President, I believe that the security and progress of a free people is founded in a proper individualism. It has been said that China's lack of progress results from the stifling of the

individual, the merging of self into a static, omnipotent government. In ancient and in medieval times the individual was regarded as an unimportant adjunct to the State. The glory and power of the Government were the great desiderata of humanity; individuals were of no consequence, and the tolling millions lived in squalor and under cruel tyrannies. The people regarded the monarch as the source of all power and believed themselves incapable of self-government. It was a long struggle from the starless midnight of those days to the hour when this Republic was born; and the advancement of the human race was measured by a growing recognition of the rights of the individual and a comprehension of the fact that the future of humanity rested with the individual units constituting the social and political organisms.

The ringing words of Patrick Henry, Samuel Adams, James Otis, and the vibrant, thrilling words of Jefferson and Madison proclaim the glory, power, and majesty of the individual, and place upon his brow the crown of authority and in his hand the scepter of leadership. And we behold in this Republic the fruits of that faith. The individualism of the American valued highly not only the rights of the person "but also the initiative of the individual, left free by society," and I believe it had regard for social rights and cooperation. This broad continent afforded free opportunity for the sturdy, virile, and militant citizen of the New World. Forests were to be cleared, rivers to be bridged, wildernesses to be conquered, deserts to be reclaimed, mountains to be penetrated, canals and railroads to be constructed, towns and cities and Commonwealths to be founded, schools, hospitals, and churches to be erected, and every part of the broad land, stretching from ocean to ocean, banded together in trade and commerce. Moreover, political and social institutions were to be established for the common weal and to bring together and control the threads of the lives and activities of the people. To accomplish these great objects strong and vigorous men with initiative and individualism were required; that they wrought mightily and achieved gloriously all the world concedes. Men paused in the westward march and organized strong and vigorous local communities; precincts grew into townships, townships grew into counties, and counties into States. Struggling villages became prosperous towns and expanding towns became giant cities. With the great utilitarian labors and the physical and material tasks before the people, time was found to devote to education, to charity, to the collective obligations imposed in communities where social rights are highly valued, to governmental problems, and to the spiritual and religious requirements of a Christian people.

A few weak, scattered communities along the Atlantic have now grown to be a mighty people more than a hundred million strong. What a great tribute to the splendid initiative and individualism of the American people, and what a paucity this record is to democracy, to a Federal Union composed of sovereign, indestructible States! We were at first an agricultural and pastoral people, but have grown into a great manufacturing and commercial people. There were rewards for daring enterprises, for the adventuresome men who left beaten paths and sought success in new fields. The spirit of splendid, wholesome rivalry prevailed everywhere, and there developed great leaders in all the departments of life. Barefoot boys became owners of great farms, of flocks and herds, of mines and factories, of banks and railroads, and of wealth beyond their dreams. This individualistic type of life under our form of government has kept the wine of youth in the veins of the smallest governmental unit or industrial organism and in the Government itself. No oppressive hand has been laid upon the people seeking to bring complete solidarity and uniformity in all things. In the supreme fundamentals, in the highest ideals, there has been unity, but there has not been, and I hope there never will be, that dead level of unification that presages stagnation, sterility, death.

It is in an atmosphere of local self-government that the leaders in every department of activity have developed. It yielded such men as Jackson and Lincoln. In the industrial world it produced Hill and Carnegie and Schwab, and it gave us preachers and poets, Websters and Calhouns, painters, musicians, inventors and builders, teachers, philanthropists, singers of sweet songs, millions of men and women fearless, courageous, ready to defend the right here and everywhere, and to uphold the cause of liberty at the sacrifice of life and the great wealth which their genius and industry have secured.

To perpetuate this Government and these great blessings the same sturdy, vigorous, and individualistic manhood and womanhood is required. But it seems to me there has been a subsidence in this high and rising tide of individualistic effort, this exercise of the right of local self-government, this assertion of

the rights and powers of the States, and in many quarters there has appeared a pronounced manifestation in favor of a benevolent paternalism.

In the pre-Revolutionary period the Colonies attempted to maintain as far as possible a government containing the checks and balances discussed by Montesquieu and by publicists who wrote after him. There was a clear perception of the necessity of a division of the powers of government and a limitation upon the legislative and executive branches thereof. Virginia and others of the thirteen original Colonies framed constitutions in which this tripartite division of powers was distinctly observed. Great as was the necessity for a Federal Union, for a government possessing larger powers than were delegated in the Articles of Confederation, our fathers guarded with extreme jealousy the sovereign rights of the State.

The chief objection to the ratification of the Federal Constitution arose because of the fear that it was too strongly centralized and because there was no Bill of Rights, no guaranties against Federal invasion of the rights of the States and citizens. Such great patriots as Patrick Henry in eloquent terms pointed out what were regarded by him as dangerous provisions menacing, as he believed, the liberty of the people and threatening the life of the State; and before some of the original States consented to the adoption of the Constitution it was necessary to give guaranties that amendments limiting the authority of the Federal Government would be adopted. The first 10 amendments grew out of these fears and demands.

And so our Federal Constitution was the result of growth and governmental evolution. Mr. Gladstone's reference to the Constitution is often alluded to. It will be recalled that he declared that as the British constitution is the "most subtle organism which has proceeded from modern history, so the American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man." If the great English statesman meant that our Federal Charter was the product of a moment or a limited period of time, he was in error. It was not "struck off at a given time." It finds its sources in the British unwritten constitution, in the charters granted by the British Crown, in the institutions and Constitution of the thirteen original Colonies, in the experiences of the American people under English rule and under their State organizations, and in addition there were the accretions of the centuries, which were rich in experiences, precedents, and principles. From all these sources, and perhaps others which I have not named, came our Constitution. Our fathers doubtless appreciated the advantages that flow from a highly centralized government.

Perhaps it is true that there may be greater efficiency and certainly there will be greater celerity of action in a government that has autocratic powers. We witness the proof of this statement in the activities of the German Government. A concentration of power makes for speedy action; but there are losses for which efficiency and speed offer no adequate compensation.

And it may be true that an absolutism produces greater solidarity and homogeneity among the people. There will probably be more uniformity in the laws and less diversity in the lives, thoughts, and institutions of the people. But progress and liberty come from differentiations, from complex not single organisms.

If perfect unity of thought and purpose is desired and it is important to force the activities, thoughts, lives, and aspirations into one mold, then an absolutism can perhaps best effectuate that result.

I am calling attention to these axiomatic principles for the reason that there are insistent demands now made that there shall be greater uniformity between the States and the laws of the States; that the people shall be more nearly alike; that in all this broad land the diversifications now existing shall be condemned and by legislation or otherwise a greater unification developed.

I protest against this view. It would not make for liberty or progress if the broker of New York or the agriculturist of the West or the planter of the South were the sole type of every American. We are strengthened by having strong types of citizenship distinct from one another. As suggested a few moments ago, general agreement upon the fundamental principles of the Republic is desirable, but differences, divergences, wide and radical separations upon the details of life and government, will be productive of the highest results. The Colonists scattered along the Atlantic coast differed widely in their social, economic, and political views. These marked differences developed character, rugged individualism, tenacity of purpose, love of home and local surroundings and the Colony which sheltered and protected them.

It is true there may be more provincialism and a somewhat dogmatic view which comes from isolation, but such consequences have their compensation. What are called the "homely" virtues and qualities can only be developed where there is individualism, local institutions, local self-government. There are stronger attachments upon the part of the people to the homes protected by local laws, local government, and in which the individuals have a voice.

Our fathers, as stated, were cognizant of these truths. Jefferson recognized that the strength of freedom rested in a diffusion of power and in the establishment of small political units and divisions. He was anxious to divide counties into hundreds, so that "these little republics would be the main strength of the great one"; and he said:

We owe to them the vigor given to our Revolution in its commencement in the Eastern States.

And in writing to Mr. Cabell he stated:

The public education and the subdivision of counties into wards—I consider the continuance of republican government as absolutely hanging on these two hooks.

Again, in writing to Mr. Cabell, he states:

The way to have good and safe government is not to trust it all to one but to divide it among the many, distributing to everyone exactly the functions he is competent to.

He argued that—

Where everyone is delegated a share of the powers that constitute truly a system of fundamental balances and checks, and where every man is a sharer in the direction of his ward republic, or of some of the higher ones, and feels that he is a participator in the government of affairs not merely at an election one day in the year but every day.

• • • he will let the heart be torn out of his body sooner than his power be wrested from him by a Caesar or a Bonaparte.

Speaking of the Constitution, Jefferson said:

Our country is too large to have all its affairs directed by a single government. Public servants at such a distance and from under the eye of their constituents must, from the circumstance of distance, be unable to administer and overlook all the details necessary for the good government of the citizens, and the same circumstance, by rendering detection impossible to their constituents, will invite the public servants to corruption, plunder, and waste. • • • You have seen the practices by which the public servants have been able to cover their conduct, or, where that could not be done, the delusions by which they have varnished it for the eye of their constituents. What an augmentation of the field for jobbing, speculating, plundering, office building, and office hunting would be produced by an assumption of all the State powers into the hands of the General Government.

Montesquieu has insisted that a republic was adapted only to a small territory; but our fathers, and particularly Jefferson, entertained a contrary view, provided the republic was a Federal one of limited delegated powers. It will be remembered that Jefferson gave to our dual form of government the title of "The Republic of Republics."

Mr. President, I am attempting in an imperfect manner to challenge attention to the views of those who established this Government and to point to dangers which, in my opinion, will result from a departure from the letter and the spirit of the Constitution. We find too many persons who would ignore constitutional limitations and chloroform the spirit of individualism and strip the States of their powers. Some would transfer from the people in the States to Congress the sovereignty and prerogatives which they possess. Others, and their numbers are greater than the former, would increase the power of the executive arm of the Government. Of course, the triumph of either view would mean the destruction of our dual form of government.

I wish the words of the Supreme Court in the case of Texas against White (74 U. S. Repts., p. 725) could be burned into the hearts of the American people:

The Union of the States never was a purely artificial and arbitrary relation. It began among the Colonies and grew out of common origin, mutual sympathies, kindred principles, similar interests, and geographical relations. It was confirmed and strengthened by the necessities of war and received definite form and character and sanction from the Articles of Confederation. By these the Union was solemnly declared to "be perpetual." And when these articles were found to be inadequate to the exigencies of the country, the Constitution was ordained "to form a more perfect Union." It is difficult to convey the idea of indissoluble union more clearly than by these words. What can be indissoluble if a perpetual Union, made more perfect, is not?

The perpetuity and indissolubility of the Union by no means implies the loss of distinct and individual existence or of the right of self-government by the States. Under the Articles of Confederation each State retained its sovereignty, freedom, and independence, and every power, jurisdiction, and right not expressly delegated to the United States. Under the Constitution, though the powers of the States were much restricted, still all powers not delegated to the United States nor prohibited to the States are reserved to the States, respectively, or to the people. And we have already had occasion to remark at this term that "the people of each State compose a State, having its own government and endowed with all the functions essential to separate and independent existence" and that "without the States in Union there could be no such political body as the United States." Not only, therefore, can there be no loss of separate and independent autonomy to the States through their union under the Constitution, but it may be not unreasonably said that the preservation of the States and the maintenance of their governments are as much within the design and

care of the Constitution as the preservation of the Union and maintenance of the National Government. The Constitution in all its provisions looks to an indestructible Union composed of indestructible States.

Senators will recall that in England, especially after the Revolution, efforts were made by the enemies of freedom to strengthen the executive powers of the Government at the expense of the people. The great writer Junius warned Englishmen in these eloquent words:

Let me exhort and conjure you never to suffer an invasion of your political constitution, however minute the instance may appear, to pass by without a determined, persevering resistance. One precedent creates another. They soon accumulate and constitute law. What yesterday was fact, to-day is doctrine. Examples are supposed to justify the most dangerous measures, and where they do not suit exactly the defect is supplied by analogy. Be assured that the laws which protect us in our civil rights grow out of the constitution and that they must fall or flourish with it. This is not the cause of faction or of party or of any individual, but the common interest of every man in Britain.

Our form of government and the institutions that characterize a democracy and a truly representative form of government can only survive where there is a profound reverence for law and particularly those organic and fundamental provisions constituting the foundation of the Commonwealth. Dr. Lieber says:

The guaranty of the supremacy of the law (due process) leads to a principle which, so far as I know, it has never been attempted to transplant from the soil inhabited by Anglican people, and which, nevertheless, has been, in our system of liberty, the natural production of a thorough government of law as contradistinguished to a government of functionaries.

We read that the Apostle Paul every seven years of his ministry made pilgrimages to Jerusalem to ascertain whether he had departed from the faith. It is important that the American people and particularly those who are charged with positions of responsibility and trust should make frequent examinations of the Constitution of the United States and the authoritative expositions of the same. We would do well to go often to the fountains of Jeffersonian democracy and be renewed in that spiritual strength which will enable us to maintain unimpaired the faith of the fathers. I am afraid that many Democrats, judging from measures to which they give support, should make journeys more frequently than Paul did to the fountains from which spring the living waters of a true democratic faith.

Marshall in the case of *Gibbons versus Ogden* speaks of the genius and character of the whole Government and points out that the internal concerns which affect the States are within their sphere and control. Even Hamilton, imperialist, as some declare him to have been, stopped far short of the grant of powers to the Federal Government which many in this hour ascribe to it. In one of his articles in the *Federalist* he speaks of the effect of an entire consolidation of the States into one complete national sovereignty, but says that that would require an "entire subordination of the parts." And he proceeds and declares that the "plan of the constitutional convention seeks only partial union or consolidation, and that the State governments clearly contain all the rights of sovereignty which they formerly possessed and which were not exclusively delegated to the United States."

We might with advantage recall the words of Madison contained in No. 14 of the *Federalist*, wherein he says:

In the first place it is to be remembered that the General Government is not to be charged with the whole power of making and administering laws. Its jurisdiction is limited to certain enumerated objects which concern all the members of the Republic, but which are not to be attained by the separate provisions of any. The subordinate governments, which can extend their care to all those other objects which can be separately provided for, will retain their due authority and activity. Were it proposed by the plan of the convention to abolish the governments of the particular States, its adversaries would have some ground for their objection, though it would not be difficult to show that if they were abolished the General Government would be compelled, by the principle of self-preservation, to reinstate them in their proper jurisdiction.

In another number written by Mr. Madison, I think it is No. 38 of the *Federalist*, he speaks of the enumerated objects of the General Government, and the authority which it has within its own sphere, and then declares:

Since its jurisdiction extends to certain enumerated objects only it leaves to the several States a residuary and inviolable sovereignty over all other objects.

In another paper written by Madison, he uses this language:

The powers delegated by the proposed Constitution to the Federal Government are few and defined. Those which are to remain in the State governments are numerous and indefinite. The former will be exercised principally on external objects, as war, peace, negotiation, and foreign commerce, with which last the power of taxation will for the most part be connected. The powers reserved to the several States will extend to all the objects which, in the ordinary course of affairs, concern the lives, liberties, and properties of the people and the internal order, improvement, and prosperity of the State.

There ought not longer to be any serious conflict as to the legitimate functions and powers and prerogatives of the State

and the constitutional powers of the Federal Government. The American people desire a Federal Government sufficiently strong to discharge the obligations and carry out the powers resting upon it. The American people distinguish between the internal and the external relations of the Nation; between the Federal powers conferred by the Constitution to deal with the several States and the people, and the national authority giving it power to deal with external questions and with other nations.

Toward foreign powers the country has no seam in its garment. It exists in absolute unity as a Nation and with full and undisputed national resources.

But, in my opinion, to those who understand our form of government, any policy that would result in weakening the States and aggrandizing the General Government is to be deplored. A persistence in such a policy would inevitably lead to the destruction of the life, and indeed the form, of the States, and to the transference of the powers reserved by the people to themselves and those conferred upon the States to the General Government. The name of a government does not determine its character. This Nation might be denominated a Republic, and yet exercise despotic powers. The people are the fountain of civil and political powers, and they must exercise them in order that freedom may exist. If the people are apathetic and fail to exercise their high prerogatives some local or national authority will seize them. If there is a subsidence of the spirit of independence which the States should possess, the Federal Government inevitably will assert the power which the States should exercise. These powers, rights, or prerogatives, whatever they may be called, can not, like Mohammed's coffin, be suspended between heaven and earth. The rights and prerogatives belonging to the individual, these powers which must be exercised in order to preserve liberty and promote peace and tranquillity and the general welfare must rest somewhere. If the subtle, yet clear and unmistakable rights and powers belonging to the individuals, as well as those which are lodged with the States, are not exercised by the latter they will be seized by the Federal Government and exercised by it.

Of course there are periods of transition, but ultimately the aggregate powers which belong to a civilized people must be asserted and exercised. Those which are reserved to the people must be fully developed and asserted by them. If they fail in this high duty anarchy will follow or encroachments by governments will result and these encroachments in time will culminate in oppression. To preserve democracy, to perpetuate a truly representative form of government, to maintain a Government such as this, founded upon the consent of the governed, containing within its outer integument the sovereign States, with their clearly defined orbits and spheres of activity, and the Federal or National Government with its enumerated and delegated powers, and to preserve that subtle, almost intangible, yet vibrant, thrilling, and immortal spirit of liberty, is a task to the accomplishment of which all patriotic people in the Republic should, with profound reverence, dedicate themselves.

The flower of liberty reaches its almost celestial beauty only in the midst of those who love justice and righteousness and who have comprehension of the eternal truth that humanity is linked together by indissoluble bonds, and that together all people must struggle up the perilous heights out of selfishness and squalor, superstition and tyranny.

It has been distressing to me to note during the past two decades the encroachments of the Executive particularly upon the legislative branch of the Government and upon the rights of the States. There are those who seem to entertain the view that ours is the British form of government and that the legislative branch is but a feeble echo of the Executive will. The Representatives chosen by the people at frequent intervals speak their will. They and the Members of this body are intrusted under the Constitution with great powers, which they should not hesitate to exercise and which under no circumstances they should consent to renounce. To disturb the equilibrium, the checks and balances of our Government, would be calamitous, and unless rectification speedily follow would end in changing its form.

We need now, more than ever before, a great political prophet to lead the people of this Republic into constitutional paths where safety, security, and continued liberty will be found. We need a prophet who is inspired with an enthusiastic love of the Constitution and who is fired by the spirit of freedom which has guided the advancing steps of humanity.

It is so easy to forget great fundamental principles; they seem to be too abstract and academic and too frequently we are prone to say that they are abstruse. Practical and material things, particularly in periods of struggle, grapple us, and the broad vision and the innate love for justice and righteousness are obscured. There is greater danger, too, when we begin to think imperially.

We are a world power and we speak to the world and take part in the world's affairs by and through the Federal Government. We are engaged in the world's greatest war, in which the very life of our Nation is involved. In these circumstances it becomes increasingly difficult to maintain the sovereignty of the States and to preserve individual liberty and individual initiative. Washington, the seat of the Nation, the point from which go forth clear and strong voices to affect the world, of necessity becomes for the moment the center to which we are attracted. The war powers of the United States are brought into full force; so long dormant, they must now be exercised efficiently and fully.

But some foolish, unpatriotic people in this hour conceive that the exercise of the war powers of the Federal Government calls for the destruction of the States and the free activities of the people.

I recall reading a number of years ago, when Senator Hoar occupied a seat in this Chamber, some one wrote him urging the passage of what was known as the Fowler bill, because it was approved by the President, the Secretary of the Treasury, the Comptroller of the Currency, and the Director of the Mint. This eminent Senator with sincere indignation expressed his disapproval of the executive branches of the Government attempting to influence legislation. He stated that it was contrary to the privileges of the Senate to have the opinion of the President of the United States in legislation. He said:

The House of Commons or the House of Lords always resent it, and have done so for a good many years, when that statement is made about the Crown.

Upon the conclusion of his remarks Senator Spooner arose and said:

The Senator is right, of course; I move the Senate do now adjourn.

There was grim humor in the statement of the Wisconsin Senator. The Senator from Massachusetts was right in affirming the power of the Senate and in defending it against any Executive usurpation. Perhaps the Senator from Wisconsin was right in contenting himself with the statement that the Massachusetts Senator's position was correct, but it was useless to debate the question, and adjournment was therefore the only alternative.

It may be that it is futile to speak for a strong and proper individualism and for a revival of the prestige of the States and a spirit in favor of local self-government and that independence essential to the protection of the sovereignty of the States. The people are prostrating themselves before the Federal Government. They come with cap in hand and bow the knee and beg that it will take charge of the States and local and domestic matters within their own keeping. Daily Senators are importuned to support measures that derogate from individual and from State rights, and these importunities are from patriotic citizens, some of whom hold high positions with the States.

The arm of the States and the arm of the people seem to be paralyzed. If some enterprise is to be attempted, an appeal is made to the Federal Government. The Federal Government is asked to build bridges over local streams, control intrastate commerce and local affairs, build the highways within the States, enact laws and promulgate regulations relating to matters exclusively within the police powers of the States, construct industrial plants and engage in the manufacture of articles and commodities required by the people. Representations are made that the Federal Government should construct universities, make appropriations for education and vocational training within the States, extend its powerful hand to exercise control over the educational system within the States. People loudly demand that the Government build railroads to serve domestic commerce, dig canals, furnish water to arid tracts of land owned by individuals, take over all sorts of private enterprises of a quasi-public character, erect hydroelectric plants, harness the electrical energy of streams within the States, construct electric lines, and transmit power for private uses. Zealous officials in Government departments are without warrant of law extending the activities of bureaus, and are demanding and asking for large appropriations to still further increase the work of the Government along the lines of private endeavor. We are asked to take over the railroads, not only trunk lines but short and unconnected systems, and to place in the hands of the Federal Government all forms of transportation, both land and water. Newspapers of standing and people of independent thought insist that the Federal Government shall take possession of the telephone and telegraph lines and shall engage in their operation, and construct all such additional systems as may be required by the public in all parts of the Nation. Many contend that practically every question is national and not local and that we are so knitted together that there is no further place for the States, and that all Government powers,

functions, prerogatives, and authority should pass to the Federal Government. In this same school are found those who deplore the difference in State laws and State institutions and who cry out against the so-called provincialism of the people and local customs and views. They would have every Roman live in Rome, think as the inhabitants of Rome thought, struggle as they struggled, and, of course, in the end they would be slaves as the people of Rome were slaves. These people who would subvert our Government, destroy the very temple of our liberties, consolidate the people into one huge lifeless, nerveless, spineless mass, become more or less potential particularly in a great crisis such as that now confronting us.

When the Government is compelled to assert great war powers in defense of the Nation, some foolish people argue that it should go further and assert all powers, State, municipal, and national, and that when peace dawns there should be no change in its attitude. This position, of course, weakens the moral fiber of the people and detracts from those essential qualities for high citizenship. I recall what Fiske, the great historian, said: "If the day should ever arrive (which God forbid!) when the people of the different parts of our country shall allow their local affairs to be administered by prefects sent from Washington, and when the self-government of the States shall have been so far lost as that of the departments of France, or even so far as that of the counties of England, on that day the progressive political career of the American people will have come to an end, and the hopes that have been built upon it for the future happiness and prosperity of mankind will be wrecked forever."

At the risk of being charged with iteration I repeat that there is a vociferous school in our land which seeks the destruction of the powers reserved to the States, and is determined that the local and domestic affairs of the people, those questions relating to the internal order, improvement, and prosperity of the States, shall be devolved upon the Federal Government. Not satisfied with so great a revolution in our form of government, some of this school go further and insist that the powers of Federal Government shall be practically unlimited.

I call attention to the vigorous and eloquent words of Mr. Justice Miller in the case of *Loan Association v. Topeka*, 20 Wallace. He states that in every free government there were provided rights beyond the control of the State, and that a government, by whatever name it is called, wherein the lives or liberty or property of citizens is subject to unlimited control of any depository of power is after all but a despotism:

The theory of our Governments, State and National, is opposed to the deposit of unlimited power anywhere. The executive, legislative, and judicial branches of these Governments are all of limited and defined powers. There are limitations on such power which grow out of the essential nature of all free governments, implied reservations of individual right, without which the social compact could not exist and which are respected by all governments entitled to that name.

When the Revolution took place, the people of each State became themselves sovereign; and when they took into their own hands "the powers of sovereignty, the prerogatives, and regalities which before belonged either to the Crown or to the Parliament, became immediately and rightfully vested in the State."

I am appealing not alone to Democrats, but to those of other political parties, to resist this tide of centralization and bureaucracy and a tyrannous state socialism that the winds and storms of discontent and passion and war are whipping into dangerous proportions. On this floor it has been said that great transportation organizations will be owned and controlled by the Government. Appeals are made for the Government to take over the operating mines within the various States, including all of the coal properties owned and operated by private individuals. Every field of private endeavor is to be invaded, and the Federal Government, by functionaries and vast armies of employees, is to control all fields of human activity.

The resolution now before us is a manifestation of this hysteria. Government bureaus and departments, eager for greater power, in too many instances are encouraging this dangerous and destructive propaganda. This resolution was prepared by officials whose power, if it becomes a law, will be greatly augmented. The Federal Trade Commission, under this resolution, would have a horde of employees and its importance and authority emphasized and rendered more conspicuous.

I might say in passing that if this resolution was the only manifestation of the tendency of which I am speaking, it could be looked upon with less apprehension. It is not so much this resolution that I am speaking against as it is the evil precedent which it will establish, and the growing heresy which

it will attempt to transmute into orthodoxy. If one usurpation of power be tolerated—

"Twill be recorded for a precedent, and
Many an error by the same example
Will rush into the State; it can not be.

It is human nature that the exercise of power leads to a desire for greater power. Departments and functionaries and those clothed with governmental authority, as a rule, send out their tentacles to draw within their influence and control other objects and additional subjects. If a bureau of public health is created, soon there is developed an appetite upon the part of the officials to enter the States and control all matters of sanitation, hygiene, and public health. There are departments which desire to operate mines, erect smelters, construct railroads, and engage in every branch of industry.

And appetite, an universal wolf,
So doubly seconded with will and power,
Must make, perforce, an universal prey,
And at last eat up himself.

Still, there is another side to this picture. The States and the people are too often offenders; they seem to have lost their self-respect and courage and independence. Is it true, Mr. President, that we are becoming so nerveless and so spineless as to be incapable of local self-government and of the assertion of those rugged and sterling virtues found in our fathers? A great American has denominated some Americans as "molly-coddles." There are those who have no courage to think or courage to act, who are cowardly in asserting their individual rights and afraid to maintain the government of their States and demand that they shall discharge their sovereign functions as a sovereign State. They cry out for an omnipotent national government, one that will dazzle the world, one with gaudy trappings and powerful visage. Apparently they think that omnipotence carries with it omniscience and that the most powerful governments must be the wisest ones. The most unhappy and tragic aspect of the situation results from the fact, as I have stated, that so many of the people are prostrating themselves before this new federalism and crying for it to exercise kingly powers. They strip themselves of their regal crown, of their priestly robe of American citizenship, and abase themselves in ugly nakedness before this Caliban creature they would make their master. We may find out too late, in the language of the fable, that we have not had a log for king but we may ere long have a stork to devour us. It may be a crushing bureaucracy, but it is more likely to be a devouring socialism.

I can not comprehend the spirit which prompts the American people to weaken the foundations of our Government. We seem to be obsessed with the irrational and unscientific idea that character and morality are the result of law and imperial edicts; that if there be a puissant nation that can promulgate a drastic law or regulation or can send some functionary into our midst to govern or control or flood us with an army of officials, petty and tyrannous, our industrial, social, and political ills will be banished and the heights of prosperity and happiness attained. The law of social evolution and all accepted philosophies teach the folly of such a view. The world has suffered from too much government rather than from too little government. The cure for our industrial and social ills and the solution of our governmental problems lies with the people and will be found in the moral progress of the people under a true democracy, not in the triumphs of autocratic bureaucracies or overpowering socialisms. There is a criminal organization which practices sabotage, there are some who are demanding national sabotage. All of our industrial machinery is to be interrupted, and incompetent and irresponsible and overbearing functionaries are to hurl foolish regulations and orders into the delicate mechanism of the business machinery of the Nation.

There is no justification for governmental control of the private enterprises of the people. Though it be true that we have perhaps followed too literally the doctrine of *laissez faire*, nevertheless, and I call attention to that fact, the course pursued in this Republic has builded it upon solid, social, and industrial foundations and brought our Nation to its present splendid proportions. Our institutions are the light shining unto all the world whose "light can not be hid."

Dr. Eliot states that through the nineteenth century individualism had the advantage in the conflict between it and collectivism. I think his view is that there has been a happy adjustment of those conflicting forces. If it should be contended that individualism during the great part of the last century did not appreciate and value social rights, I can not assent to the view. The work of subjugating the Continent and building

states and republics and great industrial empires calls for combative, aggressive men and women. To the casual observer it might appear that there is too much of the primitive man in these stalwart and fighting figures, and that the virtues and charities found in fine character are undeveloped or submerged. This may be true of some places and of other ages. It is not true of those in this land and in this age. Particularly is it not true of those who were nurtured in the traditions and spirit of the common law and Anglo-Saxon institutions. I think our Nation gives proof of a collectivism which did not paralyze individualism or thwart it in the legitimate assertion of its power.

A number of years ago Prof. Teideman commented upon the vehement attacks made because of the failure of the Government to interfere whenever any evil appeared to threaten the prosperity of society. He further spoke upon this matter in the following language:

Socialism, communism, and anarchism are rampant throughout the civilized world. The State is called on to protect the weak against the shrewdness of the stronger, to determine what wages a workman shall receive for his labor, and how many hours daily he shall labor. Many trades and occupations are being prohibited because some are damaged incidentally by their prosecution, and many ordinary pursuits are made Government monopolies. The demands of the Socialists and communists vary in degree and in detail, and the most extreme of them insist upon the assumption by government of the paternal character altogether, abolishing all private property in land, and making the State the sole possessor of the working capital of the Nation. Contemplating these extraordinary demands of the great army of discontent, and their apparent power, with the growth and development of universal suffrage, to enforce their views of civil polity upon the civilized world, the conservative classes stand in constant fear of the advent of an absolutism more tyrannical and more unreasoning than any before experienced by man, the absolutism of a Democratic majority.

Of course, he refers to a majority to whom the Constitution is meaningless, and vested rights are "scraps of paper."

The spirit to which he refers is stronger now than it was when he wrote, and the task before those who desire the maintenance of our form of government is greater now than ever before. It will be readily admitted that evils of a social and industrial nature will arise in democracies and in all forms of representative government. Selfish men, who want industrial or political power, appear in democracies as they are found in monarchies; but they can be curbed by the people and the evils cured. De Tocqueville insists that the cure for the evils of democracy is still more democracy.

There have been monopolies and combinations of wealth which have interfered with the competitive system and interrupted that free play of private endeavor so necessary for continued prosperity and progress. We met those evils by legislation in the various States, and by the enactment of the Sherman anti-trust law, the Clayton Act, the Federal Trades Commission measure. Certainly we are not pleading inability to control a combination which restrains trade or constitutes a monopoly in any industry of our land.

These laws, if enforced, will bring relief and afford free opportunity for private enterprise and for individual effort. Unfortunately some of the States have become so weakened by the pernicious doctrine against which I am inveighing that they have failed to enforce State statutes against monopolies subject to control by the States. If there be a local ill, social or political, there are thousands who immediately rush to Congress invoking Federal aid. If some proper reform is needed, this same spirit leads the people to demand Federal interference; and if when appeals are made for Federal control they have been denied because of a lack of power in the General Government, then a crusade has been inaugurated for a Federal amendment to the Constitution. As a result there have been hundreds and indeed thousands of proposed amendments to the Federal Constitution. Many of them dealt with concerns that were purely and exclusively local and domestic. The most grotesque and fantastic propositions are submitted for Federal supervision. Apparently the American people have lost their bearings and are out upon a tempestuous sea and are being carried into the maelstrom of an omnipotent and tyrannous centralized government. The swirling waters of a new federalism seem to be drawing us into this maelstrom, which, if not escaped, will result in destruction to our form of government.

I warn Senators that measures of this character, if enacted into law, will paralyze the energies of the American people. There must be hope of reward; there must be a field for legitimate ambition to bring advancement in the industrial and business world. The overwhelming majority of the successful business men of our country, those who have risen from poverty to wealth and who have builded cities and enriched communities, have not been actuated by a sordid love of wealth. They were fired by desire to achieve, to accomplish, to build, to succeed. Cecil Rhodes belonged to this type. He saw Africa a wilderness and a desert. He desired to see it the home of a happy and

prosperous people. This could only be accomplished by building railroads and irrigation systems and developing the mineral resources of the great continent.

James J. Hill looked at the great Northwest and saw the boundless plains and towering mountain ranges stretching from the Mississippi to the Pacific. A railroad was necessary to open up the deserts and the sterile wastes and the mountain fastnesses, and so he planned and builded and helped to create an empire. James J. Hill finds his prototype in hundreds and thousands of American citizens, and these strong and mighty builders have given us fields and farms and factories and plants and cities and schools and wealth and States that are empires, and a Republic which is now fighting for the liberties of the world. Their sons and the young men and women in all this broad land have unconquered fields lying before them. They desire the opportunities of their fathers; they want to be strong men and women and do great things in a great way and in a great age.

Industrial development, as I have stated, rests upon individual effort. Legislation of this character destroys such effort. I am reliably informed that private capital has been provided for the erection of a print-paper plant in the West. The threat of the passage of this bill has prevented the consummation of the plan; and if the Government takes the supervision of this industry, of course the plant will not be constructed. Examples without number are before us where industries have been halted, and projected plans for large investments that would have developed new industries and brought employment to a number of people have been abandoned because of the entrance of the Government into the fields of private business or the threat of the Government to control the enterprise and fix the prices of its products. There is nothing in the history of governmental control and supervision of the great fields of private industry to justify or support the promise that public benefits will accrue. The Government is notoriously inefficient, extravagant, and impotent in business lines and activities. A bureaucracy always has been oppressive, extravagant, and inefficient. A man of genius and business ability conducting either of the great departments of the Government without being hampered by law, officialism, regulations, and the red tape that prevail in Government affairs could perform the work with greater efficiency and success and at a cost not exceeding one-half of the present outlay.

The sacrifice by the States of their powers is due in part, perhaps, to the fact that large appropriations are constantly being made by the Federal Government to be expended within the States. It is becoming the custom to appeal to the Federal Government for financial aid in support of matters essentially and exclusively local and often private in character. These appropriations have the effect of debauching the States and the people. In the end these policies and practices can only result in the destruction of the States.

One of the symptoms of this spirit is found in the demand for a constitutional amendment in relation to woman suffrage. The distinguishing characteristic of a sovereign State is its right to determine the qualifications of its electors. The people organize the State, and the people within the State determine those who shall participate in the State government and exercise the high prerogatives of citizenship. Another government can not determine that question. To surrender that authority is to abdicate a sovereign power and tends to reduce the government to a dependency and to a shadow of a State. Yet the people seem to be desirous of depriving themselves and their own governments of this sovereign power.

The control of the liquor traffic is essentially a domestic concern, yet a constitutional amendment has been demanded by the American people and will doubtless be ratified by a sufficient number of the States to make it a part of our great charter. And so the process of centralization continues with the consequent loss to the people and the States of rights and liberties and powers.

We have set out upon the highway of centralization, or "nationalization"; what the end will be no one is bold enough to predict. But we should all sincerely pray that the work of our fathers shall not be destroyed and that free government shall not perish from the earth.

Mr. SMITH of Arizona. Mr. President, may I interrupt the Senator?

Mr. KING. I am glad to yield to my friend from Arizona.

Mr. SMITH of Arizona. The democratic doctrine that the Senator proclaims ought to have the attention of all of us, and it ought to be observed. I merely wanted to suggest that we must not make our comparisons in a way that would not be justified by history. We are in extraordinary times, meeting extraordinary emergencies and exigencies that have to be met. It is a question of wisdom as to the manner of meeting them. It is a question of wisdom as to whether or not a given state

of affairs constitutes an emergency. But, recognizing that, what I rose to ask, with all deference to the Supreme Court, is whether in the Senator's legal judgment many of its modern decisions have not gone about as far away from the original principles as any legislation has gone?

Mr. KING. Mr. President, of course there is some embarrassment upon the part of a Senator, and particularly if he is a lawyer, in expressing critical views of the decisions of that august tribunal, yet I am free to confess that the Supreme Court in my humble opinion, in some of its decisions, has departed from the sounder and wiser views announced in earlier opinions concerning the autonomous and sovereign rights of the States; and in a number of recent decisions—the Utah case, for instance, which was cited by the Senator from Colorado—

Mr. SMITH of Arizona. It was the one I had in mind in my question.

Mr. KING (continuing). That august tribunal has administered a serious blow to the doctrine accepted by the American people for a century, that the States have sovereign powers.

Mr. SMITH of Arizona. That is right.

Mr. KING. Perhaps it is not *lèse majesté* to add in a facetious way that the Supreme Court, as Mr. Dooley says, "sometimes follows the elections." In the very nature of things it could not be otherwise than that judicial bodies would respond more or less to the spirit and life and sentiments of the people. Judges carry to their positions the views which they entertained as lawyers and as students; and when a man goes upon the bench he does not disrobe himself of his mental garments. He carries with him his prejudices, his training, and education, and they find expression from time to time in the judicial utterances that fall from his lips.

But, Mr. President, if it be a fact, as the question of the distinguished Senator would imply, that the Supreme Court of the United States is transcending its powers and is attributing to the Federal Government authority and sovereignty and power not delegated to it by the States when the charter of our liberties was drawn, then the duty is higher for Senators and those who value the Constitution to appeal to it and to its sacred texts in support of their acts and the legislation coming from their hands.

But I wish to say that however much we may differ from some of the utterances of the Supreme Court, it must be conceded that it has exercised the great responsibilities resting upon it in a splendid manner. No court in all the world has been influenced by higher considerations of justice or right, by higher ethical and moral standards. It has sought to ascertain the right and give expression to the genius and spirit of our form of government. The members of this great judicial tribunal have been lawyers of the highest ability, and their opinions have dealt with complex and important constitutional, industrial, and economic questions with a wealth of learning, with a scientific and philosophical spirit and with a patriotic purpose to perpetuate and protect democratic institutions and our form of government as it came from the hands of the fathers. I remember Mr. Phelps, who was a great lawyer, speaking of this tribunal, said:

Having its origin in the sovereignty of the people, it is the bulwark of the people against threatened unadvised action, threatened and unrestricted law. It saves them not merely from their enemies; it saves them from themselves.

And Mr. Webster, upon one occasion, said:

The Constitution without it would be no constitution, the Government no government.

Mr. President, the resolution under consideration, in my opinion, is not warranted by existing conditions, is not consonant with the spirit of our institutions, would tend to discourage further investments in order to increase the output of the commodities referred to in the resolution, would palsy the activities of those now engaged in the business in question, and so diminish this commodity so greatly needed by the people; moreover it violates the Constitution of the United States in letter and in spirit.

The Senator from Arizona suggested during the debate that certain contingencies might arise demanding extraordinary legislation. I concede that in a supreme national crisis where all of the war powers of the Government are called into requisition, legislation not only is justified but is imperative which in peace times would be oppressive and destructive of the creative energy of the people and in contravention of constitutional limitations.

I have been speaking generally with respect to conditions and tendencies not produced or resulting from war, and my criticisms have been directed rather toward the developments and tendencies for a number of years past. I have said, however, and will repeat that in war times, when the call is for concentrated effort and the exercise of executive authority, the dispo-

sition is stronger to override limitations in organic law, and the spirit of democracy and democratic institutions are subjected to severer strains.

The law of self-preservation is strong upon the part of a nation, as well as an individual, and where the entire fabric of our Government may be destroyed by a powerful military foe it can not be expected that the same nice discriminations in the exercise of authority will be exercised by the people and by the various departments of the Government as in normal times. Nevertheless, when all the powers of the Constitution are called into play there should be a clear understanding of what those powers are and an observance of limitations prescribed in the Constitution. I confess to having been somewhat surprised a few months ago when the able and distinguished junior Senator from Pennsylvania [Mr. Knox] stated in substance that in war the Federal Government could exercise greater powers than in peace, and that the Constitution did not stand in the way of the legislation which was then projected.

Mr. KNOX. Mr. President—

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Pennsylvania?

Mr. KING. Gladly.

Mr. KNOX. I shall be greatly indebted to the Senator from Utah if he will produce the record that will justify the assertion that I made any such statement upon the floor of the Senate or elsewhere.

Mr. KING. Mr. President, I am afraid that I have quoted from the Senator's remarks in a very inaccurate way. Of course, I did not intend to, as it is my intention to express my approval of what I understand his position, as expressed in his speech, to be. Studying the Constitution in the atmosphere of peace, I had, perhaps, taken too narrow a view of the war powers of the Government, and had sought to find specific or clearly implied grant of power to the Federal Government in support of every enactment. Upon further examination of the authorities, and after further reflection, I reached the conclusion that the distinguished Senator from Pennsylvania was right, and that when our Nation was at war there are called into existence powers which in peace are dormant, and that in war legislation is constitutional which in peace must be condemned. Having attempted to state the Senator's position, and in order that no injustice may be done him, with the permission of the Senator, I shall secure and place the portion of his speech I had in mind in the Record in connection with this discussion:

The war powers of the Constitution, in my opinion, are dormant until a status of war is declared by Congress, and then they may be exercised without limitation or qualification to the extent that the safety of the war and in a case of great emergency or dire necessity, may be commander in Chief of the Army and Navy, in the actual conduct of the war, and in a case of great emergency or dire necessity may be compelled to act. By this construction of the Constitution, Mr. President, the Constitution itself is preserved in its entirety. Indeed, the exercise of the war power is the only way in which the Constitution can be preserved.

Of course, if there is a prohibition in the Constitution, then even in war the prohibited act would be unconstitutional. The President, under the Constitution, is made the Commander in Chief of the Army and Navy. Congress could not, even when the Nation is at war, delegate this power to any other person or official.

But, Mr. President, recurring to the position taken by the Senator from Arizona, because we are at war, and the Federal Government can therefore exercise constitutional powers which it could not in times of peace, we are not warranted in enacting into law whatever the whims and caprice of individuals may suggest, even though it may be contended that the measures are necessary as war measures.

In that observation I am not criticizing my distinguished friend from Arizona. I am speaking purely in an impersonal way and without particular reference to the bill which is now under consideration.

Apparently we are out upon the high seas of experimentation, without chart or compass. We have a bill here now—and I propose to briefly analyze it for a moment—which is in harmony with this tendency which I have been deploring.

This is not the only measure, Mr. President, that we have had or will have of this character. After we have passed this bill, if we shall pass it, there will be others asking for more power and others asking for additional power, and the people will come knocking at the doors of this Chamber asking us to create more bureaus and boards and executive departments and arms of the Government which strike at the States and strangle individualism and private enterprise.

Mr. REED rose.

Mr. KING. I yield to my friend from Missouri.

Mr. REED. It has been necessary for me to be absent from the Senate during the entire course of the debate, because I have

been engaged as a member of the subcommittee in conducting hearings under the direction of the Senate. I am therefore without information upon the course of the debate. Frankly, I have only this moment read the joint resolution through. The Senator now discussing the question has undoubtedly given it consideration.

Mr. KNOX. Will the Senator please speak a little louder? I am quite anxious to hear him.

Mr. REED. I have very great regard for the ability of the Senator from Utah as a lawyer and in other respects. I want him, if he will, before he concludes his analysis of the joint resolution, to tell what provision is made for the distribution of this paper once it has been taken over by the Government, whether if the Government is to take over all of the print paper made there is any sort of guaranty that any newspaper in the United States or any periodical will receive any of it, or that it will be distributed fairly and in proportion to the necessities of publication. I want, in a word, to know whether by the passage of this joint resolution we are placing in the hands of some Federal agent the power to suppress any newspaper or periodical in the United States at will. If that power is in the bill, then unless it is taken out, or at least there are some metes and bounds to that power in the bill, we are creating here something infinitely worse than a press censorship, for we are creating the power of suppression and annihilation.

Perhaps all these matters have been fully discussed. If the bill is to pass and if it has any virtue in it surely it ought to pass in a form so that we will know that it will not be abused.

Mr. SMITH of Arizona. If the Senator will permit me, I think I can save him some of the animadversions that are very just that he is making. If this is an opportune time, with the patience of the Senator from Utah, I can state to the Senator if my amendments are adopted exactly what the bill carries.

Mr. KING. May I ask the Senator from Arizona if there are any other amendments to be offered except those shown upon the reprint?

Mr. SMITH of Arizona. If in this connection I may state the amendments I purpose to offer to the joint resolution it will save a good deal of debate, I think, on both sides of the House.

Mr. KING. I understood the request made by the Senator a day or so ago for a reprint of the bill to contain the statement that the reprint would show in italics the amendments which he proposed to offer.

Mr. SMITH of Arizona. I did.

Mr. KING. Has the Senator additional amendments to those shown in the reprint of the bill?

Mr. SMITH of Arizona. There are other amendments which I want to suggest now so that the debate may follow along on the assumption that it is going to take away the power complained of to a great extent. If the amendments which I propose to offer are adopted this is the way the joint resolution will read—

Mr. KING. Let me say, before the Senator proceeds, in reply to my distinguished friend from Missouri, that the question he propounded can be answered categorically. The joint resolution does permit the evils which he suggests, and has none of the remedies or protective features which his discriminating mind indicates should be carried in a measure of this extraordinary character.

Mr. SMITH of Arizona. If the Senator will permit me, I propose to make the joint resolution read:

That whenever during the continuance of the war and for six months thereafter the President shall deem it needful, he may direct the Federal Trade Commission to supervise and regulate the production and distribution of print paper and mechanical and chemical pulp and their products in the United States, and that mills producing and agencies distributing print paper and mechanical and chemical pulp (and their products) in the United States shall equitably distribute such products at a price based upon cost of production and distribution plus a fair profit per ton, as determined by the Federal Trade Commission: *Provided*, That if the compensation so determined be not satisfactory to the person, company, or corporation entitled to receive the same such person, company, or corporation shall be paid 90 (pending) per cent of the amount so determined by the Federal Trade Commission and shall be entitled to sue the United States to recover such further sum as, added to said 90 per cent, will make up such amount as will be just compensation for such paper, pulp, and pulp products, and jurisdiction is hereby conferred on the United States district courts to hear and determine all such controversies.

That is all there is in the resolution.

Mr. REED. I do not intend to discuss it, and I am trespassing on the time of the Senator from Utah.

Mr. KING. I am very glad to yield to the Senator.

Mr. REED. I have broken in on a very interesting and powerful address, but I desire to make one further suggestion to the Senator. I am not prepared now to discuss the amendments that have just been read and which none of us have had an opportunity to examine, but I want to point out, with the Senator's kind permission, as illustrative of this character of legis-

lation and where it is likely to lead us to, a fact that was brought out in the hearings before the subcommittee that has been investigating the question of the coal shortage. That act authorized the President of the United States to exercise certain great powers with reference to coal. I never understood that it gave the President an absolute right to fix the price of coal; but, assuming that it did for the moment, this is what developed by the clearest kind of testimony.

A nice, dapper little gentleman, whose name I have forgotten, and whom I never heard of in my life until he appeared before the committee, all of which probably argues myself unknown, appeared before the committee and stated that he was the individual who had made up the prices of coal for the whole United States of America, and that then he had submitted these prices to the President; that they had a little conference once or twice about it, and there were one or two minor changes made, and the prices had been promulgated to the United States.

Now, if Woodrow Wilson, with his powerful intellect and his magnificent penetration and judgment, could have sat down and studied the coal situation for one-tenth of the time that our subcommittee has studied it he never would have approved that scale of prices. He never would have promulgated them in the first instance because they fixed prices entirely too high in vast sections of the country and too low in other sections of the country, and they were made to apply to those that bore too little resemblance to each other either in value or in cost of production. They are chargeable directly with a very large part of the coal shortage.

Now, the point I make is this, that this joint resolution, however amended by the distinguished Senator who sponsors it, must be executed by somebody, and if safeguards are to be put into it so that the periodicals and newspapers of this country will be entitled to a fair proportion of supplies, so that it can not be abused for the purpose of coercing and compelling and suppressing publication, then I want some board or tribunal named and I want some right of appeal to the judge of some court. I do not want some nameless man—nameless now—some unknown man, who will be taken from obscurity and put into a Federal job at a dollar a year or any other price, and then at once given the title of doctor, for they are now all doctors—

Mr. KING. Or chiefs. I find that title given to many.

Mr. REED. "Doctor, lawyer, merchant, chief." I do not want that sort of enforcement.

Now, I do not speak with unkindness of this little gentleman who fixed the prices of coal, but it is not open to dispute by those who know that he made the most egregious of blunders. I see sitting over here the Senator from Pennsylvania [Mr. Knox]. Witnesses appeared from his State who have shown clearly that the prices fixed for coal would close down and have closed down a lot of mines in that State. At the same time those same prices would allow other mines to make exorbitant profits. I can not go into it. I have trespassed on the Senator's time and I beg his pardon. My only excuse is that I have been absent from the Senate during the debate. I have been talking a good deal at random because of lack of opportunity to study the measure.

Mr. KING. I have been very glad to be interrupted by the Senator from Missouri. No man in this Chamber more clearly distinguishes in legislation evils that may menace our institutions and our business and our Republic than the Senator from Missouri. I confess here and now in his presence that I have listened frequently and always with great interest and profit to his expositions of the Constitution and the limitations that are placed upon the various branches of the Government by that great instrument. He sees in this bill some of the evils against which I have been imperfectly declaiming.

Mr. President, the Senator need not be surprised at this bill because it is not sui generis, but it bears the same label as that found upon some of the legislation that will be requested, if not demanded, I am afraid, from this Congress not only by executive departments of the Government, and bureaus and subordinates and petty officialdom, but by many people who, ignorantly or otherwise, are willing to surrender to the Federal Government the powers that ought to be exercised by the sovereigns within the States, and by the sovereign Commonwealths, as members of this Republic.

The Senator has already discovered that the apotheosis of nationalism is upon us; that some States and many Americans are prostrate before this new centralized power and are beseeching it to extend its activities and increase its authority. If a supposed monopoly exists under this dangerousism, the laws are not to be enforced for its destruction; but the Government is to seize and operate the business and create bureaus and boards and departments for that purpose. The magic touch of the Government, or some of its employees, heals the

morally unfit and causes the leprous bodies of monopolies or business or political organizations to be made clean and crowned with the beauty of joyous life.

Mr. SMITH of Georgia rose.

Mr. KING. I yield to my friend.

Mr. SMITH of Georgia. I wish to ask the Senator if it would interfere with him just at this point in his speech for me to call attention to two or three peculiarities about this bill.

Mr. KING. I have not discussed its details, but I believe the Senate will welcome any suggestions the Senator may care to offer, and I shall be pleased to hear whatever he may say.

Mr. SMITH of Georgia. In the first place, the bill suggests that the commission is to supervise, control, and regulate the production and distribution of print paper. How?

Mr. KING. That is not pointed out.

Mr. SMITH of Georgia. Are they to distribute paper that does not belong to the Government—that does not belong to them? The bill does not say how.

Mr. KING. It makes no provision for such purpose, nor does it carry any appropriation for any purpose.

Mr. SMITH of Georgia. It makes no provision for their buying it, it makes no provision for their selling it, it makes no provision for their getting it, it makes no provision as to what they shall receive for it or when they shall distribute it.

Mr. SMITH of Arizona. Does not the amendment do that?

Mr. SMITH of Georgia. I will vote to recommit the bill or for a new bill to be written.

Mr. SMITH of Arizona. That objection will be cured.

Mr. SMITH of Georgia. I wish to hear read the amendment before I can give an opinion as to its meaning. Next, the bill says that the mills shall be operated on Government account. What does that mean?

Mr. KING. The word "account," giving the lexicographer's definition, means profit, advantage. So it means for the "advantage" or "profit" of the Government.

Mr. SMITH of Georgia. Is the Government to take the mills and operate them? Can we by legislation take the mills and operate them for the benefit of the Government without paying anything, without buying the mills, without taking charge of the mills? I do not know what it means.

Mr. KING. If I might be permitted to speak facetiously, I would say that the Senator ought to know that a mere governmental proclamation, though issued by some bureau or "chief" or department, sweeps away property rights and possesses greater sanctity than judicial decrees. The departments promulgate regulations regarding lands in the Western States which have the effect of acts of Congress, and executive officers determine property rights without trial or due process of law.

Mr. SMITH of Georgia. I think that is true, unless somebody resists it. I do not know what "operated on Government account" in this bill means. I do not see anything in the bill that makes it possible for the Government to take these mills and operate them on Government account.

Mr. KING. I venture to suggest to the distinguished Senator that some bureau, some thousand or twelve hundred dollar clerk who is under the civil service but who has no ability whatever to deal with large business interests, will determine what "Government account" means, and he will furnish the wisdom that the distinguished Senator from Georgia and other Senators do not possess.

Mr. SMITH of Georgia. Are we to vote for a measure when it has no definite meaning?

Mr. SMITH of Arizona. If the Senator will pardon me, it will save a great deal of talk about that particular proposition if he will look at the amendments. I can state it in half a minute.

Mr. SMITH of Georgia. All right.

Mr. SMITH of Arizona. The Senator is debating a provision that is stricken out. What is the use of talking about it?

Mr. SMITH of Georgia. Then that is conceded to be improperly in the bill. I want to see what takes its place. I know we do not know what is meant by operating on Government account. Now, let us consider the next provision of the bill. It provides that distribution be made by the Federal Trade Commission equitably.

Mr. SMITH of Arizona. That is stricken out.

Mr. SMITH of Georgia. Then, it is not to be put in the hands of the Trade Commission and not to be equitably distributed?

Mr. SMITH of Arizona. The Senator is stating those facts himself.

Mr. SMITH of Georgia. Equitably distributed how? To all the newspapers over the country? Are we to say the Trade Commission shall determine just how much paper each news-

paper in the United States is to have. Are they to distribute it without having the paper? If they are to have the paper then we must give them the money to buy the paper, and we might furnish the Trade Commission \$150,000,000 or as much as is necessary. The Trade Commission is to distribute it. If we mean that, then we ought to appropriate money enough to buy the output of the mills and then we ought to determine whether they should sell on credit or sell for cash to all the little newspapers of the United States as well as the large ones. We do not say whether they are to do it or not. The bill would require the Trade Commission to distribute the paper without giving them the means with which first to buy the paper and without providing for the collection of pay when it is distributed. As the measure is drawn it can not be effective. I submit it gets nowhere, it does nothing except to put us in the attitude of voting for some platitudes impossible of execution.

Mr. KING. Mr. President—

Mr. SMITH of Georgia. Just one word more. It says that such person, company, or corporation shall be paid ninety cents on the dollar, and if they are not satisfied they must sue the Government for the balance. Have we given the Trade Commission the money to pay the 90 per cent? Not at all. Do we say the Government shall pay them 90 per cent? Not at all. Do we mean that the Trade Commission shall distribute to the newspapers and collect 100 cents on the dollar and keep 10 per cent and turn 90 per cent over to the manufacturers? It does not say it. Nobody can take this measure if we pass it as it is drawn and execute it. It is just simply impossible of operation.

I thank the Senator from Utah. I am compelled to meet a train at half past 1, and I wished to present an explanation of why I vote against this measure. I would vote to recommit it to let the committee see if they could work out something practicable; but as to this measure, I feel that I would stultify myself if I favored voting for a measure that gets nowhere and does nothing but use impossible generalities.

Mr. KING. Mr. President, the Senator from Georgia [Mr. SMITH] is a lawyer of ability and has had large experience in legislative matters. His keen mind goes to the root of this matter, and he points out some of the insuperable objections to this measure and shows the utter fallacy of the theory upon which the joint resolution is based.

But, Mr. President, before proceeding to a brief analysis of the joint resolution and a reference to some of the features which the Senator from Georgia has just discussed I want to make a further observation in reply to the position taken by the Senator from Arizona [Mr. SMITH]. His intimation—or, rather, his statement—is that this legislation is demanded as a war measure. If the Senator's contention is sound, then it follows that the prosecution of the war will be advanced and the cause in which we are participating will be strengthened by the passage of this joint resolution. Is it a war measure? Is it proximately connected with military or naval operations or the public defense? I should like to ask some Senator to point out what relation it bears to the war. A war measure! Does it arm a soldier? Does it provide us with munitions? Does it furnish the Government labor? Does it contribute to the revenues of the Government? Does it strengthen the military or naval arm of this Republic? There is but one answer. It adds to the burdens of the Government; it will necessitate the creation of new positions, which in turn will call for additional expenditures. What, then, is the justification for it?

Why, as I understand my friend, there is a monopoly, and to curb it or control it the General Government must play the part of a proprietor and supervise and regulate the forests and plants and business activities of a great industry in our country.

The distinguished Senator from Oklahoma [Mr. OWEN] a day or two ago, in supporting the argument of the Senator from Arizona, justified this legislation because there were "profiteers" and because—and that was the necessary deduction from his argument—the courts could not administer the law, or, if they could, that the law was not sufficiently drastic to protect the American people from extortion and from profiteering. The argument of the Senator—indeed, the argument of those who support this joint resolution—is that the competitive system in this Republic has proven inadequate and unsatisfactory and must be abandoned; that it has so weakened the States that they are powerless to protect the people; and that the National Government stands helpless and hopeless before this aggressive power. The conclusion, therefore, is the Federal Government must control, if not own, private enterprises and superimpose a species of socialism, aggravated and hateful, upon the people. Mr. President, I deny the soundness of this argument and denounce the conclusion. I believe in the competitive system.

Broadly speaking, I believe in the economic views that were announced by Adam Smith and which have heretofore been the basis of our industrial development.

Price fixing and governmental control are now being urged as the panacea for economic evils. One would think from the discussion here and elsewhere that governmental action in fixing the prices at which commodities shall be sold was a modern discovery and a recent practice. Mr. President, price fixing is older than the Pyramids. It antedates the heroic days of Homer. In the Code of Manu—Hindu, 200 years B. C.—it was declared that "the King shall set the price for the purchase and sale of all commodities according to the place of origin and destination, the profit of the seller, and the needs of the purchaser. Once in five days, or a fortnight, the King shall publish the price of commodities in the market."

And throughout the centuries governments, monarchs, and those exercising executive power prescribed drastic rules relating to trade and often fixed the prices for all the products of labor. In Great Britain the medieval and the ancient practice was continued. However, it was later discovered that an impetus was given to industrial development if the grip of the Government were relaxed and greater freedom permitted the individual. It was discovered that in proportion as there was freedom in the activities and lives and labors of the people trade and commerce and prosperity increased. Capital was more easily obtained if the power of the Government was diminished and the owner of an industry was permitted to manage it and without interruption dispose of the products of his hand or factory. With this victory gained price fixing was shattered under the process of competition. The law of supply and demand became an accepted principle of the economic philosophy of Great Britain. Competition was regarded as desirable. It stimulated individual effort and increased the productivity of the nation. It also tended to a reduction of prices, which, in the end, was for the public good.

Adam Smith, in his immortal work, presented to the world these great principles, which revolutionized the political economy of the world and became the basis of modern economic action. Even in our own country as late as 1777 the Legislature of Massachusetts, carrying out the wish of the Federal Congress, fixed by law maximum prices for many commodities. Boards were authorized by the legislature to establish prices, and the following year in New York there were similar enactments. It has been the prevailing view in this Republic that a broad field for individualism would secure the best economic results, and that under our institutions there would be no extreme individualism, but freedom of effort would be a concomitant of organization. The view of our publicists and statesmen has been that there would be greater development with the individual unfettered by governmental control; that the requirements of the people would cause individual activity; that the prices which would be paid by the people would be a sufficient incentive for individual effort. As a corollary to this proposition, it was stated that there would be no monopoly, or, if it was, it would be quickly curbed or destroyed because of the competition that would result.

This classical view perhaps needs some modifications in view of the great consolidations of capital that have occurred in our country. Where by reason of the massing of large interests, particularly where such interests control or are related to transportation, or where they control the facilities of distribution so that the natural law of supply and demand is affected or nullified, the competitive principle is not entirely satisfactory. It was to meet the conditions that affected or neutralized the economic doctrine just mentioned that laws were enacted by various States to curb, control, or destroy monopolies; and to reach monopolies and combinations in restraint of trade which affected interstate commerce the Sherman and Clayton and the Federal trade laws were passed. It is not my purpose to further discuss this important subject. I refer to it only incidentally because the measure before us has for its object the fixing of prices by the Government. Before leaving this question, however, I want to refer to what Mr. James J. Hill said in his testimony before the Stanley committee, as I recall, several years ago. He used this language:

"If this Government ever undertakes to regulate prices, as has been proposed, the present form of government will pass out of existence. It will be succeeded for a time by confusion and then anarchy. . . . You will have to tame human nature and eliminate all selfish motives that rule human beings and every other form of life before you will eliminate competition. There will be competition as long as the doctrine of the survival of the fittest lasts, and that will be operating long after our present statutes have been wiped off the books."

I think it was Mr. Davies, of the Federal Trade Commission, who stated that "governmental monopoly or ownership of in-

dustries means state socialism, and that state socialism is the negation of democracy." Mr. Davies eloquently urges the views for which I am contending in the following language:

As human nature is now constituted, I should be fearful that industry owned and operated by government could be possible only under a bureaucratic and monarchical form of government, or in a degree of perfection that has never been achieved by even a small group in the past. In plain, I feel that socialism, imposed upon a democratic state, would lead inevitably to monarchy or oligarchy, and to the destruction of the form of government which seeks to be a government of and by its people.

Our problem is to preserve as large a degree of freedom for individual growth as is compatible with the welfare of the national community. Cooperation may be the agency by which democracy may preserve itself and yet serve men. The competitive system is the fundamental base of democracy, but it is not inconsistent with cooperation.

Nor should we be thrown off our base by the big efficiencies that are induced by governmental activities in Europe. Monarchical governments, or governments under the present war necessities, can do certain things effectively that a democratic government, without the stimulus of necessity, might go to wreck upon. It is well for lovers of liberty to remember that too high a price can be paid for efficiency.

Mr. President, I am not insisting that in a crisis so grave as that confronting us conditions may not arise warranting the Government in fixing prices for some commodities. If the military operations of the Government and its stupendous efforts to carry on the war dislocate trade and commerce and prevent the application of the law of supply and demand with respect to certain commodities, then it may be eminently wise and advantageous for the Federal Government to regulate such commodities and perhaps establish selling prices; but such concession is not an argument against the proposition that governmental control of private business is not for the public good. There should be as little price fixing and governmental control of private business as possible.

Obviously business can not continue as it was in prewar times. "Business as usual" is impossible. The earnings of the people, while enormous, are limited, and but a fraction of those earnings are available for investment. It follows that the great demands for the Government to supply its war chest not only will consume the savings and funds available for investment, but the Government will have to go further and raise the additional amount required by the issue of bonds. But I insist that no steps should be taken by Congress or by the Government to unduly disturb industry. There must be no industrial paralysis. There should be no desire that men of energy and those who possess capital should be halted upon the threshold of the development of industries beneficial to the people of the country. So far as possible there should be encouragement to the American people to exert themselves to the highest degree to make as great a contribution as possible to the economic and industrial growth of the Nation. More resources should be developed, more wealth should be created, more fountains of prosperity should be tapped. Such course will help to win the war and will increase the revenues imperatively needed by the Government to meet the stupendous requirements of the war.

Mr. REED. Mr. President—

The PRESIDING OFFICER (Mr. JONES of New Mexico in the chair). Does the Senator from Utah yield to the Senator from Missouri?

Mr. KING. I yield.

Mr. REED. I should like to get the Senator's view upon another proposition which I have not yet heard mentioned. I shall have to state my question. The joint resolution undertakes to give the Federal Trade Commission the authority "to supervise, control, and regulate the production and distribution of print paper and mechanical and chemical pulp and their products."

That language "to supervise, control, and regulate the production and distribution" covers every act that may be done or which the Trade Commission may deem necessary to have done relating to the production and distribution of this product. Manifestly the power begins at the forest where the trees are cut and follows the wood over the railroads and through the mills that grind the pulp; it follows the product through those mills into the warehouse, and follows the product from the warehouse to the railroad station, and from the railroad station to the tens of thousands of points of delivery. The Federal Trade Commission is authorized by this joint resolution to control and supervise and command at every step and in every act of that long course from the forest to the newspaper plant.

Mr. KING. Let me suggest to my friend, if he will pardon me right there, there is one hidden blessing in this proposed act. I think the penalty for failing to observe the edicts of the Federal Trade Commission was stricken out.

Mr. REED. Oh, no; that is what I am coming to:

SEC. 4. That compliance with all orders and regulations of the Federal Trade Commission made in accordance with this act—

All—

shall be obligatory on any individual, firm, association, company, corporation, or organized manufacturing industry, or the responsible head or heads thereof, and shall take precedence over all other orders and contracts heretofore placed with such individual, firm, company, association, corporation, or organized manufacturing industry; and any individual, firm, company, association, corporation, or organized manufacturing industry, or the responsible head or heads thereof—

Now, notice—

failing to comply with the provisions of this act shall be deemed guilty of a felony.

Mr. KING. The Senator from Missouri is right. That had escaped my recollection.

Mr. REED. It continues:

and upon conviction shall be punished by imprisonment for not more than three years or by a fine of not exceeding \$20,000, or both.

Mr. OVERMAN. Mr. President, right there, if the Senator will yield to me, I desire to say that I understand this joint resolution carries no appropriation whatever.

Mr. KING. None.

Mr. OVERMAN. Suppose the proprietors of the mills refuse to put up the money to operate the mills, would that make them guilty of a felony?

Mr. REED. That is a very important point; but the point I have in mind is greater than that. If this joint resolution operated only to the extent of saying that if the Government went to a mill to receive the paper, to receive the product, and the mill refused to turn it over upon proper tender by the Government of the amount of money due, the failure to turn over should be regarded as a crime, we would regard that as sufficiently severe in that case. Indeed, one who had any knowledge of Saxon civilization and Saxon law would say that the most the Government ought to be entitled to do would be to seize the property and let the individual have recourse to a court for the value of the property; but this provision, which reads like it had been taken out of the laws of Draco, provides not only that if they do not turn over the property and deliver it they shall be imprisoned in the penitentiary, but it goes further than that and provides that a failure to obey any one of the rules or regulations or mandates of the Trade Commission from the time the tree is chopped down until the time the paper is delivered is a penitentiary offense. Am I correct in that? As I say, I am just beginning to read this joint resolution.

Mr. KING. The Senator is right.

Mr. REED. If I am right, the joint resolution is a disgrace to this Senate. If I am right, that for failure to obey the mandate of a civil body that is not even a court, the citizens of this country can be sent to the penitentiary and such a measure as that can be seriously treated in the United States Senate, then Kaiser Bill ought to have the author of this measure to give instructions in the court of Berlin to those men who deny all human right except the right of power.

Mr. KING. Mr. President, we passed a bill the other day which in this particular parallels the one under consideration. During the discussion the able Senator from Colorado [Mr. THOMAS] pointed out the frightful and indeed monstrous penal provisions contained therein. The violation of a regulation concerning the purchase of stock or its acquisition in any manner was a crime. If there was a devolution of property and a person obtained two shares of stock in two separate companies and held them for a period beyond that named in the statute, he would be guilty of a crime and liable to a fine of a thousand dollars and to imprisonment in the penitentiary for three years. Or if he purchased two shares of stock, one in a corporation in Wyoming and the other in a corporation of Colorado, he would be a felon. The Senator ought to see from this legislation and other legislation we are passing that we are delegating to bureaus, to clerks, to inspectors, to subalterns, and to a horde of petty executive officials legislative power, power to enact and promulgate regulations, the violation of which constitutes a crime. The provision to which the Senator from Missouri has just referred obviously must be shocking to any person who is familiar with the rights of individuals and of the State. Moreover, if the Senator from Missouri will permit, it infringes, in my opinion, another principle of our theory of government. Back in Third Howard is found one of the great decisions written by the Supreme Court of the United States. It is the case of Pollard's Lessees. In that decision the distinction is pointed out clearly as to the rights of the Federal Government and the municipal powers of the States. It was never dreamed that the Federal Government would go into the States and enact police regulations and enact a penal code to govern individual conduct and the transactions between individuals; but in this

and in other legislation analogous to it we are committing to the Federal Government the power to enact a general penal code.

Before the Senator from Missouri [Mr. REED] interrupted me—and I was glad to have him interrupt me and challenge attention to the vices of this joint resolution—I was alluding to the position of the Senator from Oklahoma [Mr. OWEN] and that of the Senator from Arizona [Mr. SMITH]. The Senator from Oklahoma and the Senator from Arizona have practically said that this Government is powerless in the hands of this monopoly, and that when monopoly exists the only alternative is for the Government to take over the business. Mr. President, I deny the conclusions reached by the distinguished Senators; I deny that there is here a monopoly that can not be controlled by law. As I said a moment ago, the Senator from Arizona admitted that when criminal proceedings were instituted the result was the immediate reduction in the price of the product to the purchaser. All that we need to do is to enforce the criminal statutes, the Sherman antitrust law, the Clayton Act, and avail ourselves of the Federal Trade Commission act. There is sufficient law upon the statute books to cover this particular case.

The Senator from Maine [Mr. FERNALD], in a most admirable address just delivered, called attention to the fact that in his State there are now and have been for years a number of companies engaged in the manufacture of print paper and its products. They have not been crushed by any monopoly or combination in restraint of trade, nor are they in any combine or associated with any illegal organization. These enterprises are expanding and growing. They are not demanding this legislation. I am also advised that there are other companies in other States engaged in this business, and they are acting independently and achieving fair success. From the record presented by the Senator from Arizona it appears that there was a combination of four or five print-paper companies which was powerful and sought to charge exorbitant prices from those with whom it dealt. Prosecutions under the provisions of the Sherman law followed, and the defenders pleaded *nolo contendere*, and the court imposed fines upon each. It is argued that the court was too lenient; that there should have been imprisonment and heavier fines imposed. That may be true. The same criticism is often made of the action of courts in criminal cases.

But it would be absurd to contend that because judges are sometimes too merciful the laws should be repealed or not enforced, or that the Government should seize the property of not only the criminals but of all persons engaged in the same pursuits; and thus after such seizure become a business proprietor, a huge overlord, driving out all competitors and reducing the independent citizens of the country to a position of semi-servitude, in which situation, dulled and deadened, they would cease to be vital factors in this world.

If the Sherman law reached this monopoly once it will reach it again and again if the combination is continued. Why are not other indictments found and why are not the defendants again brought into the courts of the land? Mr. President, the Senator's admission that the law did reach this monopoly destroys any possible argument in support of this resolution, even if its constitutionality were conceded and governmental paternalism were unobjectionable.

Mr. SMOOT. Mr. President—

Mr. KING. I yield to my colleague.

Mr. SMOOT. I do not know whether my colleague has seen the agreement made November 26, 1917, between Thomas W. Gregory, the Attorney General of the United States, and several manufacturers of news-print paper. That agreement governing the price upon the paper to be sold throughout the United States according to the recommendations of the Federal Trade Commission is in force to-day, and it will be in force until the 1st day of April of this year, after which time the companies have agreed to abide by whatever price the Federal Trade Commission may decide the paper shall be sold at. That is a thousand times better than this proposed legislation which Senators are now attempting to put through.

Mr. KNOX. Mr. President—

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Pennsylvania?

Mr. KING. I yield.

Mr. KNOX. May I inquire of the Senator from Utah whom the Attorney General represents in that agreement? What relation does he sustain to the transaction made in accordance with the agreement?

Mr. SMOOT. This agreement grew out of the suit against the news-print paper companies and—

Mr. KNOX. I understand that; but how does the Attorney General connect himself as a party to the transaction for the distribution of the paper? Whom does he represent?

Mr. SMOOT. He represents the paper users, I suppose.

Mr. KNOX. Does not the agreement state?

Mr. SMOOT. The copy of the agreement in my possession is not signed.

Mr. KING. If the Senator from Pennsylvania will pardon me, and my colleague will permit me, I think it was a part of the settlement of the criminal prosecution.

Mr. KNOX. The reason I asked the question was that I understood—I have not read the agreement—that the Attorney General made the agreement in his capacity as a trustee for all the paper users of the United States, and I was just wondering how he had been endowed with that capacity, because the Attorney Generalship is an office created by statute, with powers limited by statute, and I do not recall that any statute has ever made the Attorney General of the United States a trustee for any class of consumers of any kind of commodity.

Mr. SMOOT. The agreement states:

This agreement, made this 26th day of November, 1917, between Thomas W. Gregory, the Attorney General of the United States, and his successor, or successors, in office, as trustee, acting herein in behalf of each and every individual, firm, or corporation publishing a newspaper and using news-print paper in his or its business in the United States that now is or during the life of this agreement shall become a customer of any of the parties of the second part to this agreement, party of the first part, and the undersigned, engaged in the manufacture and sale of news-print paper, parties of the second part.

Mr. KNOX. Then I was correct in the information which I received; and it seems to me that the Attorney General must be heartily opposed to a measure such as this if he represents the newspapers of the United States in the capacity of trustee, because, as a sample, I received this morning a telegram heartily opposing this measure, signed by every newspaper, I think, in the city of Philadelphia, including Democratic, Republican, and Progressive.

Mr. KING. Mr. President, I believe that the overwhelming majority of the newspapers of this country, when they understand this joint resolution, what it means, and what precedent it will establish, will oppose it. No matter what views may be entertained regarding the press of our country, it must be conceded that, in the main, it has stood for progress and liberty, and during this world-wide struggle the newspapers have had broader vision than the people and most statesmen, and have pointed the way of duty and honor. Some papers, it is true, speak the voice of selfishness and oppressive capital; others preach a destructive socialism or subtle revolution. But the press, on the whole, speaks in powerful tones for the people, for industrial liberty, and for the preservation of our liberties.

Jefferson was a great leader and a true prophet when he said, "I would rather live in a country with newspapers and without government than in a country with a government but without newspapers."

There is no foundation for the inferences suggested by the Senator from Arizona that we will have no newspapers unless this joint resolution is passed. I challenge the correctness of such inferences or the position of my distinguished friend, that this legislation is necessary or warranted by any conditions supposed to exist.

Mr. SMITH of Arizona. Mr. President—

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Arizona?

Mr. KING. I yield.

Mr. SMITH of Arizona. Both in answer to that statement and also to the observation made just as I entered the Chamber, I will say that 8 concerns signed that agreement, while 65 of the news-print paper manufacturers not in that agreement at all are now signing another one.

Mr. SMOOT. But the eight concerns who were parties to that contract, I wish to say to the Senator, produce at least 75 per cent of the print paper of the United States.

Mr. SMITH of Arizona. We will let that go for what it is worth. I will not interrupt the Senator from Utah further and divert him from his argument, except to say, in regard to his statement that the newspapers of this country will object to this legislation when they know the meaning of the joint resolution, that they would probably object to it if they should hear the arguments against it by those who do not seem to know its purpose and are arguing concerning objections that we have consented shall be stricken out, if the Senate wishes them stricken out. I shall certainly make such a motion.

Mr. KING. My only knowledge of the proposed amendments is such as I have derived from the reading of the same a moment ago by the Senator from Arizona. As I interpret them, they do not cure the vice of the joint resolution or relieve it of any of the objections urged against it.

Mr. SMITH of Arizona. Oh, well—

Mr. KING. This joint resolution, emasculated as my friend infers it will be by the suggested amendments, still projects the Federal Government into private enterprises; seeks to control by bureaus and Federal employees the industries of many people, to deprive the latter of their property therein, and to punish in a cruel way all who refuse submission to arbitrary orders of petty officials.

Mr. SMITH of Arizona. It does not project the Federal Government into the private enterprise if the amendments are agreed to.

Mr. KING. Will the Senator permit me to see his amendments? I submit that, as he read them, they do not relieve the joint resolution at all of the criticisms I am leveling against it.

Mr. SMITH of Arizona. What I rose to suggest to the Senator was that if there had not been some action taken I think that the newspapers of this country would have had to quit business, for the manufacturers were positively selling this commodity to some isolated country papers at 6, 7, 8, and even as high as 9 cents a pound, while they were selling it to others at 2, 2½, and at the highest at 3 cents per pound.

Mr. KING. Mr. President, I do not agree with the Senator. It is possible some local jobber charged an extortionate price to some country newspaper, as some merchant or coal dealer occasionally robs those with whom he deals. I have recently read the report of the Trade Commission following its investigation, and, as I interpret that report, only about 50 per cent of the print product is controlled by the so-called combine. This combine was proceeded against by the Government and those who were participants in the monopoly were punished. If the monopoly was not dissolved it was the fault of the Government attorneys.

Now, does the Senator say that a combination that controlled but 50 per cent of the output, and against which there were proceedings in the courts looking to its dissolution, will suspend the publication of all newspapers in the United States unless this joint resolution is passed? And in answering this question it must be remembered there is a broad field for competition and many plants are successfully manufacturing this important commodity.

Mr. SMITH of Arizona. I do not say the newspapers of the country would have been put out of business any more than people would have gone naked if the price of a yard of wool were made \$75. They would have to find something with which to clothe themselves. It follows, however, that a price can be made so high that whatever enterprise is trying to use the product will have to quit business.

Mr. KING. The record shows that the wholesale prices of this so-called combine were not very much greater than prices charged by many of the industrial enterprises of this country. There has been a great rise in prices in nearly all commodities, and it would be surprising if this industry did not respond to the tide of advancing prices which is oppressing the land. The value of wood has appreciably enhanced and the chemicals employed in print paper and its products have greatly advanced in price. Labor has received greater rewards. Rent, insurance, interest on borrowed money—these and other factors must be considered when an attempt is made to deal with the question of prices.

Mr. SMITH of Arizona. The Trade Commission shows that there has been no real increase of cost. Here they were selling in 1916 at 2.50, and the great independent paper maker of New York to-day is selling at 2.30 or 2.50.

Mr. KING. Mr. President, I do not care what the Trade Commission says. Any man who affirms that there has been no increase in the cost of producing wood pulp or any other commodity in the United States during the past year is not familiar with the economic and industrial conditions of our country.

Mr. SMITH of Arizona. Suppose he should use water power instead of steam, would that account for the fact of there being no increase?

Mr. KING. No; the price of labor and other things have gone up, and in some sections freight rates have been advanced.

Mr. SMITH of Arizona. Would not the mere fact of a constant supply of water power and electricity offset the increase in the price of labor?

Mr. KING. I am not sufficiently familiar with the operation of these plants to answer that question; but I affirm again that there has been an increase in the cost of manufacturing the articles described in the resolution.

Mr. SMITH of Arizona. And it has been liberally allowed for at 3 cents a pound.

Mr. SMOOT. Mr. President—

Mr. KING. I yield to my colleague.

Mr. SMOOT. In that connection, perhaps I had better call the attention of the Senator from Arizona to the bids that have been submitted to the Committee on Printing for next year's paper.

Mr. KING. I shall be very glad to have that in the RECORD.

Mr. SMOOT. The Senator from Arizona by his own statement admits that the paper was sold for 2½ cents before the war, and now it is sold for 3 cents. That is an increase of about 25 per cent.

Mr. SMITH of Arizona. That is enough to cover all increases in wages.

Mr. SMOOT. I deny that; but now let us see what the other manufacturers of paper, other than white print paper, are charging the Government of the United States to-day.

For instance, take machine-finished printing No. 1 paper: We find the increases from last year running 161.43 per cent, 133.33 per cent, 137.35 per cent.

We find wove machine-finished printing paper increasing all the way from 125.40 per cent up to 200 per cent.

We find, Mr. President, in the case of writing papers, increases running from 172.7 per cent to 205.95 per cent.

Mr. SMITH of Arizona. Those ought to be included in this joint resolution.

Mr. SMOOT. Yes; but they are not included in this joint resolution.

Mr. SMITH of Arizona. They will be, if my amendment is adopted.

Mr. SMOOT. No; they are not included in the Senator's amendment. Just wait a minute. Those are only a few of them.

Take ledger papers, where the increase runs all the way from 110 per cent up to 127 per cent.

Take manila papers, where the increases are all the way from 188.85 per cent to 212 per cent.

Take the rope manila papers, where the increases run all the way from 154 per cent up to 159 per cent.

Mr. SMITH of Arizona. We can see very easily how those increases might naturally occur.

Mr. SMOOT. The manila board paper has increased 227 per cent. The manila cardboard paper has increased 259.53 per cent. Mr. President, the paper that we will have to purchase for the fiscal year ending June 30, 1918, will cost the Government for the Government Printing Office alone over \$4,000,000.

Mr. SMITH of Arizona. Now, Mr. President, if the Senator from Utah will permit me—

Mr. KING. I have yielded to my colleague, and I desire that he shall have an opportunity to conclude before I yield to the Senator from Arizona.

Mr. SMITH of Arizona. Our friend is multiplying, as we do with witnesses on the stand sometimes, until the court stops us.

Mr. KING. I gladly yielded to my colleague, and I yield to the Senator from Arizona if he desires to propound a question.

Mr. SMITH of Arizona. I thank the Senator. It was not merely propounding a question, but it was to make a suggestion.

Mr. KING. I yield for the purpose of having a suggestion from the Senator.

Mr. SMITH of Arizona. I was about to suggest that all of that may be perfectly true, but it is no assault on this joint resolution; for, if that be true, those people can get that paper at the price that it costs them to make it, and some of it at any price they please to charge, and they ought to be included in this bill if that be true.

Mr. SMOOT. Mr. President, as long as the Senator has made that statement, will my colleague yield to me for a moment?

Mr. KING. Yes.

Mr. SMITH of Arizona. And then, whatever price is set, there is not one thing in this joint resolution that says that a man can not get a fair profit on every ounce of paper that he makes. There is no provision to prevent him from doing it. In fact, there is every safeguard thrown around his getting it, for the Trade Commission is now and has been, or would have been if the makers of paper had come here, and will be up to February 4, settling the question with all the manufacturers that were included in this judgment, every one of them, as to the cost of production and, making an estimate of all that, to set the price under the agreement that was made at the time of the decision in that case. If they are to have that allowance and make this decision as to what it will cost, there is no difficulty under this joint resolution in dealing with any of those that try to go beyond it unless they can show that their manufacture costs more, and if they do, it will be allowed instantly.

There is no purpose here to rob anybody or to hurt his business or to stop his trade. This is only a means of protecting those that the country knows need protection. Some 12,000 papers of the United States, I think, have applied for relief of some kind or other. In that connection I will state that I have received two letters from the great paper associations of Ohio this very day asking for some relief against the oppressive prices that have been charged and advocating the passage of this joint resolution.

Mr. SMOOT. Mr. President, will my colleague yield to me? Mr. KING. I yield to the Senator from Utah.

Mr. SMOOT. It seems very strange to me that a Senator will stand upon the floor of the Senate and say that there has not been any increases in the cost of paper.

Mr. SMITH of Arizona. I did not say any such thing.

Mr. KING. I hope the Senator from Arizona will permit the Senator from Utah, to whom I have yielded, to conclude his remarks.

Mr. SMITH of Arizona. I accept the criticism of my friend, but I do not want to be misrepresented, even if I have to talk in his time.

Mr. SMOOT. May I proceed?

Mr. KING. I yield to my colleague.

Mr. SMITH of Arizona. The Senator may proceed in order.

Mr. SMOOT. I am very much obliged to the Senator from Arizona.

Mr. SMITH of Arizona. The Senator is very welcome.

Mr. SMOOT. There is no one, Mr. President, but knows that the cost of making wood pulp and chemical pulp has increased from 300 to 400 per cent. There is nothing that enters into the manufacture of paper of any kind but that has increased in cost all the way from 50 to 500 per cent. I did not particularly call attention to the increased prices of the paper manufacturers as submitted to the Committee on Printing for the coming year to show that they were exorbitant prices, but I did it simply to show the absurdity of the claim that there has been no appreciable increase in the cost of print paper; and I do not believe that the Federal Trade Commission for a moment would ever make such a statement.

Mr. KING. Mr. President, if the members of this so-called combine violated the law they ought to be punished and they ought to be sent to the penitentiary. If there is a combination in restraint of trade I repeat what I said a moment ago, that the Sherman antitrust law has been invoked, and it can be invoked again for the destruction of it and for the punishment of those who have violated the law. But the Senator from Arizona and those who are championing this joint resolution—and I say it with all due respect to them, because I have such genuine affection for my friend from Arizona—do not seem to appreciate the precedent that they are seeking to establish and the fundamental objections to this joint resolution. They seem to proceed upon the theory that because an evil exists it can be cured only by additional laws, the creation of an additional bureau, the promulgation of sweeping regulations, the supervision by the Federal Government of the industry involved, with its millions of dollars of capital and its thousands of employees. Private control must cease and the era of Government control must be ushered in.

The Senator's remedy is not a cure—it is a potion which will produce stupor and coma or a poison which will destroy. The proponents of this measure, I am afraid, do not comprehend the pathology of the case; hence their prescription is dangerous. The fallacy of this legislation and of much that is suggested for our consideration rests upon the assumption that any social or economical evil must and can be cured only by legislation or executive action. Accordingly some department prepares a bill or some clerk or bureau sends to us a proposed enactment, and it is expected that we approve it regardless of precedents or past experience or sound economic policies.

I protest against the assumption that our economic and political system has been a failure and that our great achievements are only a chimera, and with equal vehemence I protest against a government by bureaus and the adoption of a policy which renders the States impotent and places the Federal Government in control of the lives and property of the American people. I protest against the irresistible conclusions that must be drawn from the position of those supporting measures of this character, viz, that we have no law to punish and prevent monopoly and lack sufficient wit to devise suitable and constitutional measures to protect the people from corporate or individual greed and oppression.

If in the paper industry prices are too high, competition will reduce them. That has been the history of the industrial development of our country. A level of prices too high has resulted in the invasion of the same field by others and the com-

petition has reduced prices to a lower if not to a proper level. What the public has lost for a short while because of prices being too high and often extortionate has brought compensations in the general and uniform fall of prices which competition has induced, and in addition there has been a larger investment of capital and a multiplying of the industries of the land. I admit, of course, that there may be a monopoly so oppressive and powerful as to destroy competition. I can conceive of a situation where there may be an industrial conspiracy and combination so omnipotent and tyrannous as to require its destruction by the Government. The efficacy of the Sherman antitrust law has been proven, and the decisions of the Supreme Court show that it has teeth to devour trusts and monopolies which are inimical to the public welfare.

If we turn over to the Government the enterprises of the country we stifle business, destroy competition, and prevent capital from entering into legitimate fields of endeavor, because it will not compete with the Government. If we lay the clammy hand of the Government upon private business we will retard the industrial development and the industrial progress of the people. The glory of this Republic lies in the fact that the brave and hardy pioneers and their children have gone out into a multitude of fields, and by their genius and their industry and their courage and their Yankee skill they have developed industries to a high standard of perfection and have brought consequent prosperity to the American people.

The great cities of our country, the great States of the Union, are the product of this free play of individualism, of the competitive forces that have been operating in this Republic; and when there have been combinations we have gone to Congress and have enacted the Sherman law and the Clayton Act and the trade commission bill for the purpose of restraining lawless organizations that sought to make profit by illegitimate organization.

Mr. SMITH of Arizona rose.

Mr. KING. And the States have likewise, in many instances, passed statutes for the purpose of curbing monopolies that were engaged in intrastate business. Unfortunately, the States too often have failed to enforce their own statutes and have devolved upon the Federal Government the duty of controlling monopolies in restraint of trade.

Mr. SMITH of Arizona. Mr. President—

Mr. KING. I yield to the Senator.

Mr. SMITH of Arizona. The Senator has answered in his own statement what I first rose to ask—whether or not the argument he was making as to individual enterprise and competition would not have applied to the Standard Oil Co., and whether his argument would not apply to the laws that were enacted in pursuance of the effort of the people to get from under the very combination of which he speaks—the antitrust law, and the whole list of them—with the same force that it would apply against this, provided that this were a trust or a combination, and we came to Congress to get relief, just as we came to Congress to get relief in the case of the antitrust law?

Mr. KING. Oh, Mr. President, there is a wide distinction in the point that I am making. We passed the Sherman antitrust law for the purpose of preventing monopolies; but in so doing there was no appeal to Congress, as there is here, to the effect that "here is a combination in restraint of trade; it is a monopoly; therefore we insist that the Government shall take possession of this monopoly and supervise and operate the business in which it is engaged."

Mr. SMITH of Arizona. We do not here, either, if I can get my amendment adopted.

Mr. KING. Ah, Mr. President, that is just exactly what my friend is doing here. This joint resolution would be a nullity and be a mere naked fulmination if it did not contain provisions authorizing the Government to take charge of the business against which the bill is directed. There is a great deal of difference between a law to punish combinations in restraint of trade and one empowering the Government to invade the field of private endeavor and supervise the business enterprises of the people. In the first instance legislation is proper where a monopoly exists that extends its nefarious operations beyond State lines and engages in interstate commerce. Then the Federal Government has plenary powers to enact criminal statutes against that combination, and may, by proper proceedings, dissolve it and resolve it into its constituent parts; and, of course, if the monopoly is purely intrastate it can be dealt with by State laws.

This is a Republic. This is not a proprietary Government that enters the field of private business. It does possess the power to provide commodities required for its own needs. It has power to build ships for war purposes and Government uses. It may manufacture munitions for purposes of national defense.

Its functions are public, not private. It is not a landlord or a business machine or a bureaucracy. It is a political entity to exercise delegated and enumerated powers. Our fathers never dreamed of the uses to which some would seek to apply it.

If this policy were to prevail, it would ultimately lead to the destruction of industry, and the Government would become an overlord. All business would belong to the Government. We would all be servants of the Government. We would have one stupendous socialistic structure. We would be denied ambition, initiative, creative energy, and enterprise; our social and industrial system would topple, and we would exist under the fragments of a destroyed temple that was once proud and glorious to all who beheld it.

It seems to me that we should look long before we support, even in war times, a bill that transfers private ownership or control of private business into the hands of the Federal Government. Occasions may arise where, as a war measure, we may be compelled to give to the Government power to take possession of some enterprise. Shipyards and powder factories may be requisitioned and operated by the Government for the benefit of the Government; but until such an imperative condition arises we ought to set our faces resolutely against demands, whether from constituents or officials or bureaus or from any other source, to make the Government a great paternalistic and bureaucratic machine.

The Senator from Arizona has just handed me his proposed amendments to this joint resolution, and I will examine them very briefly to see whether they cure the evils which apparently he confesses exist in the joint resolution.

I invite attention to the first section. I find that the word "control" is stricken out, so that, with that amendment, it reads as follows:

Whenever during the continuance of the war and for six months thereafter the President shall deem it needful he may direct the Federal Trade Commission to supervise—

The word "control" is stricken out—
and regulate the production—

I am sure that the Senator has not relieved the joint resolution from the criticism by striking out the word "control." The words "supervise" and "regulate" obviously are just as broad, just as virile, and confer just as great authority as the word "control" would. If I "supervise" a business, if I "regulate" a business, I control it. So the Senator has not cured this part of the section because he has eliminated the word "control." The Federal Trade Commission has the power to "supervise and regulate the production and distribution of print paper and mechanical and chemical pulp and their products—to supervise and regulate their production and distribution."

Mr. President, suppose that the Federal Trade Commission, in the exercise of this power, should go to some person or corporation engaged in the production of print paper and say, "We propose to supervise and regulate your business," and should promulgate an order taking possession of it, and those in charge of the corporation should say, "Take the plant and the business; we do not propose to be subjected to domination in our business by some incompetent clerk that may be sent from Washington." Suppose the woods, and timber, and plants, and warehouses, and railroads constructed for the transportation of the timber, and all the property of the owner were thus abandoned and turned over to the Government; what would the Government do? Of course, under the penal section, possibly the owners, including every member of the corporation having any voice in its management, could be prosecuted and fined and sent to the penitentiary. If some Government employee should issue any order with reference to the business, a failure to observe it would be a crime. So it would be a crime to refuse to conduct the business in a manner different from that ordered by such employee. A business requiring technical skill is turned over to incompetent officials, and the owners act at their peril in any matter relating to their own property. This is confiscation. By this bill every owner must accept the regulatory or supervisory orders promulgated by some subaltern, no matter how absurd or irrational they might be.

Is not that involuntary servitude? You go to a corporation engaged in business and issue an order, and because the officers and employees of that corporation refuse to obey that order, preferring to abandon their property and surrender it to the Government, they are to be prosecuted and dealt with as felons; or if they fear the pains and the penalties of the act, they are compelled to submit to these regulations and provisions, and thus, as I said, be subjected to a species of involuntary servitude. It is a monstrous proposition. It seems to me that it

ought to be repugnant to any man who has any ideas of freedom.

Will the Senator from Arizona permit me to propound a question, and will he kindly answer it in my time?

Suppose that when the Federal Trade Commission goes to a corporation that is engaged in manufacturing print paper, and promulgates an order supervisory and regulatory in character, the corporation says: "We decline to operate under that order. We are not allowed a fair compensation. You have subjected us to indignities, stripped us of control over our own business, placed ignorant employees of the Government to supervise an industry which requires skill and knowledge to direct; therefore we will turn it over to the Government and let the Government do as it pleases with the property." What authority does this bill confer upon the Federal Trade Commission in these circumstances? Is there any authority?

Mr. SMITH of Arizona. No; and I have no authority to seize, either.

Mr. KING. Does the bill provide any authority to take possession of the property and operate it?

Mr. SMITH of Arizona. If it does, it will be eliminated, as I have said a hundred times before, if the Senate wants it eliminated.

Mr. KING. Obviously not. I knew that the Senator—who is a good lawyer and a splendid man—would answer the question as only it could be answered, namely, that this bill will be absolutely a nullity, so far as it relates to production, if the persons owning the property refuse to submit to the regulations and supervisory edicts of clerks and subalterns, and turn the property over to the Government, and walk out, and say to the Government, "Take possession of it and do as you please."

Mr. SMITH of Arizona. My answer did not go as far as the conclusions of the Senator. My answer only went to the fact that the Government could not seize, and the company can at least resell their product, with their appeal to the courts, without any trouble; and if they do not want to manufacture, there is nothing in the bill to make them. There is nothing in the bill to permit the Government to seize the property; so if they want to close their mills they can do it. If they do not want to close their mills they will ultimately get just as big a price as the 60 per cent of the manufacturers that have signed this agreement to stand by the price that has been agreed upon.

Mr. KING. Then, Mr. President, it comes down to this: Under this resolution the Government will supervise and regulate the production and distribution of print paper, mechanical and chemical pulp, and their products, providing the owners will work under the orders of the Government; if not, they will be prosecuted. If they refuse to operate their plants, and surrender them, they may still be punished, but the Government has no power to run the business.

Mr. SMITH of Arizona. That I propose to eliminate, as the Senator will see by looking at the amendments.

Mr. KING. I submit to the Senator that I am reading from the copy which he handed me.

Mr. SMITH of Arizona. I have not put a line around that as coming out, have I?

Mr. KING. Not around any of the words which I have just read.

Mr. SMITH of Arizona. The Senator will find that I have struck that out later in the bill.

Mr. KING. Will the Senator kindly indicate whether the words which I have just read are still a part of his joint resolution?

Mr. SMITH of Arizona. Part of it is struck out right there. The Senator sees the purpose of it. The words "and their products" are to be struck out, as it appears farther down on the same page. That is a mere oversight of mine.

Mr. KING. The Senator states that the section from which I have been reading ought to be further modified by the elimination of the words "and their products," so that, as corrected, it will read:

He may direct the Federal Trade Commission to supervise and regulate the production and distribution of print paper and mechanical and chemical pulp in the United States, and that all mills producing and all agencies distributing print paper and mechanical and chemical pulp in the United States shall equitably distribute such products.

So, as I was about to remark, we come down to this proposition, and that is this feature of the bill, that the Trade Commission, through its employees, of course, or such agents as it may designate, shall have the authority to supervise and regulate the production and distribution of print paper and mechanical and chemical pulp. I affirm again that in supervising and in regulating the production and distribution they have no power apparently under the bill to do anything if the corporations engaged in these enterprises say to the Government, "Your

regulatory and supervisory decrees and edicts are unjust and unfair. You can take our property. We will walk out and surrender it to you." The Government under this bill would have no authority to do anything except to punish the owners and operators and the business would be destroyed.

Mr. SMITH of Arizona. If the Senator will look at section 4, he will find that wherever they refuse to equitably distribute this will apply. If the Senator will read again what I have eliminated, he will find the manufacture and distribution is left to the makers of paper absolutely, and the only time the Government ever puts its hand in the business at all is when they fail to equitably distribute or charge an exorbitant price. Then the Government comes in and says they shall equitably distribute under this order. If they do not equitably distribute under the bill, you can not seize the mills, but under section 4 of the bill you find that the price must be regulated, of course, by the Trade Commission, under its supervision. Now, 80 per cent of the production in this country is confined to roll paper, the Senator understands in carload lots f. o. b. at the mill.

They have agreed that they will sell at 3 cents up to the 1st day of next April. To the 1st day of next April, under the decision that I have before me, which I presented to the Senate earlier in the debate, 3 cents is to be charged for that kind of paper. After April 1 they will submit to any price set by the Trade Commission. They are investigating what that price will be. They have given them an appeal up to 90 per cent, holding only 10 per cent, when the rule that the Senator and I voted for in several bills is 25 per cent. If the mill wants to stop work, it can stop it under the bill. If the mill wants to go on and get a fair profit, estimated on what it cost it to produce paper, it can do it. It is only used as an emergency to meet this difficulty—not the roll, but cut paper, for which they have been charging 6, 8, and 10 cents a pound. I have had a petition from Philadelphia, where I expected it to come from, showing that they were opposed to it, and at the same time I have petitions from papers in Ohio, every one of them advocating it.

Now, as the Senator will see from a careful reading, there is nothing in what he inveighs against. I myself have contended that it ought to be eliminated. Will some Senator tell me that the Government would seize the plant and there would be no remedy? You have here a remedy in the fact that if they manufacture and will not distribute at a price equitably—where the manufacturers will lock it up in order to make the price higher—you can fine them under the last provision of the joint resolution or imprison them, in the discretion of the courts. So you see from my standpoint, while I am not disagreeing with the Senator's general proposition one particle, and I place a different estimate on the necessity of quick action in a matter like the newspaper print of this country. Those who have spoken on this matter, except yourself and one other Senator, are men who ought to know something about it. They are in the business.

At this particular time the corporation or partnership or combination to which the Senator from Ohio [Mr. HARDING] belongs in his State, among which his paper is in the syndicate, I understand you call it that, strongly advocates the provisions of the joint resolution. So we are not attempting to seize anything. We are only attempting, when one of these manufacturers refuses to distribute equitably and charges extortionate prices, to regulate the matter. Their prices may be just as high as the cost of manufacture justifies. It may be 30 cents a pound if their cost is 26 or 24 cents. So there is no possible intrusion on the right of any legitimate private business.

Mr. HITCHCOCK. Mr. President—

Mr. KING. I yield to the Senator from Nebraska.

Mr. HITCHCOCK. The Senator from Arizona said he has received a large number of communications from newspapers and newspaper associations of the country. Have any of the newspapers that have communicated to the Senator from Arizona indicated that at the present time they are now compelled to pay the highly exorbitant prices that prevailed last year?

Mr. SMITH of Arizona. Not since last November, at the time of the decision. Before that I think quite a number complained.

Mr. HITCHCOCK. There are cases of that sort, but as far as the Senator's knowledge goes that is an evil of the past, and at the present time in the fair distribution of paper the price has been very materially reduced, and is still being reduced?

Mr. SMITH of Arizona. The trouble is, if the Senator pleases, I am trying to preserve the status quo of that situation in this bill. But it does not cover this contract and this agreement there, and I have a record of the whole case. The gentlemen who are in the combination have a judgment against their agreement.

That is as I have said and as the Senator so well understands, 3 cents a pound in the roll f. o. b. at the mill.

Mr. HITCHCOCK. Does the Senator desire the passage of this bill because it will maintain the present status?

Mr. SMITH of Arizona. It will retain the status to which these men have themselves agreed. There are only 8 of these and there are 65 or 70 that are already forming another association of publishers and newspaper men.

Mr. HITCHCOCK. Another combination is now being formed?

Mr. SMITH of Arizona. There is one now in course of construction, according to the editors and publishers. I have here the agreement under which they formed a news-print bureau:

FORMING NEW NEWS-PRINT BUREAU.

At the dissolution meeting of the former News-Print Manufacturers' Association on last Wednesday at the Waldorf-Astoria, which was reported in the Paper Trade Journal of last week, it was decided to form a new association with the old one continued as a de facto organization until the by-laws of the new bureau are completed.

That alarmed me a little.

The new organization has not yet received a definite name, but it is thought probable that the title will be "The News-Print Service Bureau."

Mr. WOLCOTT. Mr. President—

The PRESIDING OFFICER (Mr. ROBINSON in the chair). Does the Senator from Utah yield to the Senator from Delaware?

Mr. KING. I have yielded to the Senator from Nebraska to propound a question. I have spoken already longer than I intended and should like to conclude my remarks.

Mr. WOLCOTT. If the Senator will yield to me, I should like to ask the Senator from Arizona if the proposed agreement to which he has referred many times is not to be made subject to the approval of the United States courts and subject to the approval of the Federal Trade Commission. Is not that true?

Mr. SMITH of Arizona. I think perhaps they refer it to the Attorney General.

Mr. WOLCOTT. If that be true, would it not indicate that the bureau is being formed for a bona fide purpose and not with an ulterior motive?

Mr. SMITH of Arizona. No; that would not indicate that to me by any means.

Mr. WOLCOTT. I notice the article states that cooperation with the Federal Trade Commission will be the keynote of all the bureau's activities.

Mr. SMITH of Arizona. Let me read further:

The other important development was the dissolution of the News-Print Manufacturers' Association. It is held in this connection that now more than ever before is the time for news-print manufacturers to stand close together and secure unified action. It is reasonable to suppose that some form of working organization to secure this unity of cooperation will be evolved.

If the Senator from Utah will pardon me just a second—

Mr. KING. I yield to the Senator.

Mr. SMITH of Arizona. It is easy to draw deductions that are unfair. I only speak of possibilities. I am only wondering why all the 65 others that are not in the combination want to go into one of this kind. What is the reason of it? Newspaper print can be sold, 80 per cent of it, at the price fixed by the Trade Commission under this agreement in force. This measure does not disturb the status quo of any decision but only prevents those who wish to combine to do this outrageous thing that has been stopped by the proceedings in court and by agreement. They filed an agreement to supply print paper at 2½ cents a pound and violated that agreement in less than four weeks.

Mr. KING. Mr. President, the Senator from Arizona has just made an indictment against the able Attorney General of the United States and his assistants. If there is now a continuation of the organization which was originally prosecuted, or if a new one is in process of incubation and possibly may be hatched, why does not the Attorney General, why do not the various district attorneys, put in motion the machinery of the law and prosecute those who are forming these combinations and by proper proceedings in a court of equity dissolve these organizations, whether perfected or inchoate?

Mr. SMITH of Arizona. It is impossible for a criminal statute to anticipate the crime.

Mr. KING. But the Senator says that they are advising already the formation of another combination in restraint of trade. That advertisement, if it be authentic, would be the justification for a bill in equity to prevent the consummation of any illegal combination.

Mr. SMITH of Arizona. If it was on its face illegal, of course.

Mr. KING. Then if it is not illegal, if it does not restrain trade, the distinguished Senator from Arizona ought not to complain.

Mr. HITCHCOCK. I think it is very proper to state that the notoriety of this organization is an indication that it was intended as a method of cooperating with the Federal Trade Commission. The real combination and conspiracy which was formed undoubtedly by a few manufacturers was for a long time a secret organization.

Mr. SMITH of Arizona. No.

Mr. HITCHCOCK. Yes; it was not known for many months after its formation. They had secret meetings and their purposes were those of darkness and conspiracy. But this the Senator refers to is as far as I can see merely an effort of a certain number of men engaged in a certain trade to cooperate with the Federal Trade Commission.

Mr. KING. I was about to observe to my friend that that was the interpretation I placed upon it; but for the purpose of answering the argument of the Senator from Arizona I preferred for the moment to place the same interpretation which he did upon the apparently harmless article to which he referred.

Mr. SMITH of Arizona. I do not wish to place any stress on the fact of the formation of this combination, and I thought I had said so in my statement. I am not saying that these men would do it, but I am saying that this agreement covered in the first place that for which these people were indicted, and they pleaded guilty. Here are their pictures [exhibiting]. It does not cover the news-print case, and it is only as a preventive measure, largely in warning these combinations. If the Senate will amend the joint resolution as proposed, the Senator will see it gives no power on earth. Those men make the paper and distribute it under the bill. The first act of the Government is that they shall distribute it at a fair price. There is not another thing in the bill but that the manufacturers shall distribute certain products equitably and at a fair price. Then if they refuse to obey the order of this tribunal, there is a fine.

Mr. KING. Mr. President, before the general debate on the bill concludes I wish to complete my remarks. I should be very glad for the Senator from Arizona, however, to make such remarks following mine as he may wish to do in answer thereto.

Mr. President, the Senator can not disguise the meaning of this resolution by the ingenious argument which he has just made, namely, that it merely means that there will be an equitable distribution by the Government of the product of the paper mills. That is not the resolution. It provides that the Government through the instrumentality provided therein shall regulate and supervise the production as well as the distribution.

That means that the Trade Commission and its agents shall go into any department employed and necessary to produce print paper and supervise and regulate the work, the employees, and supervise whatever is done. In other words, the entire business is controlled by the commission. They can go into the work and supervise the manner in which the timber shall be cut, determine the wages paid, the hours of labor of all employees, and provide regulations, supervisory and otherwise, for all forms of activity connected with the production of the same. If I regulate and supervise the production of any product the power of regulation authorizes me to determine who shall work, the hours of work, the wages to be paid, and the surroundings incident to their employment. It empowers me to determine what railroads shall transport the pulp or other product, where the pulp shall be housed, the rates that shall be paid. It will give me the power to employ numerous officials to distribute it, to fix their compensation, determine where it shall be distributed, when it shall be distributed, and what instrumentalities shall be employed.

Obviously this bill would be a mere brutum fulmen (except for the penal provisions) if it did not possess more power than the Senator ascribes to it. If the Government should merely say that print paper shall be "equitably distributed" the objections to this resolution would not be so serious, and yet when you say to the Government you have the power to determine how a product shall be equitably distributed, that means the conferring of power to investigate the conditions under which the article was produced to determine the cost, because the equitable distribution contemplated in the bill regards the cost to the consumer as the chief and, indeed, only factor.

"Equitable distribution" means not the mere physical distribution in a geographical sense, but the price to be paid by those who buy the paper. So that involves an examination of the labor question, the amount invested, the returns upon the investment, and the entire subject of production. How can the questions of capital invested and profits earned be determined without investigation of all the elements of production? One purchaser may say that paper can be "equitably" distributed to him at 2 cents per pound. How can the commission ascertain that matter unless the entire subject of production costs is in-

vestigated? All these questions are involved in this resolution, even under the narrow construction placed upon it by the Senator from Arizona.

But I repeat, Mr. President, the bill puts private enterprises engaged in the manufacture of pulp into the hands of the Government to regulate and supervise. It has power to fine and imprison all those who fail to observe whatever regulations and orders may be promulgated by the Government or the subordinates of the Trade Commission. It ought to be obnoxious, it seems to me, to every man who has any idea of liberty.

Then, Mr. President, there is another fatal defect. Where is the money with which to pay those who will execute the law? Where is the money with which to transport the paper, pay insurance rates, and meet the charges of the warehouses? Where is the money to provide for the distribution and to carry the purchasers for 30 or 60 or 90 days or 6 months, as the purchasers of paper are usually carried? There is no fund provided here and no appropriation called for. The Government is told to regulate and supervise the production and distribution, and yet it has furnished no means with which to pay for the work incidental to this gigantic task.

Looking at this bill in any way, Mr. President, it seems to me, it can not receive the support of men who are familiar with the principles of our Government and with our industrial life. It is a bill imposing pains and penalties unless one submits to involuntary servitude. It is degrading in its character. It deprives men of their initiative, takes away from them their business, and subjects them to an espionage hateful to the American people. I hope it will be defeated.

Addresses of Members of the Foreign War Missions.

EXTENSION OF REMARKS

OF

HON. GEORGE W. EDMONDS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 5, 1918.

Mr. EDMONDS. Mr. Speaker, I ask leave to extend my remarks by inserting in the RECORD a compilation of the splendid addresses delivered by the members of the various war missions of the allied countries before the House and Senate during the past year, as well as the introductory remarks of Vice President MARSHALL, Senator SAULSBURY, President pro tempore of the Senate, and Speaker CLARK.

FRANCE.

Reception of the French war mission in the Senate Tuesday, May 1, 1917.

The VICE PRESIDENT said: The Chair requests the Senator from Nebraska [Mr. HITCHCOCK] and the Senator from Massachusetts [Mr. LODGE] to meet the distinguished guests of the Senate and escort them into the Chamber.

At 12 o'clock and 30 minutes p. m. the commissioners of the French Republic to the Government of the United States, Mr. Rene Viviani, vice premier of the council of ministers; Marshal Joffre; Vice Admiral Chocheprat, of the Navy of France; and M. Emile Hovelague, inspector general of public instruction, escorted by Mr. HITCHCOCK and Mr. LODGE, the committee appointed by the Vice President, entered the Senate Chamber, accompanied by Mr. Jusserand, the French ambassador extraordinary and plenipotentiary accredited to the United States, aides of the French officers, and the Assistant Secretary of State, Mr. Phillips. The distinguished visitors having been seated in chairs provided to the right and left, respectively, of the Vice President,

The VICE PRESIDENT. The Senate of the United States has had the pleasure and honor many times in the past of receiving and welcoming distinguished visitors to the Republic. It had the glorious honor of receiving Gen. Lafayette. Nearly a century afterwards it now has the great pleasure and honor of welcoming the vice premier of the French Government, the superintendent of public instruction, the marshal of France, and Vice Admiral Chocheprat, of the French Navy.

Mr. MARTIN. Mr. President, in order that Senators may have an opportunity to be presented to the distinguished guests of the Nation who are now in the Senate Chamber, I move that the Senate take a recess for 25 minutes.

The VICE PRESIDENT. Without objection, it is so ordered. Thereupon (at 12 o'clock and 32 minutes p. m.) the Senate took a recess for 25 minutes.

During the recess the members of the French commission took their places at the right of the Vice President's desk, and the Members of the Senate were presented to them.

The VICE PRESIDENT. While the Senate is not in session, the presiding officer has decided to vary the proceedings by asking the French premier to address you very briefly in recess. [Applause.]

M. Viviani thereupon addressed the Senate in French, his remarks being received with frequent manifestations of applause. The address, in English, will be published hereafter.

In response to calls for an address, Marshal Joffre said:

I do not speak English. Vive les États Unis!

[Applause.]

The VICE PRESIDENT. As we said, "Hail!" so now we say, "Farewell," and yet again, please God, "Hail!" [Applause.]

The distinguished visitors were then escorted from the Chamber.

ADDRESS BY M. VIVIANI.

The VICE PRESIDENT. The Chair has received a translation of the address delivered by the French vice premier in the Senate Chamber on the 1st instant. If there is no objection, the Chair will order it printed in the Record, and when incorporated in the permanent Record it will be of value in future years.

The address is as follows:

M. VIVIANI. Mr. President and Senators, since I have been granted the supreme honor of speaking before the representatives of the American people, may I ask them first to allow me to thank this magnificent Capital for the welcome it has accorded us? Accustomed as we are in our own free land to popular manifestations, and though we had been warned by your fellow countrymen who live in Paris of the enthusiasm burning in your hearts, we are still full of the emotion raised by the sights that awaited us. I shall never cease to see the proud and stalwart men who saluted our passage; your women, whose grace adds fresh beauty to your city, their arms outstretched, full of flowers; and your children hurrying to meet us as if our coming were looked upon as a lesson for them. All with one accord acclaiming in our perishable persons immortal France. And I predict there will be a yet grander manifestation on the day when your illustrious President, relieved from the burden of power, will come among us bearing the salute of the Republic of the United States to a free Europe, whose foundations from end to end shall be based on right. It is with unspeakable emotion that we crossed the threshold of this legislative palace, where prudence and boldness meet, and that I for the first time in the annals of America, though a foreigner, speak in this Hall which only a few days since resounded with the words of virile force. You have set all the democracies of the world the most magnificent example. So soon as the common peril was made manifest to you, with simplicity and within a few short days you voted a formidable war credit and proclaimed that a formidable army was to be raised. President Wilson's commentary on his acts, which you made yours, remains in the history of free peoples the weightiest of lessons. Doubtless you were resolved to avenge the insults offered your flag, which the whole world respected; doubtless through the thickness of these massive walls the mournful cry of all the victims that criminal hands hurled into the depths of the sea has reached and stirred your souls, but it will be your honor in history that you also heard the cry of humanity and invoked against autocracy the rights of democracies. And I can only wonder as I speak what, if they still have any power to think, are the thoughts of the autocrats who three years ago against us, three months ago against you, unchained this conflict.

Ah! doubtless they said among themselves that a democracy is an ideal government, that it showers reforms on mankind, that it can in the domain of labor quicken all economic activities. And yet now we see the French Republic fighting in defense of its territory and the liberty of nations and opposing to the avalanche let loose by Prussian militarism the union of all its children who are still capable of striking many a weighty blow. And now we see England, far removed like you from conscription, who has also, by virtue of a discipline all accept, raised from her soil millions of fighting men. And we see other nations accomplishing the same act; and that liberty not only inflames all hearts but coordinates and brings into being all needed efforts. And now we see all America rise and sharpen her weapons in the midst of peace for the common struggle. Together we will carry on that struggle, and when by force we have at last imposed military victory our labors will not be concluded. Our task will be—I quote the noble words of President Wilson—

to organize the society of nations. I well know that our enemies, who have never seen before them anything but horizons of carnage, will never cease to jeer at so noble a design. Such has always been the fate of great ideas at their birth; and if thinkers and men of action had allowed themselves to be discouraged by skeptics mankind would still be in its infancy, and we should still be slaves. After material victory we will win this moral victory. We will shatter the ponderous sword of militarism; we will establish guarantees for peace; and then we can disappear from the world's stage, since we shall leave at the cost of our common immolation the noblest heritage future generations can possess.

Reception of the French war mission in the House of Representatives, Thursday, May 3, 1917.

The SPEAKER. The Chair appoints as a committee to escort the French commissioners to the floor of the House the gentleman from Virginia, Mr. Flood; the gentleman from Maryland, Mr. LINTHICUM; the gentleman from Arkansas, Mr. GOODWIN; the gentleman from Wisconsin, Mr. COOPER; the gentleman from Pennsylvania, Mr. PORTER, being members of the regular Committee on Foreign Affairs; and also appoints the gentleman from Louisiana, Gen. ESTOPINAL, and the gentleman from Illinois, Mr. MCCORMICK, as they can each read and speak the French language. The committee will proceed to the Speaker's room and the House stands in recess for 30 minutes.

The Chair will further suggest that the Hon. Rene Viviani and Marshal Joffre come up in the first instance to the Speaker's desk to be presented to the House, and then that they take their stand at the right of the Speaker's desk, so that everybody can pass by and shake hands.

Accordingly, at 12 o'clock and 7 minutes p. m., the House stood in recess for 30 minutes.

At 12 o'clock and 10 minutes p. m. the commissioners of the French Republic to the Government of the United States, M. Rene Viviani, vice premier of the council of ministers; Marshal Joffre; Vice Admiral Chocheprat, of the Navy of France; and M. Emile Hovelague, inspector general of public instruction, escorted by Mr. Flood, Mr. LINTHICUM, Mr. GOODWIN of Arkansas, Mr. COOPER of Wisconsin, Mr. PORTER, Mr. ESTOPINAL, and Mr. MCCORMICK, entered the Hall of the House, accompanied by M. Jusserand, the French ambassador extraordinary and plenipotentiary accredited to the United States, aids of the French officers, and the Assistant Secretary of State, Mr. Phillips. The distinguished visitors were escorted to the Speaker's rostrum amid prolonged applause and cheers.

The SPEAKER. Gentlemen of the House of Representatives, I present to you the vice premier, the minister of Justice of France, M. Rene Viviani. [Prolonged applause.]

M. Viviani thereupon addressed the House in French, his remarks being received with frequent manifestations of applause. The address, in English, will be published hereafter.

The SPEAKER. Gentlemen of the House of Representatives, I present to you the marshal of France, Gen. Joffre. [Prolonged applause.]

In response to calls for an address, Marshal Joffre said:

I thank you. Vive l'Amerique! [Applause.]

The SPEAKER. Gentlemen of the House of Representatives, I present you the great-grandson of Gen. Lafayette, Marquis de Chambrun. [Applause.]

Gentlemen of the House of Representatives, I present to you the ambassador from France, M. Jusserand. [Applause.]

In response to calls for an address.

M. JUSSERAND said: Mr. Speaker and gentlemen of the House of Representatives, I intended to repeat only the words of Marshal Joffre, though I have not the same excuse for not making a longer speech; but the words interpret very well my feelings as well as his feelings and the feelings of all my compatriots. Gentlemen, I thank you. [Applause.]

This occasion is a very great one, a unique one, and I am sure that those two men whose portraits adorn this Hall, Washington and Lafayette, those two friends who fought for liberty, would, if they could, also applaud and say to their descendants, their American descendants and their French descendants, "Dear people, we thank you." [Applause.] What you have been doing, the laws you have passed, the decisions you have taken, touch us deeply, and touch the French people in a very particular fashion, because what you have done is a sort of counterpart of what we did long ago. What we did was to come to the rescue of men who wanted to be free, and our desire was to help them and to have no other recompense than to succeed, and that liberty should be established in this new continent. [Applause.] What we did was unique in the history of the world. We expected no recompense but your friendship, and that we got. [Applause.] We did not know

that ever a time would come when the same event, the same action could be taken by another of the nations of the world, and yet that time has come, the same action has been taken, with the same energy, the same generosity, the same disinterestedness that characterized the conduct of those other men many years ago. What you do now is to come to Europe to take part in the fight for liberty, a fight in which you expect no recompense, nothing to your advantage, except that very great advantage, that in the same way that we secured liberty—human liberty, individual liberty, national liberty—on this continent, you will fight to see that liberty be preserved in the Old World, and, thanks to you, we shall see the calamities of this struggle shortened, and we shall see that a new spirit of liberty will grow greater and stronger, and, thanks to you, be rejuvenated. [Applause.]

The members of the French commission then took their places at the right of the Speaker's rostrum and the Members of the House were presented to them.

The distinguished visitors were then escorted from the Hall of the House.

SPEECH OF M. VIVIANI.

The SPEAKER. The House will remember that there was an order made here to print in the RECORD an English translation of the speech of M. Viviani made in the House on May 3. The translation was not furnished until to-day, and the Chair lays it before the House to be printed in the RECORD.

The translation of the remarks of M. Viviani on May 3, 1917, is as follows:

M. VIVIANI. Gentlemen, once more my fellow countrymen and I are admitted to the honor of being present at a sitting in a legislative chamber. May I be permitted to express our emotion at this notable exception to rules more than a century old, and so far as my own person is concerned may I say that, as a member of Parliament accustomed for 20 years to the passions and storms which sweep through political assemblies, I appreciate more than anyone at this moment the supreme joy of being near this chair, which is in such a commanding position that however feeble may be the voice that speaks thence it is heard over the whole world?

Gentlemen, I shall not try to thank you, not because our gratitude fails but because now words to express it fail. No; I do not thank you for your welcome. We have all felt, my companions and myself, that the manifestations which rose toward our persons came not only from your lips. We have all felt that you were not merely fulfilling the obligation of international courtesy. Suddenly in all is charming intimacy the complexity of the American soul has been revealed to us. When one meets an American one is supposed to meet a practical man, merely a practical man, caring only for business, only interested in business; but when, at certain hours in private life, one studies the American soul one discovers at the same time how fresh and delicate it is, and when at certain moments of public life one considers the soul of the Nation, then one sees all the force of the ideals that rise from it; so that this American people, in its perfect balance, is at once practical and sentimental, a realist and a dreamer, and is always ready to place its practical qualities at the disposal of its puissant thoughts.

And see, gentlemen, what a glorious comparison, to our profit and yours also, we can establish between our enemies and ourselves. Intrusted with a mandate from a free people, we come among freemen to compare our ideas, to exchange our views, to measure the whole extent of the problems raised by this war, and all the allied nations, simply because they repose on democratic institutions, through their Governments, meet in the same lofty region, on equal terms, in full liberty.

I well know that at this very hour in the central empire there is an absolute monarch who binds other peoples to his will by vassal links of steel. It has been said this was a sign of strength. It is only a derisive appearance of strength; and in truth, only a few weeks ago, on the eve of the day when outraged America was about to rise in its force, on the morrow of the day when the Russian revolution, faithful to its alliance, called at once its soldiers to arms and its people to independence, this absolute monarch was seen to totter on the steps of his throne as he felt the first breath of the tempest pass over his crown, and he bent toward his people in humiliation, and in order to win its sympathy borrowed from free peoples their highest institutions and promised his subjects universal suffrage.

Here, in the crucial hours of our history, as in yours, it is liberty which clears the way for our soldiers. We are all now united in our common effort for civilization, for right.

The day before yesterday in a public meeting at which I was present I heard one of your greatest orators say with deep emo-

tion, "It has been sworn on the tomb of Washington." And then I understood the full emotion and import of those words. If Washington could rise from his tomb, if from his sacred mound he could view the world as it now is, shrunk to smaller proportions by the lessening of material and moral distances and the mingling of every kind of communication between men, he would feel his labors are not yet concluded and that, just as a man of superior and powerful mind has a debt to all other men, so a superior and powerful nation owes a debt to other nations, and after establishing its own independence must aid others to maintain their independence or to conquer it. It is the mysterious logic of history which President Wilson so marvelously understood, thanks to a mind as vigorous as it is subtle, as capable of analysis as it is of synthesis, of minute observation followed by swift action. It has been sworn on the tomb of Washington. It has been sworn on the tomb of our allied soldiers, fallen in a sacred cause. It has been sworn by the bedside of wounded men. It has been sworn on the heads of our orphan children. It has been sworn on cradles and on tombs. It has been sworn.

GREAT BRITAIN.

Reception of the British war mission in the United States Senate Tuesday, May 8, 1917.

The VICE PRESIDENT (at 12 o'clock and 27 minutes p. m.). The British commissioners having arrived at the Capitol, the Chair requests the Senator from Alabama [Mr. BANKHEAD], the Senator from Mississippi [Mr. WILLIAMS], the Senator from Ohio [Mr. POMERENE], the Senator from Rhode Island [Mr. COLT], and the Senator from Idaho [Mr. BORAH] to meet the members of the British commission in the Vice President's room and escort them into the Senate Chamber.

At 12 o'clock and 30 minutes p. m. the commissioners of the Government of Great Britain to the Government of the United States, the Right Hon. Arthur James Balfour, M. P., O. M., principal British secretary of state for foreign affairs; the Hon. Sir Eric Drummond, K. C. M. G., C. B.; Mr. Ian Malcolm, M. P.; Mr. C. F. J. Dormer; Rear Admiral Sir Dudley R. S. de Chair, R. N., K. C. B., M. V. O.; Fleet Paymaster Gen. Vincent A. Lawford, R. N., D. S. O.; Maj. Gen. G. T. M. Bridges, G. M. G., D. S. O.; Maj. H. H. Spender-Clay, M. P., British General Staff, escorted by the committee appointed by the Vice President, consisting of Mr. BANKHEAD, Mr. WILLIAMS, Mr. POMERENE, Mr. COLT, and Mr. BORAH, entered the Senate Chamber, accompanied by Sir Cecil Arthur Spring-Rice, the British ambassador extraordinary and plenipotentiary accredited to the United States, aids of the British officers, the Assistant Secretary of State, Mr. William Phillips; Mr. Hugh Gibson, of the State Department; and Capt. George Quekemeyer, United States Army. The distinguished visitors were escorted to the places assigned to them, the Right Hon. Arthur J. Balfour and the British ambassador, Sir Cecil Arthur Spring-Rice, being seated, respectively, at the right and left of the Vice President.

Mr. MARTIN. Mr. President, in honor of the distinguished representatives of Great Britain, who are the guests of the Nation and who are now in the Senate Chamber, and in order that Senators may have an opportunity to be presented to them, I move that the Senate take a recess for 30 minutes.

The VICE PRESIDENT. The question is on agreeing to the motion of the Senator from Virginia.

The motion was agreed to; and accordingly (at 12 o'clock and 32 minutes p. m.) the Senate took a recess for 30 minutes.

During the recess,

The VICE PRESIDENT. Senators, for more than a century and a quarter the one great reason for the existence of this body has been to preserve the equality of all men before the law. A few days since we had the pleasure of greeting the representatives of that people whose shibboleth is "fraternity." To-day we honor, and in turn are ourselves honored, by receiving the representatives of that people whose forbears centuries ago, in an age of almost universal absolutism, compelled their King, anointed though he was with the holy oil of consecration, to give to them the Great Charter of human liberty. It were mere prophecy to say that without that Great Charter the Republic either of France or of America would be or have a hope of being.

May I express the hope that at the end of this most horrible warfare, when the representatives of liberty, fraternity, and equality shall take their seats at the council table of the nations, they will not arise therefrom until they shall, so far as human ingenuity can do so, guarantee to every people the right to be free from the fear of assault from without or oppression from within [applause], until they shall write this legend in the firmament, above the sun rising for a newer and, if not a better, at least a safer civilization, "I shine only for the wise; they

are not wise who are not just"? In the words of one woman lawyer, for whom I have profound respect, the wise Portia, to Antonio, Bassanio's best friend:

Sir, you are very welcome to our house;
It must appear in other ways than words,
Therefore I scant this breathing courtesy.

I have the honor and the great pleasure of presenting to you the foremost champion of Magna Charta, the Right Hon. Arthur James Balfour, British secretary of state for foreign affairs. [Applause.]

ADDRESS OF RIGHT HON. ARTHUR JAMES BALFOUR.

Mr. BALFOUR. Mr. President and gentlemen of the Senate, you, Mr. President, have in graceful and pregnant sentences brought to our recollection the common origin of those liberties which, whether in France, in Britain, or in the United States of America, we all rejoice in and are all determined to defend. [Applause.] You have also in warm words of welcome spoken kindly of the mission of which I have the honor to be the head, and to which you are now paying the rare—the very rare—honor of welcoming within your walls. Gentlemen, on their behalf not less than on my own, I most sincerely thank you for your welcome. I know well that it is not a welcome to individuals. The kindness which each one of us as individuals has received since we came to this great city will never be forgotten by any one of us. It has been kindness abundant, overflowing, generous, unlimited; but, gentlemen, behind that kindness paid by individuals to individuals, behind the expression of a hospitable and generous feeling to guests within your gates, there is, after all, something much deeper, something much more important, something which is, after all, the animating spirit which brings this great assembly here to-day.

The original object of our mission, if I may so express it, was mainly a purely business one. We came here to discuss matters of the deepest moment for the conduct of that great war in which both our nations are involved. We came here to explain to your leaders and statesmen what were the needs from which the allies mainly suffered, and to lay freely at the disposal of those responsible for the conduct of your affairs the results of our own experience, the consequences, perhaps I ought to say, in some cases of our own errors and blunders during two years and a half of strenuous and sanguinary fighting. That was the original object; that was the business side of our mission. But the reception which you have given us here, the treatment which we have received from the President, from the Cabinet, from the House of Representatives, from the Senate—that treatment raises the whole level of our mission from a purely business operation to a great incident in the common life of two great and free peoples.

Gentlemen, I do not think the importance of that is easy to overrate. I believe that the consequences will not be measured by any mere record of the transactions that may take place between our various Governments, nor will the effects of it vanish when we ourselves, in consequence of the calls of duty elsewhere, leave your hospitable city. No, gentlemen, this mission and the French mission which is associated with it mark a new epoch in the relations of our three countries, and I believe that in the alliance thus cemented lie secure some of the greatest hopes, some of the proudest expectations, which we dare to entertain about the future of civilization. [Applause.]

Gentlemen, it is not, however, your kindness of heart alone which has given this significance to contemporary events. That significance is forced upon our notice whether we be citizens of America or citizens of France or citizens of Britain; but I speak especially at this moment of citizens of America and citizens of Britain. It is forced upon our notice by the unwaried efforts of an unconscionable German propaganda. Whether we live on the other side of the Atlantic or on this side of the Atlantic, we English-speaking peoples have never organized ourselves for military purposes; we have never been military States; and when the war broke out undoubtedly the Germans looked around the world, estimated the value (from their point of view) of the nations with whom they might be concerned, and, profoundly contemptuous of our views of civilization, whether they were British or American views, they decided that neither Britain nor America counted in the struggle by which they hoped to obtain the domination of the world. They found us unprepared; they found us unmilitary; and because we were unprepared and because we were unmilitary they jumped rashly to the conclusion, firstly, that we were afraid to fight, and, secondly, that if we fought we would be wholly negligible quantities. I think they are beginning, possibly, to find out their mistake. [Great applause.]

How, gentlemen, did that mistake ever arise? It arose from the utter incapacity of the German ruling class—and it is only of the German ruling class that I speak to-day—to estimate value except in terms of drilled men and military preparation. They saw that England and America were prosperous, were unwarlike, were immersed in the arts of peace and involved in the industrial interests incident to a peaceful civilization, and they drew from that two conclusions. They drew from it, in the first place, the conclusion that because we were commercial we were therefore material; that we were incapable of high ideals or great sacrifices; and the further conclusion that even if we determined late in the day to pursue those high ideals and to make those great sacrifices we should be so utterly incompetent in the arts to which they had devoted so much of their attention that our interference in the war would be a thing which they could leave wholly on one side. On that miscalculation have been wrecked, and will be wrecked, all their hopes. [Applause.] It was their fatal blunder, a blunder from which they will never recover, but a blunder which has saved civilization.

Gentlemen, I speak with confidence about the issue of this great struggle, a confidence which is redoubled since you have thrown in your lot with those who have been fighting since 1914. [Great applause.] I see, indeed, suggestions that Germany, incapable of winning by arms, is going to win through the illegitimate weapon of submarine warfare. I believe it not. I do not at all minimize, I do not wish to minimize, the gravity of the submarine menace. After all, in the two years and a half during which the war has been going on, more than one difficulty of like magnitude has met us and more than one difficulty of like magnitude has been overcome.

The question of munitions is a case in point. I do not wish to detain you on such an occasion with details, but at the beginning of the war it became evident that Germany had recognized the importance of the munitions question, had been preparing for this war through years of peace by having at her disposal a supply of ammunition greater than all the rest of the world put together, and at one time it almost looked as if the cause of civilization and liberty were to be crushed under the multitude of shells and the weight of artillery. We have surmounted that difficulty. It was a very great one.

I do not deny that the submarine difficulty is a very great one. I do not deny that it will require every effort made, either in Britain or here, successfully to overcome it; but that those efforts will be made, that this menace will be overcome, that the United States of America, like Great Britain and her dominions, will throw themselves into the task with ungrudging efforts, and that those efforts will be crowned with success, I do not doubt for a moment. [Great applause.] This war is not going to be settled by the sinking of helpless neutrals or by sending women and children to the bottom by torpedoes or gunfire. It is to be settled by hard fighting; and when it comes to hard fighting, neither America nor Britain nor France need fear measuring themselves at any moment against those who have risen up against all that we hold dear for the future.

I therefore, gentlemen, look forward—not, of course, in a spirit of light and easy and unthinking confidence, but with firm faith—to the future of this war. It requires every man and woman on this side of the Atlantic, as on the other side of the Atlantic, to throw their united efforts into the scale of right. That effort unquestionably will be made, is being made, will be made yet further, and, being made, I doubt not that it will be crowned with success, and that posterity will look back upon the union of these peoples, symbolized by such meetings as that which I am now addressing, as marking a new epoch in the history of the world; an epoch in which all the civilized nations roused themselves in unity to deal with one of their number which has forgotten its responsibilities, forgotten its duties, and which, in unscrupulous lust for universal domination, has brought the greatest of known calamities upon the world.

Gentlemen, I have detained you too long, but I was led away by my subject. On my own behalf and on behalf of my friends around me, I beg to thank you for the unique honor which you have paid to us, and, through us, to our country, to our cause, which is your cause, and to the future of civilization, which is yours as much as ours.

I thank you.

The VICE PRESIDENT. The British commissioners will take pleasure in greeting the Senators of the United States and such guests as may be upon the floor of the Senate. At the hour of 1 o'clock the Chair will ask Senator ROBINSON, of Arkansas, to take the chair.

The members of the British commission then took their places at the left of the Vice President's desk, and the Members of the

Senate were presented to them by the committee of the Senate appointed by the Vice President for that purpose.

At 1 o'clock p. m., upon the expiration of the recess, the distinguished visitors were escorted from the Chamber and the Senate reassembled.

Reception of the British War Mission in the House of Representatives, Saturday, May 5, 1917.

The SPEAKER. The Chair appoints as a committee to escort the British commissioners to the floor of the House the gentleman from Virginia, Mr. FLOOD; the gentleman from Maryland, Mr. LINTHICUM; the gentleman from Arkansas, Mr. GOODWIN; the gentleman from Wisconsin, Mr. COOPER; and, in the absence of the gentleman from Pennsylvania, Mr. PORTER, and the gentleman from Massachusetts, Mr. ROGERS, the next ranking members of the Committee on Foreign Affairs, he appoints the gentleman from Pennsylvania, Mr. TEMPLE. The committee will proceed to the Speaker's room, and, in accordance with the previous order, the House will stand in recess for 30 minutes.

Accordingly (at 12 o'clock and 30 minutes p. m.) the House stood in recess.

The President of the United States entered the Executive gallery of the House and was greeted with prolonged applause and cheers.

The Chief Justice and Associate Justices of the Supreme Court of the United States were seated in front of the Speaker's rostrum.

At 12 o'clock and 35 minutes p. m., the commissioners of the Government of Great Britain to the Government of the United States, the Right Hon. Arthur James Balfour, principal British secretary of state for foreign affairs; Gen. G. T. M. Bridges, of the British Army; Admiral Sir Dudley R. S. De Chair, K. C. B., of the British Navy; Fleet Paymaster V. A. Lawford, D. S. O. R. N.; Lord Cunliffe, governor of the Bank of England; Mr. Ian Malcolm, M. P.; and Maj. Spender-Clay, M. P., British general staff, escorted by Mr. FLOOD, Mr. LINTHICUM, Mr. GOODWIN of Arkansas, Mr. COOPER of Wisconsin, and Mr. TEMPLE, entered the Hall of the House, accompanied by Sir Cecil Arthur Spring-Rice, the British ambassador extraordinary and plenipotentiary accredited to the United States, aids of the British officers, and the Assistant Secretary of State, Mr. Phillips, and Mr. Hugh Gibson, of the Department of State. The distinguished visitors were escorted to the Speaker's rostrum amid prolonged applause and cheers.

The SPEAKER. Gentlemen of the House of Representatives, I present to you the Right Hon. Arthur James Balfour, principal British secretary of state for foreign affairs. [Prolonged applause.]

REMARKS OF RIGHT HON. ARTHUR J. BALFOUR.

Mr. BALFOUR. Mr. Speaker, ladies, and gentlemen of the House of Representatives, will you permit me, on behalf of my friends and myself, to offer you my deepest and sincerest thanks for the rare and valued honor which you have done us by receiving us here to-day? We all feel the greatness of this honor, but I think to none of us can it come home so closely as to one who, like myself, has been for 43 years in the service of a free assembly like your own. I rejoice to think that a member—a very old member, I am sorry to say—of the British House of Commons has been received here to-day by this great sister assembly with such kindness as you have shown to me and to my friends. [Applause.]

Ladies and gentlemen, these two assemblies are the greatest and the oldest of the free assemblies now governing great nations in the world. The history, indeed, of the two is very different. The beginnings of the British House of Commons go back to a dim historic past, and its full rights and status have only been conquered and permanently secured after centuries of political struggle. Your fate has been a happier one. You were called into existence at a much later stage of social development. You came into being complete and perfected and all your powers determined, and your place in the Constitution secured beyond chance of revolution; but, though the history of these two great assemblies is different, each of them represents the great democratic principle to which we look forward as the security for the future peace of the world. [Applause.] All of the free assemblies now to be found governing the great nations of the earth have been modeled either upon your practice or upon ours, or upon both combined.

Mr. Speaker, the compliment paid to the mission from Great Britain by such an assembly and upon such an occasion is one not one of us is ever likely to forget, but there is something, after all, even deeper and more significant, in the circumstances under which I now have the honor to address you, than any which arise out of the interchange of courtesies, however sin-

cere, between two great and friendly nations. We all, I think, feel instinctively that this is one of the great moments in the history of the world and that what is now happening on both sides of the Atlantic represents the drawing together of great and free peoples for mutual protection against the aggression of military despotism. [Prolonged applause and cheers.]

I am not one of those and none of you are among those who are such bad democrats as to say that democracies make no mistakes. All free assemblies have made blunders; sometimes they have committed crimes. Why is it, then, that we look forward to the spread of free institutions throughout the world, and especially among our present enemies, as one of the greatest guaranties of the future peace of the world? I will tell you, gentlemen, how it seems to me. It is quite true that the people and the representatives of the people may be betrayed by some momentary gust of passion into a policy which they ultimately deplore, but it is only a military despotism of the German type which can, through generations if need be, pursue steadily, remorselessly, unscrupulously, the appalling object of dominating the civilization of mankind. [Applause.] And mark you, this evil, this menace under which we are now suffering, is not one which diminishes with the growth of knowledge and the progress of material civilization, but, on the contrary, it increases with them. When I was young we used to flatter ourselves that progress inevitably meant peace, and that growth of knowledge was always accompanied, as its natural fruit, by the growth of good will among the nations of the earth. Unhappily, we know better now, and we know there is such a thing in the world as a power which can, with unvarying persistency, focus all the resources of knowledge and of civilization into the one great task of making itself the moral and material master of the world. It is against that danger that we, the free peoples of western civilization, have banded ourselves together. [Applause.] It is in that great cause that we are going to fight and are now fighting this very moment side by side. [Applause.] In that cause we shall surely conquer [applause], and our children will look back to this fateful date as the one day from which democracies can feel secure that their progress, their civilization, their rivalry, if need be, will be conducted not on German lines but in that friendly and Christian spirit which really befits the age in which we live.

Mr. Speaker, ladies, and gentlemen, I beg most sincerely to repeat again how heartily I thank you for the cordial welcome which you have given us to-day, and to repeat my profound sense of the significance of this unique meeting. [Great applause.]

The members of the English commission took their places at the right of the Speaker's rostrum and the Members of the House were presented to them, the President of the United States accompanying the Members.

The distinguished visitors were then escorted from the Hall of the House.

ITALY.

Reception of the Italian war mission in the United States Senate Thursday, May 31, 1917.

Mr. MARTIN. Mr. President, as we all know, a mission composed of distinguished representatives of the Italian Government is in the city, and in order that they may come on the floor of the Senate and Senators may have an opportunity to be introduced to them I move that the Senate take a recess for 30 minutes.

The motion was agreed to.

The VICE PRESIDENT. The Chair appoints Mr. MARTIN, Mr. SAULSBURY, Mr. STONE, Mr. SWANSON, Mr. LODGE, Mr. KNOX, and Mr. NEW as the committee to introduce the visitors to the Senate Chamber.

The Senate thereupon took a recess for 30 minutes.

At 12 o'clock and 15 minutes p. m. the members of the Italian mission to the Government of the United States were escorted by the committee appointed by the Vice President into the Senate Chamber, the members of the mission being—

His Royal Highness Ferdinando di Savoia, Prince of Udine.

Tenente de Zara, aid to the prince.

His excellency the Hon. Enrico Arlotto, minister of transportation.

His excellency Marquis Luigi Borsarelli di Riffredo, under secretary of state for foreign affairs.

Hon. Francesco Saverio Nitti, member of the Chamber of Deputies.

Hon. Augusto Ciuffelli, member of the Chamber of Deputies. Cavaliere de Parente, secretary of legation and secretary of mission.

Duke of Sangro, aid to Senator Marconi.

Cavaliere Pietra, of the commercial mission.

Gen. Guglielmotti, military attaché.

Commander Vannutelli, naval attaché.

Count V. Macchi di Cellere, ambassador extraordinary and plenipotentiary, accompanied the mission to the Senate Chamber, and also Hon. William Phillips, Assistant Secretary of State; Lieut. Col. J. C. Gilmore, United States Army; and Mr. Warren Robbins, of the State Department.

The Prince of Udine was seated on the right of the Vice President and Count di Cellere upon his left.

ADDRESS BY THE VICE PRESIDENT.

The VICE PRESIDENT. Senators, it will perhaps rejoice you hereafter to remember that within a very few days you have had the honor and pleasure of participating in three great historic scenes. For myself, I may say that I am very glad the distinguished visitors and myself both belong to posterity rather than to ancestry, for I have a historic recollection that some 1900 years ago the ancestors of these distinguished gentlemen were pursuing through the islands of Britain my ancestors, clad in sheepskin.

I am glad that I have lived in a time when the eagles of the Senate and the people of Rome come in peace to visit the American eagle in the Senate of the United States. [Applause.]

History sometimes reverses itself and sometimes repeats itself. When Rome stood exclusively for power and sought to bring the habitable globe under her control she never quite succeeded in conquering the Belgian people. Nineteen hundred years after that failure the Roman people have concluded that what Rome as the representative of power could not do no other representative of power shall ever be permitted to do. [Applause.]

History repeats itself in another instance. When I was trying to ascertain the history of this great people, digging it out of the original, I learned, as I pronounce it in the Hoosier vulgate, that one of the great Romans closed each of his addresses in the Roman Senate with this remarkable statement: "Ceterum censeo Carthaginem esse delendam." History, I hope, again repeats itself in that the people of the seven-hilled city beside the yellow Tiber have resolved that for themselves and for humanity the house of Hapsburg must be destroyed. [Loud applause.]

It is my honor and my pleasure to present to you the representative of the people of Italy, the Prince of Udine. [Loud applause.]

ADDRESS OF THE PRINCE OF UDINE.

Prince UDINE. Mr. President and gentlemen of the Senate, I consider it a great honor for the mission of His Majesty, the King of Italy, to be welcomed by the American Senate; it is also a great honor for me, and a source of deep satisfaction, to greet you on behalf of my country and to speak in this glorious assembly, which has never forgotten the noble traditions of democracy and the principles of liberty, in the name of which it was constituted.

In this hour of danger, in which military absolutism is threatening everyone, there are nations that have forgotten old and new competitions and have united to defeat this menace to the common safety. We are in a more fortunate position. Between the United States of America and Italy there has never been any cause of conflict. Therefore, in your history and in ours there is no page which should be forgotten in this hour of brotherhood. In our present alliance we need not forget any war nor any rivalry nor any strife. If nothing brings men closer together than to fight for the same ideals and to face the sufferings and the dangers of a great war for the cause of justice and of humanity, we must acknowledge that this new and closer union means for us a greater bond of sympathy and solidarity in addition to those which already linked us.

This long friendship without strife, this union without mistrust, this cloudless future, are enhanced by the fact that both our peoples are at war, not because of any imminent danger that threatened us but to defend the same ideals of humanity and justice. [Applause.]

Nearly three years have elapsed since Europe, without any justifying motive, perhaps without any motive at all beyond the will of a small military oligarchy, was driven into the greatest conflict which human history records. The struggle has extended beyond Europe, and now, a great part of humanity is suffering the anguish of a war which it did not desire and in which it did not believe. So much wealth, the fruit of long labor and suffering, has been destroyed; so many noble lives, for which the future held bright hopes, have been cut off before their time, that we can not bear to think of this spectacle of destruction without profound grief.

But a deeper anguish is stirring our souls. That which has grieved us more than the wealth destroyed, more than the lives cut off in the flower of their youth, is the sight of cultivated and intelligent nations who but yesterday shared with us all

a communion of life and intellect, who have now denied those principles of humanity and of justice which were the result of long centuries of work and the great and difficult conquest of civilization.

Little nations, which were entirely guiltless and which, within their small territory, contained masterpieces of art and treasures of industry, have been barbarously sacrificed.

In the conquered countries personal slavery has returned as in the worst periods of medieval invasions.

You know what methods have been introduced into submarine warfare, how nothing has been respected, neither neutral vessels, nor Red Cross ships, nor inoffensive travelers, nor women and children, who, even in times which we consider barbarous, enjoyed protection and safety.

In the enemy's camp science has perhaps sought to justify all these excesses. Will the human conscience ever be able to justify them?

Your wars have been fought for independence and for liberty, and your heroes have been men such as George Washington, Thomas Jefferson, and Abraham Lincoln—human heroes, shining lights of the intellect, who looked with a kindly heart even upon their adversaries. [Applause.]

We, too, after having suffered greatly at the hands of foreign oppressors, have conquered liberty and independence; and our heroes, the men who gathered around Victor Emanuel II, and gave Italy unity and freedom, were men such as Cavour, Garibaldi, Mazzini, champions of idealism, men who belonged to humanity rather than to their own country, pure glories of the world's democracy. [Applause.]

In your wars and in ours an ideal light has guided us, and our efforts were all directed toward a most noble aim. What ideals did those who have brought so much suffering upon the world aim at outside the dominion of force and the triumph of violence?

Gentlemen of the Senate, for nearly three years our continent has been involved in this great struggle, and it looked with anxious eyes toward your great and free country. We knew that the European war had increased your trade and given new vigor to your industries. Many feared that because of the ocean that divides us the great cry of grief of oppressed Belgium would only sound faintly in your ears; many feared that, absorbed by the activities of industry and labor, you would fail to take an interest in our struggle and in our sorrows. We, however, looked toward you with trusting sympathy; we felt that the great fatherland of liberty, the noble democracy which offered its hospitality to all the peoples of Europe, without distinction of race, of religion, or of languages, and granted to all of them the protection of the same just and humane laws, could not remain indifferent. [Applause.]

Nevertheless, we awaited your decision with anxiety, and it seemed to us that the holiness of our cause was in need of recognition by those who from afar would judge us with more serenity.

You waited to intervene until violence and offenses against right had become clearer and more evident.

When your flag, the stars of which, growing in number, symbolize the growing prosperity of America and the triumphs of American labor—when your flag, always universally respected, was insulted, you hesitated no longer, and your mighty accents of promise and of faith rang in our ears. [Applause.]

Your Nation has colonized immense territories; it has created powerful industries; it has developed an ever-growing trade. You bring all the enthusiasm of your national youth to science and to labor. Our enemies are aware that you will bring into the war, which is flooding Europe with blood and making the earth barren, the invaluable strength of your men and of your wealth.

For this most noble adherence to our cause, given without any thought of conquest or of material wealth, we shall always be grateful to you. [Applause.]

But, gentlemen of the Senate, you bring us to-day something which is far greater than the help of men, of wealth, or of food; you bring us the sacred recognition of our right; you bring us moral confidence and the conviction—nay, rather the faith—that our cause is holy and that the free democracies, and even the greatest among them, share our feelings, our spirit, and our hopes.

How greatly the knowledge of your approval has helped us I need not tell you, who are strong men, who did not hesitate to enter into the whirlpool of war, and who preferred the hard way of duty to a comfortable and resigned indifference. [Applause.]

The message of your President, as our sovereign has said, is worthy, by the nobility of its conceptions and the dignity of its form, to rank with the most inspiring pages in the history of ancient and immortal Rome. [Applause.] It was greeted with

the enthusiasm of faith when it made clear the objects of the war and defined the aims of American action. Our soldiers, at the foot of the snowy Alps, amid the atrocious life of underground trenches; our sailors, defying the treacherous warfare of the submarine; the populations of France and of Belgium, suffering under the most cruel servitude, could not read it without a profound emotion.

By proclaiming that right is more precious than peace; that autocratic governments, supported by the force of arms, are a menace to civilization; by affirming the necessity of guaranteeing the safety of the world's democracies; by proclaiming the right of small nations to live and to prosper, America has now, through the action of her President, acquired a title of merit which history will never forget. [Applause.]

You decided to take part in the war not by a sudden impulse but after having seen its full extent and measured all its horrors. And though you were able to choose freely between the tranquillity of a peace resigned to evil and the pain of a participation, which will require at your hands sacrifices of wealth and of lives, you did not hesitate. All this we appreciate very deeply, and every effort of yours to shorten the war will be blessed by millions of human creatures, victims of the greatest barbarity. [Applause.]

The increase of material wealth, the marvels of industry, the progress of science, all these are as nothing, if their aim be not the moral elevation of mankind.

There are sorrows which elevate men more than any joys; sacrifices which ennoble more than any successes.

By our sacrifices we must prepare the way for a humanity in which collective violence shall no longer be possible, and in the bosom of which each nation may freely unfold its activity and realize that social justice which is the Divine goal to which we are all tending, each in his own way. [Applause.]

Italy, gentlemen of the Senate, entered into the war with aims equal to those which you pursue. Her territory had not been invaded, her insecure boundaries had not been violated. Our people understood that the sacrifice of free nations was the prelude to their own sacrifice, and that we could not remain indifferent without denying the very reasons of our existence. [Applause.]

Italy has suffered more than any other nation in Europe the horror of foreign domination, the martyrdom of invasion and pillage; and, therefore, she will never forget the principles which presided over her birth and which constitute her strength and her defense.

Italy wants the safety of her boundaries and her coasts, and she wants to secure herself against new aggressions. Italy wants to deliver from long-standing martyrdom populations of Italian race and language that have been persecuted implacably, and are nevertheless prouder than ever of their Italian nationality. [Applause.]

But Italy has not been and never will be an element of discord in Europe; and as she willed her own free national existence at the cost of any sacrifice, so she will contribute with all her strength to the free existence and development of other nations.

By increasing the ruthlessness of submarine warfare and thus rendering navigation unsafe and dangerous, our enemies, who were not able to defeat our soldiers by the force of arms, hope to win the war by increasing misery and suffering. They hope that our powerful ally, Great Britain, will lack food; that France will lack food and men; and that Italy will lack especially food, and that which is more necessary, coal for the war, for industries, and for railways. The problem of shipping is for all of us the greatest problem of the war.

With our united efforts we shall vanquish all these difficulties and that which the force of arms, secretly prepared and unexpectedly employed, was not able to accomplish will not be accomplished by disloyal means on land and water. We shall triumph over all these difficulties if we continue our efforts in brotherly agreement, united by the great duty which we have now voluntarily taken upon us for a cause which is superior to all worldly interests and which partakes of an almost divine nobility. [Applause.]

The mission of which I have the honor to be the head and in which there are representatives of the Senate of the Kingdom, of the Chamber of Deputies, and members of the Government, desires to express through me the liveliest sympathy to the representatives of the American people. [Applause.]

May God protect our two nations! Italy, which has given the world three civilizations, considers herself worthily at your side in this hour, full of sorrow it is true, but also great because of its moral nobility. [Applause.] A day will come when we shall be proud of our suffering and when our sacrifices will be rewarded. Let us endeavor, gentlemen, to bring that day nearer

which shall put an end to the sorrows of so many who are suffering and dying without guilt. Let us hasten its coming, worthy representatives of the American people, by our firm will to obtain the victory and by our complete solidarity of ideals, of sacrifices, and of deeds. [Applause.]

The VICE PRESIDENT. Prince Udine and the members of the Italian mission will be gratified to meet the Members of the United States Senate.

The members of the Italian mission took their places at the left of the Vice President's desk, and the Members of the Senate were presented to them by the committee appointed by the Vice President.

The distinguished visitors were escorted from the Chamber, and at 12 o'clock and 45 minutes p. m., upon the expiration of the recess, the Senate reassembled.

*Reception of the Italian war mission in the House of Representatives
Saturday, June 2, 1917.*

The SPEAKER. The Chair appoints as the committee to escort the Italian mission to the floor of the House Mr. Flood, Mr. LINTHICUM, Mr. GOODWIN of Arkansas, Mr. COOPER of Wisconsin, Mr. PORTER, and Mr. LA GUARDIA, and, in accordance with the order heretofore made, the House will stand in recess for 30 minutes.

Accordingly (at 11 o'clock and 45 minutes a. m.) the House stood in recess.

At 11 o'clock and 55 minutes a. m. the commissioners of the Italian Government to the Government of the United States, his Royal Highness Ferdinando di Savoia, Prince of Udine; Tenene de Zara, aid to the prince; His Excellency the Hon. Enrico Arlotta, minister of transportation; His Excellency Marquis Luigi Borsarelli di Rifreddo, undersecretary of state for foreign affairs; Hon. Guglielmo Marconi, senator of the Kingdom; Hon. Francesco Saverio Nitti, member of the Chamber of Deputies; Hon. Augusto Cluffelli, member of the Chamber of Deputies; Cavaliere de Parente, secretary of legation and secretary of the mission; Duke of Sangro, aid to Senator Marconi; Cavaliere Pietra, of the commercial mission; Gen. Guglielminotti, military attaché; and Commander Vannutelli, naval attaché, accompanied by Count V. Macchi di Cellere, ambassador extraordinary and plenipotentiary, accredited to the United States; Mr. Breckenridge Long, Assistant Secretary of State; and Lieut. Col. J. C. Gilmore, United States Army.

The distinguished visitors were escorted to the Speaker's rostrum amid prolonged applause and cheers, and the Prince of Udine was seated on the right of the Speaker.

The SPEAKER. Gentlemen of the House of Representatives, I present to you his royal highness, the Prince of Udine. [Applause.]

ADDRESS OF THE PRINCE OF UDINE.

Prince of UDINE. Mr. Speaker and Members of the House, no one could appreciate the honor of your invitation more than myself and my colleagues.

To address the Representatives of the greatest among new democracies at a time when the destinies of humanity are awaiting decision, at a time when our destiny and yours depend on the issue of the war, to bring you the greeting of distant brothers who are fighting for the same ideals at the foot of the snowy Alps or in the deadly trenches, to express to you our feelings and our sympathy for your feelings—all those are for me so many reasons for legitimate pride. [Applause.]

During our brief stay among you we have found everywhere the most joyous welcome and the most friendly cordiality. Everywhere it was not only friendly words that greeted us but also friendly souls who welcomed us.

We have felt deeply moved by this.

We know, gentlemen, that such cordial sentiments, such hearty friendship, are meant not so much for our persons as for our beautiful and distant country; our country, of which every foot is sacred to us because of its century-old greatness and sufferings and because of the noble share which it has always had in human thought and history. [Applause.]

But your great Republic, when it grants us such courteous hospitality, honors still more that which at the present moment is dearest to us—the efforts of Italy's soldiers, the noble sacrifice of so many young lives freely given for their country and for civilization and in defense of ideals which you have made your own and which we all love.

In the name of the soldiers of Italy, one of whom I am proud to be; in the name of all those who are fighting on the mountains, on the plains, and on the treacherous seas; in the name of those to whom your words of friendship have brought a message of hope and faith across the ocean, I thank you from the bottom of my heart. [Applause.]

The aims of the war for the allied nations were pointed out by President Wilson in his magnificent message, which will not only remain in the minds of our descendants as a historic event, but which has already aroused, because of its moral force, intense admiration among all civilized peoples. We shall be satisfied, whatever sacrifices we may be called upon to make, when the rights of humanity are assured, when the guarantees of peace are effectual, and when free nations are able to work for their own prosperity and elevation.

President Wilson has proclaimed that to the Americans right is more precious than peace and that the people of the United States are ready to shed their blood in defense of those principles in the name of which they became a nation.

For the sake of the same principles we are ready to face every sacrifice and every sorrow.

We are fighting a terrible war. Our enemies were long since prepared for it, while we were content to live, trusting in peace, and only sought to contribute to the development of our people and to the progress of our country, almost unconscious of the clouds which so suddenly grew dark over our heads.

We came into the war when we realized that there was no room for neutrals and that neutrality was neither possible nor desirable, when the freedom of all democratic nations was threatened and the very existence of free peoples was at stake.

Ever since that day we have not hesitated before any danger or any suffering. Our wide fighting front presents conditions of exceptional difficulty. The enemy is, or has been until now, in possession of the best positions. He has dug deep trenches; he has concealed his guns among the mountains. We are even compelled to fight at altitudes of eight and ten thousand feet, in spots where it seemed impossible that any fighting should ever take place. We are alone on our wide and treacherous front, and every step forward that we take, every progress that we accomplish, costs us great efforts and many lives. The enthusiasm of our soldiers has often helped them among the glaciers of the Alps and the many snares of the Carso to triumph over difficulties which seemed to defy every human effort. But the deep faith which burns in them kept their strength alive. [Applause.]

We must, we will, triumph over other difficulties and other insidious devices.

Nature, which gave us our pure skies, our mild climate, has denied us almost entirely the two great necessities of modern industry—coal and iron. Therefore, with industries still in course of formation, Italy has had ever since their inception to overcome obstacles which appeared insuperable. Italy occupies one of the first places in Europe as regards the number and power of her waterfalls; but this wealth, which constitutes the great reserve of the future, has only been partly exploited until now. The treacherous enemy, who has long since prepared the weapons of aggression, not having obtained victory on the field, is now trying by means of submarine warfare to endanger our existence, to cause a scarcity of food, and, above all, a scarcity of the coal which Italy needs for her ammunition factories, for her railways, and for her industries.

We have reduced our consumption of all necessities, and we are ready to reduce it still further within the limits of possibility. We do not complain of the privations that we have to endure. Wealth itself has no value if life and liberty are endangered. And when millions of soldiers offer their young lives for their country there is not one among the civil population who is not ready to make any sacrifice.

But to overcome the dangers of the submarines, which, in defiance of every law of humanity, are not only destroying wealth but endangering the lives of peaceful travelers, sinking hospital ships, and murdering women and children, we must all make a great effort.

We must unite all our forces to oppose the strongest resistance to the insidious devices of the enemy. You possess a great and magnificent industrial organization. You, more than anyone, are in a position to put an end to the enemy's barbarous dream and to create with your energy much more than he can destroy. [Applause.]

This great and terrible trial can only make us better men. They who know how to offer to the fatherland their wealth and their lives; they who give themselves unto death and, more than themselves, that which is sweetest and most sacred, their children; they who are ready to suffer and to die; they will know when the morrow dawns how to contribute to civilization new elements of moral nobility and of strength. [Applause.]

We must not grieve over our sorrows. When we fight for the rights of humanity we are conscious that we are elevating ourselves morally.

When America proclaimed herself one with us a great joy ran through every city and every little village of Italy. We knew the full value of your cooperation, and at the same time we appreciated the nobility of your sentiments.

The families of 3,000,000 Italians who dwell in the United States under the protection of your hospitable and just laws felt a deep sense of joy.

Mr. Speaker and Members of the House, the words which His Majesty the King of Italy, first among our soldiers, wrote to your President expressed his feelings and those of all his people.

To-morrow when the news reaches Italy that this Congress, which represents the will of the American Nation, has desired to give to our mission the supreme honor of welcoming it in its midst your friendly words will reach the farthestmost points where men are fighting and suffering. And in the trenches, at the foot of the majestic Alps, there where the struggle is bitterest and where death is ever present, a thrill of joy and of hope will be felt—the joy of a sincere union, the hope of certain victory. [Prolonged applause and cheers.]

The SPEAKER. I am certain that every Member of the House of Representatives will be delighted to see and hear the man who invented wireless telegraphy, Signor Marconi. [Prolonged applause.]

ADDRESS OF SIGNOR MARCONI.

Signor MARCONI. Mr. Speaker and Members of the House, I appreciate very highly the honor and the privilege of being allowed to say a word to you in this assembly. Up to two minutes ago I did not know that I would have the honor of being called upon to say a few words here, and I sincerely thank the Speaker for the privilege. I have had the pleasure of listening to the words spoken by the chief of our mission, his royal highness the Prince of Udine, and there is very little that I could add to his expressions or to his feelings, which are the feelings of the whole of Italy, which are feelings of friendship for this country and of appreciation for the great step which it has taken in joining us and our allies in Europe in this great war. [Applause.] There is one thing that I can add, however. It is that it was my privilege to live for many years in America [applause], and I think I know America and Americans fairly well. I flatter myself that I know them very well. No one more than myself rejoices in the fact that we in Italy have America with us. I have worked in America, and America has always been, in a large way, in my plans, for without America my work could not have succeeded.

I have learned to appreciate in America two things that I can express in two words—justice and fair play. [Applause.] You are ready to back anything that you think may be of good to the world, and you are ready to encourage any honest endeavor to advance science or the applications of science; and although you are the greatest industrial Nation in the world, although there is healthy competition—and it is only by that healthy competition there can be such progress—what you do here is always fair. I can say that with absolute conviction from the bottom of my heart.

Mr. Speaker and gentlemen of the House, I thank you very much for the way in which you have received this mission, for the way in which you have received the utterances of his royal highness, the president of our mission, and for the way in which you have received the very few remarks I have been able to improvise. [Prolonged applause and cheers.]

The members of the Italian mission then took their places at the right of the Speaker's rostrum and the Members of the House of Representatives were presented to them.

The distinguished visitors were then escorted from the Hall of the House.

RUSSIA.

Reception of the Russian war mission in the United States Senate Tuesday, June 26, 1917.

Mr. MARTIN. Mr. President, in order that Senators may have an opportunity to be presented to the distinguished Russians who are now the guests of the Nation I move that the Senate take a recess for 30 minutes.

The motion was agreed to.

The VICE PRESIDENT. The Chair appoints Mr. MARTIN, Mr. GALLINGER, Mr. SAULSBURY, Mr. BRADY, Mr. STONE, and Mr. LODGE as a committee to present our distinguished guests to the Senate.

The Senate thereupon took a recess for 30 minutes.

At 12 o'clock and 15 minutes p. m. the members of the Russian mission to the Government of the United States were escorted by the committee appointed by the Vice President into

the Senate Chamber, the members of the mission being the Russian Extraordinary Ambassador Boris A. Bakhmetieff; Lieut. Gen. Roop, representing the Russian general staff; Captain of the Guard Dubassoff, aid-de-camp; Prof. Lomonosoff, member of the council of engineers, representative of the ministry of ways and communications and head of the railroad mission; A. Nikolaieff, colonel of the general staff, military attaché; M. Novitsky, representative of the minister of finance; Capt. Shutt, from the ministry of war; M. Soukine, diplomatic representative; and Alexander Smirnoff, lieutenant, Russian Army, Russian Embassy.

Maj. N. K. Averill, United States Army; Hon. Breckinridge Long, Assistant Secretary of State; and Mr. Jefferson Caffery, United States Diplomatic Service, Department of State, aid to the mission, accompanied the mission into the Senate Chamber.

Ambassador Bakhmetieff was seated on the right of the Vice President and Lieut. Gen. Roop upon his left.

ADDRESS BY THE VICE PRESIDENT.

The VICE PRESIDENT. Senators, the kaleidoscope of current history is being turned so rapidly that to the normal eye the combinations of yesterday are forgotten, of to-day are uncertain, and of to-morrow are unknown. And yet as from time to time there are unfolded in this most sacred and historic spot portions of the panorama of the greatest tragedy that has been enacted since Calvary there stands out one clear-cut central figure, the figure of the dauntless and undaunted man who dares to draw his sword either to preserve or to obtain for himself and for his fellows the right of self-government, the heritage of life, of liberty, and of the pursuit of happiness. [Applause.] It matters but little to us the feature and the form of that man, his lineage or his language, if he speak in the full and confident tones of a manhood or in the lisping tongue of infantile possession of those rights. But if we hear from his lips the golden rule of statecraft, then he is our brother. [Applause.] He has a right to be, and he has a right to be here.

We are honored this day by the representatives of a people who have been our long-time and unvarying friends. [Applause.] It is not possible for me to think in the terms of countries and continents and governments. My mind thinks only in the terms of men; and perhaps this is as it should be, for the Goddess of Liberty is not always a strong and virile woman. In the hours of peace she becomes pale and anemic, and it is oftentimes necessary to keep her alive by transfusing into her veins the blood of patriotic and self-sacrificing men.

I can not think of France, of England, of Italy, of America; I think only of Viviani and Joffre, of Balfour and Haig, of Udine and Cadorni, of Wilson and Pershing. [Loud applause.] On this day as I look into the eyes, the storm-tossed eyes, of these our guests, I can not think of Russia as the land of Alexander and Nicholas. She seems to me to be only the home of Krapotkin and of Tolstoi.

Travelers tell us that there is a point in Iceland where the rays of the setting and of the rising sun mingle. Already upon the far-flung eastern battle line of Europe the rays of the setting sun of autocracy have mingled with the rays of the rising sun of democracy. [Applause.] May that sun grow in light and warmth, and may it be undimmed by the clouds of internal dissension. May democracy everywhere understand that its first duty is to make a democrat a free man everywhere on earth. [Applause.]

Last week we went with little Belgium sadly to her Gethsemane; to-day let us go gladly, with mighty Russia, to her Mount of Transfiguration. [Applause.]

I present to you the chairman of this commission, Mr. B. A. Bakhmetieff.

ADDRESS BY AMBASSADOR BAKHMETIEFF.

Ambassador BAKHMETIEFF. Mr. President and gentlemen of the Senate, at the outset permit me to express to you sincere thanks and keen appreciation for the warm reception you have so graciously given to the members of the mission and to myself. Great is the honor you have bestowed by permitting me to address your distinguished body, abrogating thus a custom which has been upheld for more than a century, but still more gratifying is the expression of cordial sympathy and friendly feeling which has been so manifestly exhibited by your reception.

From the moment of our arrival in this country we have been deeply affected by the extraordinary greeting accorded us and by the constant expression of hearty welcome and sincere sympathy with which we have been hailed on all sides.

That bonds of friendship and sympathy united the people of the two nations we knew before we departed from Russia. They were amply manifested during the early days of the revolution. The act of prompt recognition of our new Government has been of incalculable value. For the brotherly encourage-

ment which you gave us, and for the noble manner in which you so generously stretched forth a helping hand, we are here, in behalf of the new Russia, to express to you our deepest and most heartfelt gratitude. [Applause.]

We have come here as well to make clear the spirit and meaning of the great events taking place in our country. A thorough understanding is indispensable to enable our mission to accomplish the important task of establishing a close and effective cooperation between the two countries for common action and common cause. With the greatest of hope do I look forward to the results of such cooperation so vital to our mutual desire to form a league of honor among free nations on the smoking ruins of autocratic militarism.

At this moment all eyes are turned on Russia. Many hopes and many doubts are raised by the tide of events in the greatest of revolutions at an epoch in the world's greatest war. Justifiable is the attention, lawful the hopes, and naturally conceivable the anxiety. The fate of nations, the fate of the world is at stake, all dependent on the fate of Russia. Freedom and peace will be the blessings of the future if Russia happily emerges from the struggle a powerful democracy, sparkling with the gallantry of her army returning from fields won in common strife with her allies. [Great applause.]

An unprecedented epoch of spiritual depression, a new period of strenuous and anxious military depression would follow, should Russia fail to accomplish her task of political regeneration or should she collapse for economical reasons or the insufficiency of her arms. In all frankness and sincerity do I expose my cause, confident in your good will and paying tribute to the manifest feelings of sympathy, may I say affection?

I am not going to conceal the gravity of the situation that confronts the Russian Provisional Government. The revolution called for the reconstruction of the very foundations of our national life. It is not easy to comprehend what it means to reorganize all of Russia on democratic lines. Such work involves the whole of our social, economic, and political relations. The entire State structure is affected by the changes, involving village, district, county; in fact, every part from the smallest to the central State. The creation anew of a country of boundless expanse on distinctly new principles will, of course, take time, and impatience should not be shown in the consummation of so grand an event as Russia's entry into the ranks of free nations.

We should not forget that in this immense transformation various interests will seek to assert themselves, and until the work of settlement is completed a struggle among opposing currents is inevitable and exaggerations can not be avoided. Attempts on the part of disorganizing elements to take advantage of this moment of transition must be expected and met with calmness and confidence. [Applause.]

In exposing to you a true picture of the situation I feel that it is my duty to present to you two considerations which make me feel that Russia has passed the stage of the world when the future appears vague and uncertain.

In the first place, it is the firm conviction of the necessity of equality, which is widely developing and firmly establishing itself throughout the country.

In the eyes of the Russian people this principle of equality is based on the fertile democratic doctrine that governments derive their just power from the consent of the governed [prolonged applause], and hence that a strong government must be created by the will of the people. [Renewed applause.]

Three days ago in the House of Representatives I stated that a strong majority of the Russian people had united around the coalition cabinet on a national program. I mentioned the confidence and powerful support which the Government is at present enjoying, and which from day to day gives it more strength and determination not only to suppress acts of lawlessness on the part of disorganizing forces but also to carry out the constructive work of national reorganization.

Since then my latest advices give joyful confirmation of the establishment of a firm power, strong in its democratic precepts and activity, strong in the trust reposed in it by the people in its ability to enforce law and order. [Prolonged applause.]

In the second place, and no less important, is the growing conviction that the issues of the revolution and the future of Russia's freedom are closely connected with the fighting might of the country. It is such power, it is the force of arms, which alone can defend and make certain the achievements of the revolution against autocratic aggression. [Applause.]

There has been a period, closely following the revolution, of almost total suspension of all military activity, a period of what appeared to be disintegration of the army, a period which gave rise to serious doubts and to gloomy forebodings. At the same time there ensued unlimited freedom of speech and of the

press, which afforded opportunities for expression of the most extreme and antinational views, from all of which resulted widespread rumors throughout the world that Russia would abandon the war and conclude a separate peace with the central powers.

With all emphasis and with the deepest conviction, may I reiterate the statement that such rumors were wholly without foundation in fact. [Great applause.] Russia rejects with indignation any idea of separate peace. [Prolonged applause.] What my country is striving for is the establishment of a firm and lasting peace between democratic nations. Russia is firmly convinced that a separate peace would mean the triumph of German autocracy, would render lasting peace impossible, create the greatest danger for democracy and liberty, and ever be a threatening menace to the new-born freedom of Russia. [Applause.]

These rumors were due to misapprehension of the significance and eventful processes of reorganization which the army was to undergo as a result of the emancipation of the country. Like the nation, the army, an offspring of the people, had to be built on democratic lines. Such work takes time, and friction and partial disorganization must be overcome.

To adapt new principles to a body so huge, so very manifold, and so self-dependent as is a modern army is no simple task. Patience is required to mold it in accordance with forms of democracy and personal liberty, preserving at the same time discipline so essential for success on the field of battle.

One must also realize that the time has passed when the fates of nations can be decided by an irresponsible government or by a few individuals, and that the people must shed their blood for issues to them unknown. We live in a democratic epoch where people who sacrifice their lives should fully realize the reasons therefor and the principles for which they are fighting. [Applause.]

Just as the Russian people had to undergo a process of reorganization and political revolution, so also did the Russian Army. It was necessary for it to live out illusions and deceptions, and to rally about a program of historical necessity and national truth.

The national program of the Government calls for effective organization and consolidation of the army's fighting power for offensive as well as defensive purposes. [Applause.] This has been the outcome of the crystallization of the will of the people. That is the program as to warfare which has rallied around the Government, Russia's democracy, giving its leaders vigor and strength.

Conscious of the enormous task the Provisional Government is taking measures promptly to restore throughout the country conditions of life so deeply disorganized by the inefficiency of the previous rules and to provide for whatever is necessary for military success.

In this respect exceptional and grave conditions provide for exceptional means. In close touch with the panpeasant congress the Government has taken control of stores of food supplies, and is providing for effective transportation and just distribution. Following the example of other countries at war, the Government has undertaken the regulation of the production of main products vital for the country and the army. The Government at the same time is making all endeavors to settle labor difficulties, taking measures for the welfare of workmen consistent with active production necessitated by the national welfare.

As to the army, the process of crystallization of the national will is expressing itself in a growing sentiment of general and common appreciation of events and a thorough understanding of the situation.

Peaceful in its intentions, striving for a lasting peace based on democratic principles and established by democratic will, the Russian people and its army are rallying their forces around the banners of freedom, strengthening their ranks in cheerful self-consciousness; to die, but not to be slaves. [Great applause.]

Russia wants the world to be safe for democracy.

To make it safe means to have democracy rule the world. [Prolonged applause.]

The VICE PRESIDENT. The chairman and members of the Russian mission will be delighted to have presented to them the Members of the Senate.

The members of the Russian mission took their places at the left of the Vice President's desk, and the Members of the Senate were presented to them by the committee appointed by the Vice President.

The distinguished visitors were escorted from the Chamber, and (at 12 o'clock and 45 minutes p. m.) the Senate reassembled upon the expiration of the recess.

Reception of the Russian war mission in the House of Representatives Saturday, June 23, 1917.

The SPEAKER. The Chair appoints the following committee to wait upon our Russian visitors and conduct them into the Hall.

The Clerk read as follows:

Messrs. FLOOD, HARRISON of Mississippi, STEDMAN, SABATH, COOPER of Wisconsin, ROGERS of Massachusetts, LONDON, and SIEGEL.

The SPEAKER. The House will stand in recess under its previous order for 30 minutes.

Thereupon (at 11 o'clock and 56 minutes) the House stood in recess.

At 12 o'clock and 4 minutes p. m. the commissioners of the Russian Republic to the Government of the United States, Prof. Boris Bakhmetieff, chief of the mission; Lieut. Gen. Roop, representing the Russian general staff; Prof. Lomonosoff, chief of the delegation to study railways and communications; Prof. Borodine, representing the ministry of agriculture; Col. Oranovsky, representing the ministry of war to study munitions and supplies; Mr. Novitsky, chief of the financial section; Mr. Soukine, diplomatic secretary of the mission; Capt. Dubassoff, aid-de-camp to Ambassador Bakhmetieff; and Capt. Shutt, escorted by Mr. FLOOD, Mr. STEDMAN, Mr. HARRISON of Mississippi, Mr. SABATH, Mr. COOPER of Wisconsin, Mr. ROGERS of Massachusetts, Mr. LONDON, and Mr. SIEGEL, accompanied by Mr. C. Onou, chargé d'affaires of the Russian Embassy, and Mr. Breckinridge Long, Third Assistant Secretary of State, entered the Hall of the House.

The distinguished visitors were escorted to the Speaker's rostrum amid prolonged applause and cheers.

The SPEAKER. The peculiar circumstances under which the Russian commission comes to us justify a few preliminary words.

When our fathers proclaimed this Republic at Philadelphia July 4, 1776, there was only one other Republic on earth—Switzerland—and the fathers were not certain that this one would live till Christmas. It was an even break whether it would or not. [Laughter and applause.] Now, thanks be to Almighty God, there are 27 republics in this world. [Applause.] In a large sense we made them, every one [applause]—not by conquering armies, not by the mailed hand, but by the wholesomeness of our example [applause]; by teaching all creation the glorious fact that men can govern themselves. [Applause.] Until then the theory was that political power descended from on high and lighted upon a few tall heads and a little of it trickled down upon men below. We reversed all that and made it begin at the bottom and go up like the sap in the tree in the springtime, and it will go up forever. [Applause.]

Of these 27 republics Russia is the newest and the biggest. [Applause.] It dazzles the imagination to think what she may be under free institutions, possessing as she does 180,000,000 of people and one-sixth of the land on the globe.

The Russian Revolution is the most momentous political movement since the French Revolution.

I present to you the first Russian ambassador to the United States of America from the Republic of Russia. [Applause.]

ADDRESS OF PROF. BORIS BAKHMETIEFF.

Prof. BORIS BAKHMETIEFF. Mr. Speaker and gentlemen of the House [applause], I am deeply conscious how great an honor has been conferred on me and the members of my mission by this gracious reception. I understand how unusual it is for this House to accord to foreigners the privilege of the floor. I realize that if you were moved to make such an exception it was due to the great and most extraordinary historic events which have been and are now taking place in the world.

Great indeed is the honor and the privilege to speak here, in this House, exemplifying as it does the Constitution of the United States—that wonderful document which embodies so clearly and yet so tersely the principles of free government and democracy. [Applause.]

Gentlemen of the House, when addressing you on behalf of the Government and the people of new Russia, when conveying to you the greetings of the new-born Russian democracy, you will conceive how impressed I am by the historical significance of this moment; you will understand why my emotions do overwhelm me.

During the last few months Russia has really lived through events of world-wide importance. With a single impulse the nation has thrown down the old fetters of slavery. Free, she is entering now the dawn of new life, joining the ranks of democracy, striving for the happiness and the freedom of the world. [Applause.]

Does not one feel occasionally that the very greatness and significance of events are not fully appreciated, due to the facility

and spontaneity with which the great change has been completed?

Does not one always realize and conceive what it really means to humanity that a nation of 180,000,000, a country boundless in expanse, has been suddenly set free from the worst of oppression, has been given the joy and happiness of a free, self-conscious existence? [Applause.]

With what emotions are we inspired who have come to you as messengers of these great events, as bearers of the new principles proclaimed by the Russian revolution.

May I be permitted to reiterate the expression of the feelings that stir our hearts and, impressed as I am by the might and grandeur of the wonderful events, welcome and greet you on behalf of free Russia? [Applause.]

Here at the very cradle of representative government I feel it proper to recall the very moments of birth of constitutional life in Russia which presented itself some 12 years ago at the time of the first Russian revolution.

It was then that the Duma came into being. From the very inception of this assembly the old authority endeavored to curtail the powers that had been conferred on it. Its sole existence was an uninterrupted struggle; but in spite thereof, notwithstanding the limitations and narrowness of election laws, the Duma was bound to play a most important part in the national life of Russia.

It was the very fact of the being of a representative body which proved to be so fruitful and powerful.

It was that mysterious force of representation, force which draws everything into the whirlpool of legislative power, force the existence of which your American framers of the Constitution so deeply recognized and understood. It was that force which led the Duma, however limited, to express the feelings of Russia and frame her hopes during the world's great crisis, and made the Duma ultimately the center and the hope of national life.

It was the Duma who at the epoch when the old authority by vicious and inefficient management had disorganized the supplies of the country and brought the military operations to unprecedented reverse; it was the Duma who with energy and devotion called the people to organize national defense and appealed to the vital forces of the country to meet the German attack and save the nation from definite subjugation. Again, when it appeared that the shortsighted Government, who never took advantage of the patriotic enthusiasm and national sacrifice, was not only incapable of leading the war to a successful end but would inevitably bring Russia to military collapse and economic and social ruin, it was the Duma again who at that terrible hour proclaimed the nation in danger [applause]; it was at the feet of the Duma that the soldiers of the revolution deposited their banners and, giving allegiance, brought the revolution to a successful issue. It was then that from the ruins of the old régime emerged a new order embodied in the provisional government, a youthful offspring of the old Duma procreated by the forces of the revolution. [Applause.]

Instead of the old forms, there are now being firmly established and deeply embedded in the minds of the nation principles that power is reposed and springs from and only from the people. [Applause.] To effectuate these principles and to enact appropriate fundamental laws—that is going to be the main function of the constitutional assembly which is to be convoked as promptly as possible.

This assembly, elected on a democratic basis, is to represent the will and constructive power of the nation. It will inaugurate the forms of future political existence as well as establish the fundamental basis of economic structure of future Russia. Eventually all main questions of national being will be brought before and will be decided by the constitutional assembly—constitution, civil and criminal law, administration, nationalities, religion, reorganization of finance, land problem, conditionment of labor, annihilation of all restrictive legislation, encouragement of intense and fruitful development of the country. These are the tasks of the assembly, the aspirations and hopes of the nation.

Gentlemen of the House, do not you really feel that the assembly is expected to bring into life once more the grand principle which your illustrious President so aptly expressed in the sublime words, "Government by consent of the governed"? [Applause.]

It is the provisional government that is governing Russia at present. It is the task of the provisional government to conduct Russia safely to the constitutional assembly.

Guided by democratic precepts, the provisional government meanwhile is reorganizing the country on the basis of freedom, equality, and self-government, is rebuilding its economic and financial structure.

The outstanding feature of the present government is its recognition as fundamental and all important of the principles of legality. It is manifestly understood in Russia that the law, having its origin in the people's will, is the substance of the very existence of State. [Applause.]

Reposing confidence in such rule, the Russian people are rendering to the new authorities their support. The people are realizing more and more that to the very sake of further freedom law must be maintained and manifestation of anarchy suppressed.

In this respect local life has exemplified wonderful exertion of spontaneous public spirit which has contributed to the most effective process of self-organization of the nation. On many occasions, following the removal of the old authorities, a newly elected administration has naturally arisen, conscious of national interest and often developing in its spontaneity amazing examples of practical statesmanship.

It is these conditions which provide that the provisional government is gaining every day importance and power; is gaining capacity to check elements of disorder arising either from attempts of reaction or extremism. At the present time the provisional government has started to make most decisive measures in that respect, employing force when necessary, although always striving for a peaceful solution.

The last resolutions which have been framed by the Council of Workmen, the Congress of Peasants, and other democratic organizations render the best proof of the general understanding of the necessity of creating strong power. The coalitionary character of the new cabinet, which includes eminent socialist leaders and represents all the vital elements of the nation, therefore enjoying its full support, is most effectively securing the unity and power of the central government, the lack of which was so keenly felt during the first two months after the revolution.

Realizing the grandeur and complexity of the present events and conscious of the danger which is threatening the very achievements of the revolution, the Russian people are gathering around the new government, united on a "national program." [Applause.]

It is this program of "national salvation" which has united the middle classes as well as the populists, the labor elements, and socialists. Deep political wisdom has been exhibited by subordinating various class interests and differences to national welfare. In this way this Government is supported by an immense majority of the Nation, and, outside of reactionaries only, is being opposed by comparatively small groups of extremists and internationalists.

As to foreign policy, Russia's national program has been clearly set forth in the statement of the provisional government of March 27 and more explicitly in the declaration of the new government of May 18.

With all emphasis may I state that Russia rejects any idea of a separate peace? [Applause.] I am aware that rumors were circulated in this country that a separate peace seemed probable. I am happy to affirm that such rumors were wholly without foundation in fact. [Applause.]

What Russia is aiming for is the establishment of a firm and lasting peace between democratic nations. [Applause.] The triumph of German autocracy would render such peace impossible. [Applause.] It would be the source of the greatest misery and, besides that, be a threatening menace to Russia's freedom.

The provisional government is laying all endeavor to reorganize and fortify the army for action in common with its allies. [Applause.]

Gentlemen of the House, I will close my address by saying Russia will not fail to be a worthy partner in the "league of honor." [Applause.]

The members of the Russian commission then took their places at the right of the Speaker's rostrum, and the Members of the House were presented to them.

The distinguished visitors were then escorted from the Hall of the House.

BELGIUM.

Reception of the Belgian war mission in the United States Senate Friday, June 22, 1917.

Mr. MARTIN. Mr. President, in order that Senators may have an opportunity to be presented to the distinguished representatives of Belgium who are now in the city as the guests of the Nation, I move that the Senate take a recess for 30 minutes.

The motion was agreed to.

The VICE PRESIDENT. The Chair appoints Mr. MARTIN, Mr. GALLINGER, Mr. HITCHCOCK, Mr. SAULSBURY, Mr. POMERENE,

Mr. SMITH of Michigan, Mr. McCUMBER, and Mr. BORAH as a committee to introduce our distinguished guests to the Senate.

The Senate thereupon took a recess for 30 minutes.

At 12 o'clock and 15 minutes p. m. the members of the Belgian mission to the Government of the United States were escorted by the committee appointed by the Vice President into the Senate Chamber, the members of the mission being Baron Moncheur, chief of the political bureau of the Belgian foreign office at Havre; Gen. Leclercq, cavalry officer of the Second Regiment of Guides, and at one time commander of the First Division of Cavalry; M. Hector Carlier, counselor of the mission; Maj. Osterrieth, an officer of the First Regiment of Guides; Count Louis d'Ursel; and Mr. Jean Mertens, secretary of the mission.

Monsieur E. de Cartier de Marchienne, the Belgian minister; Hon. Breckinridge Long, Assistant Secretary of State; Mr. Hugh Gibson, of the State Department; and Capt. T. C. Cook, United States Army, accompanied the mission into the Senate Chamber.

Baron Moncheur was seated on the right of the Vice President and Minister Marchienne upon his left.

ADDRESS BY THE VICE PRESIDENT.

The VICE PRESIDENT. Senators, since that far-off, unrecorded hour when our ancestors began their slow westward movement, unnumbered and unremembered thousands have died upon the field of battle for love, for hate, for liberty, for conquest, as freemen or as slaves. Every note in the gamut of human passion has been written in the anvil chorus of war. Many have struck the redeeming blow for their own country, but few have unsheathed their swords without the hope of self-aggrandizement. It remained for little Belgium to write a new page in the blood of her martyred sons and daughters in the annals of diplomacy [applause], to inscribe thereon that the dishonor of a people is the aggregate of the selfishness of its citizens; that the honor of a people is the aggregate of the self-sacrifice of its citizens; that treaties are made to be kept, not broken; that a people may dare to walk through "the valley of the shadow of death" touching elbows with their convictions, but that they dare not climb to the mountain tops of safety if thereby they walk over the dead bodies of their high ideals [applause]; that a people may safely die if thereby they can compel an unwilling world to toss upon their new-made graves the white lily of a blameless life.

Here, Senators, ends all I know, and here begins what I believe: Belgium shall arise. [Prolonged applause.] The long night of her weeping shall end; the morning of a day of joy shall break over her desolated homes, her devastated fields, and her profaned altars. When it breaks, humanity will learn that when mankind gambles with truth and honor and humanity the dice of the gods are always loaded. [Applause.]

To me, in all profane history, there is no sadder, sweeter, sublimer character than Sidney Carton. Dreamer of dreams, he walked his lonely, only way. In all the history of nations there is no sadder, sweeter, sublimer story than the story of Belgium. [Applause.] Doers of deeds, she, too, has walked her lonely, only way—the *via dolorosa* that leads to duty, death, and glory. [Great applause.] Out of the depths and across the deeps the representatives of the remnant of her people and the guardians of her honor have come to us this day.

I present to you the chairman of that mission, Baron Moncheur. [Applause.]

ADDRESS BY BARON MONCHEUR.

Baron MONCHEUR. Mr. President and gentlemen of the Senate, when some years ago I had the honor of representing the Government of my King in the United States, I often came to the Senate, where I listened with deep interest to the debates of your distinguished body. In those times I never thought that some day it would be my privilege to speak from this historic tribune.

When the Vice President was kind enough to ask me to address the Senate, I admit that at first I hesitated to accept his gracious invitation.

How should I dare to speak in this Chamber, which has resounded to the eloquence and wisdom of so many distinguished statesmen whose utterances from this tribune have changed the history of the world?

How should I venture to address this body, to which the distinction, the talent, and the wisdom of its Members have given a unique place among the legislative assemblies of the world?

If, gentlemen, I have finally succeeded in overcoming this natural hesitation, it is only because of my great desire to express, as well as my words will permit, the gratitude and admiration which the whole Belgian nation feels toward the American people and toward their Government.

You all know the unspeakable evils which have befallen my unfortunate country—the unprovoked invasion, accompanied by

a deliberate system of terror, the burning of many of our thriving cities and of innumerable villages, the massacre of thousands of our peaceful citizens, the pillage and devastation of our country.

Then followed the iron hand of foreign domination, enormous war contributions exacted from all the nine Provinces of Belgium, ruinous requisitions of all sorts from our people, the seizure of the raw material of industry, and even the theft of our machinery which was sent into the country of our enemy for his own use, so that now the silence of death reigns in our industrial centers which before had been the most active in Europe.

You also know, gentlemen, the way in which this régime of oppression has been carried out—80,000 Belgians condemned, in the space of one year, to various penalties for having displeased the invader; as, for example, the noble burgomaster of Brussels, who has been in imprisonment for the past two years for trying to uphold the principle of civic liberty which for centuries has been so dear to all Belgians.

You have learned also of the deportation of our workmen into Germany—a crime the horrors of which, according to the opinion of one of your countrymen, should cause more indignation throughout the entire world than all the previous outrages against the sacred principles of justice and of humanity.

But Belgium, even in the midst of the terrible misfortunes which have been brought upon her by her fidelity to treaties and by respect for her plighted word, does not regret her decision, and there is not a single Belgian worthy of the name who does not now, as on the first day of war, approve the judgment of our Government that it is better to die, if need be, rather than to live without honor. [Prolonged applause.] Like Patrick Henry, all Belgians say, "Give me liberty or give me death." [Applause.]

This sentiment will be shared by all the citizens of the great American Nation, who responded with such enthusiasm and with such unanimity to the noble words of your President when, in terms which held the world spellbound, he proclaimed the inprescriptible right of justice over force.

The courage of my fellow countrymen has been strengthened, also, by the sympathy for our misfortunes which has been manifested throughout your great land. American initiative has bestowed most generous help upon our starving population, and, in offering from this tribune the expression of gratitude of every Belgian heart, I wish also to render special homage to that admirable organization, the commission for relief in Belgium, which has done so much to save our people from starvation. [Applause.]

Yes, gentlemen, the sympathy of America gives us new courage; and while King Albert [applause], who since the fateful day when our territory was violated, has remained steadfastly at the front, continues the struggle with indomitable energy at the head of our army intrenched upon the last strip of our soil that remains to us, while the Queen [applause], that worthy companion of a great sovereign, expends her unceasing efforts to comfort and relieve the victims of battle, exciting enthusiasm by her contempt for the danger to which she exposes herself day by day, on the other side of the enemy's line of steel stand the Belgian people, bowed beneath the yoke but never conquered, maintaining their unshaken patriotism in spite of the seductions of the enemy as well as in spite of his iron rule, the Belgian population, a martyr whose courage is upheld by our great Cardinal Mercier, awaits silently in the sacred union of all parties the final hour of deliverance. [Great applause.]

That hour, gentlemen, will, I am convinced, be materially hastened by the powerful aid of the United States, and the time approaches when Belgium, restored to full and complete independence, both politically and economically, will be able to thank in a fitting manner all those who have aided her to emerge from the darkness of the tomb into the glorious light of a new life. [Prolonged applause.]

The VICE PRESIDENT. Baron Moncheur and the members of the mission will take pleasure in meeting the Senators and their guests.

The members of the Belgian mission took their places at the left of the Vice President's desk, and the Members of the Senate were presented to them by the committee appointed by the Vice President.

The distinguished visitors were escorted from the Chamber and at 12 o'clock and 45 minutes p. m., upon the expiration of the recess, the Senate reassembled.

Reception of the Belgian war mission in the House of Representatives Wednesday, June 27, 1917.

The SPEAKER. Under the previous order the House will stand in recess for 30 minutes.

Accordingly (at 1 o'clock p. m.) the House took a recess until 1 o'clock and 30 minutes p. m.

At 1 o'clock and 4 minutes p. m. the Sergeant at Arms announced the Belgian mission, and the members of the mission, Baron Ludovic Moncheur, Mr. de Cartier, Gen. Leclercq, Maj. Osterreith, and Count d'Ursel, accompanied by Mr. Warren Robbins, secretary of embassy, attached by the Department of State as aid to the mission, and Capt. Cook, military aid, entered the Hall of the House.

The distinguished visitors were escorted to the Speaker's rostrum amid prolonged applause and cheers.

The SPEAKER. Gentlemen of the House of Representatives, from time out of mind Belgium has been known as the cockpit of Europe. [Applause.] There have been more great battles fought in Belgium than on the same acreage of land anywhere else in the civilized world.

Those of you who remember when you were wrestling with Latin in the days of your youth recall that Caesar, in the opening words of his Commentaries, said that among the Gallic tribes the Belgians were the bravest. [Applause.] Most assuredly he was a good judge of fighting men. Within the last three years the present generation of Belgians have demonstrated beyond all controversy that they are worthy of the high encomium pronounced on their ancestors by the great Roman Imperator. [Applause.]

I now present to you Baron Moncheur, the head of the Belgian mission to this country. [Applause.]

ADDRESS BY BARON MONCHEUR.

Baron MONCHEUR. Mr. Speaker and gentlemen of the House of Representatives, I am deeply grateful for this cordial reception by your distinguished assembly. Your sympathy and friendship will warm the hearts of all my countrymen and will give them renewed confidence for the future. We know that in the great conflict before us we have the powerful aid of the American Nation.

During my long residence in the United States some years ago I watched with interest and admiration the economic development of your country, which had been favored by the advantages of many years of peace.

During that period my own country learned from you many lessons in regard to industry and commerce and by following your example had become, although small in size and population, one of the foremost nations of the earth in the realms of commerce and industry.

But if years ago I admired your country in the fullness of prosperity and wondered at your industrial genius and the marvelous activity of your citizens, it is with even greater admiration that I now see your entire Nation rise as one man to answer the voice of your President calling upon you to put forth all your efforts and devotion for the defense of freedom and the rights of mankind. [Applause.] All the sons of America, without distinction of race or of party, have rallied to your flag. They think only of their duty to their country. They are ever ready to sacrifice their private and personal interests, and leaving behind them their dear ones, who will be plunged into grief and tears on account of their absence, they rally to the Star-Spangled Banner, which for the first time in your history has crossed the ocean to float over the battle fields of the Old World. [Applause.]

As in the Middle Ages the knights were accustomed to hold a vigil, watching their armor in the chapel, so you to-day are making that same holy and prayerful preparation for the battle to come. Everywhere you are carrying on work which day by day brings nearer the moment of supreme victory. [Applause.] While the flower of American youth is preparing itself in your splendid training camps your shipyards, your factories, and your munition plants resound with the hum of feverish work providing your soldiers with the implements of war.

American aviation, that marvelous product of the New World, is making ready to lend its powerful aid, also, to support our armies. Is it not natural, indeed, that the American eagle should from the skies strike the deathblow to the enemy? [Applause.]

After your great stroke for liberty in 1776 you formed a society which you called the Order of the Cincinnati, to indicate that when war was finished you knew how to beat your swords into plowshares; and now, when war has been forced upon you, you have given proof that you know equally well how to turn your plowshares into swords. [Applause.] Some 20 years ago Prince Albert of Belgium, heir to a throne which seemed to be safely sheltered from the blast of war, came to America where he studied with the deepest interest your marvelous country and the wonderful works of industry and commerce which you had developed in the quietude of peace; and now how can I express the sentiments which fill his heroic soul

when, fighting at the head of his troops in the last trench on Belgian soil, he sees the sons of that same industrious America land upon the coast of Europe, brave champions of the most noble principles, and ready to lay down their lives in defense of right and justice. [Applause.]

On a certain occasion a mighty sovereign declared "the Pyrenees exist no more," and to-day we can say with even more truth "There is no longer any ocean"—for endless friendship, cemented by gratitude and joint effort and triumph in the cause of justice and liberty, will forever obliterate the barrier of the seas and unite the children of old Belgium to the sons of the young and powerful Republic of the New York. [Applause.]

The members of the mission then took their places at the right of the Speaker's rostrum, and the Members of the House were presented to them.

The distinguished visitors were then escorted from the Hall of the House.

JAPAN.

Reception of the Japanese war mission in the United States Senate Thursday, August 30, 1917.

Mr. MARTIN. Mr. President, we all know that we have in the city as the guests of the Nation a number of distinguished statesmen representing the Government and people of Japan. I am sure it will be a pleasure to all the Members of the Senate to have an opportunity to be presented to the distinguished visitors, and for that purpose I move that the Senate now take a recess for 30 minutes.

The PRESIDENT pro tempore. In anticipation of the adoption of that motion the Chair will appoint the Senator from Virginia [Mr. MARTIN], the Senator from Massachusetts [Mr. LODGE], the Senator from North Carolina [Mr. OVERMAN], the Senator from Utah [Mr. SMOOT], and the Senator from Nebraska [Mr. HITCHCOCK] to meet the distinguished guests and escort them into the Chamber. The Chair will request that at 1 o'clock, when the Senate reconvenes, the Senator from Arkansas [Mr. ROBINSON] will take the chair. The question now is on the motion of the Senator from Virginia that the Senate take a recess for 30 minutes.

The motion was agreed to.

At 12 o'clock and 35 minutes the members of the Japanese mission, escorted by the committee appointed by the President pro tempore and headed by the Sergeant at Arms, appeared at the main door of the Chamber and were announced to the Senate by the Sergeant at Arms. The members of the mission were Viscount Ishii, ambassador extraordinary and plenipotentiary; Vice Admiral Takeshita, Imperial Japanese Navy; Maj. Gen. Sugano, Imperial Japanese Army; Mr. Masanao Hanihara, consul general at San Francisco; Mr. Matsuzo Nagai, secretary of the foreign office; Commander Ando, Imperial Japanese Navy; Lieut. Col. Tanikawa, Imperial Japanese Army; Mr. Tadanao Imai, vice consul; and Mr. Owaku.

Mr. Aimari Sato, ambassador from Japan to the Government of the United States; Mr. Tokichi Tanaka, counselor of the embassy; Capt. Nomura, naval attaché; and Lieut. Col. Mizumachi, military attaché, accompanied the mission into the Senate Chamber, together with Mr. Breckinridge Long, Assistant Secretary of State; Brig. Gen. James A. Irons, United States Army; Capt. C. C. March, United States Navy; Mr. Ransford S. Miller, American consul general; and Mr. A. B. Ruddock, of the State Department, personally attached to Viscount Ishii.

Viscount Ishii was seated on the right of the President pro tempore and Ambassador Sato upon his left.

ADDRESS BY THE PRESIDENT PRO TEMPORE.

The PRESIDENT pro tempore (Mr. SAULSBURY). Senators, we are highly honored to-day by the presence of these distinguished guests, who come to us representing the most ancient and powerful Empire of the world. We have met here before and welcomed the distinguished missions from other great nations. Heroic Belgium, historic Italy, great Russia, beloved France, and democratic Britain have sent to us of their best, but to none have we extended a more cordial welcome than to-day we give to the representatives of great Nippon, that beautiful land of ancient tradition and passionate patriotism. [Applause.]

A mighty nation is the ancient Empire of Japan. Its youth renewed, it joins our great young Nation in pledging anew a continuance of our old friendship, which the trouble maker of the earth has tried so hard to interrupt. We now know how industriously insidious attempts have been made by the Prussian masters of the German people to bring about distrust and hatred in the world. We know what evil attempts they have made to breed hatred and distrust of us among our friends, and we welcome this opportunity to heartily congratulate our old

friends who honor us to-day that by the capture of Tsing Tau and the German islands in the Pacific Japan has completely removed from the Far Eastern world the only threat, as we believe, to peace and prosperity, the only threat to lasting peace in eastern Asia. [Applause.]

Within the memory of living man Prussians have provoked four wars for conquest and in three succeeded. Their fourth attempt has roused the world to unified, concerted action.

The yellow peril was made in Germany, and Shangtung was seized; the Slav peril was made in Germany, and Serbia was overwhelmed and Russia was invaded; but the thick-witted, smug, self-centered supermen of Germany entering their last attempt at conquest have roused a real peril—a real peril to themselves—and the free nations that believe in international honor, in the binding force of treaties, and in the pledged word are grimly though so sorrowfully engaged in creating, perfecting, and bringing to successful issue an alliance for the benefit of all earth's people, which will protect the rights of nations, small and great, and enable them to lead their lives in peace, and lead them unafraid. This alliance we and the other free nations of the earth are creating to control the disturbers of the peace of the world, and it is now succeeding. The alliance we create is based on the brotherhood of man, the equal rights of men and nations. It is based on the universal kindly instincts of the human heart, no matter whether that heart beats in an eastern or a western breast, no matter where free men live, in America or Asia, in South Africa, in Europe, or in South America. The alliance we create is directed against and threatens only wrong, inhumanity, and injustice. It threatens only rapacity, greed, hypocrisy, and nationalized brutality. It threatens only military autocracy and the violators of treaties who disregard the pledged honor of nations. Our alliance is indeed a peril, but only to the new pirates of the seas, to the assassins of the air, to those who violate international decency and fair dealing, who misuse the forces of developed science, and distort the teachings of philosophy, who would destroy civilization itself in the effort to accomplish world domination.

This peril our alliance has created is the peril to the central European powers, but it bears no color label. It is, and will be in the future, the common glory of all true men of all free nations everywhere to have joined in its creation and success. It is an Anglo-French-Slav-Italian-Japanese-American peril to the misdeed of the world. [Applause.] Allies in East and West are joined together to bring back lasting peace to a disordered and war-sick world. Let us renew our time-honored friendship with clasped hands and good wishes for the peaceful, friendly development of both our nations and assure poor, stricken Europe that this western Republic and eastern Empire, together in friendly accord, will work for the good of all humanity. [Applause.]

This Congress has pledged all the resources of our great country to our common cause, the curbing of international rapacity and hate and barbarism.

Senators, I have never believed there was more than a jingling rhyme in the phrase that East is East and West is West and never the two shall meet, and we are happy to-day, while honoring our distinguished guests, to demonstrate to the world that there is no East and there is no West when strong men come together as friends, though they come from the ends of the earth, determined in friendly alliance to work out right and justice for themselves and all earth's peoples. [Applause.]

Let us never permit hereafter that evil tongues or wicked propaganda shall cause even the simplest minded among our people to forget the ancient friendship of our nations or weaken the ties of mutual respect and regard in which we hold each other. This meeting to-day symbolizes complete international fraternity which common consciousness of international honor has brought about. Let it be eternal!

I have the honor of presenting to the Senators of the United States the most distinguished of our visitors, His Excellency Viscount Ishii, chief of the mission from Imperial Japan. [Great applause.]

ADDRESS BY VISCOUNT ISHII.

Viscount ISHII. Mr. President and gentlemen of the Senate of the United States, no words at my command can give adequate expression to the profound appreciation I have of this honor you confer upon us. We know full well the exalted dignity and the proud traditions of this illustrious branch of the great Legislature of the United States; and in the name of my country, my mission, and myself I thank you most sincerely. To accept your courteous invitation and to occupy even the smallest fraction of the time allowed for the momentous deliberations of this august body is a great responsibility—a

responsibility I do not underestimate, but from which I may not shrink.

I shall not, however, abuse this rare privilege by attempting to address at length, in a language of which I have but little command, trained leaders of thought and masters of argument and oratory. But I grasp this occasion to say to you that the whole people of Japan heartily welcome and profoundly appreciate the entrance of this mighty Nation of yours into the struggle against the insane despoiler of our civilization. [Applause.] We all know that you did not undertake this solemn task on the impulse of the moment, but that you threw your mighty weight into the struggle only after exercising a most admirable patience, with a firm determination that this world shall be made free from the threat of aggression from the black shadow of a military despotism wielded by a nation taught with the mother's milk that human right must yield to brutal might. [Applause.] To us the fact that you are now on the side of the allies in this titanic struggle constitutes already a great moral victory for our common cause, which we believe to be the cause of right and justice, for the strong as for the weak, for the great as for the small.

We of Japan believe we understand something of the American ideal of life, and we pay our most profound respects to it. Jefferson, your great democratic President, conceived the ideal of an American Commonwealth to be not a rule imposed on the people by force of arms, but as a free expression of the individual sentiments of that people. Jefferson saw Americans not as a set of people huddled together under the muzzles of machine guns, but he saw them as a myriad of independent and free men, as individuals only relying on a combined military force for protection against aggression from abroad or treachery from within. He saw a community of people guided by a community of good thought and pure patriotism, using their own special talents in their own special way under their own sacred roof-trees; not a machine-made Nation, but a living, growing organism, animated by one passion—the passion of liberty. [Applause.]

I assure you, gentlemen, that the Japanese ideal of national life is, in its final analysis, not so very far removed from yours. We conceive of our nation as a vast family, held together not by the arbitrary force of armed men, but by the force of a natural development. We shall call the common force that animates us a passion of loyalty to our Emperor and to our homes, as we shall call that of Americans a passion for liberty and of loyalty to their flag. [Applause.]

Blind loyalty without rational consciousness of the responsibility of self is but another name for slavery, while a right of liberty ill conceived, ignoring the mutual human affection and respect for the rights of every man, which form the essence of true loyalty, must be tantamount to anarchy. These two passions—passion of loyalty and passion for liberty—are they not really one? Is not the same control working in both cases—the intense desire to be true to our innermost selves and to the highest and best that has been revealed to us? You must be free to be Americans and we must be free to be Japanese. But our common enemy is not content with this freedom for the nation or for the individual; he must force all the world to be German, too! You had hoped against hope that this was not so; but that noble hope fled and your admirable patience was exhausted. You did not then hesitate to face the issue and the foe, as you are facing it, with that great American spirit which has loved and still loves liberty, which loves the right more than peace and honor more than life. [Applause.]

We of Japan took up arms against Germany because a solemn treaty was not to us "a scrap of paper." [Great applause.] We did not enter into this war because we had any selfish interest to promote or any ill-conceived ambition to gratify. We are in the war, we insist on being in it, and we shall stay in it, because earnestly, as a nation and as individuals, we believe in the righteousness of the cause for which we stand; because we believe that only by a complete victory for that cause can there be made a righteous, honorable, and permanent peace, so that this world may be made safe for all men to live in and so that all nations may work out their destinies untrammelled by fear. [Applause.]

Mr. President and gentlemen, whatever the critic half informed or the hired slanderer may say against us, in forming your judgment of Japan we ask you only to use those splendid abilities that guide this great Nation. The criminal plotter against our good neighborhood takes advantage of the fact that at this time of the world's crisis many things must of necessity remain untold and unrecorded in the daily newspapers; but we are satisfied that we are doing our best. In this tremendous work, as we move together, shoulder to shoulder, to a certain victory, America and Japan must have many things in which

the one can help the other. We have much in common and much to do in concert. That is the reason I have been sent and that is the reason you have received me here to-day.

I have an earnest and abiding faith that this association of ours, this proving of ourselves in the highest, most sacred, and most trying of human activities—the armed vindication of right and justice—must bring us to a still closer concord and a deeper confidence one in the other, sealing for all time the bonds of cordial friendship between our two nations.

Again I thank you. [Great applause.]

The PRESIDENT pro tempore. The special ambassador from Japan and the Japanese ambassador to Washington will be glad to receive the Senators and their guests upon the floor as they desire to be presented.

The members of the Japanese mission took their places at the left of the Vice President's desk, and the Members of the Senate were presented to them by the committee appointed by the President pro tempore.

The distinguished visitors were escorted from the Chamber, and (at 1 o'clock p. m.) the Senate reassembled upon the expiration of the recess.

Mr. SMOOT. I ask unanimous consent that the address delivered in the Senate Chamber to-day by the President pro tempore of the Senate [Mr. SAULSBURY] and by Viscount Ishii, special ambassador from Japan, be printed in the RECORD of to-day's proceedings.

The PRESIDING OFFICER (Mr. ROBINSON in the chair). Is there objection? The Chair hears none, and it is so ordered.

Reception of Japanese war mission in the House of Representatives Wednesday, September 5, 1917.

The SPEAKER. The Chair announces the following committee to wait on the Japanese commissioners and conduct them into the Hall: Mr. FLOOD, Mr. LINTHICUM, Mr. GOODWIN of Arkansas, Mr. STEPMAN, Mr. COOPER of Wisconsin, Mr. TEMPLE, and Mr. FOSS. Under the order of the House, the House will stand in recess 30 minutes.

Thereupon (at 12 o'clock and 25 minutes p. m.) the House stood in recess.

At 12 o'clock and 35 minutes p. m. the members of the Japanese mission, escorted by the committee appointed by the Speaker, entered the Chamber and were announced to the House by the Sergeant at Arms. The members of the mission were: Viscount Ishii, ambassador extraordinary and plenipotentiary; Vice Admiral Takeshita, Imperial Japanese Navy; Maj. Gen. Sugano, Imperial Japanese Army; Mr. Masanao Hanihara, consul general at San Francisco; Mr. Matsuzo Nagai, secretary of the foreign office; Commander Ando, Imperial Japanese Navy; Lieut. Col. Tanikawa, Imperial Japanese Army; Mr. Tadanao Imai, vice consul, and Mr. Owaku.

Mr. Aimari Sato, ambassador from Japan to the Government of the United States; Mr. Tokichi Tanaka, counselor of the embassy; Capt. Nomura, naval attaché; and Lieut. Col. Mizumachi, military attaché, accompanied the mission into the House, together with Mr. Breckinridge Long, Third Assistant Secretary of State; Brig. Gen. James A. Irons, United States Army; Capt. C. C. March, United States Navy; and Mr. A. B. Ruddock, of the State Department, personally attached to Viscount Ishii.

Viscount Ishii was seated on the right of the Speaker and Ambassador Sato upon his left.

The SPEAKER. Gentlemen of the House of Representatives, Japan is one of the oldest countries in the world, and yet it is the very newest of the great powers of the world. [Applause.] The history of Japan extends back into the twilight of fable. In ancient times there were seven things selected that were denominated the wonders of the world. Nearly all of them have gone. The historian of the times in which we live will rank the remarkable and astounding progress of the Empire of Japan as one of the seven wonders of these times. [Applause.]

The Empire of Japan is our nearest western neighbor. She holds one side of the Pacific and we hold the other, and every right-thinking man in the Empire of Japan and in the Republic of the United States hopes that peace, amity, and friendly relations will always prevail between these two great powers. [Applause.]

Within the last few months we have had visiting commissions from France, Great Britain, Belgium, Russia, and Italy, and now we have the Japanese mission. I present to this magnificent audience Viscount Ishii, the head of the mission from Japan. [Applause.]

ADDRESS BY VISCOUNT ISHII.

Viscount ISHII. Mr. Speaker and Members of the House of Representatives, I thank you most sincerely for this gracious reception. The rare opportunity thus afforded to me is deeply appreciated throughout the nation I have the honor to repre-

sent. [Applause.] I bring a message, borne by us across an ocean and a continent, from the Emperor and the people of our beloved island, set in the far eastern Pacific, to the President of the United States and to you, the representatives of the greatest Republic on earth to-day, a potent factor in the most stupendous and, we must believe, the final struggle for liberty throughout the world. [Applause.]

Our message reiterates an assurance of unchanged sincerity of friendship well understood by the people of the United States, but it is a message which has never found opportunity such as this for delivery. [Applause.] Your courteous permission for us to occupy a place on this historic rostrum and to speak within the hearing, in fact, of the hundred millions of people of the United States of America, carries with it a forceful manifestation of the sentiment which we believe the United States entertain toward my country. [Applause.]

We would not have traveled 10,000 miles merely to repeat what must have sufficiently impressed itself upon you, but that within the last few months a new day has dawned [applause]—a day welcomed indeed by us. It follows upon another when you, with magnificent forbearance, endured great wrongs and outrages in the hope that recourse to the sword might be avoided. It was a day in which you bore the pitiless cruelty of the willful aggressor of all human rights—bore it bravely and with fortitude until the star of hope vanished and toleration ceased to be a virtue. Then, in the dawning of this day, you arose and threw your mighty forces into the balance against the wrong in favor of the right. [Applause.] In this dawning the Stars and Stripes flung across the skies were entwined with the emblem of the Rising Sun, and so commenced the brighter day. [Applause.] That is why we are here. We come to bring to you the message of our Emperor, which gives you assurance of the comradeship and the cooperation of Japan throughout this day. We are here to say that, with the other allies, we heartily welcome the advent of the United States in the fields of France and elsewhere. We recognize the great uplift given to humanity and the promise of a physical victory doubly insured by the most momentous decision you have taken. [Applause.]

We bring to you assurance of support, unselfish, without a motive other than the common force that drives us all to-day. [Applause.] We of Japan face the task seriously and with determination. We recognize the grim and unrelenting order we all must obey. We know that the desperate foe of civilization must be met by self-sacrifice, counsel, and unsleeping watchfulness. We are here to say that Japan has done and will do what may be demanded of her to the utmost of her resources and to the best of her ability. [Applause.]

Yours are vast resources; ours may be small, but we can say to you that the spirit of Japan burns as ardently and will last as long as may be demanded in this war. [Applause.] We are eager for counsel with you. We come to find out how these two nations can best coordinate their energies and their resources; how best they can cooperate in the conduct and the winning of this war. [Applause.] We come to say to you that we are proud on this day to stand shoulder to shoulder with the soldiers of America. In the field and in the household, in the mine and in the shop, the men and the women of Japan are working and will work with a greater confidence and a higher sense of moral obligation.

Japan has exerted herself with the spirit of loyalty to her allies, her Emperor, and to her homes, following the ideals of our national life, to which I alluded when I had the honor of addressing your Senate a few days ago. Japan will continue to add her quota to the sacrifice which alone can insure a victory. [Applause.] Like the people of America, those of Japan have remained permanently independent because of a real patriotism which, when the occasion demands, never fails. We, like you, protect ourselves against aggression from without and treachery from within. We, like you, know nothing of tyranny and despotism; and we, like you, stand determined that malignance and oppression from the conqueror, imposed upon the conquered, shall not become the lot of our people. [Applause.] Neither shall our families and our homes be violated and desecrated by the licentious and brutal forces of evil now trampling upon the helpless women and children of the countries they have overrun. [Applause.]

Treachery from within, indeed, at this hour, calls for our attention. While your soldiers leave their families and their homes to fight on the blood-stained fields of France, we must guard our landmarks, as you will guard yours, against treachery that has found hiding places in our midst and which for the last 10 years has sown the seeds of discord between us. Let it be a part of our cooperation and coordination to protect each other from these forces of evil which lack even the poorest courage of an open enemy. [Applause.]

Mr. Speaker, and gentlemen of the House of Representatives, we have been climbing a mountain toward the stars by different and sometimes devious pathways, but near the summit our roads shall join, and together we shall win into the full sunlight above the clouds. [Applause.] We shall pass safely through the dangerous places. Our blood shall not have been shed and our sacrifice shall not have been made in vain, for we shall be among the nations of a world living in a brotherhood of peace. [Applause.] Will it not then be a source of intense national pride to each of us to remember this day which must insure a permanent maintenance of these renewed pledges of comradeship and of cooperation?

I again wish to express my sincere appreciation of the honor you have done us. [Applause.]

The members of the mission then took their places on the right of the Speaker's rostrum, and the Members of the House of Representatives were presented to them.

The distinguished visitors were then escorted from the Hall of the House. The recess having expired, the House (at 1 o'clock and 3 minutes p. m.) resumed its session.

SERBIA.

Reception of the Serbian war mission in the United States Senate Saturday, January 5, 1918.

Mr. MARTIN. Mr. President, I have just been advised that the members of the Serbian mission are now in the Capitol, and I am sure it will be a pleasure for the Members of the Senate to have an opportunity to receive them and to be presented to them. I therefore move that the Senate take a recess until 1 o'clock.

The motion was agreed to.

The VICE PRESIDENT. The Chair appoints the Senator from Virginia [Mr. MARTIN], the Senator from New Hampshire [Mr. GALLINGER], the Senator from Missouri [Mr. STONE], the Senator from Pennsylvania [Mr. KNOX], the Senator from Delaware [Mr. SAULSBURY], and the Senator from Massachusetts [Mr. LODGE] to conduct the members of the Serbian mission into the Senate Chamber.

At 12 o'clock and 30 minutes p. m. the members of the Serbian mission, escorted by the committee appointed by the Vice President and headed by the Sergeant at Arms, appeared at the main door of the Chamber, and were announced to the Senate by the Sergeant at Arms. The members of the mission were: Dr. Milenko R. Vesnitch (chairman), Dr. Sima Lozanitch, Gen. Michailo Rachitch, Lieut. Col. Michailo Nenadovitch, Capt. Milan Yovitchitch, and Mr. Vladislav Martinatz.

Mr. Lioubomir Michailovitch, minister from Serbia to the United States; Mr. Alexandre V. Georgevitch, and Mr. Todorovitch accompanied the mission into the Senate Chamber, together with the Assistant Secretary of State, Mr. William Phillips, Mr. A. B. Ruddock, of the Department of State, and Lieut. H. F. Armstrong, United States Army.

Dr. Milenko R. Vesnitch was seated on the right of the Vice President and Minister Michailovitch on his left.

ADDRESS BY THE VICE PRESIDENT.

The VICE PRESIDENT. Senators, even so untrained a mind as mine grasps the artistic possibilities of this scene. Here you are, the representatives of a free people, because your forbears heard and heeded the agonizing cry of Patrick Henry in the Virginia House of Burgesses. Here they are, the representatives of a people who for nearly six centuries in mortal combat with Austrian and with Turk have written in the blood of their sons upon the greensward of every mountain side and every valley of the Balkans the immortal cry of Henry. Here you both are this day, each a worthy representative of his race, clasping hands in the midnight darkness and solemnly vowing that the morrow's morn will find you and yours, as always, consecrated to liberty or to death! [Applause.]

If I were asked by some not so learned as you what the world will open its eyes upon when the nightmare of this awful carnage has passed, I should answer of my faith and hope and not my knowledge; I should say that the world would gaze upon one dream come true.

The greatest of the national heroes of our visiting friends was Stephen Dushan, Stephen the Throttler. His untimely death prevented the unification of the Serbs and the driving of the last Turk from the soil of Europe. It is a far cry from Diavoli to Washington. The physical Throttler died there; the spiritual Throttler, we hope, lives in this city. [Applause.]

For centuries the dream of the real world has been that some time, somehow, the spirit to rule alien nations, the ambition to lord it over conquered provinces, the arrogant desire to fatten and grow great upon the broken and bruised bodies of the weak and helpless would be throttled, throttled to their undoing and to their death; and when that time comes, as come it must, the

Serb will be as free as the air that soothes to sleep his babe on the Balkan mountain side.

Senators, you are not what you pretend to be if it be not "hats off" and voices in unison with these our friends as they sing:

On our sepulcher of ages
Breaks the resurrection morn.
From the slough of direst slavery
Serbia anew is born:
Through five hundred years of durance
We have knelt before Thy face;
All our kin, O God, deliver—
Thus entreats the Serbian race.

[Applause.]

We should be traitors and forsworn to our own glorious traditions if we did not gladly greet and joyously acclaim the representatives of a people who, through the long centuries, have never failed to put their backs to the wall of Europe fighting to die in the defense of their rights and their liberties. So, Senators, it pleases me to present to you Dr. Milenko Vesnitch, the head of the Serbian mission, whom the wings of destiny have wafted to our shores. [Applause.]

ADDRESS BY DR. MILENKO R. VESNITCH.

Dr. VESNITCH. Mr. President and gentlemen of the Senate, destiny wills that we arrive in the United States just before your Christmas eve, and, having heard in Europe of the historic announcements made in your Congress during the past year, like the Magi from the East, we were anxious to inquire and to testify to their truth. The same good destiny wills, thanks to your gracious invitation, that we appear before you on the eve of our Christmas, and, like the shepherds of the Gospel, we are now going about in the splendid Capital of your country singing in our hearts and reciting to ourselves the magic words which President Wilson has addressed to mankind, "We believe in peace, but we believe also in justice and righteousness and liberty." More than anybody we believe that peace can not subsist without justice, without liberty and righteousness.

From over the ocean we have anxiously listened to the epochal declarations of the eminent leader of the greatest and purest democracy that history has ever known, and we have been happy to understand that this Congress was in complete harmony with the ideas of the dignified successor of Washington and of Lincoln.

With golden characters in their hearts and souls, all liberty-loving nations will inscribe forever his and your program, following which America stands first of all for the right of men to determine whom they will obey and whom they will serve, for the right of political freedom and a people's sovereignty; for the equality of nations, which means the equality of rights, neither recognizing nor implying a difference between big nations and small, between those that are powerful and those that are weak; for no peace can last or ought to last which does not recognize and accept the principle that governments derive all their just powers from the consent of the governed [applause], and that no right anywhere exists to hand people about from sovereignty to sovereignty, as if they were property. [Renewed applause.] We, too, accept with enthusiasm the doctrine of Monroe as the doctrine of the world, "that no nation should seek to extend its policy over any other nation or people, but that every nation or people should be left free to determine its own policy, its own way of development, unhindered, unthreatened, unafraid, the little along with the great and powerful." We are happy to be permitted to share with you the belief that right shall command might, and that it ought not to be dishonored in its very inception.

Let me confess to you, gentlemen, that over there in Europe many people were anxious for months, if not for years, as to the attitude of the United States in this unexampled war. But let me add at the same time that I was not of the number. How could a man acquainted with your history imagine for a single moment that this great Nation should confine herself to the part of a reserved spectator in the presence of the most tremendous struggle for the highest principles of humanity? How could we believe that you could have been insensible in reading the barbarous and unprecedented ultimatum which the Hapsburg Government presented to Serbia and foreseeing the unequal struggle between the two countries, of which the one was ten times bigger and stronger than the other, especially as the latter had just passed through two successive wars? How could an American citizen remain indifferent to the violation of Belgian neutrality, excused by the imperial chancellor with the assertion that solemn international treaties are nothing else than simple "scraps of paper"?

The people who doubted the course you were going to take are excused only by the consideration that they did not know, or rather that they had forgotten, your history.

My mind had been fixed about this problem from the very first moment of the war. But on the tragic day when our old King and his heroic son, our almost dying Vofvod Putnik, and our last soldier, hungering and freezing, quite exhausted, left the Albanian coast, taking with them nothing save our national flag and our honor enveloped in it [applause], I remained for hours and hours deploring our unmerited misfortune and defending myself against despair, and, glancing at the map in my mind, I reviewed countries and nations. And looking across the Atlantic, I saw your ancestors sailing over the "sea of darkness," after having left forever in their native countries all that was dear to them, and going to this unknown continent without any fear, unaware of the trials and troubles awaiting them here, scorning the risks and dangers, determined to fight with savages, with beasts, and with the elements. For what reason? Because they were not willing to endure autocracy and capriciousness in their native countries, and because they were ready and capable to found new human societies, where political, religious, and moral liberty would be the same for all, and where law and right would command instead of tyranny and caprice. I have followed their generations, extending civilization over the mountains, over the woods and lakes, and enlarging the political rights of everybody in this part of the continent—becoming, in a word, the promised land of all liberty-loving people. [Applause.] I remembered then how early it was that Turgot represented the American people as "the hope of mankind," and how justly he appreciated and foresaw at that time the character and importance of your people for the civilization of mankind. The American people, he thought, "must show the world by its example that men can be free and tranquil, and can do without the chains that tyrants and cheats of all garbs have tried to lay on them under the pretense of public good. It must give the example of political liberty, religious liberty, commercial and industrial liberty."

This prophecy of the great French statesman, made in the second half of the eighteenth century, has become a reality. And so, in my desolate eagerness, I said to myself that the Nation with this origin and this history, I know, can not consent to the overwhelming of the whole civilized world by the barbarous rule which centuries ago had forced them to leave their native countries and to seek other homes, and that the day is not far off when the Star-Spangled Banner will join the flags of the nations fighting for freedom, for right, and for justice, and that then better days will come for the nations suffering injustice in Europe and throughout the whole world. [Applause.]

The Serbian Nation, with their kinsmen, the Croats and Slovenes, have suffered in this war more than any other nation. But I shall not appeal to-day to your commiseration. I am happy and proud to say we have fought for our liberties as bravely as any one of our gallant allies. [Applause.] In thus fulfilling our sacred duty to our country we venture to think that we have rendered a real service, however small it may be, to the better future of humanity, for in defending our beloved land our regiments have sown the greater portion of our territory with the lives of the best of their men. These seeds of virtue can not, they will not, perish. They have even begun to give their blessed fruits. To them we owe the interest which the civilized world has taken in our national cause; to them, and because of their martyrdom, we owe the heartiness with which your great Nation has opened her magnanimous arms to us; to them my friends here present and I myself owe the great honor of being received in your Senate, which we regard as the strongest asylum of right, of liberty, and of justice, and as the noblest temple for the prayer of a better future for the human race. [Applause.]

We, too, believe with you, Mr. President of the Senate; we, too, have faith to-day that the morning light will break in this good year at hand, and that it will break with the sun of liberty rising upon a rose-tinted sky. We, too, have in this solemn hour a vision, and we voice our unalterable faith that this magnificent Republic is to lead the nations of the world unto the mountain of perfect peace and to become the arbiter of them all, because we know that the American commandments of peace are commandments of justice, which alone will enable mankind to improve in free evolution.

When, in the service of these ideals, the allied Governments, the allied soldiers and sailors, and civilian men and women will have put forth all their energies; when, in a coordinated and strongly cemented unity of all our forces, of all our war aims, and of all our thoughts we win this fight—and we must win it unless we are all to be crushed in slavery under the Prussian heel!—then, as you said some days ago, Mr. President:

The darkness will disappear. The light will break over a world grown old in want, in sin, in misery, in autocratic kingcraft. It will be the light of a newer and a better day; and anything else that America has ever accomplished will pale into insignificance before the light of the sacrifices which it shall have made for humanity and for freedom.

Blessed be the nation which first in history gives glorious impulse to the Christian teaching, "Thou shalt love thy neighbor as thyself."

Accept, for the sake of our common humanity in these epochal days, the heartfelt gratitude of a small but of an honest nation. [Prolonged applause.]

The VICE PRESIDENT. Senators, Dr. Vesnitch and the members of the mission will be pleased to meet you and greet you.

The members of the Serbian mission took their places at the left of the Vice President's desk and the Members of the Senate were presented to them by the committee appointed by the Vice President.

The distinguished visitors were escorted from the Chamber, and (at 1 o'clock p. m.) the Senate reassembled upon the expiration of the recess.

Reception of the Serbian war mission in the House of Representatives Tuesday, January 8, 1918.

The SPEAKER. The Chair appoints as a committee to escort the Serbian mission Messrs. FLOOD, DENT, SABATH, COOPER of Wisconsin, and FORDNEY, and the House will stand in recess.

Accordingly (at 12 o'clock and 58 minutes p. m.) the House stood in recess.

At 1 o'clock p. m. the members of the Serbian mission, escorted by the committee appointed by the Speaker, entered the Hall of the House and were announced by the Doorkeeper. The members of the mission were: Dr. Milenko R. Vesnitch (chairman), Dr. Sima Lozanitch, Gen. Michailo Ratchitch, Lieut. Col. Michailo Nenadovitch, Capt. Milan Yovitchitch, and Mr. Vladislav Martinatz.

Mr. Lioubomir Michailovitch, minister from Serba to the United States, accompanied the mission into the Hall of the House, together with the Third Assistant Secretary of State, Mr. Breckinridge Long; A. B. Ruddock, of the Department of State; and Lieut. H. F. Armstrong, United States Army.

The SPEAKER. Gentlemen of the House of Representatives, almost 500 years ago the Turks overran the Balkans and got as far as the capital of Austria, and John Sobieski, the heroic King of Poland, went down there with an army and defeated the Turks under the walls of Vienna. From that day to this the Turks have been retreating eastward, sometimes very slowly and sometimes more rapidly. During all these years, nearly five centuries, the Serbians and Montenegrins have kept up a more or less constant warfare against the Turks. [Applause.] They never admitted that they were conquered. Serbia was one of the first of the Balkan Provinces that achieved its independence. It is one of the smaller States of Europe, but no nation in the world has ever put up a braver fight. [Applause.] About the time that the western end of the Balkans, including Serbia, had achieved independence from the Turks, the Austrians precipitated this war by an assault on Serbia. They did not get along as easily as they supposed they would, and the Serbians fought them inch by inch, and were driven from their own country only by the overwhelming force of men and guns. I suppose that in this war the Serbians have suffered more than any other nation in Europe.

I take pleasure in introducing to the House the head of the Serbian mission to the United States, Dr. Milenko R. Vesnitch, who will now address the House. [Applause.]

ADDRESS BY DR. VESNITCH.

DR. VESNITCH. Mr. Speaker and gentlemen of the House of Representatives, we stand here, in this post of honor, my friends and myself, thanks to your great courtesy, and my first thoughts go beyond you to your constituents, to those whom you so conscientiously represent, and who probably have often asked of you the reason for this catastrophe overwhelming the world, and which has imposed upon them the greatest sacrifices which humanity has ever been called upon to endure. Would that my voice might reach them all, but, alas! I fear that I can not hope to succeed in this self-imposed task, for the voice of a modest representative of a small nation is too weak to be heard throughout this vast country. Nevertheless, I dare not hesitate, and your democracy, gracious and gentle as it is powerful, will lend its ears to my voice, because I ask the favor of speaking the truth and of invoking justice for the cause of the allies and for that of my desolate country.

The most distinguished of our common allies have explained to you from this platform the reasons for which Germany and Austria-Hungary have provoked this tremendous war, and for which all righteous and liberty-loving nations have been successively and necessarily involved in this conflagration. This duty was for none of them so great and so imperative as for me; for little Serbia, as you know, was the first nation attacked by Austria-Hungary, and later invaded by Germany, Bulgaria, and

Turkey. Serbia was the first object of the Teuton's aggression. In a single moment the armies of four powers, representing 150,000,000 inhabitants, were hurled against a small nation of hardly 5,000,000, whose army was exhausted by two preceding wars.

Why did the central European powers attack us, aided by their Turanian, Asiatic, and half-Asiatic allies? Why did the liberal nations of Europe interfere in this unequal struggle? Why was it impossible for your great country to stand, as it were, apart, and await the final result of this immense conflict, far from the field of battle? To frame clearly the answer of these questions would require hours and hours, if not days, and, as I may not impose upon your good nature or claim more than half an hour of your precious time, I shall endeavor to be very brief. Because of this my address will necessarily suffer, but I count upon your indulgence.

You will, I sincerely hope, agree with me that a great and enlightened democracy has the right in our time to be fully informed why it is that its citizens, so far removed from the battle field, why, to be specific, the countrymen of Washington and Monroe, should forsake their regular occupations, renounce all their cherished plans, and concentrate their thoughts and their powers, physical as well as moral and material, exclusively on one object—to win the war. The necessity for this is absolute.

Two motives have led Germany and Austria-Hungary to crush Serbia, both of which were peremptory and categorical. The first was dictated by the determination of the Germans to become the masters of the world after having successfully subjected Europe to their will and having settled themselves in Asia Minor. The second was due to the horror in which the German mind holds democracy. If you consider these two motives more closely you will readily persuade yourselves that their origin is the same autocratic mentality of the Teutons, of which the Hohenzollerns and the Hapsburgs are the strongest and the most evident personifications. This mentality manifested itself long ago in the Middle Ages, when the Hohenzollerns imposed Christianity with the sword for political purposes, and when the Hapsburgs forced a people to stand bareheaded before the hat of Gessler. Medieval, feudal robbers, the Hohenzollerns descended from their mountain castles, and, passing through the county of Nuremberg, founded the Duchy of Brandenburg, outraging and exterminating the Slavs, and colonizing their lands with Teutons. Through persistent intrigue and military activity they have transformed their dominions into the Kingdom of Prussia, which they enlarged by robbing Austria of Silesia, Denmark of Schleswig-Holstein, and, excluding Austria from the circle of German States, formed the North German Confederation, under the leadership of Prussia. Five years later the South German States, through compulsion and compromise, were united with the North German States and merged into an empire, and, enlarged by the cynical annexation of Alsace and Lorraine, under the dominion of this same Prussia, the German States have become Prussianized. From that moment the ambition of the Hohenzollerns has known no bounds. They have resolved to conquer the world. Indeed, before Nietzsche announced his theory of the superman, the German people considered themselves to be a superior people. Their superior people—*Ueervolk*, to use their own expression—ought, in their opinion, to govern and direct the world, because, in their pride, they claimed to be the cultured people—in their own language *Kulturvolk*—and the transmitters of culture, as they termed it, *Kulturtrager*—to the peoples of the earth. The first step to be taken was to secure financial and agricultural resources for the struggle which this ambition would necessarily provoke. These, they early saw, were to be found in Palestine and Mesopotamia, where there were cotton and wheat in abundance. After having for scores of years lulled the Turks into a belief in their friendship, until the Kaiser, with turban on head, knelt before the grave of Mohammed, the Germans decided to cut their way through the Balkans. But to reach Constantinople and Saloniki it was necessary to win over or to crush Serbia. As we could not be won over, our destruction was quickly decided at Berlin and Vienna.

The House of Hapsburg had even more reasons to wish for our disappearance from the map. Old feudal brigands, descending from the Swiss mountains, the Hapsburgs conquered, often fraudulently acquired, Province after Province. By cabal, corruption, and treachery they acquired the crown of the Holy Roman Empire of the German Nation, without ever seeing in their Provinces and realms anything more than private lands or family domains. Even nowadays the Hapsburgs do not recognize an Austrian or Hungarian, a Czech or Croat country, nor even an Austria-Hungary. They only know lands and estates belonging to their house like simple property, and it is

on the basis of these conceptions that they administer their Provinces, considering the inhabitants as belonging to and forming a part of their estates. At the same time, being essentially a Teutonic dynasty, the Hapsburgs have always been in the East the agents of German policy. With the exception of the German, and from the latter half of the last century Magyar, they have never tolerated national tendencies under their rule, and they have persecuted systematically every nation or race with those ambitions, especially the Slavs; but they have emptied the vials of their wrath upon the Yougoslavs, because the democratic Slovenes and Croats had seen in the Serbia of their brothers the realization of their dreams extending over centuries, and, as they have openly and with all their energy favored our development, many of them abandoning their homes and their native lands in order to pass over to and to settle in little Serbia, the feudal and bureaucratic Hapsburgs have seen in our country a real danger to their political situation. And because of this menace, as they considered it, they long ago inaugurated the policy of oppressing the Yougoslavs, of persecuting Serbia, and of thwarting all our endeavors toward a normal economic and political development.

If Austria-Hungary has become a hell to all her inhabitants, with the exception of the Germans and Magyars, no nationality has suffered more under Hapsburg misrule than the Yougoslavs. Hatred of the Croats and of the Slovenes has increased in the last 50 years as they have begun to oppose Germanization, leaning upon Serbia as a defense and upon her democracy. Since the formation of the Austro-German alliance of 1879, Vienna and Berlin have been united in their policy to crush Serbia because of its democracy—a small America in the southeast of Europe—and to counteract every effort of the Serbs and Croats or Slovenes in the dual monarchy standing in their way.

Our desperate moral and political situation has been truly pictured by one of our great national poets, "Our tears flow unremarked, and neither our cries nor our prayers are heard." The ambition to dominate the world and the determination to check democratic movements in their dominions have been the motives which have caused the central powers to inaugurate this tremendous war. All else has been simple pretext.

You know the methods followed by the Germans in this war in Belgium, in France, in Italy, in Roumania, and even in Russia. You have never heard of the horrors endured by the Yougoslavs, not only in Serbia but even in the Provinces of Austria-Hungary. They are so cruel and inhuman that I am obliged to spare you the recital. But I must give you one, the slightest example of it.

Since we have been so happy as to enjoy the hospitality of your beautiful Capital, I have been going every Sunday to commune with your people in prayer for all the unfortunate men and women in the world and for our redemption from the evils imposed upon us all by German aggression. On every one of these occasions I have recalled to mind the military order issued by the invader of my martyred country:

Divine service is only to be permitted at the request of the inhabitants of the locality and only in the open air and outside the church. No sermon, however, will be permitted under any conditions whatsoever. A platoon, prepared to fire, will hold itself in readiness near the church during divine service.

In methods of barbarity, Austrians, Magyars, Bulgarians, and Germans have vied with one another. Contrary to the traditions of warfare in the last three centuries, and contrary to the obligations assumed in international treaties, the Austro-Germans, the Bulgarians, and the Turks have violated the most elementary civil, moral, and religious rights in Belgium, in France, in Italy, in Roumania, but surely nowhere in such large measure as in Serbia. Should they be victorious in this war, the turn of others would necessarily come, and neutral nations would not escape.

This situation imposes upon us all the imperative duty of facing sacrifices to win the war. I have come from the western front in Europe, and I saw there all the horrors of German devastation. Attila could go to the school of barbarism founded by the successors of Moltke. But I saw at the same time the resolution of all the allied soldiers, those under the command of your gallant Gen. Pershing included, to win this war, forced upon us all, and to restore right, justice, and liberty to the civilized world. [Applause.] But to win it we must act with all our coordinated energy and indefatigably day and night. We must not, we dare not, think of anything else these days than of the war and of winning it. Only when we hold complete and definite victory in our hands can we dare to think of peace. This peace must be a just and a lasting one, and to be such it can not be made in Germany. [Applause.] To obtain it we must realize that further great and earnest efforts are to be made. We must stand as one man and concentrate all our energies. We Serbs put all our confidence in our allies, as

we have up to the present day, that this sunlight will dawn. We hope that the new world organization—for a new world will and must result from this war—will be inspired by the American spirit, tending toward "a more perfect union," providing at the same time that no State shall be deprived of its equality in the new society of nations. We may assure you, gentlemen of the House of Representatives, that in the coming happier organization we shall be factors and elements of order and of progress, and that we shall be happy and proud to stand beside you and to follow you in the way in which the spirit of Washington is to guide mankind. [Applause.]

The members of the mission then took their places on the right of the Speaker's rostrum, and the Members of the House of Representatives were presented to them.

The distinguished visitors were then escorted from the Hall of the House.

The recess having expired, the House (at 1 o'clock and 37 minutes p. m.) resumed its session.

War Aims and Peace Terms.

EXTENSION OF REMARKS

OF

HON. MARVIN JONES,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 8, 1918.

Mr. JONES of Texas. Mr. Speaker, some misapprehension has been caused and some misstatements have been made about a resolution calling a conference for the purpose of stating war aims and peace terms which I presented to the Foreign Affairs Committee of the House on August 7, 1917. Of course, no one in this body misunderstood my thought or purpose, but certain parties elsewhere have sought to misconstrue the facts.

At that time Russia was still battling on the side of the allies and the German ruling classes were using their best efforts to deceive their people and to deceive Russia.

As I stated to the Foreign Affairs Committee of the House at the time I presented the resolution to them, my sole and only purpose in so doing was to destroy the deception which was being practiced by the German rulers upon the German people, and through them upon the Russian people. These rulers were trying to make the German people think that the United States and the allies were committed to the purpose of destroying the national existence of Germany and the dismemberment of that empire and were making the Russian people think that we were trying to commit them to the same purpose. Of course, we knew from the President's own statement that he had no such aim, but that statement was made before we became a party to the war. We also knew the President was still clinging to the same ideals, but in spite of this the German rulers were saying otherwise.

The resolution did not interfere in any way with a vigorous prosecution of the war, which I have favored at all times and still favor. Being on the side of the right, I thought we had nothing to fear from a statement of our aims.

On August 27, 1917, the President in his reply to the Pope did the very thing that I sought to have done by the resolution. In an address, magnificent in form and crowded with substance, he stated our war aims and peace conditions so clearly and so cogently that there could be no doubt as to the ideals, hopes, and purposes of this country. In so many words the President laid down the following basic conditions for the termination of the struggle and the establishment of a lasting peace:

First. No punitive damages.
Second. No dismemberment of empires.
Third. No establishment of selfish and exclusive economic leagues.
Fourth. The right of peoples, great and small, to freedom and security and self-government, and to participation upon fair terms in the economic opportunities of the world.

On December 4 the President elaborated these conditions and set out in fuller form our aims and purposes, and, after doing so, used the following language:

The people of Germany are being told by the men whom they now permit to deceive them and to act as their masters that they are fighting for the very life and existence of their Empire, a war of desperate self-defense against deliberate aggression. Nothing could be more grossly or wantonly false, and we must seek by the utmost openness and candor as to our real aims to convince them of its falseness.

Then the President proceeds to set out the wrongs that have been done us as well as our aims in the struggle, and in the same message to Congress uses the following language:

All these things have been true from the very beginning of this stupendous war, and I can not help thinking that if they had been made plain at the very outset the sympathy and enthusiasm of the Russian people might have been once for all enlisted on the side of the allies, suspicion and distrust swept away, and a real and lasting union of purpose effected. Had they believed these things at the very moment of their revolution, and had they been confirmed in that belief since, the sad reverses which have recently marked the progress of their affairs toward an ordered and stable government of freemen might have been avoided. The Russian people have been poisoned by the very same falsehoods that have kept the German people in the dark, and the poison has been administered by the very same hands. The only possible antidote is the truth. It can not be uttered too plainly or too often.

From every point of view, therefore, it has seemed to be my duty to speak these declarations of purpose, to add these specific interpretations to what I took the liberty of saying to the Senate in January.

Thus it will be seen that the President reached the conclusion that there ought to be a concrete statement of our war aims, and on December 4, 1917, expressed regret that it had not been made sooner.

I urged that such a statement be made early in August of the same year. That was my stated purpose.

The President of the United States in the message last mentioned says that if the statement of our aims had been made sooner Russia might have been saved to the allies.

Soon after the President stated our war aims and the conditions and terms on which peace might be had Lloyd-George also made a statement. The statements forced Germany to state concrete terms; in other words, forced her to the open and disclosed to her people that she is fighting a war of aggression and not of defense. Since that statement she has been having internal troubles. Thus have the issues for both sides been made clear.

I have supported every administration measure that has come before Congress since I took office on March 4, 1917, as the Record shows. I shall continue to support the administration in a vigorous prosecution of the war to an ultimate and victorious conclusion.

The Liberty Loan.

EXTENSION OF REMARKS

OF

HON. CARL HAYDEN,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 5, 1918.

Mr. HAYDEN. Mr. Speaker, during the night that the House passed the declaration of war against Germany I received a telegram from the Rotary Club of Phoenix, Ariz., to which I replied as follows:

We have to-night entered into war, and in my opinion a long war. We now know our enemy and there is no limit to the sacrifice which this country should make, for if the Prussians win and thereby become the rulers of the earth it will be but the beginning of other wars, because humanity could not long endure the yoke. It is the bountiful duty of every American to do that which he is best fitted to do in the service of the Nation, whether it be in business, on the farm, in mine or factory, or upon the field of battle. I know that the citizens of Arizona will do their full share to prove their belief in victory and their determination to secure it.

As time goes on I am more than ever convinced that I did not exaggerate the gravity of the situation. Every ounce of the strength of the United States must be thrown into the conflict before we can secure a complete victory. It is for that reason that I am moved to address myself to the question of the necessity for a prompt and liberal response by Americans everywhere to the request of their Government that they subscribe to the liberty loan. Not very long ago I had occasion to discuss this subject at the Normal School of Arizona at Tempe, and it is my desire to extend my remarks in the Record by printing my recollection of what I then said:

"The special session of Congress, which adjourned last October, made appropriations or authorized expenditures amounting to over \$14,000,000,000 as the direct contribution of this Government to the war against Germany. Loans to the allies amounting to seven billions were provided for. This grand total of over \$21,000,000,000 is the most stupendous sum of money ever devoted to war purposes at any one time by any nation in all history. I shall not weary you with details, but it is sufficient to say that about eight billions of this sum is to be expended for the Army and about two billions on the Navy. Another two billions will be used to build up a great merchant shipping fleet. "The most natural question is to ask where all this money is to come from. That such vast expenditures can be safely made

is conceded because, after all, they do not represent more than a tenth of the aggregate wealth of the United States. The only issue is whether we shall obtain these funds by taxation or by loans. The war-revenue bill will produce from taxes, both direct and indirect, about two and a half billion dollars. Those charged with the duty of carrying on the war are positive that every cent appropriated by Congress will be needed if America is to do her share in the work of the war. This money must be raised and the only way to get it is for you and me to loan every dollar that we can possibly spare to this Government.

TAXATION ON BONDS.

"The issue is clear. We must win the war. Money must be obtained to insure victory. Will you loan it to your Government or will you compel that Government to take it away from you by taxation? One method will cause future generations to share the burden; the other places the full weight of the conflict on the shoulders of those who are living to-day. The choice of means is in your hands. There is no escape from these war demands, for we must win the war.

"We avoided this war so long as it was possible to believe that the separate unlawful acts of the Imperial German Government were done in self-defense and without intention or desire to injure us. But the continued and repeated violations of international law, the deliberate destruction of our ships, and the cold-blooded murder of our citizens, not to speak of the horde of spies and plotters that were let loose in our land, nor the attempt to array Japan and Mexico against us, taken all together, finally convinced the majority of our citizens that the Kaiser's government was waging actual war upon the United States. Having reached this conviction, the American people, through their duly elected Representatives, recognized the facts by declaring that a state of war existed between them and the Imperial German Government.

RETURN ARIZONA TO OLD MEXICO?

"If one more thing were needed to convince the citizens of Arizona of the blundering idiocy of German diplomacy, the offer to return our State to Old Mexico was sufficient. If that proposal for such a territorial readjustment had ever reached the City of Mexico it would have been received with no enthusiasm there. From those who rule Mexico down to the poorest peon in the Republic, in every class and degree of Mexican society, there is a firm conviction that victory in a war with the United States is hopeless. They have heard from their fathers the stories of American valor and prowess. They know that the same breed of men who triumphed at Buena Vista, at Cerro Gordo, and Chapultepec now live among the hills and in the valleys of Arizona. If that intercepted message had reached its destination the Mexicans would have promptly said 'Muchas gracias, Señor Kaiser; but your proposition does not even interest us. To take Arizona is like harvesting the cactus with bare hands. There are too many thorns around the fruit.'

"When I studied botany in this school, Prof. Stormont told me that every thorn that grew in this arid land represented a leaf on some kindred plant growing in a more humid climate. Under the hot blast of war we have followed nature's example and tightly curled our peace-time leaves of industry into the deadliest of all known spines—that steel-white arm which ultimately decides the victory in every battle and the fate of every nation—the bayonet. Arizona's answer to the Potsdam diplomats will be presented in a way that they thoroughly understand—at the point of the bayonet in the hands of her sons.

A GREAT WRONG TO BE RIGHTED.

"From time to time in the history of mankind great wrongs have been committed which could only be righted by a blood atonement. The blood that was shed on Calvary was not wasted, for it has redeemed millions of men.

"As He died to make men holy, we can die to make men free."

"We do not intend that the bloodshed which is now reddening the world shall be a wanton waste. We make this war to the end that wars shall cease. The men of this generation would rather die than to see their children endure the same agonies which have been forced upon them by the Imperial German Government. The great wrong of attempting to conquer the world by force of arms can only be righted by a complete victory for democracy and the utter destruction of a system of government which makes such monstrous and inhuman conflicts possible.

"But there are some misguided and selfish souls who say that this is none of their war; they did not seek it and will not willingly furnish a man or give a dollar to aid in its prosecution. Some say, with unction, that none of its blood is on their hands. Pontius Pilate made that same plea when the Savior of mankind was done to death, but the name of that Roman governor, who evaded his duty, has gone down dishon-

ored through 20 centuries. The American people could have done likewise. Their Congress might have dodged this issue for a time. But we remembered that whatever of liberty, of justice, and of prosperity we have was won by war, and that if we were not to become slaves to the most brutal military tyranny the world has ever known we must accept the war that was thrust upon us. If blood must be shed in this most righteous cause, we would not make a Pontius Pilate plea, but assume the full responsibility as becomes a race of free men. We must do this or submit to see the Imperial German Government crucify the liberties of all mankind upon an iron cross.

MEN AND MONEY.

"Victory in war depends upon two things—men and money. Money without men is but an invitation for some strong military power to plunder you of your wealth and reduce you to serfdom. Men without money means the useless slaughter of your brave defenders who would be forced to bare their naked flesh to the merciless hail of projectiles used in modern scientific warfare.

"The men have been provided. They have gone, or will go, from here as from every other part of our common country, in numbers sufficient to meet every military necessity. Their task is simple. They do not have to weigh and consider how much they shall loan and how much they shall keep. They end all suspense by giving everything and being done with it.

ARIZONA'S SOLDIERS.

"I have seen the Arizona soldiers at Camp Funston, at Camp Kearny, and the other cantonments. Whether they went as volunteers or were selected for military service, each one of them is a living witness to the deadly earnestness of our people in their desire to destroy German militarism. We have furnished more men for the war, in proportion to our actual population, than any other State in the Union. They fitly represent the very best of our citizenship, and I know that Arizona and the Nation will be justly proud of their exploits before this conflict is ended.

"It is the duty of those of us who are not privileged to give ourselves to this great cause to see that the soldiers of America shall lack for nothing in the way of food and clothing or arms and equipment to make them the most efficient fighting machine ever devised. The way to do this has been made easy for us. Our duty is plain. We must all buy liberty bonds. Buy them until it amounts to a sacrifice. A good soldier does not retire from the battle until he is severely wounded. We should not quit buying these bonds until it hurts. It is only then that one can know that he has done his full share for his country."

In the Spell of Beautiful Hawaii.

EXTENSION OF REMARKS

OF

HON. C. F. REAVIS,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 11, 1918.

Mr. REAVIS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a newspaper article written by the gentleman from Indiana [Mr. BLAND] concerning the trip to the Hawaiian Islands of the congressional party recently made.

The article is as follows:

The great mass of the people of the United States are unfamiliar with the history, people, and institutions of the Hawaiian Islands. This is due in part to the 2,100 miles of water that separates the islands from the western coast of the American continent, and in part to the comparatively recent interest taken in them by the American Government.

Almost every phase of social and industrial life on the islands is so unlike anything on the continent that it is difficult for Congress to legislate for them without Members of each Congress getting first-hand knowledge of the perplexing problems that confront the islanders. Because of the necessity of personal knowledge of these conditions the Territorial government of Hawaii is anxious that Members of each Congress from as many States as possible visit the islands and familiarize themselves with their problems from their viewpoint.

The natural wonders and beauty, the tropical charm and climatic splendor of the wonderful little islands make an invitation to visit them under governmental supervision a resistless lure to dangle before the eyes of work-worn Members. The invitation, coming as it did after the most strenuous session of any American Congress in the history of the Republic, was eagerly accepted by the 25 Members of the party as a profitable and pleasant way to spend a portion of a brief vacation.

The party assembled in St. Louis on October 24, where we were taken in charge by Angus Early secretary to the Hawaiian Delegate to Congress, the Hon. JONAH K. KALANIAN'OLE. At St. Louis, Kansas City, Denver, Salt Lake, and San Francisco we were the guests of the various commercial clubs, and patriotic meetings were held.

Our passage from San Francisco to Honolulu and return, six days and nights each way, was made on the *Matsonia* and *Mani*, two splendid speedy vessels, which, when our trip was completed, were taken over by the Government for Atlantic war service. We were the guests of the Territorial government on the islands for 22 days.

HISTORY OF THE ISLANDS.

While there is Hawaiian tradition of the discovery of the islands by the Spaniards in 1527 the recorded discovery of them was by Capt. Cook, an English navigator in 1779. He found these eight beautiful tropical pearls of the ocean inhabited by a wonderful race of dark-skinned people whose origin is purely speculative and whose character and physical proportions were unlike any other races of mankind. He found the different islands governed under separate kingdoms and there were no traditions or any evidence of there ever having been extreme savagery or cannibalism among the natives. They were physically a race of giants and possessed gentle and loving manners, unless wronged or betrayed. On the return trip of Capt. Cook the natives killed him because of the cruelty and treachery of Cook and his men. A wonderful mythology similar to the Grecian was and is the groundwork of their religion and this mythology is still rudimentary in the minds of the pure Hawaiians. As was true in other historical instances the Hawaiian then was healthy and happy and remained so until the Caucasian brought to him the curse of strong drink and disease. He was peculiarly susceptible to the diseases of the Caucasian race. The standards of morality of the Hawaiian were conducive to the terrible ravages of these diseases.

When Capt. Cook landed on the islands he estimated that there were 432,000 inhabitants. In 1917 there were only 23,450 pure Hawaiians and 15,850 part Hawaiians. There were 22,100 Chinese, 107,213 Japanese, which includes 4,734 Koreans who are subjects of Japan, 23,990 Portuguese, and 58,024 of other races, or a total of 250,627.

The fast disappearance of this wonderful race of sunny-souled, big-hearted island dwellers is the saddest thought of those who visit his land of wonder. The easy-going, good-natured Hawaiian, with his tropical oriental languor and contentedness, could not and can not, except in a few instances, resist the encroachment of the races reared under more hardy and rugged surroundings. Of course, intermarriage has done much to deplete the race. It is probably an undisputed fact that intermarriage between the Hawaiian and the Chinaman is productive of the most desirable offspring. The Chinese characteristics of thrift, energy, and business alertness make up for certain deficiencies in the Hawaiian. The splendid physique and the honest, noble, generous disposition of the Hawaiian is found in the offspring of such a marriage. The Japanese rarely lose caste or intermarry with other races, but the males send to Japan for "picture brides."

A native chief of remarkable physical and mental qualities, Kamehameha I, who originally ruled the southern half of the island of Hawaii, was, after a series of bloody battles (1795), the conqueror of all the islands and the first King over the entire group. Six Kings and one Queen have since occupied the throne, the last ruler being the late Queen Lilioukalani, who was dethroned in 1893. The realization of the strategic importance and commercial value of the islands came to the United States during the Spanish-American War and they were annexed in 1898.

MUSIC AND LANGUAGE.

The Hawaiian people had no written language until the missionaries came in 1820 and gave them an alphabet of 12 letters—5 vowels (a, e, i, o, u) and 7 consonants (h, k, l, m, n, p, and w)—with which their wonderful soft-sounding words are written. All vowels are sounded and no consonant at the end of the syllable is sounded. So you would pronounce Honolulu, Ho-no-lu-lu. As their alphabet is abbreviated, so is their vocabulary, which accounts for their many unusual and mystifying signs and gestures which they use while conversing. A native Hawaiian orator has the American Indian eclipsed on oratory and is to the "Haoles," or foreigners, an expert in feats of gymnastic wonder. Frequent use of the same syllable in long words gives to their language a monotonous sound, which is difficult to separate into words. One word usually has many meanings, and the "Malihini," or newcomer, often gets in the most embarrassing and uncomfortable messes by his inflections or gestures. One enthusiastic but incautious member of our party at Hilo, where the natives were most abundant, almost broke up a party by his injudicious raising of the wrong eyebrow in connection with the use of a new word he had learned and desired to try out. The melody and seductive charm of the Hawaiian music or "mele" is but the expression of the gentle and loving disposition of the race. The sweetness of the Hawaiian song is largely due to the softness of the syllable sounds of their language and, of course, in part to the inherent anatomical makeup of the Hawaiian throat. You will notice the absence of harsh sounding letters in their alphabet such as s, t, v, z, and x, which gives the Hawaiian singer the charming facial expression while singing which is sometimes characterized as "soft-mouthed," and to the same cause in part may be ascribed the drolling, languorous, sensualizing charm of their song.

The islands are of volcanic origin and the work of the volcano is not only at first glance apparent in the lava character of the soil, but in the general topography of the land. Parts of volcano craters, gas craters, and earthquake fissures are to be seen at almost every spot on the entire island surface. The center of each island, as a rule, is the highest point and was thrown up by volcanic action. These high points of mountains bring the rainfall and furnish the water supply. Some high tablelands are arid and on account of elevation can not be irrigated. Valleys and most of the area on the coast have an abundance of splendid water and are unusually very productive.

The soil is decayed lava. On the northernmost island, Kauai, the garden island, which was first formed, the lava has decayed to the extent that the soil resembles the red clay of Maryland and Georgia and possesses a fertility that is truly remarkable. The island Hawaii, farthest southward, which is the largest island and the most important from a plantation standpoint, is the last island in formation and much of it is overflowed with comparatively recent flows of lava to the extent that much of its level, well-watered surface is worthless, and will be so for several generations yet to come.

There being no winter, crops which require long seasons are raised. Sugar cane, pineapples, and coffee are the principal agricultural products. Rice, coconuts, taro, rubber trees, sisal, bananas, and the wonderful variety of tropical fruits and plants are produced and raised. Six hundred thousand tons of sugar are produced annually. It requires 18 months for the cane crop to mature.

Twelve per cent of the exports are pineapples. Two millions of cases of the best pineapples on earth were canned on the islands in 1914. Coffee is third in importance. More than 6,000,000 pounds of coffee were exported during the fiscal year ending June 30, 1914. There are some splendid cattle ranches on the islands.

Wild hogs, wild goats, wild cattle, and wild turkeys are found. Wild hogs and turkeys are often killed in large quantities for export. The fishing industry is almost exclusively in the hands of the Japanese. The fishing rights on the coast—there is no inland fishing—sometimes belongs to private individuals. These rights were obtained from the kings, and our Supreme Court has held that they are a vested right and still maintain. Most of the shops and stores are conducted by the Japanese and Chinese.

In connection with industries and pursuits it is, I think, proper to add that the islands constitute a wonderful matrimonial exchange, where good-looking young school-teachers from the continent take positions with the Territorial school authorities for the chief purpose of marrying rich natives or wealthy white men, and in this pleasant and profitable pursuit our captivating "schoolmarm" have been remarkably successful.

CHIEF LEGISLATIVE PROBLEMS.

Most of the available sugar land, which is very valuable and high priced, is in the hands of great sugar plantation companies or rich individuals, and is either owned outright by them or leased from the Government. The Crown lands which came to the United States Government upon annexation were leased to individuals or plantation companies for a period of 21 years. These lands, which were in large tracts, were developed by the lessees at great expense. Water was brought from the mountains by tunnels, ditches, and aqueducts, which required great expenditure of money, and railroads, wire trolleys, and sluices were built to carry the cane to the mills. Oriental labor is used in the sugar cane fields. Little villages grow up at the plantations, and practically everything in sight is owned and controlled by the companies or owners. Individual enterprise and effort at such places is, therefore, well near impossible because of the jealous and watchful control of the sugar barons. With a few exceptions, the lessees have grown rich from the profits of the leased lands. The leases are now about to expire.

A large element of people on the islands want Congress to open up the improved land for homesteading. Some desire it because they want homesteads. Some desire it because they hope eventually to buy the land from the homesteader, and others desire it because it will bring more people to the islands and thus benefit business in general. The lessees, of course, talk about their "vested rights" and point to the enormous amount of sugar now being produced under their smooth working system and express fear that a change of ownership and plan of operation would endanger the sugar supply during the war. It is questionable how the homesteader of, say, 80 acres could get his water and get his cane to the mill. It is contended by the advocates of homesteading these lands that this problem can be worked out.

IMPORTANCE OF COFFEE.

Coffee will grow on the lava rocks where no soil can be seen, and the Kona coffee is a very high grade of coffee. Coffee can only be produced profitably by cheap labor. Unless a protective tariff is placed on the coffee so as to give the products of the island an advantage, they can not compete with Brazil. Since we have never produced much coffee ourselves, there has always been a disposition on the part of Congress to keep coffee on the free list. It is argued by those who oppose a tariff on coffee that since Hawaii would have to import her cheap labor, it is just as well to import the product of cheap labor from some other country.

The labor question is a serious one for the Hawaiian people. The Japanese are said to be no longer dependable. As the indispensability of their services is brought to their knowledge they become more and more unsatisfactory as employees. The Filipino will not stick to a job. The Chinese-exclusion act prevents the Chinaman from entrance. The people of Hawaii think that the Chinaman is the most desirable plantation and household employee. He is in great demand there, and because of his honesty and industry is well liked. The Territorial government of Hawaii is making a strong effort to get Congress to modify the Chinese-exclusion act in so far as it affects the islands only, and so as to permit a limited number of Chinese for agricultural industry, and Congress will soon be called upon to determine this question.

The congressional party went to the islands with the idea that much in the way of harbor improvements and military roads and military defenses would have to be considered, and in this we were not wrong, because much of our pleasant stay upon the islands was devoted to the study of these questions. A harbor for the island of Kauai and an improvement of the breakwater at Hilo, Hawaii, are essential and important.

No military defenses are attempted on any island but Oahu, which is the island upon which Honolulu, the capital, is situated. For certain well-understood reasons I will not discuss these in detail. I think personally that immediate action should be taken to put the island of Oahu in a better state for military defense. Lack of preparedness for defense here is at once apparent and is only a part of the general apathy on this subject, which, unfortunately, has characterized our official circles in late years.

HUNTING AND FISHING.

There are many plover, dove, and pheasants. I went pheasant shooting on the island of Kauai with Senator Jack Coney, who is a native of the islands, and who is one of the best sports I have ever met. We saw 30 pheasants in three hours. We killed only six. The six weighed about 22 pounds and were beauties. If the senator doesn't tell how many of these he killed, I will never mention it.

There is an abundance of mountain goat shooting, as well as wild boar, wild dogs, and deer. King Kamehameha I was presented a pair of Japanese deer by the Mikado of Japan. They have multiplied marvelously and are beautiful little animals, found mostly on Hawaii and Molokai Islands, the latter being the island upon which is located a most interesting leper colony, called Kaiaupapa.

One pleasant thing about the island hunting is the fact that there is not a snake of any kind on the islands. No snake show with its snake charmer can get near these islands. On account of the perpetual warmth of the climate and the natural porousness of the soil, it is feared that if snakes were ever introduced on the islands they would completely overrun them.

I believe it is the greatest game sea-fishing spot on earth. With the exception of the tuna, the several other varieties of game fish are unknown to this continent. The mehameha and the ulua are about the gamest fellows I ever went after, and they are there in abundance and are not a bit bashful about biting. H. Gooding Field, secretary of the Tuna Club, and who, by the way, is one of the big live wires on the islands, has written a book on Hawaiian game fishing which is of more than usual interest to any enthusiastic angler.

Sharks are abundant, and a favorite pastime and sport is to float the carcass of a dead horse (ilo) or a cow (pipi) behind a gasoline launch until a drove of man-eating sharks begins to fight each other over their

intended feast and swarm about the boat. With harpoon, windlass, knife, and gun a remarkable catch is made in short order. The shark is regarded as an edible fish on the islands.

Our native boatman, Billy, did not hesitate to dive overboard among the man eaters at the mouth of Pearl Harbor. He contends that it is the white palms of the hands and soles of the feet of the white man that attract the man eater, but that they give no heed to the dark skin of the native "kanaka." Natives go down into the water with knives and swim under great man eaters and kill them. Duke Kahanamoku, the champion swimmer of the world, who was one of the committee for our entertainment, told me that some of his native countrymen had, when shipwrecked, swam in the ocean for 16 hours until land was reached.

FUNERAL OF QUEEN LILIUOKALANI.

The last monarch of the Hawaiian people, Queen Liliuokalani, died, and her funeral was held at Honolulu while we were there. I never expect to see a more striking and impressive scene than that witnessed at this service. The event revived in the hearts of the Hawaiian people all the ancient loyalty to their ruler.

All the chiefs, or "alies," former governors and Hawaiian natives of influence came by boat from the different islands to pay their last respects to their last sovereign. She was much loved by her own people. Although she had not been on the throne for a quarter of a century she was still regarded as "their Queen."

Just here I might say that I never talked with a native who was not perfectly satisfied with and proud of the fact that Hawaii was a part of the United States. Knowing that this would be the last royal funeral, and that a funeral of royalty on these islands was always a remarkably spectacular affair, the streets of Honolulu were crowded during the entire week from the day of her death to the day her body was placed in the royal mausoleum on the side of the mountain in the beautiful Nuuanu Valley, just in the edge of the city of Honolulu.

During the time the Queen's body was in state in the throne room of the palace and at the Kawaiahao Church, the first church built in Honolulu, and during the wonderful procession from the palace to the mausoleum, it was the evident aim of those in charge to display the most wonderful panorama and glare of gorgeous colors that was possible. You understand the skies, the water, and the landscape of this tropical land is a perfect rainbow of beautiful color at all times. Considering this fact it is not strange that the desire for color display should manifest itself on such an occasion.

The ancient feather capes worn by the chiefs and high dignitaries, the sacred kahilas, a gorgeous feather cylindrical plume made of rare feathers and placed upon staffs of ancient and wonderfully artistic workmanship, in great numbers, in all the gaudy colors, were always in evidence. Carloads of beautiful, fragrant flowers and countless plumes and torches and gaudy-colored cloth decorations added to the beauty and striking color of this remarkable display in honor and reverence of their dead sovereign.

MANY LANDS REPRESENTED.

The Royal Hawaiian Band, the United States military bands, the Hawaiian Cathedral Church choir, the members of various Hawaiian clubs, and organizations of Hawaiian origin, dressed in uniforms unique and unusual, the sailors from the Japanese man-of-war lying in the harbor, and American soldiers and sailors, the consular families of the different consuls from foreign lands, and all the mixed heterogeneous mass of all nationalities, which thronged the streets for miles, made the funeral procession to the mausoleum a scene never to be forgotten.

The queer, high, open, slender vehicle, the catafalque, upon which the body of the Queen rested as she was pulled through the streets by 400 coolies, or young Hawaiian men, was of ancient origin. A canopy of black stood 6 feet above the body, and upon this canopy rested a large crown. As this queer hearse left the mausoleum grounds a low-hanging leaf of the royal palm tore the crown from its fastening. Whispered warnings, strange forecasts, and ominous forebodings were heard at once among the excited natives. It will be remembered that Prince KALANIAN'AOLE, the Hawaiian Delegate to Congress, is the Queen's nearest kinsman, and is a political favorite with the natives. Some took the incident as a sure sign that the political doom of the prince was at hand; others that the fall of the crown at this unseasonable hour meant an increased power for the prince, he being a native-born Hawaiian of royal blood, who at the time had embraced the ways of the new government and was an important part of it.

Queen Liliuokalani wrote the famous Hawaiian song, "Aloha Oe," while detained in jail during an uprising preceding her dethronement:

Farewell to thee, farewell to me,
Thou charming one who dwells among the bowers;
One fond embrace before I now depart,
Until we meet again.

This wonderful song, so much loved and revered by the Hawaiian people, is only sung by them as a good-bye and good-night song. The choir of the Hawaiian Church and a great throng of natives on the palace lanai or portico in front of the palace where she had reigned as queen sang "Aloha Oe" as the procession was leaving the palace.

Some strange song bird resembling the southern mocking bird perched itself upon the stem of a giant leaf of one of the royal palms in front of the palace and joined in the song for a quarter of an hour, and seemed to be in tune and in sympathy with the occasion. The grief of the old loyal natives was truly pathetic. With trembling lips and chins and tear-stained faces they were in evidence wherever the bier carrying the Queen's body passed. The strange, sad, weird, native chant or wail all along the line of march was deeply expressive of the great sorrow of her host of devoted friends.

WEIRD RIVALRY OF WALLERS.

It is the custom among the natives to have professional or hired wallers or kakura's at funerals to take the places of the relatives who from exhaustion can no longer give expression to their grief. On this occasion the professional wallers from all the islands were called in, and it was a weird rivalry of wailery, and to the credit of the commercial participants it was, to us, impossible to distinguish them from those who wailed because of their own great grief at the loss of their beloved sovereign.

The old nurses and trusted servants of the Queen, who had lived with her for many years, were apparently the greatest sufferers. As the casket was being slowly lowered down the long concrete stairway that leads from the surface of the ground to the receptacle of the mausoleum, these old faithful friends and constant companions of the Queen were permitted to close around the stairway. Their sad wailing mingled with the strains of the Royal Hawaiian Band as it played, and as the multitude sang "Aloha Oe" brought tears of sorrow and sympathy to the eyes of all those who were present.

The "tabu" sticks of the Queen and of the King who ruled before her were carried in the procession near the position taken by the jewel bearers. One jewel bearer carried the jewels of the Queen, another carried the jewels of the last King. The Queen's jewel bearer was a splendid old native, Gov. Baker, who under the Queen was the governor of Hawaii, and was a major in the King's army and stroke oar in the King's boat crew.

The word "tabu" means "stop" or "can't go past." It is an emblem of sovereign authority and consists of a gilded ball bearing the royal Hawaiian coat of arms, which ball is 6 or 8 inches in diameter, pierced by a sharp ivory or gilded staff 6 or 7 feet long. The Queen's tabu stick was veiled and will remain so for one year from the date of her death. The body of Queen Liliuokalani, unlike some of the sovereigns who ruled before her, will have a definite known resting place.

The body of Kamehameha I has never been found. A custom at the time of his death prevailed where two strong, trusted, courageous friends of the monarch were his inseparable companions and bodyguards, and upon the death of the ruler they were required to hide his body and then to take their own lives. This insured the keeping of the secret and prompted the bodyguards to protect the life of the King, because the King's death meant their death also.

The strange phenomena which has always taken place immediately prior to the death of one of the royal Hawaiian family again occurred a week or 10 days before the death of Liliuokalani, which was that of swarms of countless thousands of small red fish filling the harbors and shore waters of the islands of Oahu, where the Queen lived and died. It was the general expression of opinion among all races of the residents of Hawaii at this time that some one of the royal family would soon pass away. After the death of the Queen the red fish vanished.

THE VOLCANOES OF HAWAII.

While there are many natural wonders on the islands, such as canyons, caves, lava tubes, waterfalls, and strange-shaped mountain peaks, the volcanoes and extinct volcano craters are the most interesting. The great Kilauea crater and, on the inside of same, the active crater of Halemauama, or "house of everlasting fire," is probably the most interesting natural phenomena on earth. Kilauea crater is 2 miles in diameter, is 35 miles inland from the seaport of Hilo, is situated on a lava plateau 4,000 feet above sea level and 10,000 feet below the peak of Mauna Loa. "The lake of fire" is almost one-fourth of a mile in diameter. The peak of Mauna Loa is a great crater that becomes active about every 10 years, and its close proximity to Kilauea and their habits cause those who study it to conclude that there is some close connection between them. No words, no pen, no picture can describe the physical characteristics of the "lake of fire," and much less are they adequate to express the feelings, impressions, and emotions which this strange natural monster brought to me and companions.

The molten lava, which flows like molten glass or iron, is sometimes within 20 feet of the top of the pit, and at others it is 2,000 feet below the surface. There are great islands of rock and cooled lava standing in the lake, and these at times tremble, reel, and crumble and are swallowed up in the hungry caldron of boiling lava. Geysers of gas and white hot molten lava each few seconds rise from the surface like some fantastic pyrotechnics on a dark night.

Loud hissing of escaping gas accompanies the rise of the geysers and an intense heat comes from them. These geysers rise and subside only to rise again within a few feet of the first rise and so they travel entirely across the pit. Then they, in a mad and reckless dance, "Madam Pele's Hula dance," apparently pass into some subterranean cavity under the walls of the crater. Great white hot waves of lava will for 30 minutes at times beat against the walls of the crater like the surf beats upon the rocky coast of the ocean.

PROBLEM FOR FUTURE SUPERMAN.

The liquid mass will be tossed into the air, and it hardens as it falls and rattles on the hardened surface of the lake like ice. Clouds of sulphur gas and smoke rise hundreds of feet above the pit. No one knows where this flow of constantly moving liquid fire comes from nor where it goes. There is heat enough in this natural furnace, if it was possible to harness it, to supply the energy to move all the machinery of the world. Yet its brittle and treacherous banks and its uncertain and varying depth or level and its intense heat (at the surface 2,000°) makes its utilization by man a big problem for the future superman to solve.

This fearful, awe-inspiring cruel-looking monster has played no little part in shaping the lives and habits and religion of the Hawaiian people. Madam Pele is the goddess of the volcano, and strange weird legends and myths of her doings in the past has influenced the lives of those who lived where its flow might any day engulf them. Only last August a party of natives from the other side of the island started on a pilgrimage to appease Madam Pele and intended to throw themselves into the crater to accomplish this purpose, but were prevented from doing so by officers and deputies. But Madam Pele must have her sacrifices. A black pig and a white rooster are the most to her liking, and these are freely given in abundance.

It is a land of beautiful clouds and sunsets. I know of no place where the clouds are so often in some part of the sky and take such fantastic shape. The skies have wonderful color and you often see lunar rainbows. On account of the different colors of the lava on the ocean bed, the water when still, or when in surf, gives off the most unusual shades and tints of gaudy colors. The mountains are not brown and barren as they are in many places. Certain kinds of plants have crept to the very top of the peaks on all the older mountains and cause them to look green and beautiful.

LAND OF FLOWERS AND DREAMS.

The vegetation is always green and flowers of every imaginable kind contest with each other as to which can reflect the most beautiful and the greatest amount of color. The air everywhere is laden with their fragrance. Miles of night-blooming cereus hedges are seen, and more than 150 varieties of hibiscus of every color make beautiful ornamental hedges. The royal palm, which is, as was expressed by a member of our party, "the tree with a concrete foundation," is here the largest and statelyst of its kind. The tall sentinel coconut, with its cluster of fine nuts, leans out over the water and is the tropical sign or emblem of the islands.

The big, spreading banyan tree, spreading over acres of ground, is an interesting sight, and some of them still living have sheltered some gatherings of natives in the years gone that were of lasting importance. The climate is ideal. It is not too hot in summer or too cold in winter, but one thing the year round.

Is it any wonder that Robert Louis Stevenson, Jack London, Harry Lauder, and Mark Twain all loved to dwell there and burst into song and enchanting verse about this wonderful little paradise?

Mark Twain wrote:

"The loveliest fleet of islands that lies anchored in any ocean. No alien land in all the world has any deep, strong charm for me but that one; no other land could so longingly and beseechingly haunt me, sleeping and waking, through half a lifetime, as that one has done. Other things leave me, but it abides; other things change, but it remains the same. For me its balmy airs are always blowing, its summer seas flashing in the sun; the pulsing of its surf beat is in my ear; I can see its garlanded crags, its leaping cascades, its plummy palms drowsing by the shore; its remote summits floating like islands above the cloud rack; I can feel the spirit of its woodland solitudes; I can hear the splash of its brooks; in my nostrils still lives the breath of flowers that perished 20 years ago."

Agriculture.

SPEECH

OF

HON. HATTON W. SUMNERS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 25, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 9054) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1919.

Mr. SUMNERS. Mr. Chairman, in my judgment this is the best appropriation bill which the Committee on Agriculture has ever submitted to this body, but it does not meet our emergency necessities. The committee is especially to be congratulated for having incorporated an item for the inspection of perishable commodities in the great centers. This proposed service completes the bringing of the Market Bureau into grapple with the whole problem of distributing perishable products and makes possible the symmetrical development of that bureau into comprehensive helpfulness in the sale and distribution of farm products. Under ordinary conditions we could afford, perhaps, to await the growth of other agricultural legislation, developed under the pressure of generally recognized necessity, but in a great crisis like this, where the success of every military plan, the fate of every military campaign, our hope for victory, depends upon agriculture being able to meet the extraordinary demands now placed upon it, we must not content ourselves with following the direction of public opinion. We must look into the future and now prepare agriculture as far as possible to meet its supreme test this year. Many of the facts which should determine the policy of the Nation toward agriculture are well known and generally accepted. The three most important are:

First. That the demand upon the agricultural energy of the United States during this year will be the greatest in the history of American agriculture.

Second. That the agricultural population of the United States during the past year has been vastly decreased by enlistment in the military service, by military draft, and by the enormous draft made by other industries upon the farm population.

Third. That whenever the industries of the city and the industries of the country have come into competition with each other for the labor of a given community, agriculture has not been able to hold its labor.

The fourth significant fact connected with this situation is that we have reached the period of spring planting in this the most crucial year of the war with no practicable, workable plan, and none in prospect of immediate adoption under which it may be hoped that agriculture will be able to meet its responsibilities. This is true, notwithstanding that it is agreed by all that if American agriculture fails this year substantially to meet its responsibilities, our troops on the other side may fail; the morale of our people and of our allies will be imperiled, and our cause will be in danger. Mr. Chairman, the situation is definite and concrete. The peril involved is manifest and so stupendous in its inevitable consequence, if it befall us, that we must guard against it now by measures comprehensive and constructive or stand guilty before the world of gross neglect of manifest duty. The genius of statesmanship and the courage of leadership must take hold of this situation now. This is no time for petty politics. This is no time to hesitate; this is no time for "surveying" the situation; it is a time for action, immediate, aggressive, and determined.

I am not an alarmist, Mr. Chairman; we can meet this situation, but not by ignoring its existence. It is better patriotism to sound a note of warning now while there is yet time than to demagogue about "old Rube" meeting his responsibilities. The apparent fact is, Mr. Chairman, the American farmer can not meet this responsibility unless the aid of Government be given to the limit of its capacity to aid both in developing and in conserving the full possibilities of

agricultural production. Many farmer boys have gone to war; much labor has gone to the industries of the city; many of the hands, therefore, which used to help the American farmer fill the dinner pail of the world no longer toil in his fields. They pass to those left on the farms their own empty dinner pails. Many of the erstwhile native collaborators of the American farmer in the fields of France, England, Italy, Belgium, and the Balkans have gone to the war and now send to the American farmer their empty dinner pails, and with the message: "If you do not feed those whom we have heretofore fed and fill these, our own dinner pails, the strength of our right arms, which are fighting for the liberty of the world, will fail us, the morale of our armies and the morale of our people at home will break under the strain." These are not idle words, Mr. Chairman; that is the situation. Whatever else may occur, that group of nations will lose the morale of which breaks quickest under this strain. A people can bear up under almost any sort of losses and hardships if they be fed. No government nor military organization can long stand the strain of hunger. A democracy breaks quicker than an autocracy.

It is perfectly apparent, Mr. Chairman, that with the number of American farmers less this year than last year, with the world's reserve food supply less this year than it was last year, and with the requirement from the American farmer, even if that surplus had not been reduced, of a larger production this year than last year, it is perfectly apparent that something far reaching and effective must be done this year which was not done last year or we imperil the whole military program of our country and of our allies. Every movement, every plan made, rests upon the expectation that America will furnish a large part of the food for the military and civil population of the great nations warring with us and practically all for ourselves.

If the many schemes of "meatless" and "wheatless" days of food substitution and economic uses succeed to the full limit or optimistic expectation, there is no amount of genius under which it can be hoped, no amount of conservation under which it can reasonably be expected, that meat and grain production of the United States this year as the major foods of the United States will enable us to feed the people of the United States, take care of our armies in training and in the trenches, and meet the imperative responsibilities which we must discharge to our allies. I do not question the effectiveness of wise governmental effort in dealing with meat and grain production and conservation. I am not addressing myself to that point, because there is general recognition of necessity to do this. But the fact remains that in so far as meat and grain production is concerned the multiplicity of avenues through which the ultimate market may be reached, the unperishable character of the product, and the price resulting from present and prospective demand, untouched by the Government, would insure great effort to produce and great results in conserving and economizing these products. Besides the length of time required to develop meat animals and to grow grain and the comparative uniformity and fixedness of the effort devoted to this production leaves the Government without the greatest possibilities for increasing this year by its effort the volume of our food from these two commodities.

Mr. Chairman, with no purpose to serve a local interest—I have none such to serve—I direct attention to the fact that our hope, both from the standpoint of possibilities of new production and of conservation, and especially of effectiveness of governmental encouragement and help, is centered largely in the production of vegetables, in the distribution of these vegetables and fruits in such a way as to encourage their relatively increased consumption, and in preparing the surplus above the requirement for current use so that it may be added to our store of nonperishable food, and as far as practicable placing them in concentrated form for convenience and economy in shipment.

Mr. RAMSEYER. Mr. Chairman, will the gentleman yield?

Mr. SUMNERS. Yes.

Mr. RAMSEYER. What has the gentleman learned from his investigations as to the prospect of increasing food production next year over last year?

Mr. SUMNERS. No one who looks the situation squarely in the face is justified in forming any other conclusion than that we will produce less this year than last year and will harvest a lesser per cent of what we produce than we harvested last year, unless something fruitful of large results is done this year which was not done last year. And yet we get up here in Congress and talk with assurance about the fact that it is the "man behind the plow" that is going to save the situation. We recognize the necessity of speeding up agriculture, and yet not one comprehensive thing is done tending to that result.

Mr. RAMSEYER. Mr. Chairman, will the gentleman permit another interruption?

Mr. SUMNERS. Yes.

Mr. RAMSEYER. When the gentleman says "We will raise less," does he refer to the United States or to all the allied nations?

Mr. SUMNERS. I mean we promise to raise less in the United States. I thought everybody understood the allied nations will raise incomparably less, and to that extent our necessity to produce is increased. I noticed recently in a London dispatch that the Food Administrator was boasting somewhat of the fact that during his administration he has reduced the price of 11 of the 14 prime food necessities. But he failed to tell us that he has increased food production. On the contrary, we were told that we will have to supply England with still larger quantities. And that is a fact. Gentlemen, we must have vast stores of nonperishable food above what our grains and meats can supply. We must face that situation. This is no time for an optimism which rests upon egotism and disregard of facts.

Though it is a digression from my objective in this discussion, I want to give a word of warning to those who have charge of price fixing in regard to agricultural products. Gentlemen, when you lay the hand of arbitrary control upon one class of a great country's industry and do not limit in that regard the other industries in that country you imperil the balance of production in that country. I do not say you ought not to do it under some conditions, but I do say that when you do it you do a dangerous thing. You put a price upon the products of the farm under which the farmer can not pay his labor as much money as it can make in the factory, and there is no appeal to patriotism, there is no sentiment, there is nothing on the face of the earth that can enable that farmer to hold his men in the field.

One experienced farmer already located and at work, acquainted with the implements, animals, and soil with which he must work, is worth more than a half dozen city-bred emergency recruits. That is not all, the same rule applies among the productions of every industry. Down in my country to-day they are feeding wheat to their cattle, because wheat is worth less than corn. If you should put a minimum price upon cotton, under which the cotton farmer can not compete with the industries of the cities, you can not hold in the fields of the cotton farmer enough labor to cultivate and gather a crop necessary to supply this country with cotton. If you limit the farmer and do not limit his competitor for the labor of the country, you do the most absurd thing that a country could do in our present circumstances.

Mr. LONDON. I do not want to break the thread of the gentleman's argument. The gentleman has made the statement that in Texas wheat is being fed to cattle. What is the extent of that evil?

Mr. SUMNERS. I do not know the extent to which that is done, but I am of the opinion that it is to a considerable extent in those territories which produce wheat, due to the fact that, at the present relative price of wheat and corn there, wheat is just as cheap to feed to animals as corn is.

Mr. HAUGEN. Is it not also due to the short crop of corn? Is it not a fact that our corn crop has been overestimated; that we have been led to believe that we had a bumper crop of corn while the fact remains that we have only a half crop, measuring it by value? The fact is that we have hardly a bushel of marketable corn in the corn belt.

Mr. SUMNERS. I understand there is much soft corn.

Mr. LONDON. Why does the gentleman take it for granted that the production during this current year will be less than last year? He seems to have taken that for granted.

Mr. SUMNERS. There is no question about it, other things being equal, because there are fewer agricultural producers in the field this year than there were last year.

Mr. SMITH of Michigan. Is it not true that the grasses and grazing fields have all dried up down in Texas, and that they feed this grain in order to preserve the lives of their animals?

Mr. SUMNERS. Oh, yes; that is the fundamental reason why grain is being fed. I understood the gentleman's question to be, "Why is it they are using wheat instead of corn?"

Mr. SMITH of Michigan. They are using it to keep their stock alive.

Mr. SUMNERS. Yes; they feed wheat to keep their animals alive.

Mr. SMITH of Michigan. They have not got the corn down there. Is it not true that there is a larger crop of soft corn in the United States this year than ever was known before?

Mr. SUMNERS. Maybe so.

Mr. SMITH of Michigan. It is on account of the shortage of feed in Texas that they are feeding the wheat?

Mr. SUMNERS. They are feeding wheat instead of corn because the relative price of wheat and corn in that section makes it economically advantageous to feed the wheat which they have rather than to sell the wheat and buy corn, which they do not have.

Mr. Chairman, I trust my colleagues will not, by their questions, lead me too far afield. I am endeavoring to lay before the House a definite situation, and shall make some definite suggestions. I hope it is clear to the gentlemen of the House that I am not seeking to minimize the position, in point of importance, of our grain and meat foods, nor to discourage governmental effort to stimulate their production and conservation. What I am trying to impress is that what we shall have done our best for these foods—in production and in conservation—we must find for them help above that which they have heretofore had.

I shall now endeavor to point out how that help may be obtained. Fortunately, there is a source to which we may go. I pointed this out to the Senate Agricultural Committee last year. With all possible emphasis and with absolute assurance that I am correct in my conclusions, I renew that suggestion now.

Mr. Chairman, with our wide range of climate and diversity of soil, we may look with confidence to a better utilization of our vegetable and fruit producing possibilities to supplement more largely than ever before our grain and meat production.

Mr. QUIN. Mr. Chairman, will the gentleman yield?

Mr. SUMNERS. Yes.

Mr. QUIN. How are you going to increase vegetable production? I am interested in that.

Mr. SUMNERS. Vegetable production can be increased. I want to say to my distinguished friend from Mississippi, and will be increased, if the Government will let the people know now that they can profitably devote their spare time and spare land to raising vegetables. Their old men, their little boys and girls, and their women who can not go into the field can help cultivate the gardens of the country. The girls and boys of the cities and towns and many adults not necessary to activities there would be induced intensively to cultivate the vacant lots and neighboring land, and such assurance now given would prevent the activity of this new producing energy from intimidating the professional truck farmer of the country. That is a thing which we are not guarding against now. The gentleman knows the hazard of commercial truck growing under normal conditions and at this time. At this time, when we are engaged in the most stupendous struggle of all ages and need to conserve every ounce of food, these perishable products go out into the night to seek an unlocated purchaser, which they may not live to find, perishing possibly on a sidetrack in a great center awaiting "shippers' orders" or in some congested market. They may possibly fall into the hands of an unscrupulous commission merchant who will write back to the shipper, "Your car arrived in bad order; remit to cover balance of freight charges." Supply does not know where the market is and the market does not know where to find the supply. There is no intermediary supervision to which the shipper may look for protection. There is no agency touching the whole country through which uniformity in distribution may be had and through which commodities may be routed from the point of production to the point of use as may be required for consumption. There are no adequate facilities for conserving the surplus above the demand for immediate use, with the result that millions of pounds of food now rot in our fields after production. I shall ask my colleague to follow my discussion for a more comprehensive answer to his question. I do not want to disarrange further the order of presentation. Mr. Chairman, I want to emphasize not only the possibilities of increasing our food supply from vegetable production but the fortunate adjustment of that character of production to our labor conditions. Vegetable production is peculiarly adapted to the utilization of odds and ends of labor and remnants of time, both of country people and of those who reside in the cities and towns. I take it for granted, Mr. Chairman, that this is generally understood and appreciated; but I do not believe it is either generally understood or appreciated that the possibilities of this utilization can not be realized through home-garden campaigns nor through appeals to patriotism alone. Gentlemen, there are definite economic limitations now operating against the necessary vegetable production which neither propaganda nor appeal to patriotic sentiment can overcome. They are: First, vegetables are perishable, and therefore must find a market immediately after maturity. Second, the expense, the multiplicity of profits, and the physical waste incident to the haphazard methods of distributing fresh vegetables, which must

be included in the price to consumers, prevents them from reaching the table of the average family at a price which carries no restrictions upon the quantity which may be used. Third, the quite definite limitation upon the capacity of the country to consume fresh vegetables during the period of general movement and the absence of facilities to conserve the surplus during that time fix the limit upon the quantity which it is economically desirable to produce. The volume of production is therefore so fixed by these limitations that any increase from a propaganda which brings new producers into the field tends effectively to intimidate the professional truck growers and to bring about a corresponding reduced production on the part of such growers.

I do not lightly estimate the possibilities of the "home gardens" and "war garden" campaigns.

They should result in utilization of much time and land which otherwise would not profit.

Families with such gardens will prepare greater quantities for future use than if the vegetables had to be purchased.

Substitution of home-grown for purchased vegetables would lessen the burden upon our transportation facilities.

It is our duty to press these movements and, at the same time, remove the rigid limitations upon our vegetable-producing energy, so that the stimulus of commercial possibilities may help the patriotic men and women who are supporting this campaign. Clearly it is our duty, our imperative duty, to remove these limitations, so that the success of these patriotic campaigns will not dwarf the activities of commercial growers, and the vegetable-producing energy will be permitted to proceed to full capacity to help win this war.

Knowing, as we do, the enormous waste of vegetables under ordinary conditions, with our overtaxed transportation facilities this year, and the vegetable market to be demoralized by supplies from new sources of production, as it will be demoralized by the increase of home gardens, it is due to those to whom we are appealing in the name of patriotism, and obligatory upon us as the representatives of a great Nation, charged with the responsibility of largely increasing its food production, to make provision now which will enable these producers to respond to the necessities of our country. I want to emphasize, Mr. Chairman, that we must make those provisions now in order to procure the necessary increased acreage. If we can not get the acreage, we, of course, can not get the production whatever else we may afterwards do. I do not want to criticize, but we are going about this matter in a most ridiculous way. As practical men, we ought to know that it is folly to depend upon propaganda and patriotic appeals to take care of this situation which has its definite economic limitations. We can only inspire a sufficient general confidence in the business soundness of the venture incident to increased production by broadening the commercial possibilities of such production. We are working at the wrong end. We must recognize that profit is the nerve center of agriculture as it is the nerve center of every other vocation. Besides, it would be a ridiculous public policy to divert the energy of the country into the production of that for which we make no provision to conserve.

The farmer is as patriotic as any other class of citizens; no more, no less. Patriotism has its limitations; patriotism can stimulate, but only within the limitations imposed by the laws of business. Patriotism can not repeal these laws. In order to be effective we must underwrite any appeal for a production larger than present conditions make profitable by a larger prospect of profitable demand. In my home city—Dallas—people responded to the home-garden campaign last year, with the result that the professional truck growers in that community found themselves largely deprived of a market. They were not in touch with the general markets of the country and had no available facilities for reaching them. This happened, Mr. Chairman, in the business of these men to whose patriotism we had appealed and who responded to that appeal at the highest expense in the history of agriculture. They were rewarded by great financial loss, and humiliated, as they saw their commodities perish, by realization that they had worked in vain at a time when they wanted to serve. That happened when many of our allies were said to be on the verge of starvation and many of our own people were hungry. That thing happened all over the United States, and the people to whom it happened have not forgotten their experience. We offer them no additional assurance; we simply send out the same old appeal. As practical individuals, we ought to know that we must do that now—we ought to have done it earlier—which will insure these men that if they will plant again this year the experience of last year will not be repeated. We must send them to the fields in full confidence of rewarded labor in order to get the necessary acreage planted. That is the first point

which I am trying to emphasize. It ought to need no emphasis; it ought to be perfectly apparent, but the fact is that the country has become so accustomed to thinking exclusively in the terms of a city-dominated commerce that it grasps with difficulty the most simple propositions touching the business side of agriculture.

Mr. Chairman, it so happens that the things necessary to give the encouragement, in the main are those which would be necessary to conserve the results of increased effort to produce. In other words, preparation to conserve the results of a large production, which preparation, of course, would be necessary if that production should result, will insure such a production. Nothing else will make it possible. That is self-evident. Understanding, as I believe I do, the difficulties and the viewpoints of the producer, I suggest these as the chief things necessary to be done:

First. The work of standardizing vegetables as to quality and package should be pushed at all possible speed, and these standards promulgated as soon as they shall have been determined upon with sufficient accuracy materially to aid transactions in the vegetable standardized. We do not have the time to await that degree of accuracy which a number of years might bring. This standardization is necessary in order to give to these commodities a commercial status at the point of first concentration and to permit them to move under prior sale by the shortest and most economic route to the point of use.

Second. The Bureau of Markets should be taken from its obscure position in the Department of Agriculture and expanded into a produce-exchange system. Adjusted not only to aid in the distribution of products where production is restricted in territory, specialized and highly concentrated, but adjusted to render aid in distribution from territories of diversified farming, wherever producers can get together enough to make a shipping unit. It should be developed into an agency where general, vital, up-to-date information as to both supply and demand is assembled, and from which such information may be had, and should exercise general supervision over commodity movement, so that such movement may be by the shortest route to the point of necessity, and in quantity and quality in accord therewith. One other thing is necessary: There must be exercised such intermediary supervision and inspection as will make it possible for individuals in communities far apart to purchase and sell that which the purchaser can not see from individuals whom he does not know, either as to moral or financial responsibility. Such knowledge and confidence is not necessary to commercial transactions if there be confidence in the efficiency of the intermediary agency. That is demonstrated by the transactions on the exchanges of this country and by the transactions through the Federal farm-land bank, where farm mortgages are sold to conservative purchasers who have never seen the land securing the mortgages, and have no knowledge whatever with reference to the owners thereof, confidence being entirely in the efficiency and integrity of the inspecting and supervising agency, the bank. This would reduce to the minimum the physical waste. It would reduce to the minimum intervening profits. It would reduce to the minimum transportation charges. It would reduce to the minimum the burden upon our transportation facilities. By placing fresher and cheaper vegetables within the reach of the average family it would increase vegetable consumption and thereby decrease the burden upon the meat and grain products, releasing a larger percentage for exportation. This would broaden to a material extent, of course, the economic possibilities of vegetable production, but would leave the definite and largely controlling limitation imposed by the fact that there is no added facilities for conserving the surplus of these highly perishable commodities. While it would reduce the waste in the process of distribution, there would possibly be increased waste at the points of production, due, of course, to the limitation upon the capacity of the country to consume fresh vegetables during the period of their movement. It is obvious, therefore, Mr. Chairman, that extraordinary advance preparation should be made to conserve the surplus above the capacity to consume while the vegetables are fresh. We are advised now of the probable difficulty in procuring tin cans. Besides, canned vegetables are bulky. Of course, we should endeavor to procure all the cans possible and to fill them, but we are not dependent upon cans. We know, Mr. Chairman, that through dehydrating or drying practically every fruit and vegetable can be changed from a perishable commodity to a nonperishable commodity and from a bulky commodity to a concentrated one.

Mr. BLACK. Will my colleague yield?

Mr. SUMNERS. For a question; yes.

Mr. BLACK. Does not my colleague think it would be a good idea for this agricultural bill to carry an appropriation author-

izing the Secretary of Agriculture to conduct some of these dehydrating plants as an experiment?

Mr. SUMNERS. We have passed beyond the experimental stage. We have passed the time for experimenting. The time for action is at hand. We may spend some money unnecessarily, but we are spending billions of money to equip an Army and we must not hesitate to spend money to insure that which will give strength to the bodies of our soldiers. We must install and operate these plants; if necessary, the Government should take over and operate the necessary manufacturing plants to turn them out on a large scale.

Mr. DENISON. Mr. Chairman, will the gentleman yield?

Mr. SUMNERS. Yes.

Mr. DENISON. I want to ask my friend from Texas if it is demonstrated the dehydrating plants work successfully in private industry already.

Mr. SUMNERS. Yes.

Mr. DENISON. Where? I never saw one. I do not know anything about it, and am asking for information.

Mr. FOSTER. Mr. Chairman, will the gentleman yield?

Mr. SUMNERS. Yes.

Mr. FOSTER. All the vegetables that we used to take up into Alaska were dehydrated. I think you will find throughout the country a great many little plants.

Mr. SHALLENBERGER. Yes; they have them in Maine. I saw them used very successfully in Maine. If the gentleman will permit, I saw them in the great potato region of Maine, and they are operating very successfully now.

Mr. SUMNERS. There is no question about it.

Mr. DENISON. Can they preserve fruit that way?

Mr. SUMNERS. They can take the water out of anything that grows in the fruit or vegetable line and preserve it, not indefinitely, perhaps, but for all practical purposes indefinitely.

While these dehydrated vegetables and fruits may not be as palatable as canned ones, their nutrition is preserved. Besides it is the only practical method under which we can hope to conserve the surplus from a large increased production. By taking the water out of these vegetables and fruits we would relieve to a considerable extent our overburdened transportation facilities. We haul thousands of tons of water in fruits and vegetables each year. Just now the American people are disposed to consider the relative palatableness of an article as the controlling consideration in its treatment. Before another harvest comes, certainly before the second harvest comes, unless this war shall have ended in the meanwhile, we are not going to be so particular. We will be glad to have food if it has in it the strength to sustain. The people at large may not realize this yet, but there is no excuse for our not knowing it. The Government ought now to make it known that it will put these dehydrating plants all over the country; and I go further, Mr. Chairman, and say that the Government should offer to contract for these vegetables and fruits. Let the school children and everybody now know it; let the commercial truck grower now make his contract; let the Government take the water out of these perishable commodities, reduce them from bulky to concentrated foods to feed our people and to send to our fighting forces and those whom we must help to feed. I would not favor that under ordinary conditions, but we are at war and we must fight with food as well as with guns.

Mr. Chairman, there is not food enough in the world to go around, and the question will soon be not the palatableness of an article nor its price, within reasonable limitations, but where on the face of the earth can there be found the elements to sustain our bodies until we can reach a normal state in the world? We know this; we know we must utilize to the full limit of possibility our food-production resources and that we must conserve to the limit after we have produced. Then, in the name of common sense, I want to ask the Congress why do we not act as though we knew it? Does any gentleman dispute the fact that in order to procure that production of these short-lived commodities, which our necessities require, we must make such provisions in advance of the seedling time as will prevent a larger planting from being a nonsensical, uneconomic venture? I say, Mr. Chairman, that it is a crime against patriotism to appeal in the name of the country for an increased production of vegetables and leave them to rot after production, bringing financial ruin to those who have responded to that patriotic appeal, as well as a crime against our country, whose agents we are, which has placed at our disposal its resources and charged us with the responsibilities of protecting the public interests as we guide this country in those directions which will lead it to victory. That group of nations will lose the morale of which breaks first under this strain. Morale breaks at the point of widespread hunger. It breaks quicker in a democracy than in an autocracy.

No Time for Political Camouflage—Patriotism Before Partisanship.

EXTENSION OF REMARKS

OF

HON. GEORGE K. DENTON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 13, 1918.

Mr. DENTON. Mr. Speaker, if there ever was a time when political camouflage was out of place that time is the present. We are now approaching another political campaign when there is the temptation to shape public conduct with a view to political advantage. There is a temptation to take advantage of any prejudice that may be in a public mind and to try to use it for personal advantage. The pending bill, it seems to me, affords a case in point.

There is a time to talk and a time to act. When this war Congress met in extra session the 2d day of last April and listened to President Wilson's epoch-making address, and shortly thereafter adopted the resolution which marked our entrance into the world conflict, what was needed of us was speedy action. Our President had expressed, as he only is capable of doing, our stand in this conflict and the reasons for it, and it only remained for us to back him up with the required legislation and to do that as quickly as possible. What was needed on our part then was not words, but deeds. And while it was generally recognized that our esteemed Speaker spoke the truth when he said that no legislative body had ever enacted so much important legislation in the same length of time, yet we were probably justly subject to some criticism because of the delay occasioned by the fact that some Members could not suppress their natural desire to consume time in useless speech making.

But war emergency legislation having been now enacted, we may feel freer to express our sentiments and to say on this floor what we may think the occasion demands. And it seems to me that it is proper at this time to call attention, lest we forget, to the necessity of putting patriotism above every other consideration. It is our country's welfare that concerns us now, and it matters little in comparison what becomes of you and me politically, and if we are called upon to make any personal sacrifices we should make them gladly. The gentleman from Kentucky [Mr. SHEELEY], during the late war session, gave expression to a sentiment that I believe at that time animated the membership of this House. It was when the revenue bill was under consideration and had reference to some feature that affected some of his constituents adversely, and he realized the effect of his vote for this feature would be politically prejudicial to him. He said:

I realize the disadvantage there will be to me personally in voting for this feature, and it may mean my political defeat, but when one of my neighbors voluntarily goes to the front and another of my neighbors voluntarily sends his boy to the front, to give their lives if need be to the country, I would be a very poor patriot, indeed, if I was not willing to sacrifice my political career on the altar of my country, and I feel that I would be making even then a poor and paltry sacrifice compared with my neighbors to whom I have just referred.

The country can get along without you and without me in this House. It has gotten along well and passed through many crises without our help in the years that have gone by, and it will get along well and prosper and continue to grow in greatness, and continue to be the great servant of the people and of mankind that it was destined to be under the Providence of God long after we are gone. But it is important at this time, above all others, that we shall perform our duty with an eye single to the demands of the occasion, uninfluenced by any petty personal consideration.

The danger in this bill is that it tends to appeal to a prejudice existing at the present time in the public mind in many quarters. That our boys should go to the front and offer their lives while thousands of aliens among us who enjoy the same blessings and privileges that we enjoy should not be required to make any sacrifices is not right. Justice demands that since they enjoy the blessings of this free country, they should defend its flag. But the question is, How shall this wrong be righted? What is the proper remedy? I believe it is well established under international law and usage that matters affecting the rights of aliens should be taken up with the nations whose citizens they are, and the proper department for handling this matter is the State Department. Since all the aliens affected

by this bill are citizens of countries that are our allies it necessarily follows that these countries are just as much interested as we are in seeing that these people do their part in this crisis. Indeed, we are informed by the State Department that treaties have already been agreed upon with England and with Canada that will take care of this matter, and that treaties are being negotiated with our other allies that will accomplish the end in view. We are also told that the enactment of this legislation will violate treaties with some of our allies, and that they have protested, and surely we, above all others, should be the last to treat our treaties as "scraps of paper" at this time.

In view of the further fact that the State Department tells us also that this legislation will embarrass our Government in handling this matter, it seems to me that there is only one course to pursue. To go ahead and pass this measure in the face of these facts merely to appease public clamor in some quarters is to sacrifice the public welfare on the altar of personal and political advantage.

Let us rise, therefore, superior to any selfish considerations and show that we are willing, first and above everything else, to be patriots. Many of us have sons who have volunteered their services to fight for their country, and all of us have neighbors who have voluntarily given their sons to fight in defense of the flag, and it goes without saying that we are much more interested in the welfare of these boys than in our own political future; and since we have accepted the challenge of autocracy and by our legislative acts as the Representatives of the people in this House sent them to the front, we should be willing to make any sacrifices on our part that will lessen their danger by contributing in any degree to the speedy and successful termination of this war.

In the city in which I reside there lives the mother of the first boy to fall in this war. I esteem it an honor to have been born and brought up in the same neighborhood in the State of Kentucky in which he was born and brought up, and I esteem it an honor to represent the city from which he went forth to give up his life in defense of the flag. It was my pleasure and privilege to attend a memorial service held in his honor in the city of Evansville, Ind., on the 11th day of November, 1917, in, if I am correctly informed, the largest auditorium in the State of Indiana, which was filled to its capacity and unable to hold all those who sought to gain entrance. And when I saw such a great outpouring of the people in his honor and saw the mother and realized the sacrifice she had made I thought how insignificant are all other sacrifices that may be made in time of war in comparison with hers, and I would that every American citizen might be imbued with the sentiments expressed by her when she said:

I feel, as only a mother can, the loss of his love and support, but my sorrow is made easier to bear by the knowledge that my boy did his full duty for our country in her time of need.

If his example shall help others to preserve and spread the liberties we now enjoy, and thus bring humanity one step nearer the universal brotherhood of man, his sacrifice will not have been in vain.

I hold in my hand a short memorial containing a brief biographical sketch of James Bethel Gresham, a copy of the program of the services held in his honor, and a short statement by the French general, Bordeaux, made over his grave and the graves of his two comrades who fell in the same engagement, which I am going to ask leave to have printed in the RECORD as an extension of my remarks as a tribute to his memory and to the sacrifice of his mother.

LIBERTY FOR ALL FOREVER.

[In grateful appreciation of his unselfish service to his country and with a desire to assist in keeping burning the torch of liberty, in support of our boys at the front, we dedicate this booklet to the memory of James Bethel Gresham, the first American "over the top" to fall on the soil of France for liberty and justice.]

JAMES BETHEL GRESHAM, THE FIRST MAN "OVER THE TOP."

James Bethel Gresham was born in McLean County, Ky., April 23, 1893. His father, Green Gresham, a Confederate veteran, passed on, leaving the boy at the tender age of 6 years to fight life's battles. At the age of 7, with his mother, he moved to Evansville, Ind., where he attended Centennial School and the Cotton Mill Sunday School conducted by Miss Amelia Walters. Compelled to assume a man's responsibility early in life, he left the schoolroom at the age of 14 and worked in the factories of his chosen home until called to the greater service of his country.

On his twenty-first birthday, April 23, 1914, he enlisted in the Regular Army and was assigned to duty in Company F of the "famous Sixteenth Infantry." His first service under the Stars and Stripes was with Gen. Pershing in Mexico.

His superior officers report him as always conducting himself in such a way as to bring added honor to the untarnished record of the American Army. When Gen. Pershing was sent to France, James Bethel Gresham was among the first contingent to reach the first-line trenches.

In an unequal struggle against an overwhelming force, he, together with two companions, true to the American spirit, fought a game fight, and dying like heroes they thus paid the first interest on America's "debt of gratitude" to France for a like service rendered us in 1775-1781. Thus, too, this son of a Confederate soldier sets an example of

how sons of men who wore the gray are as ready as the sons of men who wore the blue to help preserve the Union and liberty established in 1861 to 1865.

YOUR LAD AND MY LAD.

(Randall Parish, in the Chicago Tribune.)

Down toward the deep blue water, marching to throb of drum,
From city street and country lane the lines of Khaki come;
The rumbling guns, the sturdy tread, are full of grim appeal,
While rays of western sunshine flash back from burnished steel.
With eager eyes and cheeks aflame the serried ranks advance;
And your dear lad, and my dear lad, are on their way to France.

Before them, through a mist of years, in soldier buff or blue,
Brave comrades from a thousand fields watch now in proud review;
The same old flag, the same old faith—the freedom of the world—
Spells duty in those flapping folds above long ranks unfurled.
Strong are the hearts which bear along democracy's advance;
As your dear lad, and my dear lad, go on their way to France.

The world rings out; a million feet tramp forward on the road,
Along the path of sacrifice o'er which their fathers strode.
With eager eyes and cheeks aflame, with cheers on smiling lips,
These fighting men of '17 move onward to their ships.
Not even love may hold them back, or halt that stern advance;
As your dear lad, and my dear lad, go on their way to France.

PROGRAM—MEMORIAL SERVICES HELD IN HONOR OF JAMES BETHEL GRESHAM, SUNDAY, NOVEMBER 11, 1917.

1. Invocation, Dr. Frank Lenig.
 2. Hymn—"Our God, Our Help in Ages Past," Watts.
 3. Address, Hon. J. J. Nolan.
 4. Scripture lesson, Dr. J. U. Schneider.
 5. National anthem—"Star Spangled Banner," Francis Scott Key.
- Mrs. Hoskinson, and audience.
6. Address, Hon. Philip W. Frey.
 7. Hymn—"Lead, Kindly Light."
 8. Address, Dr. Mortimer P. Giffin.
 9. National anthem—"America," audience.
 10. Benediction, Rev. William Sweeney.
- Miss Ada Bickling, musical director; Mrs. E. E. Hoskinson, soloist; Mrs. Amelia Straub Lautner, accompanist.

GEN. PERSHING'S MESSAGE IN FRANCE FROM THE AMERICAN PEOPLE.

Standing before the statue of the beloved Gen. Lafayette, in company with President Poincaré and Gen. Petain, Gen. Pershing thrilled the hearts of the French Army and people with these words: "Lafayette, we've come."

NOVEMBER 6, 1917.

The first American soldiers killed in the trenches of France are sleeping in French soil to-night, honored by the American Army and the people and army of France.

With a guard of French infantrymen, in their picturesque uniforms of red and horizon blue, standing on one side and a detachment of American soldiers on the other, the flag-draped caskets were lowered into the grave as a bugler sounded taps and the batteries at the front fired minute guns. With his words punctuated by the roar of guns and the whistle of shells, a French officer paid the following tribute to our boys:

THE TRIBUTE OF FRANCE.

"In the name of the French Army and in the name of France I bid farewell to Private Gresham, Private Enright, and Private Hay, of the American Army.

"Of their own free will they left a prosperous and happy country; they crossed the submarine-infested ocean at great peril; they took their places on the front by our side, well knowing the hardships of battle and the brutal domination, oppression, and barbarity of a war-mad foe; and they have fallen facing that foe in a desperate hand-to-hand fight. All honor to them. Their families, friends, and fellow citizens will be proud when they learn of their glorious deaths.

"Men! these graves, the first to be dug in our national soil, are a monument and link us with bonds of friendship to that mighty land to which we cling, confirming the will of the people and the Army of the United States to fight with us to a finish, ready to sacrifice as long as is necessary until final victory is won for the most noble of causes, that of liberty of nations, the weak as well as the mighty.

"We will therefore ask that the mortal remains of these young men be left here, left with us forever. We inscribe on their tombs and in the hearts of the French people, 'Here lie the first soldiers of the Republic of the United States to fall on the soil of France. They died for us, for liberty, and justice.'

"Private Gresham! Private Enright! Private Hay! In the name of France I thank you. God receive your souls. Farewell."—(Gen. Bordeaux.)

THE SPIRIT OF EVANSVILLE, IND.

We of Evansville have given our boys, and they in turn have given their lives.

We have a just pride, mingled though it is with sorrow, that the first American soldier to fall on French soil in an actual engagement with German troops was an Evansville boy.

Private Gresham truly typified not only the loyalty and devotion of Evansville but likewise the spirit of a united Nation.

[From the Pittsburgh (Pa.) Post.]

LORRAINE TO ERECT SHAFT TO GRESHAM.

Citizens of Lorraine, France, will erect a monument to the memory of Corpl. James B. Gresham, of Evansville, Ind.; Privts. Merle D. Hay, of Glidden, Iowa; and Thomas F. Enright, of Pittsburgh, Pa., according to a letter received by Mayor Joseph G. Armstrong, of Pittsburgh, from the prefect of Lorraine. The prefect, in part, says:

"These three young men have fought and died for the right, for liberty, for civilization, against German imperialism, a shame and a menace to humanity. Their names will not be forgotten."

[From the Indianapolis (Ind.) News.]

LOS ANGELES, CAL., December 22.

Corregidor Post, Veterans of Foreign Wars, here to-day changed its name to James B. Gresham Post, in honor of the Evansville, Ind., man, first to give his life as a member of Pershing's army in the cause of world democracy.

TO MRS. ALICE DODD FROM THE CITIZENS OF EVANSVILLE.

With hearts filled with gratitude for the noble sacrifice by our fellow citizen, who laid his life on his country's altar of freedom, the people of Evansville present to you, his mother, this home, made possible by Evansville capital, built by Evansville labor, and furnished by Evansville manufacturers and merchants, as a feeble token of our appreciation. God grant you the comfort that He alone can give.

CARRY ON.

James Bethel Gresham.

Trench life has led to the coining of many new phrases, none of which carries a larger message than the one above, "Carry on." It means to the boys at the front, "Fill the place of the fallen, hold aloft the banner, go forward, ever forward."

To those at home it means self-sacrifice, denial of unnecessary pleasures, a patriotic conservation of every natural resource, a thorough cooperation with those in authority to the end that a constant supply of everything needful for the equipment, comfort, and success of our boys may reach them regularly; it means, keep the factories running, keep the home fires burning and our hearts alive and aflame with the spirit of liberty. It means buy liberty bonds, give to the Red Cross, give to the Y. M. C. A. It means organize work and save and give.

The spirit of James Bethel Gresham bids you "Carry on."

Postal Service in France.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. COX,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 12, 1918.

Mr. COX. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following letter from the Second Assistant Postmaster General correcting a statement I made the other day on the floor of the House as to the number of postal clerks we have in France:

POST OFFICE DEPARTMENT,
SECOND ASSISTANT POSTMASTER GENERAL,
Washington, February 11, 1918.

Hon. WILLIAM E. COX,
House of Representatives.

MY DEAR MR. COX: On reading the CONGRESSIONAL RECORD I find that I have left you under the impression that we have but 40 postal clerks in France, whereas we have now in France or on the ocean to reach France in a few days 140 postal employees, with 25 more now assembling in Washington to sail for France on February 20. We did have a shortage of men in our French service during the month of January when 35 clerks were waiting in New York since December 28 to sail, but could not get passage. This shortage, however, was only temporary and was ended by 23 of the clerks agreeing to take the second-class passage on a French liner sailing January 16. Twelve more sailed on a vessel scheduled to depart January 26.

It may be interesting to note that the clerks in France receive \$1,200 per year and \$2.50 per diem, or \$2,100 per year. With the increasing cost of living in France the department will have to increase the per diem to the men stationed in the larger cities. Chief clerks drawing \$2,100 in this country and clerks in charge of railway postal cars drawing \$1,600 to \$1,700 are volunteering for this service at financial sacrifice. Only the highest type of men to be found in the Railway Mail Service, and the best financial clerks and distributors in city post offices are being appointed to the service in France.

I notice also that charges are being made that mail is being delayed in the Chelsea Terminal in New York, and that men outside of the civil service are being used for this work. This is false. There never was delay to soldiers' mail in the New York terminal save a brief delay to newspapers and magazines during the 10-day period at the end of November when the terminal was swamped with more than 1,000,000 pounds of Christmas parcel post for the Army. In order to get this mail to the soldiers at the front on or before Christmas day it was necessary to employ from 400 to 460 men daily, and only when the civil-service lists were exhausted noncertified men were employed for this work. It was necessary to do this or fail to get the mail to the men in the farthest camps on Christmas day. These men were paid at the rate of \$75 per month and not \$50, as has been asserted by certain discharged or disgruntled former postal employees who have been conspicuous in the attacks on the conduct of the Postal Service at home and abroad.

For the purpose of censoring uninspected parcel-post packages which are to go aboard transports and eliminating dangerous and otherwise unmailable articles, there are employed some women who are not on the civil-service rolls. These women, I have been informed, have been selected for this delicate work after investigation of their loyalty to the country and their reputation for honesty. They receive \$75 per month after demonstrating their fitness for the work.

The operation of the terminals when the mail is being distributed for the troops in France is under constant surveillance and a post-office inspector, reporting on the employment of noncertified employees at the height of the soldiers' Christmas mail, advises the Post Office Department as follows:

"The lists of certified substitutes having become exhausted, it became necessary to accept applicants for temporary clerkships who were not required to pass an examination for the position."

I desire to add that all reports that reached me from persons who had investigated the terminal indicate that the work in it is now constantly up to date.

Sincerely, yours,

OTTO PRAEGER,
Second Assistant Postmaster General.

The War Cabinet—Secretary Baker and Big Business.

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 8, 1918.

Mr. HUDDLESTON. Mr. Speaker, we have reached, as it seems, the parting of the ways where those who are supporting the war out of idealism and love for democracy and those who are inspired by motives of base selfishness must separate. Hereafter, as it appears, these two groups will struggle against each other. The clash over the proposal for a war cabinet is merely one part of the conflict.

By the measure creating the war cabinet it is proposed to create a commission of three to have supreme powers in carrying on the war. This commission, while nominally subject to the President's authority, is, so far as the Constitution will permit, a three-headed dictatorship and will perform all the functions heretofore lodged in members of Cabinet and governmental bureaus. Members of Cabinet will hereafter perform only such duties as the war cabinet may direct, and are relieved of responsibility and discretion alike. The project is revolutionary. It uproots American traditions. It is an experiment on a dangerous scale, and would be justified only by an inconceivable emergency.

BIG BUSINESS BEHIND THE SCHEME.

In order to fairly appraise the value of the plan for a war cabinet we should examine as to the source from which the scheme comes and inquire who are back of it and what their motives are in presenting this extraordinary measure.

Highly significant is the following recent dispatch to the New York Times from its Washington correspondent:

A suggestion made to-day, which took the form of a prediction, was that the great captains of finance would be likely to make known before very long that the financial support they are giving the Government entitled them to express the hope that the President should bring into his inner councils some of the men in whom the people have supreme confidence. And in adopting this course, it was said, the President probably would be given to understand that he should waive aside political considerations and take men without regard to past or present party affiliations. That was the spirit of the country, it was asserted.

Students of public affairs see more clearly every day the rise and activities of a dangerous faction in our country. Every day it becomes more apparent that there is a small but powerful group of our citizens who are dissatisfied with old-fashioned Americanism and who long for a change in our national life and institutions, which would give new birth and security to effete ideals and caste systems which, having run their course in Europe, are now about to be there rejected and cast out.

This group is dissatisfied with America as the land of democracy, of equality, and of opportunity and would make it over along the lines of their disordered dreams. As our soldiers go forth to battle against German imperialism and for the liberty of mankind this group would inaugurate an American imperialism which would take the place in exploitation and the suppression of self-government in the world which is so ardently coveted by the ruling class of Germany. As expressed in a recent issue of The Public:

Our masters of business enterprise would put up with many things for the winning of the war and the attainment of those aims that to them are identified with victory. * * * In their most dangerous form they appear to America's great financial and industrial leaders as a vision—a vision of America as the financial and industrial center and master of the world; of American industry standardized and integrated to the last degree, pushing over the world through great legalized combinations, supported by tariffs and subventions; of American finance reaching into the backward places and obtaining control of rich undeveloped natural resources for fiscal exploitations; of American bankers and American landlords taking toll of new continents now that the exploitation of this one no longer satisfies their craving for fresh risks, fresh masteries, fresh prizes worthy the enterprise of kings. As part of this vision they see an America drilled and regimented for efficient production—an America under the sway of scientific management, an America of workers responding to the patriotic stimuli of national pride and national honor, every immigrant "Americanized," every agitator silenced, every class difference smothered—by what? By

the glamor of national prestige, by the cult of obedience, both to be fostered at a stroke by the institution of permanent compulsory universal military service. Great armaments as a visible sign of national power and prestige, equally potent to impress the malcontent at home, the competitor abroad.

That is what they would do—they would "Prussianize" America.

The group to which I refer is composed of the big financial, big business, and big industrial interests of the country. Of course, not every individual of those classes is in the conspiracy. The inner ruling circle is, no doubt, quite small, but it is the exception to find a widely influential member of those classes who is not in active sympathy with the movement.

Drunk with intense class consciousness and egoism, big business has its dreams of America as a modern and more terrible Rome holding distant lands and weak nations in tribute, claiming the best fruits from remote corners of the world and fattening a lordly patrician class worthy of the Augustinian age. The dream is of a new golden age in which they and those of their class and those who think as they do shall enjoy the political, social, and financial supremacy of the whole world. This is their vision of America's destiny and of national glory.

Militarism, of course, though merely a detail of the appalling conception, is a necessary detail. Vast fleets and armies are necessary to suppress competition from the plutocrats of other nations in the business of ravishing weak peoples and undeveloped lands. Without vast armaments there can be no adequate protection for investments in loans, mines, railroads, and other instrumentalities for the exploitation of unorganized peoples. They would have the mere utterance of "I am an American citizen" strike terror into the heart of anyone who might question his will. But militarism has other essential aspects for the imperialists, for through it they will suppress whatever home influences might rise to interfere with their purposes. By compulsory military service they will teach the masses to obey and to respect their masters. They will break the spirit of the people. They will teach labor its proper place and make order and industry the supreme law and habit of the man who toils.

American imperialism is more irresponsible and deadly than the imperialism which curses Germany. The ruling class of Germany is in chief a nobility which has behind it traditions of birth, place, and achievement. But American imperialists know no such restraining influences. They have no spirit of noblesse oblige. They are merely the newly rich Wall Street gamblers, the taskmasters, and profiteers. Their only restraints are those of selfishness, egoism, and class instinct.

THE ANTIDEMOCRATS.

The organization of the antidemocratic group is widespread and efficient. It has its dependable representatives in every important community and has but to touch the wires to rouse them to intense activity. Usually the group works through financial institutions, business organizations, and subsidized newspapers, and when it gives the word the response is powerful and instantaneous—a fearful and dangerous machine.

Formerly reactionaries were able to work their will through campaign contributions, corruption, and similar practices; now it is done by controlling public opinion through influential and widely read newspapers, which, when the signal is given, take up the cry and crystallize public sentiment in whatever form is desired. These selfish interests have viewed with growing dissatisfaction the trend of affairs during the past dozen years. The people have been getting harder to control. There has been too much evidence of democratic spirit, too much idealism and brotherhood. They are displeased by the swing toward amelioration and the recognition of the rights of common men; they long for the former era of unrestrained combination, monopoly, and exploitation; they are determined to seize out of the present world crisis some means of ending such foolishness once and for all.

These men think well of themselves. That is the trouble. They look on themselves as patriots trying to save society, and that is why they become desperately dangerous. They would save democracy from itself. To them "making the world safe for democracy" means *making democracy safe for the world*. They think always in terms of caste and privilege. Their souls are shut to a true understanding of man's responsibility for his fellow man and only catch its meaning in the condescension of shaping the lives of others to the mold of their own desires.

The antidemocratic group sees no virtue in liberty for mankind which can not be translated into profits and sordid material things; they dream now of a glory for America to come out of the war, a glory of imperialism with far-flung provinces and dominion in the world's remote places; of marble palaces for

the few and vast slums of cities for the many; of the rich and benevolent patron with a bumble and hungry rabble at his gate.

To the antidemocratic group the war has its significance only in the opportunity for profiteering which may come afterwards. Even now they are selecting the fields of their endeavor—China, Russia, South America. From a recent issue of one of their journals I clip the following:

China is the land of the future for world trade and commerce. There will be a struggle after the war to see who builds China's railroads, erects her manufactories, works her mines, and regulates her rivers—a struggle in which the cleverest nation will win, and the competition will be extremely sharp. It will not be waged by individual firms as of old, but by great combines of capital, like the American International Corporation. We must meet like with like, and the time has now come for the Government to confer with individual enterprise with a view to gliding ourselves for the coming race.

With our entry into the war the rant of pretended loyalty of the antidemocratic group reached the height of absurdity. Never loyal to the President, its extravagant professions at such a time became deafening. Only a few months before it had denounced the President for his forbearance with Mexico. There was no cry of "Stand by the President" then, for his policy of peace ran counter to their interest. But they regarded our entrance into war with Germany as the golden opportunity for which they were longing. They did not accept at their face value the President's professions of democracy and interest in weak peoples and common men. They believed the President to be like themselves, a hypocrite, and so entered on the war as an orgy of greed and profiteering, and wanted victory as the prelude to world conquest and spoliation.

BIG BUSINESS WOULD TAKE CHARGE.

War having been declared the big business group threw itself with all its soul into an effort to take charge of carrying it on. It waved flags, marched in processions, and shouted itself hoarse. It denounced as traitors all who had previously hoped to avoid war. It sprang gladly to the task of suppressing freedom of opinion, speech, and press, to the advocacy of extreme and headlong military measures, and to the restriction of men's rights in every way. It financed and organized pretended patriotic societies, and sent its agents to every part of the country to enlist the membership of patriotic and unsuspecting citizens. With the support of wide membership the puppet officers of these organizations pressed their views upon the Government. Never before did private organizations so press their measures upon the public. The plain purpose of all this was to rush Congress and the administration off its feet, to dictate public opinion, and to control our war aims and after-the-war activities.

But after the first few weeks it was observed that the administration had not yielded. Members of big business gorging enormous fortunes from war contracts and profiteering began to take note between gulps that the administration showed signs of really trying to carry out the lofty purposes which the President had so finely expressed. Later it developed that the administration would earnestly oppose their schemes to plunder by wholesale the people and the Government. Prices on steel and metals were cut in half, profiteering in coal and food was curbed, and so from point to point the administration proceeded to thwart greed and avarice. The administration further disclosed, so that no one might have any doubt, a fixed and irrevocable purpose to war for humanity and not for imperialism and exploitation. The growling from selfish groups and their organs and parasites increased with each measure which blocked their efforts and their rage has now reached its climax.

The imperialists had sought to take advantage of the war situation to intimidate Mr. Baker into supporting their pet project for a permanent system of compulsory military service. They had underestimated his courage and democracy. His answer was a refusal to consider the scheme for perpetuation of war conditions, the very thing we are fighting to terminate. His adversaries considered that at last their opportunity had come. His refusal of their pet scheme of compulsory service was the last straw. They would destroy him and teach the administration who its real masters are. They would capitalize public interest in the war and out of distressed public opinion create a weapon with which to disembowel the administration by discrediting its chief war officer.

THE EFFICIENT MR. BAKER.

The militarists pressed for our entrance into the war long before we had cause to enter. "America should avenge Belgium and Serbia," they said. They had so much impressed Mr. Baker's predecessor with the need for preparation for war that he appeared about to yield in important details. However, the expensive propaganda which they had carried on for months through the newspapers in behalf of vast increases in armaments had not yet converted the people. The people were not

ready for the measures proposed, so that out of the situation a vacancy in the office of Secretary of War arose. Into this vacancy by the President's command stepped a small and unassuming man, youthful, modest, and unimpressive—Newton D. Baker. His previous activities in his home city had irritated the profiteering class. He was too democratic. He believed in the people. He had belonged to a peace society—"Socialist" they called him, as they always do men who love real democracy.

The war party marked the new Secretary for its victim and raised its cry against him from time to time. It viewed him with profound distrust from the very beginning. It sought opportunities for his undoing, but no opportunities came.

Our entrance into the war laid a gigantic task on the Secretary of War. To raise, to bring into the field, and to equip a million and a half of men within eight months is a feat never before accomplished. Mr. Baker has performed it and performed it well. There have been mistakes; yes, many of them. There have been errors, of course. There has been unnecessary hardship and suffering, as there always is. Soldiers have been sent to camps when equipment and clothing were not ready for them. Our hospitals have been inadequate, and there has been preventable disease and death. But this is war, and war is always sorrow and suffering, desolation and death. The Secretary was compelled to deal with the existing organization; he was forced to rely upon others. His instrumentalities did not always function, and hence there were minor imperfections and defaults. But viewed as a whole, looked at in the big way, Mr. Baker has accomplished great work and is entitled to unstinted praise. His task was superhuman. He has performed it with extraordinary ability, devotion, and effectiveness. I dare assert that in all history no similar splendid performance is recorded, and that never has an executive done great work more effectively.

As stated in *The Public* of January 25:

The supreme sin of President Wilson and of Secretary Baker in the eyes of the American business community is that they actually desire a democratic and stable peace. On January 8 Mr. Wilson addressed a message to the world in which he included among the country's war aims a demand for "the removal of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace." That, in the eyes of the business community, was heresy of the rankest sort, and for the first time in its treatment of the President the metropolitan press broke into a chorus of alarmed disapprobation and warning. As for Secretary Baker, in his annual report he presented a strong recommendation against permanent universal training, on the ground that the country's future military policy should be determined by conditions existing after the signing of a peace treaty. In other words, Mr. Baker took our war aims seriously. He actually believes in them. It is now only too apparent that for the industrial business community they were so much sentimental nonsense, serviceable only as catch words for the populace.

To-day Mr. Baker is bearing the brunt of the most powerful and virulent offensive launched in our generation against a public man. Mr. Wilson is the real target, and the attack will be transferred to him the moment the financial community becomes convinced that he is determined to adhere to the policies already declared.

Mr. Baker is human, and, of course, he has made his mistakes, but they have in the main been minor ones. He made a mistake when he excluded the Odd Fellows, Masons, and other fraternities from maintaining club rooms in camps on the same terms as the Y. M. C. A. and the Knights of Columbus. I was the first to go to him and complain of this mistake. He was big enough to correct it when he became convinced that he was wrong. Mr. Baker made a mistake in the creation of the advisory commission of the Counsel of National Defense, composed in chief of representatives of big business. I can see why he did this. He realized the need for cooperation from these powerful interests and he took them at their word for patriots. But now that it has been disclosed that many of them have taken outrageous advantage of the country he is correcting that mistake as well.

THE BOLT OF CRITICISM.

As the sons of the people were marshaled in the camps many American hearts were sorely distressed, many mothers' hearts ached with anxiety, and when the inevitable stories came home of deprivation, insufficient clothing, and disease public opinion was necessarily inflamed. The situation reached its crisis.

The stage was well set—New York, for publicity of its great newspapers and a sympathetic audience of the inner circle of the war party, with a spokesman who had the prestige of a chairman of a great committee of the Senate.

At one hand sat Root, the archleader of American reactionaries, and at the other Roosevelt, who has hounded the President in the press and had the affrontery to charge him with having betrayed the cause for which we are fighting. The occasion of the meeting was to do honor to men who had shown themselves most able and willing in promoting militarists' measures.

Then the bolt was launched: "Baker has failed. We must create new war executives; we must put the President with his

silly ideas of democracy into his proper place; we will teach the administration a lesson."

And so with the Secretary of War chosen as the victim the bolt of criticism was thrown. Big business pulled the strings, and its thousand hireling newspapers the land over, and its agents and clackers, took up the cry for a war cabinet.

Mr. Speaker, this is the meaning of the situation. The past must be considered as well as the present to gather its true significance. We must view the situation as a whole in order to understand. The onslaught is the attack of the antidemocrats; of the selfish interests; of the un-Americans and their hirelings and parasites. And the object of the attack is democracy—American democracy—and our democratic war aims, and to reach this object they would destroy the reputation and prestige of our Secretary of War, discredit the administration, and reduce it to a subserviency.

The attack is ostensibly on Mr. Baker, but in reality the attack is on American ideals and the liberties of the world. Then it is for us who love democracy to defend; for us who cling to the old order of Americanism, to the principles of Washington and Jefferson and Lincoln, of American opportunity and equality; for us who would deliver to coming generations an America of justice and opportunity, pure and undefiled as we received it from our fathers.

The question is a greater one than Mr. Baker; greater than the prestige and authority of the administration. It is not a question of the moment or of policy; it is one of wide import and of principle. It is not a matter merely of whether we will submit temporarily to the dictation of an autocratic war commission, but whether big business or the people shall rule in America; whether our soldiers who fight for democracy and Americanism shall shed their blood in vain; whether we at home will allow to be betrayed the cause which they sustain on foreign battle fields.

The militarists' scheme has aborted. The war cabinet will not be created. Already the people are awakening; they understand the nature of the attack; they are demanding support for the Secretary of War and his liberal policies. The efforts of the reactionaries will be thwarted; their scheme will end in failure; they can not make an issue with the administration over piffling criticism of details. The hearts of the people have been wrung by the stories of the sufferings of our soldiers, but they know that Mr. Baker is able, courageous, and devoted and they trust him. They compare present conditions, though perfect they may not be, with the management of the Spanish War during which some of those who now criticize him were in positions of authority.

Patriotism.

EXTENSION OF REMARKS OF HON. WILLIAM W. RUCKER, OF MISSOURI, IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1918.

Mr. RUCKER. Mr. Speaker, I desire just a few minutes to direct the attention of the House to an act of patriotism which, so far as I know, is without parallel.

The town of Sumner is in my district and is situate in the county in which I have long resided, and I am very proud of the fact. I am glad, too, that numbered with the splendid institutions and business enterprises of that town is the Sumner Exchange Bank, the officers, directors, and stockholders of which are each and all patriotic citizens.

At a meeting of the directors of the Sumner Exchange Bank, held early in January just passed, a resolution was unanimously adopted, with the consent and approval of every stockholder, pledging the bank, at the close of each month, to pay interest at the rate of 3 per cent per annum on the average monthly checking accounts with said bank, the money thus derived to be deposited to the credit of the Red Cross Society on the 1st day of each month, and also to announce, at the beginning of each succeeding year, the rate of interest which will be paid during the then ensuing year until the close of the war.

The resolution further pledges the cooperation of the bank "with the Government in all of its war measures," and declares "that during the continuance of the war the bank will pay no dividends to its stockholders," but that its entire net earnings will be paid to the Red Cross Society or otherwise applied to help win the war.

The resolution referred to is as follows:

Whereas our country is now engaged in a great war with the German Empire, in which the very life of our Republic is menaced, and involved in that war is the momentous issue of whether American liberty shall endure and whether American rights upon the high seas shall be respected; also the issue of whether democracy or autocracy shall rule the world. In this great crisis through which our country is passing it becomes the first and highest duty of every man and woman and every bank and every other institution of every kind to subordinate all personal and financial considerations of gain or profit to the cause of our country and manifest with acts, deeds, and money our patriotism to our Government; and

Whereas the Red Cross Society of America is caring for the sick and wounded of our armies, and in performing this noble and humane work it needs all the financial assistance it is possible to obtain, which makes it the imperative and patriotic duty of citizens, banks, and financial institutions to see that it is provided with necessary funds: It is therefore

Resolved by the board of directors of the Sumner Exchange Bank, Sumner, Charlton County, Mo., all the stockholders concurring herein, That for the purpose of aiding in some measure the Red Cross Society in carrying on its humane work of relieving and caring for the wounded and suffering of our armies, said bank, beginning on the 1st day of January, 1918, will pay interest at the rate of 3 per cent per annum on the average monthly balance of checking deposits carried in said bank, which sum thus derived shall on the first day of each month, beginning February 1, 1918, be placed in said bank to the credit of the Red Cross Society of Sumner and Forker, Mo., until the end of said bank's fiscal year, which will be September 1, 1918, and at the beginning of each fiscal year thereafter to the end of the war said bank will announce the rate of interest it will pay on checking deposits for the ensuing year and will continue each year to make such payments until the end of the war.

Resolved further, That, in addition to cooperating with the Government in all of its war measures, it is the sense of the board of directors of the Sumner Exchange Bank that during the continuance of the war this bank will declare and pay no dividends to its stockholders, but that all net earnings of the bank, except such sum as may be necessary for local charities, shall be paid to the Red Cross Society or otherwise used to aid in carrying the war to a victorious conclusion.

Farm Loans.

SPEECH

OF

HON. EVERIS A. HAYES,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 4, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 3235) amending section 32, Federal farm-loan act, approved July 17, 1916.

Mr. HAYES. Mr. Chairman, the pressure for time in this debate has been so great that I have reserved for myself no time to adequately discuss this very important measure. I only desire at this time to call the attention of the House to the fact that this is claimed to be an emergency measure.

Now, the Senate bill as amended, it seems to me, provides for all that is necessary at this time. It limits, in the first place, the operations of this act to one year. It permits the Secretary of the Treasury to purchase bonds up to a certain amount for the present year. After that, no man in this House knows what the conditions in this country may be, and there is no limitation upon this House. It can take the subject up a year from this time or at any time intervening, when we may know what the conditions are, and can meet the situation as it then exists.

Now, further, the Senate bill provides for taking care of the moral obligations that have been incurred by the Farm Loan Board. As I understand, they have virtually approved and promised \$71,000,000 of loans. The Senate bill takes care of that obligation and gives a limited opportunity to the Farm Loan Board to make new loans where such loans will increase the food supply of the United States. It seems to me that at this time, when the credit of the Government is probably to be extended and reextended to meet the great crisis in which we find ourselves, this is as far as we ought to go. If we pass the House bill without amendment we shall have put the stamp of approval upon the proposition that the Secretary of the Treasury is to come to the relief of the Farm Loan Board whenever they find it impossible to sell their bonds at a particular rate of interest, whereas the Senate bill does nothing of the kind.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. GLASS. Mr. Chairman, I shall be very glad to give my colleague a few minutes of my time.

Mr. HAYES. I thank the gentleman. I just desire to say that if we yield this right to the Farm Board in the broad way in which the House proposes to yield it there are in this country over \$4,000,000,000 of farm loans, and we may as well face the proposition that money is to bring a higher rate of

interest for a few years, and whenever the Farm Loan Board can not float these bonds at 4½ or 4½, they can come to Congress for help to enable them to get those bonds floated; so that we may expect applications for the \$4,000,000,000, if not more, in the near future. I think the House should vote with this knowledge in view and determine now whether we want to embark on this sort of undertaking on the part of the Government of the United States or not.

The CHAIRMAN. The time of the gentleman from California has again expired.

Aids to Germany.

EXTENSION OF REMARKS

OF

HON. JOE H. EAGLE,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 15, 1918.

Mr. EAGLE. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a communication addressed to the President and to the Members of Congress by the executive committee of the Socialist Party of the United States under date of February 9, 1918, and a copy of my reply thereto.

The matter referred to is as follows:

SOCIALIST PARTY, NATIONAL OFFICE,
Chicago, Ill., February 9, 1918.

To the President and Congress of the United States:

The war frenzy which has gripped many nations, including our own, is waning. The Socialist Party, therefore, through its national executive committee, deems it to be its duty to state its views as to the best methods of obtaining a speedy, general, and democratic peace.

We indorse unreservedly the peace program of the Russian Socialist Government based upon the demand for the evacuation of all territory occupied by hostile forces and its physical restoration from an international fund; the right of all nations and inhabitants of disputed territories to determine their own destinies; the unrestricted freedom of travel and transportation over land and sea; full equality of trade conditions among all nations; universal disarmament; open diplomacy; and an effective international organization to preserve peace, to protect the rights of the weaker peoples (including the natives in the colonies), and to insure the stability of international relations.

We are unalterably opposed to all annexationist and imperialistic designs, all plans of forced geographical and political readjustments, and all punitive measures included in the war aims of the contending ruling classes and their Governments.

We emphatically deny that it is necessary for the people of the United States to spill their blood and waste their treasure in order to rearrange the map of Europe. If rearrangement is necessary, it can be more speedily and more effectively accomplished by the peace conference.

The present situation demands more than the mere statement of war aims or peace terms. An agreement to enter into peace negotiations is now imperative.

To agree upon the details of peace is impossible until the representatives of the belligerent nations meet one another in conference.

The statement of detailed conditions is futile. Such details are quite as likely to multiply the causes of disagreement, magnify the difficulty, and delay peace as they are to bring peace.

We earnestly urge you to recognize officially the present Russian Government and to accept immediately its invitation to take part in the peace conference of the Russians and the central powers. We also urge you to make every effort to secure the participation of the allies in the conference.

A decision by our country and the allies to join in the conference will electrify the peoples of the world. It will take the ground from under the crowned robbers of the central powers. It will deprive the autocrats of all arguments now used to deceive their people and maintain themselves in power.

This is the road to peace.

MORRIS HILLQUIT,
VICTOR L. BERGER,
ANNA A. MALEY,
JOHN M. WORK,
SEYMOUR STEDMAN,
National Executive Committee,
ADOLPH GERMER,
Executive Secretary.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., February 12, 1918.

MORRIS HILLQUIT, VICTOR L. BERGER, ANNA A. MALEY, JOHN M. WORK, SEYMOUR STEDMAN, National Executive Committee; ADOLPH GERMER, Executive Secretary, the Socialist Party, 803 West Madison Street, Chicago, Ill.:

Your latest fulmination in the interest of Germany in the form of a circular of February 9 addressed to Members of the Congress has reached me to-day.

I do not care to be addressed by any aggregation of foreigners who, while living under the protection of the American flag of freedom, yet by every device of ingenuity they can conceive, since America was driven into this war by brutal Prussians, have endeavored to aid Germany, and I ask that none of you will write me any more. I hoped they had already put Germer and all that bunch behind the prison bars before this for their treasonable utterances.

Most of you were born in industrial and political slavery in Europe; nobody invited any of you to come to America; each of you sought admittance to free America in order to have freedom and liberty; each

of you brought European racial and religious and other prejudices and associations along in your hearts and minds with you; none of you, since this war began, has been loyal to America; but each of you has done all the infamous propaganda he can to aid Germany.

It is such creatures as you who, taking advantage of the confusion in Russia, have thrust a mighty people, fighting for freedom and for liberty, body and soul under the iron heel of Germany.

It was Hillquit who, misleading the Jewish people of New York City and taking them in one solid phalanx into foreign sentiment and foreign allegiance, thus laying a predicate for the persecution of that splendid race in this country as they have suffered elsewhere, uttered thoughts and sentiments as Germany would wish—refusing to support America in this war forced on the country of his adoption by the brutal military caste of Germany. He should return to Russia, or be made to return to Russia, whence he came, whose instincts he may understand; because he has shown himself an utter traitor to this country that has given him his living and his freedom.

At a time when the millions of German soldiers are on conquered territory, which they brutally overrun while their victims slept; after they have outraged the women and starved the children in many adjacent lands; when they have wrecked the country and destroyed the lives of countless thousands; after, at Brest-Litovsk, the real purpose of Germany becomes evident to steal territory, to enslave populations, to perpetuate brutal military power over the lives and liberties of millions living and more millions yet unborn; but before the full armor of strength and outraged patriotism has been buckled on American manhood to resist Germany's infamous aggressions, you and each of you have the brazen effrontery to address a communication, in the interest of Germany, to the free Representatives of a free people whose spirit you have not yet conceived.

You ask patriots to sit down now at a peace table to discuss peace with barbarian autocrats who do not know what honor means, and who tore up a sacred treaty as a mere "scrap of paper" and violated the neutrality of a helpless neighbor, and would not now even discuss peace with the allies if they did not already realize their infamous designs had been frustrated. For one, upon the contrary, I would discuss peace with them only when they show evidence of a return to sanity, when their scientific and heartless military machine and plans and purposes are crushed, when they evacuate the territory they have overrun and devastated, when they are willing to reconstruct the Provinces they have wrecked, when their spirits are chastened by some of the sorrow they have inflicted upon an unsuspecting world, and when the people of Germany, weary of the woe they endure, as well as repentant for the woe they have caused millions of others, reorganize their own Government in the interest of truth, justice, and civilization; otherwise a peace is but a truce to their renewed aggression.

In the meantime Germany's tools in America, like you, should be hanged as high as Haman.

If I had my way about it, I would put each one of you back in the German trenches, where your hearts are, and where American patriots could fire shrapnel into you.

Sincerely, yours,

(Signed)

JOE H. EAGLE.

The Eight-Hour Day for Government Clerks.

EXTENSION OF REMARKS

OF

HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 18, 1918.

Mr. BORLAND. Mr. Chairman, under the leave granted to me to extend my remarks I include an address delivered by myself on February 15, 1917, before a mass meeting of Government clerks in Washington, D. C.

The address is as follows:

"It will be well to preface what I have to say on the subject of the eight-hour day for Government clerks with the statement that in the nearly 10 years that I have served in Congress I have found it wise to be guided by two rules: First, never to propose or vote for any legislation which I would not be willing personally to submit to under the same conditions; and, second, never to permit legislation to become a private or personal matter.

"Legislation is a public matter and should be tested solely by its effect upon the public at large. The private character or peculiarity of those who advocate or oppose it has nothing to do with the merits of a measure. Strange to say, those who oppose the eight-hour law most vigorously are not willing to submit to either of these two rules. The most violent opposition has come from a class of business men in Washington who protested vigorously when Congress forced them to observe an eight-hour law in their own establishments, and their method of opposition has been purely one of personal intimidation and abuse.

"From my point of view there is no reason why any self-respecting Government employee should object to an eight-hour day. In fact, very few Government employees with whom I have talked personally care to admit that they are not willing to submit to an eight-hour day. It is always some one else on whose behalf they are objecting.

"I believe that there is such a thing as an honest day's work in all lines of business just as much as I believe that there is an

honest pound or an honest bushel or an honest dollar. I do not believe that there is a shifting scale which depends entirely upon some fortunate or unfortunate accident which happens to affect the relation of the employer and employee. Labor, in my judgment, is intensely interested in the preservation of an honest day's work. If labor takes the position that it will get as much as possible and give in return as little as possible it is surrendering the very principle upon which it has fought all of its battles. It is placing itself upon the level of the trusts which act upon precisely the same motives.

"It is only by affirming that there is an honest day's work which labor is willing to give and which employers ought to be compelled to accept that labor has enjoyed the sympathy and support of the public. No one can successfully contend that eight hours is not a reasonable and honest day's work for Federal employees.

"When I first came to Congress the men in the Postal Service, numbering nearly 400,000, were working 9, 10, and 11 hours a day seven days in the week. We finally secured for them an eight-hour day and a six-day week, which has not yet been carried fully into practice. It is only by a species of political favoritism that a few of the employees of the Government who happen to be employed in the departments at Washington have had a seven-hour day. Those who defend this special privilege and favoritism among Federal employees are defenders of the argument that a day's work is eight hours or less. This argument is false in principle and vicious in practice.

"One might as well say that a pound is 16 ounces or less, or that a dollar is 100 cents or less. How much less would depend, of course, on how shrewd one party to the trade was and how helpless or unprotected the other party?

"But it is said that the eight-hour day is not customary in Washington. A merchant might just as well say that it was not customary for him to give 16 ounces to the pound or that it had been his universal practice to only give 85 cents on the dollar. The fact that some men reason this way when their own interests are involved is the very reason why legislation is necessary to fix the standard.

"The argument is further advanced that Government clerks are only paid on the basis of a seven-hour day or that they are treated so badly by their employer that they would not continue in employment unless they were given special privileges of short hours and numerous holidays. No one seems to be particularly proud of this argument either. There are always present in Washington, unfortunately, those who desire to stir up discontent among Government employees. I have served nearly eight years upon the Committee on Appropriations and have had exceptional opportunities for becoming familiar with every phase of departmental work in Washington. I feel safe in saying that I know more about the departments in Washington than any person in this room.

"I want to distinctly affirm, and to challenge any successful contradiction of the statement, that Uncle Sam is the best employer of labor the world has ever known. There is no business or office in the known world employing 100 people or more where the hours of labor, the conditions of employment, the number of holidays at full pay, or the compensation for labor done compare with the United States Government offices in the city of Washington. I have nothing but condemnation for those who seek to defame the Government by attributing to it all kinds of meanness and oppression.

"It is unfortunately true that the elements of human nature must always enter into business transactions. There are plenty of chief clerks in the departments who abuse their power and who are unfit for their positions. Many cases of individual hardship occur, as they do in every employment of life. Occasionally we find a set of employees who are not paid or treated in comparison with their fellow clerks, and in many instances we have corrected inequalities of this kind.

"The last case in which I was especially interested was that of the machinists in the Bureau of Engraving and Printing; but, on the whole, Uncle Sam is a very liberal and generous employer of labor. He very seldom discharges an employee; he never misses a pay roll; he never has a strike, lockout, or boycott; and his business never shuts down during periods of financial depression. There are only a few concerns in Washington large enough to compare the pay and service of their office force with that of the Federal Government. The most notable examples are the Southern Railroad, the Chesapeake & Potomac Telephone Co., the Potomac Electric Light & Power Co., and the general offices of the American Federation of Labor. A comparison with one or with all of these will show that Uncle Sam pays from 25 to 40 per cent higher wages and gets from 15 to 25 per cent less work out of his employees.

"While I am on this subject, let me say that I have always believed that Uncle Sam ought to pay union scale or better in all lines of employment, and wherever I have found the case that the union scale had run ahead of the Government scale I have been glad to correct it. Prior to the war the Federal pay roll in Washington was approximately \$50,000,000. If Uncle Sam had paid the same scale of salaries and wages as were paid by private employers in the District, the Federal pay roll would have been cut to \$35,000,000. If he had enforced the same hours of labor and conditions of employment and the same number of working days in the year the pay roll would have been cut another \$10,000,000.

"I said that no self-respecting clerk ought to oppose the eight-hour day. To the individual clerk it makes little difference. The inconvenience to him is so slight that he is ashamed sometimes to admit his personal opposition. Many of the better-informed clerks, however, have told me that they were in favor of the eight-hour day, and that it would distinctly improve their condition in many ways. First, it would place them in a better light before the public; second, it would reduce the excessive number of employees, which would give better opportunity for promotion to those who are employed; third, it would reduce the objection to proper raises of salary and readjustments of pay; and fourth, it would reduce much of the objection to a just retirement law.

"If I were a Government clerk I would not spend a moment's thought nor a cent of money in opposing the eight-hour day. It is curious to hear what absurd arguments are proposed by outsiders against this proposition. One is that the pay of the Government clerks has not been changed since 1854. This statement does not deceive anybody. There is never an appropriation bill that goes through the House of Representatives that does not contain raises, promotions, transfers, and reclassification for whole groups of clerks.

"The real opposition, however, to the eight-hour day does not come primarily from the Government clerks. I want to do them the credit to believe that, and I hope and trust that they will demonstrate that fact to the Nation at large. The real opposition comes from the selfish interests in the city of Washington who live off the Government clerks. It is useless to deny this fact.

"I went through this fight two years ago and have incontrovertible proof that the men who fought the act of Congress to provide an eight-hour day for women in the department stores in Washington were the same men who fought to retain the seven-hour day for the Government clerks. The motive in both cases was precisely the same—greed. These men have no more interest in the Government clerks than they have in their own employees except so far as they are able to exploit them. It is to the interest of the merchants and landlords of Washington that there should be a large number of people on the Government pay roll drawing high pay and working short hours. The interests of these people are directly opposed to the interests of the taxpayers of the country. The issue is as clear-cut as though it were drawn by a saber.

"On the one side are the special interests of Washington, demanding that the Federal Government become extravagant and inefficient. On the other side are the taxpayers of the Nation demanding that economy and efficiency be maintained. These positions are absolutely irreconcilable. It is for you Government clerks to determine whether you will side with the people of the United States whose servants you are or with the selfish interests of Washington who are exploiting you. If you side with the selfish interests you must surrender much of your argument in favor of increased pay, much of your opportunity for promotion, and much of your chance for a just retirement law.

"Outside of the city of Washington there is but one opinion upon the subject of the justice of the eight-hour day for Government clerks. Attempts have been made to play politics of a rather questionable character against men who favor the eight-hour day, and particularly against myself. I will not go into that question, although I can assure you that you would not be proud of any of the methods pursued. Fortunately I have been in Congress long enough for the people of my district, including organized labor, to know something about me. My files are full of letters and resolutions from labor bodies thanking me for special efforts in their behalf, and I have no fear of my record being successfully challenged.

"At this time, when the life of the Nation is in peril, it is impossible to defend a system of a short day in Washington with an excessive number of employees. Washington is the busy workshop of the Nation—a Nation at war. We have an army in the field which must be supplied and kept supplied. No man would dare go before any audience in the United

States where he must face the fathers and mothers of these boys in the field and argue for a seven-hour day for the clerks in the departments at Washington. I should like to make an appeal to your patriotism, but I shall only appeal to your common sense. You can not successfully resist an eight-hour day at this time, nor can you successfully conceal the fact that this is a square issue between the profiteers of Washington and the people of the United States."

Leisure at Washington.

EXTENSION OF REMARKS

OF

HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 16, 1918.

Mr. BORLAND. Mr. Speaker, under the leave given me by unanimous consent I desire to call attention to the following editorial:

[From the Oregon Daily Journal, Portland, Oreg.]

LEISURE AT WASHINGTON.

Congressman BORLAND, of Missouri, ought to have help in his fight for an eight-hour day for Federal employees.

They have a seven and a seven and a half hour day now. Besides a shorter day than have private employees, they have by custom obtained 30 days for summer vacation, 30 days' sick leave, half holidays on Saturdays half the year, and half a holiday preliminary to the eight full holidays.

This loaflike pretense at service is an outrage on the people of America. If all would work an honest eight hours, as other folks have to do, 10,000 of them could be released for war service in this time when every citizen of the country except Federal employees is doing his utmost in work to win the war. The proposed eight-hour day would save the country \$7,000,000 a year.

The conditions of service are a national scandal. It is leisure and ease made notorious. Senators and Congressmen are driven by their duties during congressional sessions into long and weary hours of service, and it is astonishing that they consent to a continuation of the underservice, holidays, half holidays, and rest periods that department employees so leisurely and complacently enjoy.

These war days are a good time for Congressman BORLAND to continue to press his proposed reform.

War Legislation in Lincoln's Time.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GRAHAM,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 12, 1918.

Mr. GRAHAM of Illinois. Mr. Speaker, on February 12 last, while addressing the House on the subject of Abraham Lincoln, it occurred to me that perhaps some digest of the legislation enacted during the Thirty-seventh and Thirty-eighth Congresses, July 4, 1861, to March 4, 1865, might be interesting and somewhat helpful, and I therefore then asked and was granted unanimous consent to extend my remarks in the Record on that subject. In doing so I shall not try to give a general résumé of the legislation during that period but shall confine myself to such acts enacted during the period mentioned that were similar to the bills now being considered or acts already enacted by the Sixty-fifth Congress.

SESSIONS OF CONGRESS.

Thirty-seventh Congress: First session, July 4, 1861, to August 6, 1861; second session, December 2, 1861, to July 7, 1862; third session, December 1, 1862, to March 4, 1863.

Thirty-eighth Congress: First session, December 7, 1863, to July 4, 1864; second session, December 5, 1864, to March 4, 1865.

GOVERNMENT CONTROL OF RAILROADS.

Control of railroads and telegraph lines was given to President Lincoln by the following act, which is sufficiently important at this time to be recited in the Record in full:

An act to authorize the President of the United States in certain cases to take possession of railroad and telegraph lines, and for other purposes.

Be it enacted, etc., That the President of the United States, when in his judgment the public safety may require it, he is hereby authorized to take possession of any or all the telegraph lines in the United States, their offices, and appurtenances; to take possession of any or all the railroad lines in the United States, their rolling stock,

their offices, shops, buildings, and all their appendages and appurtenances; to prescribe rules and regulations for the holding, using, and maintaining of the aforesaid telegraph and railroad lines, and to extend, repair, and complete the same, in the manner most conducive to the safety and interest of the Government; to place under military control all the officers, agents, and employees belonging to the telegraph and railroad lines thus taken possession of by the President, so that they shall be considered as a post road and a part of the Military Establishment of the United States, subject to all the restrictions imposed by the rules and articles of war.

SEC. 2. *And be it further enacted*, That any attempt by any party or parties whomsoever, in any State or District in which the laws of the United States are opposed, or the execution thereof obstructed by insurgents and rebels against the United States, too powerful to be suppressed by the ordinary course of judicial proceedings, to resist or interfere with the unrestrained use by Government of the property described in the preceding section, or any attempt to injure or destroy the property aforesaid, shall be punished as a military offense by death or such other penalty as a court-martial may impose.

SEC. 3. *And be it further enacted*, That three commissioners shall be appointed by the President of the United States, by and with the advice and consent of the Senate, to assess and determine the damages suffered, or the compensation to which any railroad or telegraph company may be entitled by reason of the railroad or telegraph line being seized and used under the authority conferred by this act, and their award shall be submitted to Congress for their action.

SEC. 4. *And be it further enacted*, That the transportation of troops, munitions of war, equipments, military property, and stores, throughout the United States shall be under the immediate control and supervision of the Secretary of War and such agents as he may appoint; and all rules, regulations, articles, usages, and laws in conflict with this provision are hereby annulled.

SEC. 5. *And be it further enacted*, That the compensation of each of the commissioners aforesaid shall be \$8 per day while in actual service; and that the provisions of this act, so far it relates to the operating and using said railroads and telegraphs, shall not be in force any longer than is necessary for the suppression of this rebellion.

Approved January 31, 1862.

The meaning of this act was somewhat clarified by the joint resolution of July 14, 1862 (12 Stat. L., 625), which provided as follows:

That an act entitled "An act to authorize the President of the United States in certain cases to take possession of railroad and telegraph lines, and for other purposes," approved January 31, 1862, shall not be so construed as to authorize the construction of any railroad, or the completion of any line of road the greater part of which remained uncompleted at the time of the approval of said act, or to engage in any work of railroad construction. And so much of said act as authorizes the President of the United States to extend and complete any railroad is hereby repealed.

Following the passage of the railroad act, on February 11, 1862, D. C. McCallum was appointed military director and superintendent of railroads in the United States and assumed his duties at once. A full report by him as such director will be found in the Congressional Library, "United States Military Railroad Department Report, 1861-66." The total number of miles of railroad operated was 2,105, and the roads were transferred back to their owners on August 8, 1865. The net expenditures of this governmental control were \$29,838,176.72, and the total number of men employed was 24,984. Most of the roads operated were in Southern or border States; roads were operated in the following States: Pennsylvania, Maryland, Virginia, North Carolina, Georgia, Tennessee, Kentucky, Alabama, Mississippi, Arkansas. An excellent map showing these roads will be found in connection with Gen. McCallum's report above referred to. There were approximately 641 miles of track laid or relaid during this time.

The debates in Congress on this interesting subject will be found in the Congressional Globe on the following dates: January 22, January 28, January 29, January 31, and February 4. The bill was originally introduced in the Senate by Mr. Wade, of Ohio. The debate on this subject was participated in by Senators Wade, Davis, Cowan, Sumner, Pearce, Fessenden, Trumbull, Wilson, Browning, Hale, Doolittle, Sherman, Bayard, Grimes; and in the House by Mr. Blair, Mr. Vallandigham, and some others. It was argued by those opposed to the bill that it was unconstitutional; that the penalties prescribed in the act deprived the person charged of his constitutional right to a trial by jury, while it was replied that because these railroads were absolutely necessary to the carrying on of the war the employees of that road ought to be properly considered as a part of the Military Establishment and subject to military law; in other words, it was a proper exercise of the war power of Congress. It was also strenuously insisted that by so taking possession of the railroads the constitutional provision providing that private property should not be taken without compensation was violated.

CENSORSHIP OF THE PRESS.

While there was no legislation enacted giving any powers of censorship, there was some exercise of such power during the Civil War.

On August 23, 1861, the Journal of Commerce, the Daily News, the Freeman's Journal, and the Brooklyn Eagle were barred from the mails by order of the Postmaster General. On the same date large numbers of some of these papers were seized by

United States marshals. Other papers were similarly excluded from the mails. These matters having engaged the attention of Congress, the Committee on the Judiciary of the House of Representatives on January 20, 1863, made a report to the House incorporating an opinion of the Attorney General and advising the House that the action of the Postmaster General was legal. The opinion of Mr. Blair, Attorney General, on that occasion was extremely well considered and discussed the matter in its constitutional phases.

In addition, generals commanding departments frequently suppressed papers circulating within the limits of their commands. Maj. Gen. Wallace, on May 18, 1864, suppressed the Baltimore Evening Transcript; Maj. Gen. Rosecrans, on May 26, 1864, prohibited the circulation of the Metropolitan Record in Missouri; the commanding general of the department also, at one time, suppressed the publication of the Cincinnati Enquirer in Kentucky. On May 19, 1864, by order of the Secretary of War, the offices of the Journal of Commerce and the World, both of New York, were seized by the military authorities and held for several days.

HABEAS CORPUS—SUSPENSION OF THE WRIT.

President Lincoln was authorized by the act of March 3, 1863 (12 Stat. L., 755-758), to suspend the writ of habeas corpus. The act stated, in part:

That during the present rebellion the President of the United States, whenever in his judgment the public safety may require it, is authorized to suspend the privilege of the writ of habeas corpus in any case throughout the United States or any part thereof.

On April 27, 1861, President Lincoln authorized Gen. Scott to suspend the writ of habeas corpus at any point on the military line between Philadelphia and Washington wherever he found resistance making it necessary; on July 2, 1861, this order was extended to the military line between New York and Washington. On September 24, 1862, the President issued a proclamation suspending the writ of habeas corpus in respect to all persons imprisoned in any "fort, camp, arsenal, military prison, or other place of confinement by any military authority or by the sentence of any court-martial or military commission" during the war. On September 15, 1863, by proclamation of the President a general suspension of the writ was ordered as to all persons in custody by virtue of any military order issued by authority of the President "during the rebellion." On July 5, 1864, the writ was suspended by proclamation in the State of Kentucky. The various military governors were also clothed with power by the President to suspend the writ when desired.

TRADING WITH THE ENEMY.

Early in the Civil War it was found advisable and necessary to limit trading with the enemy, and Congress passed an act with that object in view: "An act further to provide for the collection of duties on imports, and for other purposes," approved July 13, 1861 (12 Stat. L., 254-258). This act, after providing in various sections for the collection of import duties at places where insurrection exists, by special agents to be appointed by the Secretary of the Treasury, provides, in section 5, that where insurgents have failed to disperse as commanded by proclamation of the President, and where such insurgents claim to act by authority of a State, and such claim is not repudiated by the State, the President may declare the inhabitants of the State in insurrection against the United States.

And thereupon all commercial intercourse by and between the same and the citizens thereof and the citizens of the rest of the United States shall cease and be unlawful so long as such condition of hostility shall continue; and all goods and chattels, wares and merchandise, coming from said State or section into the other parts of the United States, and all proceeding to such State or section by land or water, shall, together with the vessel or vehicle conveying the same, or conveying persons to or from such State or section, be forfeited to the United States: *Provided, however*, That the President may, in his discretion, license and permit commercial intercourse with any such part of said State or section, the inhabitants of which are so declared in a state of insurrection, in such articles, and for such time, and by such persons as he, in his discretion, may think most conducive to the public interest; and such intercourse, so far as by him licensed, shall be conducted and carried on only in pursuance of rules and regulations prescribed by the Secretary of the Treasury.

On February 25, 1863, a further act was approved, entitled "An act to prevent correspondence with rebels" (12 Stat. L., 696). This act provided that if any citizen, without authority, and with intent to defeat the measures of the Government or weaken their efficacy, should have any written or verbal intercourse with the "rebel" government, or with any of its officers, or with anyone "acting or sympathizing" therewith, he might be, on conviction, punished by a fine not exceeding \$10,000, or imprisoned from six months to five years.

AUTHORITY TO USE ARMED FORCES.

Full authority, early in the war, was given by Congress to President Lincoln to use the armed forces of the country as he might think proper. As constitutional Commander in Chief of

the Army and Navy. It is probable he had such before, without legislation. The act of July 29, 1861 (12 Stat. L., 281-282), provides, in part:

That whenever, by reason of unlawful obstructions, combinations, or assemblages of persons, or rebellion against the authority of the Government of the United States, it shall become impracticable, in the judgment of the President of the United States, to enforce, by the ordinary course of judicial proceedings, the laws of the United States within any State or Territory of the United States, it shall be lawful for the President of the United States to call forth the militia of any or all the States of the Union, and to employ such parts of the land and naval forces of the United States as he may deem necessary to enforce the faithful execution of the laws of the United States, or to repress such rebellion in whatever State or Territory thereof the laws of the United States may be forcibly opposed, or the execution thereof forcibly obstructed.

Afterwards, by the act of July 17, 1862, it was provided that the militia from the various States might be called into the service by the President for any term not to exceed nine months, and that the President might make all necessary rules and regulations; the term "militia" in the act was defined to include all able-bodied males between the ages of 18 and 45 years. The quota was to be apportioned among the States according to "representative population."

Loans authorized.

REVENUE.

The matter of financing the Civil War was a serious one for the Government. But little income was obtained from imports at the customhouses because of the low-tariff policy. Manufacturing and industrial life had not been developed. The population of the whole country in 1860 was but 31,443,321, while 9,103,332 of this population was in the States that afterwards made up the Confederacy. The national debt on June 30, 1861, the close of the fiscal year, was \$90,867,828.68, while the Treasury balance was \$2,257,065.80. In addition, our credit was not of the best. It was, therefore, necessary to resort to every possible source of revenue. Following is a brief history of the legislation on this subject:

The first war-revenue act was passed at the first (special) session of the Thirty-seventh Congress, approved August 5, 1861 (12 Stat. L., 292-313).

It provides for the raising of war revenues:

First. By specific duties on certain imports.

Second. A direct tax of \$20,000,000 on the lands of the United States, apportioned among the States by the act.

Third. An income tax.

The income tax specified by the act was a tax of 3 per cent on the excess of annual income above \$800, from whatever source obtained, for residents. The tax upon income arising from United States securities was fixed at $1\frac{1}{2}$ per cent. Upon non-resident citizens the tax was fixed at 5 per cent, except that part derived from United States securities. The tax was retroactive, being assessed for the year preceding the time for assessing the tax.

At the second session an act was passed, "An act to increase the duties on tea, coffee, and sugar," approved December 24, 1861 (12 Stat. L., 330), laying duties on tea of 20 cents a pound, on coffee of \$0.05 a pound, and on sugar of from \$0.02 $\frac{1}{2}$ to \$0.08 per pound. On account of the difficulty in collecting revenues in the States in insurrection, on June 7, 1862, an act was approved entitled "An act for the collection of direct taxes in insurrectionary districts within the United States, and for other purposes," providing machinery for such collection.

The act of August 5, 1861, not raising sufficient revenue for war needs, on July 1, 1862, there was approved the second war-revenue bill, entitled "An act to provide internal revenue to support the Government and to pay interest on the public debt" (12 Stat. L., 432-489). Its principal taxing provisions were as follows:

First. Spirits, ale, beer, and porter, 20 cents per gallon.

Second. Licenses (annual): Bankers, wholesale dealers in liquors, theaters, \$100; wholesale dealers, pawnbrokers, distillers, brewers, brokers, commercial brokers, circuses, coal-oil distillers, \$50; rectifiers, land-warrant brokers, \$25; auctioneers, retail dealers in liquors, jugglers, \$20; retail dealers, eating houses, tobacconists, horse dealers, livery stable keepers, cattle brokers, tallow chandlers and soap makers, apothecaries, manufacturers, photographers, lawyers, physicians, surgeons, and dentists, claim agents, and patent agents, \$10; hotels, inns, and taverns, \$5 to \$200, graduated; bowling alleys and billiard rooms, \$5 for each alley or table; peddlers, \$5 to \$20; photographers, \$10 to \$25.

Third. Specific and ad valorem duties on goods, wares, and merchandise manufactured and sold.

Fourth. Tax of one-tenth of 1 per cent on gross amount of all auction sales.

Fifth. A direct tax on carriages, yachts, billiard tables, and plate.

Sixth. A tax on each head of live stock slaughtered for sale, 5 to 30 cents.

Seventh. Three per cent on railroad, steamboat, and ferry tickets.

Eighth. Three per cent interest on railroad bonds.

Ninth. Three per cent on bank and insurance company dividends.

Tenth. On all salaries of all officers or persons in the employ of the United States, including Members of Congress, 3 per cent on excess above \$600 per annum.

Eleventh. Advertisements, 3 per cent.

Twelfth. Income tax; 3 per cent between \$600 and \$10,000; 5 per cent between \$600 and any sum above \$10,000; 5 per cent on nonresident citizens.

Thirteenth. Stamp duties.

Fourteenth. Inheritance tax.

On July 14, 1862, an act was approved entitled "An act increasing, temporarily, the duties on imports, and for other purposes" (12 Stat. L., 543-561).

This act greatly increased the import duties on hundreds of articles enumerated, and was the real beginning of the high-tariff system in the country.

On July 16, 1862, an additional tax of 1 cent a pound on domestic sugar was imposed.

The act of March 3, 1863 (12 Stat. L., 709), provided for further increases by imposing duty of 1 per cent each half year, from and after April 1, 1863, upon the average amount of circulation of notes or bills as currency issued beyond certain amounts named in the act.

Also, on March 3, 1863, the war-revenue bill of July 1, 1862, was amended in various formal matters, and the following changes made:

First. By adding the following annual taxes on professions and callings: Architects and civil engineers, \$10; builders and contractors, \$25; owners of stallions and jacks, \$10; lottery-ticket dealers, \$100; insurance agents, \$10; butchers, \$10; retail dealers, \$10; wholesale dealers, \$25 to \$500, and \$250 for each \$1,000,000 over \$2,000,000 annually; wholesale dealers in liquor, same as wholesale dealers, supra; retail dealers in liquor, \$20.

Second. Additional duties on manufactured articles.

Third. Stamp taxes on lottery tickets.

Fourth. One per cent on accident insurance.

Fifth. Additional stamp taxes.

Sixth. Three per cent on interest on bonds of canal or turnpike companies.

Seventh. Increased taxes on earnings of ferry-boat companies and express companies.

On March 7, 1864, a further war-revenue act became effective. This act provided for a tax of 60 cents per gallon on distilled spirits.

It also provided for a tax of 2 cents per pound on all cotton produced or sold and removed for consumption. An additional import duty of 40 cents per gallon was imposed on distilled spirits. (13 Stat. L., 14-17.)

The act of June 30, 1864 (13 Stat. L., 202), furthered the system of the collection of revenues by largely increasing the import duties on certain specified articles. No doubt the most complete tariff schedules are incorporated within this bill of any enacted during the Civil War.

Again, on June 30, 1864, the war-revenue act was revised generally (13 Stat. L., 218-306). This act applied graduated taxes to business of banks, wholesale dealers and wholesale

liquor dealers, pawnbrokers, cattle brokers, hotels, peddlers; it also added a tax on the business of plumbers and gas fitters, assayers, and a general license fee on every business not otherwise specified where the annual receipts were in excess of \$1,000. This act also fixed a tax on many other manufactured or produced articles, including gas and mineral oils. It imposed a tax of $\frac{1}{2}$ of 1 per cent on amount of auction sales; on brokers new graduated taxes, and generally raised upwards all taxes formerly levied, including income and inheritance taxes and stamp taxes.

On April 29, 1864, by joint resolution, the import duties on all articles were increased 50 per cent for the period of 60 days.

A special income tax was also imposed by the resolution of July 4, 1864.

The revenue act was again amended March 3, 1865 (13 Stat. L., 469-487). This act increased the rates of taxes in many instances and laid some new taxes.

If there was any trade, business, profession, or individual not taxed by this act and the measures it amended I have been unable to identify it.

Additional import duties were also imposed by the act of March 3, 1865.

The following table shows the receipts and expenditures during the Civil War. Neither the receipts from loans nor the amounts paid out in redemption of such loans is included, and the years are the fiscal years ending June 30.

Year.	Receipts.	Expenditures.
1861.....	\$44,974,190.53	\$66,436,934.47
1862.....	51,935,720.76	474,744,778.16
1863.....	111,399,766.48	714,709,995.58
1864.....	260,632,718.08	865,234,087.86
1865.....	329,567,886.66	1,290,312,982.41

DRAFT ACT.

The draft act of the Civil War was approved March 3, 1863 (12 Stat. L., 731-737). It included in its operation all able-bodied male citizens between the ages of 20 and 45, and all persons of foreign birth who had declared their intention to become citizens. The following persons were exempt: The physically or mentally unfit; the Vice President; the United States judges; heads of the various executive departments of the Government and governors of States; only son of a widow dependent upon his labor for support; only son of aged or infirm dependent parent or parents; where there were two or more sons of aged or infirm parents subject to draft, the father or mother might elect one son; only brother of children not 12 years old, having neither father nor mother, dependent upon his labor for support; father of motherless dependent children under 12 years of age; where there are father and sons in the same family and household, and two of them in service, the rest, not exceeding two, are exempt.

The act provided for two classes, the first between the ages of 20 and 35 and unmarried persons above the age of 35 and under 45; the second class comprising all other persons subject to military duty. All of the first class must first be called before any of the second class was subject to call.

The President and Secretary of War were to make all necessary rules and regulations; the drafted soldiers were to serve for the balance of the war, and not to exceed three years. The President had the power to assign to each district the number of men to be raised, but in such a way as to "equalize the numbers among the districts of the various States," making proper allowance for volunteers and militia already furnished.

The act provided that the drafted man might furnish an acceptable substitute or might release himself from service by the payment of \$300.

In the Thirty-eighth Congress the draft act was amended by the act of February 24, 1864 (13 Stat. L., 6-11). This amendatory act provided:

That the President of the United States shall be authorized, whenever he shall deem it necessary, during the present war, to call for such number of men for the military service of the United States as the public exigencies may require.

It was further, in the second section of the act, provided that the quota of each ward, district, or county—

shall be, as nearly as possible, in proportion to the number of men resident therein liable to render military service, taking into account, as far as practicable, the number which has been previously furnished therefrom.

This act also provided that if the quota required was not furnished, then a draft should be made by the provost marshals for the required number. This amendment also provided for substitutes.

The exemptions were also changed, so that the act as amended exempted only the mentally and physically unfit, per-

sons actually in the military or naval service at the time of the draft, and all persons who have served two years during the present war and have been honorably discharged.

Persons of foreign birth were subject to the draft if they had ever voted at any election or had held any office of any kind in the United States.

THE COMMITTEE ON THE CONDUCT OF THE WAR.

On the 5th day of December, 1861, Senator Chandler, of Michigan, offered in the Senate the following resolution:

Resolved, That a committee of three be appointed to inquire into the disasters of Bull Run and Edwards Ferry, with power to send for persons and papers.

The resolution was, by unanimous consent, then taken up for consideration, and on the same day Mr. Grimes, of Iowa, offered the following substitute:

Resolved, etc., That a joint committee, to be composed of two Members of the Senate and three Members of the House of Representatives, be appointed to inquire into the causes of the disasters that have attended the public arms, with power to send for persons and papers.

The further consideration of the matter was postponed until December 9, when it was again taken up and discussed by the Senate. The appointment of the committee was supported in the debate by Senator Grimes, who cited a resolution for the appointment of a similar committee during the administration of George Washington to inquire into the causes of the disasters to the expedition of Gen. St. Clair into the Northwest in 1790.

Before the debate of the day was concluded, Mr. Grimes amended his resolution so that it read as follows:

Resolved, etc., That a joint committee of three Members of the Senate and four Members of the House of Representatives be appointed to inquire into the conduct of the present war, and that they have power to send for persons and papers and to sit during the sessions of either House of Congress.

It was also strongly supported by Senators Lane, of Kansas; Fessenden, of Maine; Sherman, of Ohio; and Wilson, of Massachusetts; and opposed by Senators Pomeroy, of Kansas; McDougall, of California; and Foster, of Connecticut. The remarks of Senators Sherman and Fessenden were particularly able and well considered. The substitute resolution of Mr. Grimes was adopted by a vote of 33 yeas and 3 nays, on December 10, 1861.

The resolution was concurred in by the House of Representatives without a word of debate or a dissenting vote. The principal debates on this subject are found on pages 29-32, Congressional Globe, volume 57.

Congress made three appropriations for the expenses of this committee during President Lincoln's administration, namely, August 5, 1861, \$10,000; January 27, 1862, \$10,000; and May 19, 1864, \$20,000.

The committee appointed consisted of Senators Benjamin F. Wade, of Ohio; Z. Chandler, of Michigan; and Andrew Johnson, of Tennessee; while from the House the members were Hon. Samuel N. Goode, of Massachusetts; Hon. John Covode, of Pennsylvania; Hon. George W. Julian, of Indiana; and Hon. Moses F. Odell, of New York. Senator Wade acted as chairman of the joint committee. The committee held its first meeting on December 20, 1861, and adjourned sine die on April 3, 1863. The committee made an extensive report of its labors.

SUBMARINES.

We are apt to think that the idea of the use of submarines in war is of recent origin. On July 4, 1864, the following act was approved.

An act making an appropriation for testing submarines.

Be it enacted, etc., That the sum of \$25,000 is hereby appropriated for the purpose of testing submarines, batteries, and other inventions, to be applied under the direction of the Secretary of the Navy * * *.

Selective Draft and My Opponent, Prof. Robsion.

EXTENSION OF REMARKS

OF

HON. CALEB POWERS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 6, 1913.

Mr. POWERS. Mr. Speaker, I was opposed to the selective-draft bill. It forced American citizens against their wills to fight in the trenches of foreign lands. I was in favor of giving the volunteer system a fair trial. I took the position that it was wrong to force those of our citizens to stay who wanted to go, and to force those to go who wanted to stay. But the selective-draft bill is now a law, and I shall gladly vote for the bill before us, a bill designed to force the foreign slackers in this

country to either flee or to fight—to get in or get out. It is a monstrous injustice to force our American boys into the war while alien slackers are here by the hundreds of thousands enjoying all the rights and privileges of American citizens without performing any of the obligations or duties of such citizenship.

ROBSON'S CHARGES ANSWERED.

I was opposed to getting into this war, but now that we are in it there is nothing left for this country to do but to fight it to a final finish—fight it until American rights and American safety are secure. I have never taken any other position at any time or place, and I know of no better time than now to answer some of the grave charges made against me by my opponent, Prof. Robson. Robson says in his public speeches that I have no influence in Congress, and "since Mr. Powers has taken his position against the Government, as he has, he will have even less influence, if this could be possible, in the future."

This is a grave charge that Prof. Robson has preferred against me. He charges me, in effect, with being a traitor to my country. I can not permit such charges to go unanswered; and since the arduous and important duties of Congress detain me here, and since I can not at this time answer him in person, as I would like to do, I take this method of placing myself right before my constituents and the country.

In just what way I have taken a "position against the Government" Prof. Robson has not so far pointed out.

He states in so many words that I was wrong because I was opposed to a declaration of war between the United States and Germany. I was against declaring war, and have no apologies to make for my position. I am ready to defend it whenever and wherever assailed. He says our country was "assaulted" and that "destruction threatened us." Robson then would have voted for war, although he studiously tries to conceal that fact from the voters whose suffrage he seeks. He says I was right in the city of Washington and did not raise my voice—"did not vote one way or the other." But he fails to tell the people that the vote did not take place until 3 o'clock at night and that I was sick at the home of Prof. Shaw in the State of Maryland—under treatment there at a sanitarium—10 miles away from the city of Washington, and was paired with another Member of Congress on the question of war.

In CONGRESSIONAL RECORD, April 5, 1917, is found this:

"Mr. CRISP, Mr. Speaker, my colleague, Mr. LEE, is sick. If he could have been present he would have voted 'yea.'"

In other words, I was against the declaration of war, and Mr. LEE of Georgia, the Member I was paired with, was for it. If we both had been present and voted our votes would have offset each other; and since we were paired our absence made no difference in the result.

It is not true, then, that I was in the city of Washington at the time the vote was taken, as Robson claims. Neither is it true, as he claims, that I agreed with Mr. LEE for neither of us to make a speech on the question. Mr. LEE will confirm these statements. Members of Congress have been pairing with each other on important public questions since the beginning of the Government. They are doing it now each day that Congress is in session. They have always done it. The law sanctions it. It must be right and proper else the system would long since have been abolished. Robson complains that I did not make a speech on the war at the time it was declared. I was too sick to do it, but in about six weeks thereafter, as soon as I was able, I did, letting my constituents know how I stood on the question, as was due them.

ROBSON SAYS I AM AGAINST THE GOVERNMENT.

In what way, pray tell me, have I been against the Government? The only so-called war measure I have voted against since war was declared was a revenue bill that sought to raise \$2,000,000,000 by direct taxation, which would average about \$20 to every man, woman, and child in the United States. On the 22d day of May, 1917, I made a speech against it on the floor of the House and among other things said:

It is proposed to raise this year by direct taxation nearly \$2,000,000,000 to meet the first year's expenses of the war. Since war has been declared and since we are now into it, I feel that it is my duty to support every reasonable measure for its successful prosecution, and I am sorry I can not see my way clear to support this bill.

I could not and did not vote for the selective-draft or conscription bill, and I can not vote for this one. I did vote, though, to increase the pay of the soldiers, who had to go to war, to \$30 per month, and that is not near enough. And I did vote, too, to permit Col. Roosevelt to take his army to France. This revenue bill proceeds upon the wrong principle. It undertakes to make the present generation bear the costs of the war. That is not right. If this war benefits anybody much in this country except munition makers, money lenders, the purchasers of foreign bonds, and a few others—and I do not object to them paying—it will be the people of future generations and not those living in the present one; and the people of future generations and not those of the

present one should be made to pay most of the money cost of this war.

Is it not enough for the present generation to do the fighting and suffer the pangs, heartaches, and hardships incident to this war? Is it not enough for the present generation to have its great industrial life disarranged, disorganized, and upset without taxing it to death to meet the expenses of the war as they are incurred? You can not kill the cow and still get the milk. You can not tax people out of business and still expect incomes from them. If a long time ago this Democratic administration had stopped the shipment of foodstuffs, arms, and ammunition to the allies, war might have been avoided, and certain it is that the food problem in this country would not be so grave and serious as it is to-day.

Long-time bonds ought to be issued and a protective tariff laid to get the money to carry on this war and meet most of its expenses. The future generations—those most likely to be benefited—could pay off the bonds without material hardships. The tariff is the time-honored way of the Republican Party for raising revenue. [Applause.]

This revenue law taxes nearly everybody and everything from wagons to pills. You can not even mail a letter without putting a 3-cent stamp on it. The Government has finally come around to my way of thinking and is now raising most of the money to carry on the war through bond issues. We have already had issued by the Government the first and second liberty-loan bonds, and in a short time now we are to have another issue. Others will follow.

My position that the money to carry on the war should be largely raised through the issue of Government bonds rather than by direct taxation has been vindicated. It is not right that the present generation should have to pay off all this immense war debt. The present generation is freezing and starving and fighting. The present generation is enduring all the pangs and pains and hardships and heartaches incident to this awful war. I think that is quite enough for the present generation, without driving it to the poorhouse. Because I do not agree with all the things done here, because I believe there is sometimes a better method of accomplishing the same result than the one proposed, and because I am not afraid to get up and say so, my opponent, Mr. Robson, at once concludes that I am "against the Government"; and he says in his public speeches that he "is for our country and against the Kaiser," and tries to leave the impression that I am against our country and for the Kaiser; else why should he prate about his own loyalty as an argument to succeed me in Congress?

I do not need to protest my loyalty to my own country. I believe in the principles of the toast of the naval officer, when he said: "My country, may she ever be right; but my country, right or wrong." The position I have taken and the votes I have cast since the war began are ample proof that my loyalty is no doubt quite as great and equally as genuine as that of my distinguished opponent. I have not voted for every measure that the Democratic Party has stuck up under my nose, nor do I intend to. My loyalty is to my country and not a Democratic President or the Democratic Party.

Can not a Member of Congress, the people's Representative, have some views of his own as to what is best for our common country in the crisis that confronts it without being dubbed a traitor by some candidate anxious to succeed him?

Is it the purpose of Prof. Robson to be a "rubber-stamp Congressman" and to proceed to do what a Democratic President tells him? Would he be a patriot if he did and a traitor if he did not? Would he have the courage of his convictions if he were here? He criticizes me because I have got the courage of mine. Does the life of Prof. Robson prove that he will stand by principle any longer than I will or that he is willing to sacrifice more for it?

Instead of my opposition to the declaration of war being an act of disloyalty to my Government and country, I submit that it was the highest and best proof of my interest in it and loyalty for it. Is a man any less a patriot because he is more interested in the welfare and well-being of the people of his own country than in those of other countries 3,000 miles away? It is an easy thing to do to hurl the charge of traitor. A distinguished Senator at the other end of the Capital—a dyed-in-the-wool Democrat—denounced as a traitor on the floor of the Senate, a few days ago, the foremost champion of preparedness and the people's rights in all this country, Theodore Roosevelt. He said that "Roosevelt had been a menace and obstruction to the successful prosecution of the war" and that he—Roosevelt—"was the most potent agent the Kaiser had in America," and that he ought to be prosecuted as a traitor to his country.

On December 7, 1917, I said in a speech on the floor of this House that "the people demand publicity and truth about this war." Does my alleged disloyalty consist in that?

On January 18, 1918, Col. Roosevelt said in an editorial in the Kansas City Star:

Let us insist that the truth be told. The truth only harms weaklings. The American people wish the truth.

And for expressions such as these Col. Roosevelt is denounced as the "agent of the Kaiser." I agree with Col. Roosevelt that the American people are entitled to know the truth, and if that is disloyalty let my opponent make the most of it.

ROBSION'S PLATFORM.

Robson says that he is for nation-wide prohibition, more stringent immigration laws, Federal aid for roads and public buildings, Federal aid for rivers where necessary, the extension of rural routes, and for better pay for sailors and soldiers, their widows and orphans. Why does Prof. Robson cite these things as an argument to succeed me in Congress? I have stood and spoken and worked and voted for all these things and the records of Congress so show. My speeches on these subjects have been read in every State in this Union. My speeches on parts of these subjects, especially on the restriction of immigration, have been chosen and sent out by the thousands, especially by farmer and labor organizations. It was an unusual compliment they paid me; but if they had regarded the speeches of other Members of Congress better than mine theirs, not mine, would have been selected for distribution. Does Robson propose to try to succeed me in Congress by merely following in my footsteps? What does he propose to do that I have not done? He ought to tell the people just what it is and just how it will help them, and how he proposes to do it.

CONGRESSMEN'S SALARIES NOT EXEMPT FROM INCOME TAX.

The Commissioner of Internal Revenue has recently made a ruling that the salaries of Members of Congress have never been exempted from paying an income tax by any law ever passed by Congress, although Robson says that I voted to exempt my own salary of \$7,500 a year from any tax to carry on the war. There is not a word of truth in Robson's statement. Upon the contrary, I voted to tax my salary. My vote is of record. My statement explaining the law is of record. So clearly did I make it that the gentleman from Oklahoma, Congressman McClintic, has with my permission sent to his district 30,000 copies of the statement I made. He paid me the compliment to say that it was the most lucid explanation of the law he had yet seen by any Member of Congress. And yet my enemies say that nobody pays any attention to me here.

THE CONSCRIPTION BILL.

Robson says I did not vote to conscript our boys and have them carried across the ocean to fight in the trenches of France and other countries. No; I did not. I have no apologies to make for voting against conscription.

ROBSION SAYS I AM WITHOUT INFLUENCE IN CONGRESS.

Prof. Robson charges that I am without influence in Washington "not only with the Democrats, but with the Republicans likewise," and that he expects "to make friends both North and South." "I am going to make friends with the Democrats," he says. In other words, he expects to try to stand in with the Democrats and the Democratic administration. If it is the idea of the Republicans of the eleventh district to send a man to Congress who will stand in with the Democrats and have influence with a Democratic administration, I submit that the thing to do to accomplish that result would be to elect an out-and-out Democrat. Naturally a Democratic Congressman would have more influence with a Democratic administration than a Republican Congressman. Carried to its logical conclusion, the argument of Prof. Robson means that and nothing more.

If I do not mistake the temper and wishes of the Republicans of the eleventh district, they want to send a man to Congress who is a Republican, a man who will stand up for the principles of the Republican Party, a man who will help redeem the country from the awful blunders, fearful and expensive mistakes, of Democracy, and put back into power the party of Lincoln and Grant. If I judge them aright, the Republicans of the eleventh district want to send a man to Congress who will truly and honestly uphold and defend their best interests as he sees it, and who will perform the onerous daily duties of a Member, duties that the public never hears about, to the limit of his strength and to the best of his ability.

CHARGE ANSWERED THAT I HAVE NO INFLUENCE.

The Republican Members of the House of Representatives, my associates, and the Republican Members of the United States Senate have answered the charge that I am without recognition and influence by unanimously electing me but a few days ago a member of the Republican national congressional campaign committee to represent the State of Kentucky. The Louisville Herald, in speaking of this committee, said:

This organization will direct the campaign activities in all the congressional districts in the United States, in an effort to wrest the political control of the House at the polls next November.

If I were not regarded as being capable of performing this great service to our party and the country, I would not have received such recognition.

MY SPEECHES HAVE BEEN SENT OUT BY PARTY LEADERS.

Speeches I have made on the floor of the House have been sent out broadcast over the country by the Republican national congressional campaign committee, the Republican national campaign committee, and others, an honor paid to but few Members of Congress.

Col. Roosevelt said of one of them in a letter to me dated August 17, 1916:

MY DEAR MR. POWERS: I have just seen your speech "Woodrow Meets Wilson Coming Back." It is capital, and I shall use some of it in a speech I am about to make.

Faithfully, yours,

THEODORE ROOSEVELT.

Such an indorsement from such a man as Roosevelt is an honor of which I shall always be proud. Other national leaders have as warmly praised other speeches of mine.

DISTRICT REPUBLICANS HAVE INDORSED MY COURSE.

The Republicans of the eleventh district in convention assembled at London, Ky., a few days prior to the holding of the national Republican convention in Chicago, 1916, at which Justice Hughes was nominated for President, passed with but one dissenting voice the following resolutions offered by Hon. S. H. Kash, of Corbin, Ky.:

Resolved, That the Republicans of the eleventh district of Kentucky hereby most heartily indorse the course of our able and distinguished Member of Congress, Hon. CALEB POWERS, and assure him of our appreciation of the ability with which he has represented this district in the American Congress.

Prof. Robson, my opponent, was a delegate to this convention and failed to vote against these resolutions.

THE NEXT HOUSE TO BE REPUBLICAN.

The next House is most certain to be Republican. When I entered the Sixty-second Congress there were 228 Democrats in the House and 162 Republicans. In the Sixty-third Congress there were 291 Democrats and 127 Republicans. This was the result of the 1912 election, when our party split. In the Sixty-fourth Congress, the result of the 1914 election, there were 228 Democrats in the House and 198 Republicans. In the present, or Sixty-fifth Congress, the result of the 1916 election, there are 214 Democrats and 214 Republicans, and 7 independents. The Republicans have every reason to believe that they will control the next House. Senator PENROSE says we will have 100 majority in the next House. In the event we control it, I will be made chairman of the great Committee on Education.

I am now the ranking Republican member on that committee. I will be close to the chairmanship, if I do not get it, of the great and powerful Committee on Immigration and Naturalization.

If Prof. Robson should be elected, he will have to take his place, along with other new Members, at the bottom of these or other committees. It would be Robson and not me who would be without influence here, since it is the chairman and the high ranking members of the big committees who really frame and pass the legislation in Congress.

BUT THEY SAY I HAVE DONE NOTHING.

Prof. Robson says that "conditions are such that Mr. Powers can never do in Congress what some other man of equal ability might do."

What he means to say is that I have been charged by the Kentucky Democrats with the killing of Senator Goebel; that they all hate and despise me; that he stands well with them; and that the Republicans of the eleventh district ought to send a man to Congress who stands well with the Kentucky Democrats and the Democrats generally.

I have no doubt but that Prof. Robson is a good deal more popular with the Kentucky Democrats than I am. It has been my pleasure to fight them and not to try to curry favor with them.

Although Prof. Robson and myself are competing for the Republican nomination for Congress in a Republican primary, and although it is no fight of the Democrats, they can not keep out of it to save their lives.

The Winchester Democrat, as mean a little Democratic newspaper as there is published in Kentucky, has come out strong for Prof. Robson.

It says that I am a mere "figurehead" in Congress and that—

Judge Robson received his first boost a few days ago in the Louisville Times, which stated a boom had been started with the view of

getting him in the race, which, it is believed, would prove the undoing of Powers and put a man in the eleventh congressional seat who could command the respect of his colleagues in Congress.

If there is a meaner Democratic newspaper in Kentucky than the Winchester Democrat, it is the Louisville Times. The Louisville Times says that "Judge Robsion has been picked to take the measure of CALEB POWERS."

The Winchester Democrat says the Times picked him. Prof. Robsion's boom has started from pretty bad quarters.

The Richmond Register, the Midway Clipper, the Bowling Green Journal, and other Democratic papers are doing all they can to help Prof. Robsion's cause along. I want to remind Prof. Robsion and the Kentucky Democrats generally that the eleventh district is Republican, and that the Republicans of that great district are quite competent to run their own party affairs without Democratic dictation, either from the Democratic press of the State or the local Democrats in the eleventh district. My defeat would be a Democratic victory.

ROBSION PROMISES IN GENERAL TERMS TO DO WONDERS FOR THE DISTRICT.

The people are entitled to know in advance just what Prof. Robsion proposes to do. Let him tell the people the exact things he would have accomplished that I have failed to accomplish. The people have a right to know. They have a right to know also just what votes he would have cast different from those I have cast, and in just what way the votes he would have cast would have been better for the people of the eleventh district and the country generally than those I have cast. Get down to brass tacks, Professor, and stop your generalities. The people are tired of platitudes.

We have had many gifted men in Congress from the eleventh Kentucky district. There was the indomitable David G. Colson, the resourceful John D. White, the popular John Henry Wilson, the sturdy Don C. Edwards, the capable Dr. W. Godfrey Hunter, the tireless and intelligent Vincent Boreing, and many other illustrious sons. No doubt they performed faithfully and to the best of their ability the many pressing duties that fell to their daily lots. It would be difficult for them to point out—were they all alive—it would be difficult for the people of the district to point out just what services each of these men rendered the district generally, and yet most, if not all, of them served in Republican Congresses. I had to look up my records to find out that I have secured, including increases, over 300 pensions since I have been here, by special act and through the Pension Department. It is easy to ask "What has he done?" It is easy to say that "he has done nothing." It is often difficult to do better.

The late Senator William O. Bradley occupied for many years a seat in the United States Senate. Neither his ability nor his industry was questioned by those who knew him. Like the rest of us in Congress now, he was handicapped by a Democratic administration. Does Prof. Robsion surpass all these men in ability? Does he expect to surpass them in accomplishment? Should the professor ever reach the Halls of Congress he will find out, what he does not seem to know now, that no one man can turn the world upside down.

Instead of putting in all his time criticizing me for the things I have failed to do—you know he might have done worse—let him tell the people just the things he proposes to do for them and just how he means to do it. The people would really be interested in that. It is not enough just to "do something." A man has "done something" when he has set his neighbor's barn or house on fire. Opposing the wrong and injurious things and doing the right and helpful ones are the ones that count. It is not every law passed that is a good one. If Robsion can not be nominated on his own merit and the things he proposes to do, he ought not to be nominated. He is asking the people to swap horses without showing them the kind or quality of horse he urges them to trade for. The people will have to be shown whether it is better for them to send a rich banker to Congress—yes, the president of a bank—than to keep in Congress a man who is one of them and who has always faithfully stood by their interests.

BUT ROBSION SAYS I AM RICH.

Well, I am willing to trade my riches for his and pay him many thousand dollars to boot. With his riches I will be able to do that.

If riches incapacitate a man from holding a seat in Congress, Robsion can never occupy it. If riches were a crime, they would send the professor up for life. He is president of a big bank, president of a coal company, and owns stock in many corporations. He has thousands of dollars of cash on hand. He has certainly got the "kale seed."

Robsion says that Dr. Bennett and myself recently bought \$96,000 worth of coal land in Harlan County, and he tries to make it appear that I own half of it. The land did not cost \$96,000, nor did Dr. Bennett and myself buy it alone. I own but one-sixth of it. My brother-in-law, A. J. Croley, owns one-sixth. I own only 157 acres. I borrowed the money from the Union Trust Co. and the National Capital Bank, both of Washington, to make the first payment on my part of the land. There are two other payments yet to be made. Robsion says that my brother-in-law, A. J. Croley, and myself have leased our part for \$96 per day and that we will make that much per day out of the property. That would be about \$35,000 per year. Croley and myself will give Robsion \$30,000 per year to make good his statement. The professor can now put up or hush up.

Robsion says I own "a half interest in a big coal operation down in Whitley County." I own a one-fourth interest, and my wife owns a fourth, in 400 acres of land down there, 200 of which was once underlaid with the Jellico seam of coal. It is nearly mined out now, and I will trade my entire interest in all the property I own in Whitley County for one-twentieth of what Robsion is worth.

Robsion says I own 14,000 acres of coal land in Knox County, Ky., and that I have it "in another man's name." I will give the Professor 14,802½ acres of coal lands in Knox County to make good his statement. Get busy, Professor; you have a chance to make a lot more money now. Of course, you do not need it, but you might give it to some of your "poor relations," of whom you talk so much. The question of my alleged riches is an old subject. I am sorry I am not worth all my enemies say I am. My real friends also regret it. They would be glad to see me in affluent circumstances. During my first race there was a lawyer on the stump charging that I had given to Judge Flem D. Sampson, my law partner, all the money to buy up all the property—the mineral rights in Knox and Clay Counties—purchased by Sampson, and at the same time this same lawyer had in his inside coat pocket a suit he had drawn up charging Sampson with having "skinned" the R. O. Campbell Coal Co. and R. O. Campbell out of the money; and after my race was over this suit was filed against Sampson in one of the courts there in London, Ky. Robsion, too, is an able lawyer and is quite capable of concealing all the facts injurious to his cause. It will not take the people long to find out that Robsion is meanly unfair in all his speeches.

Let me give the Professor and my enemies a few facts for their consideration, and if I am not telling the truth let them expose me. About the time I was first elected to Congress I owed, among others, the following sums of money, as I now recall them:

To the First National Bank of Barboursville, Ky. (Robsion's bank)	\$3,900
To Mrs. Sarah A. Bonham, Williamsburg, Ky.	4,000
To E. M. Bonham, York, Pa.	13,000
To Judge J. D. Black, Barboursville (borrowed by Dr. Bennett)	2,500
To Whitley National Bank, Corbin, Ky.	2,500
To A. R. Bennett, Gatlin, Ky.	1,500
To Judge R. C. Browning, Williamsburg, Ky.	1,000
To Mr. Jim Croley, Williamsburg, Ky.	1,000
To a bank in Louisville (borrowed by Dr. Bennett for me)	2,500
To Mrs. J. W. Williams, Corbin, Ky.	1,000
To Hon. Charles Finley, Williamsburg, Ky. (interest and principal)	830
To R. Tye, Jellico, Tenn.	1,250
To Mr. F. M. Stanaford, Williamsburg, Ky.	2,500
To Mrs. M. E. Cole, Barboursville.	2,000
To Dr. Samuel Bennett (my cousin), Middlesboro, Ky.	8,500

This makes a sum total of about \$40,000, besides a few other debts I do not now recall. The faith that my creditors had that I would make and pay this money is all they had to look to. The interest on the money I owed amounted to about \$7 per day.

On April 11, 1911, I wrote this note to Mr. Robert Cole, of Barboursville, the banking partner of Prof. Robsion:

I am in receipt of your communication to the effect that my note for \$3,900 at your bank is due April 17. Inclosed find a note for renewal. From now on I will use every cent of money I get for the purpose of paying off my debts.

My canceled checks will show that the bulk of the salary I received for years went toward the payment of my honest debts. Robsion knows this, because many of them went through the bank of which he is president. My friends believed in me and backed me with their money, and I would be a scoundrel of the deepest dye if I did not pay off as rapidly as I could every honest debt I owe. This I have done. I have felt all along that my first obligations were to pay off my honest debts. I have therefore not been able to contribute to many worthy causes as I would like to have done. I thought it better to be "just" than "generous." But notwithstanding the fact that I still owe over \$12,000, notwithstanding the fact that I have been

"sweating blood" to get out from under a mountain of debts and get hold of a little property, which I have done, the fact remains that I have helped as many worthy causes as I felt that I could, the circumstances all considered.

ROBSON'S CHARGES ANSWERED.

Robson says, "Mr. Powers would not help a church." Ask the Baptist Church at Barbourville, Ky., whether or not I have helped it. Ask the Baptist Church on Big Brush Creek, in Knox County, Ky., whether or not I have helped it. Ask the Locust Grove Christian Church, in Laurel County, Ky., whether or not I have helped it. Ask the church near Mr. Marsh Gregory's, in Laurel County, Ky., whether or not I have helped it. Ask other churches if I have not helped them. Robson says, "Mr. Powers would not help a school." He can find out from the Baptist school right there in his own town whether or not I have helped it.

Robson says, "Mr. Powers would not give to the Red Cross." That is where the Professor is wrong again. I am a member of the American Red Cross. I believe in that great movement. I indorse the work it is doing. I have helped it financially.

Robson says, "Mr. Powers would not buy a liberty bond." Robson either ignorantly lies about it or willfully misstates the facts. I subscribed for a liberty bond many months ago—before Robson became a candidate—and I now have that bond in my possession.

Robson says that Dr. W. C. Black, of Barbourville, Ky., who is against me, appealed to me to make a speech at one of the churches in Barbourville to help raise some funds for war relief work, and that I refused to do it. Robson's statement is not true. I did not refuse, although the program had already been made out and printed with the names of the speakers announced, as I remember it, before I was asked anything about it. Notwithstanding this, I told Dr. Black I would make the speech if I were in the town at the time but thought I would have to be in Corbin that Sunday night, which I was. I was at the Wilbur Hotel, as I remember it. Neither did Dr. Black or Prof. Robson ask me to give anything to the Red Cross. Robson says I would not give anything to the Young Men's Christian Association. That statement is not true. I have, and more than once.

Robson says that I concede that he will carry the upper end of the district. I do not concede that he will carry a single county in it—not one.

Robson said in his speech at Somerset: "We need Federal aid for our roads, and you ought to have rural mail routes running through every part of Pulaski County. You go to JOHN LANGLEY's district and he has them everywhere, but you can not get anything if Mr. Powers remains there."

I will let the Fourth Assistant Postmaster General answer Mr. Robson on that question. The following is a letter I have just received from him:

POST OFFICE DEPARTMENT,
FOURTH ASSISTANT POSTMASTER GENERAL,
Washington, February 14, 1913.

HON. CALLE POWERS,
House of Representatives.

MY DEAR MR. POWERS: In response to your personal inquiry as to the number of rural routes in operation in the tenth and eleventh congressional districts of Kentucky, in the various counties thereof, I beg to state that there are no rural routes in operation in the tenth district, but that in the eleventh district the routes in operation are as follows:

Cumberland County	1
Laurel County	2
Monroe County	4
Pulaski County	4
Whitley County	3
Total	14

Sincerely yours,

JAB. S. BLAKELEY,
Fourth Assistant Postmaster General.

Congressman JOHN W. LANGLEY represents the tenth district and I represent the eleventh. LANGLEY is an efficient and faithful Member of Congress, but has no rural routes in his district.

With such exposure as this, how does Mr. Robson expect the people to put any confidence in what he says? The people are already inquiring: "What do you know about this new 'star witness,' Robson, who has always been for POWERS and who has recently turned up against him?" Robson has got to learn what he does not now know, that a man in public life has got to deal honestly, fairly, and frankly with the public.

Robson says that if he is elected and the Democrats should turn their backs on him, that they will thereby have turned their backs "on the splendid people of this great district."

The Democratic Members of Congress from Kentucky turned their backs on me by refusing to be sworn in with me when I

first came to Congress—I have refused to be sworn in with them ever since—and their Democratic constituents have indorsed that insult to me and to the Republicans of the eleventh district by reelecting them and by still keeping them in office. The Republicans of the eleventh district ought to resent that insult to them and to me, and I am willing to leave it to their sense of justice whether or not I be kept here, if I desire to stay, as long as there is a single Kentucky Democrat here that has insulted us both.

Robson says I turned my back on the mountain women and married a German. That is not true, but even if I had, what right has Robson got to complain? He is not even a mountain man, but an imported Ohloan. He is not one of us. Surely the 11th district has enough native ability of its own to represent it in Congress. I have been married twice, married to two good American girls; both they and their parents were born and reared in this country. My first marriage was to Miss Laura Rawlings, of Clay County, Ky., in the eleventh district. My second marriage was to Miss Anna Dorothy Kaufman, of Newport, Ky. The right sort of a man never asks what school district, county, State, or nation she is from when he finds the one he wants. My present wife is a member of the American Red Cross and the women's section of the Navy League and has been since war was declared. She is doing her bit toward winning it.

Robson says: "The law provides that a Congressman shall have a secretary drawing \$1,500 a year, and Mr. POWERS has worked that around and has his wife drawing that \$1,500." The law provides nothing of the sort. It does provide that a Congressman shall be allowed a certain sum for "clerk hire," the money to be used in hiring done the clerical work of the office. I am proud to say that my wife has not been too proud or too good to do such work, and that she has made a faithful and efficient hand. She has been paid for it, as was her due, along with other help I have had in the office. I honor Mrs. Robson because she has never been too good to lend a helping hand.

Robson says that "Jim Buck McKeehan carried Mr. POWERS's home precinct two to one." Mr. Robson misstates the facts and fails to tell the people that I carried Knox County and every county in the district over Mr. McKeehan, and that I defeated him by over 11,000 majority. Mr. Robson fails to tell the people that I have run 14 races in Knox County, 13 times with opposition, and that I have never lost the county in my life. Robson will soon have a chance to know how much I beat him there.

Robson criticizes my clothes and says I do not "dress up" when I go over the district; that I actually wear pants with "holes" in them, and "patches" on them where there are no holes. I have never worn any patches where there were no holes. It has been all I could do to have patches where there were holes. Of course, I could not dress up like Prof. Robson—he is a rich banker—but my clothes, I hope, have been fairly respectable. I have tried to be what I am, a plain citizen.

Robson says I am a millstone around the neck of the Republican Party. The Republicans of the eleventh district have already answered that charge by giving me about 10,000 majority in all the races I have ever run, both in primaries and general elections and by running me 4,000 votes ahead of the Republican national ticket in 1912.

Robson says eight years in office compensates me for over eight years in jail, even though my life was in the balance during the whole of that time. I submit that a man with such a monstrous idea of justice can not be trusted to deal fairly between man and man.

Robson says: "I have supported Mr. POWERS more than 20 years." The editor of the Mountain Advocate says the same thing. They both have lived right there in the same town with me, and it has taken them a long time to find out that I am not a faithful and efficient public servant, not a fit man to hold a public office.

ROBSON AND THE COUNTRY PEOPLE.

Robson criticizes me for making speeches in the country last fall and not making any in the cities and towns. He has said in his speeches that I was afraid to make speeches on the war in the cities and towns where the people read and were enlightened and that I went to the country schoolhouses among the ignorant people. He said in his speech at Manchester that it was only the ignorant people who lived in the country and on the branches and did not read the newspapers and were not enlightened that were for me; that when you come to town where the people read and were enlightened and knew what they were doing, they were all for him. He said he met a little cymbing-headed fellow and asked him to vote for him, to which the little cymbing-headed fellow, carrying a head no bigger than

his fist, responded to him that he was for POWERS, and that he, Robsion, persisted in his supporting him, saying to him that it was only the ignorant people who were for POWERS, to which the little cymbaling-headed fellow responded: "That might be true, but there is enough of us damn fools up the branches to elect him." Robsion, since seeing his awful blunder, is now trying to tell this story in a different way.

Robsion lives in town and has not been in the country much for years. When he comes to know the country people better, he will realize that they are just as intelligent, just as well read, and just as good citizens as those living in the cities and towns. I was born and reared in the country. The country people have always been for me. I have always been their friend. A lot of town fellows at Barbourville got up a set of resolutions indorsing Robsion. Robsion had these resolutions printed at his expense in the various newspapers in the district. When you see newspaper articles boosting Robsion, you may know that they have been written by Robsion and their publication paid for with his cash. Resolutions gotten up for Robsion by city folks may help to account for his partiality for the folks living in the cities and towns. I have nothing against the people living in the cities and towns, but I like the country people just as well, and feel just as much at home with them.

POWERS AND THE PROGRESSIVE PARTY.

Robsion says that in 1912 I wanted to quit the Republican Party and join the Progressives; that I wanted to throw up the Republican nomination and be nominated by the Progressive convention that met at Corbin, Ky., on Thursday, August 1. It will be remembered that I was not the nominee of the Republican Party for Congress on Thursday, August 1, 1912, when the Progressives named Mr. H. H. Seavy, of Corbin, Ky., as their nominee. I was nominated on the following Saturday, August 3, in a primary election. I never dreamed of quitting the Republican Party and joining the Progressives, but I was very anxious to receive the Progressive nomination along with the Republican nomination. I knew it would be better for me and better for the Republican Party if I could get them both.

Often men are nominated by more than one party. There is a Member of this House now, Congressman CHARLES H. RANDALL, of California, who was nominated by the Prohibitionists, the Democrats, and the Republicans—each political party gave him its nomination—and in 1912 many Members of the House were nominated both by the Republican and the Progressive Parties. I doubted the wisdom of letting the Republicans nominate me in 1912 unless I could also get the Progressive nomination, because I did not see how I could possibly win. How I could defeat an opponent running on a presidential ticket—the Roosevelt ticket—that was five or more times as strong as the ticket I was to run on—the Taft ticket—I could not figure out. I did not want to be wrecked upon the rocks of defeat by a current and for causes for which I was in no sense responsible.

I had a meeting of some friends at Corbin, Ky.—Hon Charles Finley was among them—and it was there decided that I would be defeated, but that I should make the sacrifice for the Republicans by accepting the nomination, and making the best fight in my power for the Republican Party and its principles. And as soon as I was nominated on August 3, I gave out on that day a statement for publication and, among other things, said:

There are good Republicans and good men scattered over the district taking the position that President Taft stole his nomination, and that no honest man should uphold it, and that it is our duty as self-respecting citizens to leave the Republican Party and form a new political organization distinct from and independent of the Republican Party, and which in the future will fight the Republican Party as we are now fighting the Democratic Party. Suppose President Taft did steal his nomination at Chicago—and that is for him to explain and defend, not me—does that justify the formation of a new political party that will be fighting the Republican Party in the future as we are now fighting the Democratic Party? If for any reason we do not approve of the things done by the pastor of our church, should we forsake our faith and destroy the church and join some other creed? Ought the great Republican Party be doomed and damned because of what a few of its members have done? If Col. Roosevelt leaves the Republican Party and turns upon and tries to destroy it, I can not, as much as I admire Col. Roosevelt, join with him in that course.

This shows what kind of a Republican I am and what I was willing to sacrifice for the Republican Party. I think my past life and the things I have gone through are proof enough of my party loyalty. But if I had done all that Robsion claims, should that defeat me? Is he going to be against Col. Roosevelt for the next Republican nomination for President? To be consistent, he will have to be. Roosevelt's friends should be on their guard.

Robsion says that I went over the district last fall making antiwar speeches. In announcing my candidacy I made this statement, which fully answers Prof. Robsion on this point:

I represented and cast the votes of the people of the district I have the honor to represent on questions of the most vital import to them—on questions that seriously affect the peace of their firesides and the

happiness of their homes. There are those who would deprive me the right to tell and the people the right to know how and why I have stood and voted on the people's dearest rights and most sacred privileges. The people have a right to know whether I discharged faithfully and well the trust they reposed in me. I have the right to give an account of my stewardship. The man who would deprive either of us that right is an enemy to us both and a traitor to the welfare of his country.

ROBSION AND THE POOR MAN.

Robsion said in his speech at Somerset:

No man who has had his leg cut off or his arm broken, no widow who ever came into court to seek redress for her husband being killed in the mine or on the railroad ever had me to meet as a lawyer to fight.

Ask Perry Broughton, of Knox County, about the truth of that statement. Ask Thomas Broughton, of the same county, if Robsion did not represent the Smith-Riley Coal Co. in the suit Broughton instituted against that company. Ask William Johnson if Robsion did not represent the Dean Jellico Coal Co. against him. Ask Walter Hembree, administrator, who lives in Knox County, if Robsion did not represent the Trosper Coal Co. against him. Ask divers others. But suppose Robsion never had represented a company or corporation, but had always represented the injured, the unfortunate, the maimed, the widowed, and the wounded against these big corporations, in many of which he holds stock. To what great credit is he then entitled? Was not he doing it for the good of Robsion rather than for the good of those he represented? Robsion has represented many of these, but ask him, ask his neighbors, ask the lawyers around the courts in Knox and surrounding counties if a large part of Robsion's large fortune was not made out of these damage suits by charging these unfortunates, whose ardent friend he now claims to be, large fees and not infrequently a sum equal to half of the amount recovered. Did not these folks befriend Robsion, rather than he them, in getting rich off of them? What obligation are the miners under to Robsion, whose fortune largely resulted from their misfortune?

Ever since I have been in Congress, as well as before, I have stood for the interest of labor, the cause of the poor man. No vote have I ever cast against him. Let them search my record and satisfy themselves. My salary would have been the same whether I was for or against the interests of the struggling millions, for the masses or the classes.

I am not afraid to risk the poor man and his sense of fairness. I am not afraid that he will turn his back upon his friend. I am not afraid to trust the gratitude of him whose interests I have faithfully tried to serve.

POWERS WOULD EXEMPT FARMERS AND MINERS FROM MILITARY SERVICE.

On the 15th day of January this year I introduced a bill in Congress "to exempt persons engaged in agriculture and coal mining from military service." In his speech at Somerset Robsion said that I was just "playing politics" and trying "to deceive the people," it was a "foolish bill," and that he was against it. He is strong against it. He says "it is striking at the very heart and life of this country." I am quoting his exact words. He and I then join issue upon an important public question. I stand for one thing, and he stands for another. I will vote one way if I get a chance, he another were he here in my stead. I will go still further and say that there are others than farmers and miners who ought to be exempted and who can do more for the welfare of our country on this side of the waters than they can across the seas. That ought to be the real test—where and how can the welfare of our own country be best served?

It has been wisely said that there is a "food crisis" in this country, and that the "food problem is the greatest of the war."

Notwithstanding the efforts at food conservation, the fact remains, according to the testimony of Mr. Hoover himself, that food consumption has been greater in this country since the war began than it was before. The further fact remains that the United States is buying about \$160,000,000 worth of foodstuffs each month for the allies alone.

The president of Cornell University recently said in a speech that this Nation "is confronted with the dangers of starvation in the next 12 months," and that—

Of all the great problems of this colossal world war the food problem is now the most important. Man power can be raised by conscription up to the point of exhaustion. The allied lines, from the North Sea to Switzerland, are piled high with munitions which the output of French, British, and American factories is constantly augmenting. But everywhere the supply of food is limited, and beyond a very narrow margin you see the edge of an inferno of starving nations. Yet no problem of the war is so much misunderstood.

The simple question is this: Can we keep our own and our allied soldiers and civil population from starvation? It is not a question of price. It is solely a question of supply.

All he says about food is true. As he says, it is a question of supply; and how can we have the supply with our farmer boys going and gone to the war? How can those of us who are left

at home live without food? How can the war be won without it? Food and coal are the biggest factors in the war. There is an alarming shortage of both.

On January 15 I introduced my bill to exempt farmers and miners from military service. Seven days after that, on January 22, Congressman DENT, chairman of the Military Affairs Committee, realizing the importance of food in the prosecution of the war, introduced a resolution—and that resolution has been favorably reported to the House by his committee—authorizing the "Secretary of War to grant furloughs to enlisted men of the Army to engage in civil occupations and pursuits."

This resolution was prepared by no less a personage than Hon. Newton D. Baker, Secretary of War, who, in transmitting it to the chairman of the Military Affairs Committee, said:

The main purpose for which it is intended to use this authority is to furlough soldiers in the National Army during harvest and planting time, to enable them to assist in the agricultural production of the country.

So there are others besides myself, Prof. Robsion notwithstanding, who realize the importance of having our soldier-farmer boys recalled to the work of the farm, as well as in keeping on the farm the boys not yet conscripted.

THE MINERS.

And it is just as important to keep the miner boys on the job here as it is the farmer boys.

On August 1, 1917, I made a speech on the floor of this House, and, among other things, said:

Let me read to you part of the Federal Trade Commission's report of a few days ago:

"All the nations at war have relieved coal miners from military duty, urging that their greatest service to the State can be performed by remaining at their regular employment."

Let me pause long enough to say the nations at war, whether on the side of the allies or whether on the side of the central powers—all the countries engaged in the war—if the report of the Federal Trade Commission can be relied upon, have relieved from military duty the coal miners of those various countries. But the attitude of this Government toward the coal miners of our country is upon an entirely different footing. In other words, they are not relieved from military duty under the conscript law passed by this Congress over my protest some time ago. The ranks of the miners are already being seriously depleted by the lack of steady employment, by big wages paid in munition plants and other employments; and now you propose to further deplete them, contrary to the policy and experience of every other country engaged in the war, by sending them to the front to shoot and be shot at. Let me read you further what the Federal Trade Commission says about this:

"Already in this country the ranks of the miners are being seriously depleted by enlistment."

Congress would not listen. It experimented in fixing the price of coal through the President. It deliberately conscripted our coal miners and sent them to the war. As a result of it the prosecution of the war has tremendously suffered, the industries of the country have been in many places paralyzed, and heatless Mondays have followed, one upon the heels of another, the complaints of the freezing and the frozen have become the order of the day. We are short over 50,000,000 tons of coal.

Prof. Robsion, however, says that mine is a "fool bill" that seeks to exempt the miners from military service.

Let me repeat that the miners ought to be exempted from military duty, and that I fully agree with the Federal Trade Commission when it said that "their greatest service to the country can be performed by remaining at their regular employment."

It is not so much what POWERS has done in a Democratic House, but what POWERS has tried to do, and what would have been the result if his advice and counsel had been followed. The question is, Have I been right, in the main, upon the big public questions before the country?

WHEN SHOULD THE WAR END?

I believe in standing for America and Americans first. I believe in being absolutely loyal to our own interests. Apparently Prof. Robsion believes in backing President Wilson up in everything he does and asks simply because the war is on. I do not. I do not agree that President Wilson has all the brains and all the patriotism that there is in this country. I do not agree that the American people should look to him alone to solve all the problems connected with this war.

I believe that the people through their representatives should have something to say about it. The American people, not President Wilson, will have to do the fighting and the dying. The American people, not President Wilson, will have to pay the bills. It is upon the people's backs where the burden of this war will fall. They should be consulted.

President Wilson, in his message to Congress on January 8, 1918, among other things, said:

What we demand in this war, therefore, is nothing peculiar to ourselves. It is that the world be made fit and safe to live in; and particularly that it be made safe for every peace-loving nation which, like

our own, wishes to live its own life, determine its own institutions, be assured of justice and fair dealing by the other peoples of the world as against force and selfish aggression.

The President then proceeded to set out 14 different and distinct things or aims that this country is willing to fight for and is fighting for, the sixth of which reads as follows:

VI. The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest co-operation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.

Robsion would back President Wilson up in all the positions he takes about this war. Robsion then would have conscripted our soldiers to cross the waters and fight for "the evacuation of all Russian territory." If I question the wisdom of any of these things, Robsion says that I am "against the Government."

Since President Wilson delivered his message Russia has made peace with Germany and the central powers, and her influence and moral support from now on will be thrown against us and for our enemies.

The following is the thirteenth of President Wilson's war aims:

XIII. An independent Polish State should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

Robsion would have conscripted our boys to go and fight for that. If I doubt the propriety of such a course, Robsion says I am "against the Government." Yet Poland as a part of Russia a few days ago got in bed with our enemies.

The eighth, ninth, tenth, eleventh, and twelfth war aims of the President, as set out in his message of January 8, follow:

VIII. All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly 50 years, should be righted, in order that peace may once more be made secure in the interest of all.

IX. A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality.

X. The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

XI. Roumania, Serbia, and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea; and the relations of the several Balkan States to one another determined by friendly counsel along historically established lines of allegiance and nationality; and international guarantees of the political and economic independence and territorial integrity of the several Balkan States should be entered into.

XII. The Turkish portions of the present Ottoman Empire should be assured a secure sovereignty, but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations under international guarantees.

The President continues:

For such arrangements and covenants we are willing to fight and to continue to fight until they are achieved.

President Wilson and Robsion then would conscript our boys and send them across the seas to fight for the evacuation of Russian territory—or would have done that—the evacuation of French territory, the evacuation of Belgian territory, the evacuation of Italian territory, the evacuation of Rumanian, Serbian, and Montenegrin territories, as well as to enable the Polish people to set up an independent State, and part of the Turkish people to secure an independent sovereignty.

President Wilson spoke in his message his own views and evidently tried to speak the views of the American people on these questions. He may have spoken the views of the American people. I do not know about that; but he did not speak mine. I do know that the American people ought to let President Wilson know whether or not he is speaking their views and sentiments, and whether or not he is setting forth the things for which they are willing for this war to be continued. The American people, and I am with them, will stand by their Commander in Chief, President Wilson, in this war until he says "Quit"; but the President is entitled to know when the American people think he ought to quit and the things for which they believe he ought to continue the fight. To President Wilson my views may be of little concern, but with my constituents it is a different matter, and I shall therefore speak my mind.

Robsion agrees with President Wilson in all his war aims. I do not. Robsion would conscript our farmers and miners and American boys generally and force them to give up their lives in order to force one European country to transfer to another European country all or a part of its territory. I would not.

Robson would conscript our farmers and our miners and our American boys generally and force them to give up their lives in order "to make the world safe for democracy." I would not. No American boy should be forced to give up his life after the United States has been made safe. "Any nation worthy of the people's protection must protect its own people."

Robson would conscript American youths—the sons of those whose suffrage he seeks—and force them to do and die in the trenches of France in order to settle "the ancient wrongs and territorial boundaries of Europe." I would not. When the United States is safe and her rights secure, my humble judgment is that this war should end. I do not believe that our American boys should be "forced to fight to change conditions that would not affect the United States." So long and in so far as the rights and interests of our own country are involved I am willing, if need be, that our money be consumed like dried leaves and our blood poured out like water, but further than that I am not willing to go. The American people should not permit our allies "to drag us into interminable and unending war to settle the ungodly intrigues of royalty." Germany can never come to this country and whip us. The United States is worth \$140,000,000,000; Germany only \$60,000,000,000. Our population is over 100,000,000; Germany's less than 50,000,000.

This country has wisely declined to enter any alliance whereby it could not make a separate peace. I do not think our country will want to make a separate peace, but we are in a position to check the territorial greed of our allies and make them stop fighting when our interests are no longer involved. They can not win without us. Uncle Sam is now paying the bills of the war.

France demands—and God bless France; I would rather fight for her than all our allies put together—but she demands that the two rich Provinces of Alsace-Lorraine, taken by the French before this Republic was born, and retaken by Germany in 1871 and still held by Germany—France demands that this territory be transferred from Germany to her without consulting the wishes of the people of those Provinces, 80 per cent of whom are German and 95 per cent of whom speak German.

Robson and President Wilson both agree that American boys should be conscripted and forced to fight to accomplish these ends. In this, but with due deference to the opinions of both, I can not agree. I am not willing for the sons of my district and the sons of my country to be forced to fight and die "to settle a title of real estate in Europe." I agree with the editor of the great Chicago paper who said that "the American Government could not rightfully offer one conscripted soldier to such a cause."

The people of Alsace-Lorraine themselves ought to be allowed to say whether they want to be governed by Germany or by France or whether they want to govern themselves.

I abhor the unspeakable brutality of the Kaiser. His methods of warfare shock the conscience of mankind; but only in so far as they affect America and Americans am I willing that Americans be forced to fight to change or alter them. Robson takes a different view of it. It is not so difficult to be willing to have the blood of our countrymen spilled—not including our own—to right the wrongs done humanity; but a Member of Congress should deal with the blood of his constituents like he would deal with his own. Most any of us can have patriot mouths. Most any of us can urge that the war should go on, even for the exchange of foreign territory, when the other fellow has to do the fighting and the dying. I agree with the brilliant editor of the National Republican when he said:

The only cause for which any nation has any moral right to go to war is the necessary defense of the people's fundamental rights of person and property against foreign or domestic aggression.

When American safety on land and sea is secured, this war should end. This country should not seek to be the "arbiter of the world's destiny." It is job enough for us to work out our own. Our soldiers should not be forced to fight and die "to accomplish the dreams of millennium makers." The American flag and American rights ought to be our cause. My humble judgment is that we made a mistake in entering the war for "the democracies of the world" and "the liberties of mankind" rather than upon the clear-cut invasion of American rights. I do not believe that the war aims of the President to which I have called attention are in harmony with the American thought on these questions. If not, the American Representatives and the American people should speak their minds, that the President may know. My opponent, Robson, thoroughly agrees with the President and says both he and the President reflect the views of the people of the eleventh district, and that I do not reflect their views. If I knew I did not, I would not ask any longer to represent them.

President Wilson's fourth war aim is expressed in these words:

Adequate guaranties given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

With that I fully agree. That is worth fighting for. That will go a long way toward preventing future wars. It would stop the financing of these ambitious military and naval programs of this and other countries at such fearful expense to the people. The President ought to add to his fourth war aim the language of the Republican platform adopted at Chicago in 1916, when we said:

We believe in the pacific settlement of international disputes and favor the establishment of a world court for that purpose.

I was a delegate at large to the Chicago convention that adopted this plank in our platform. I indorsed it then and indorse it still.

If we can have the nations to disarm and stay disarmed and a world court established to settle future disputes between the nations of the world without going to war, then this war to us will be worth all the money spent and all the blood spilled.

With universal disarmament and an international court or commission to settle disputes between nations by peaceful methods rather than by the arbitrament of arms, there will come world peace and wars will be no more. We are in this war now. Let it not be a failure for us; and it will be a failure, victorious though we be, unless we get something out of it really worth while. Those we fight are now willing to concede to us freedom of the seas.

If universal disarmament, except for domestic purposes, and the establishment of an international court were our only other demands, they, too, might be met. These things most vitally concern us. For them, if need be, we should continue to fight, and fight until they are achieved. They mean much to this country as well as to the world. We should brush aside all nonessentials and insist no further upon them; insist upon nothing that does not directly concern us.

The American sword should never be drawn except in defense of American rights. "Never before in the history of the United States have Americans been conscripted to settle ancient questions pending between other nations."

My heart goes out to bleeding Belgium, but the central powers have already agreed that its territory shall be returned. The amount of indemnity due her is not an American question, and American lives should not be sacrificed in settling the money disputes of foreign countries. I want this war to "go through," but I want it to "go through" for the things that concern us. Oh, I am not unconcerned about the suffering, the hardships, and heartaches of Belgium; no; but I am more concerned about the sufferings, the hardships, and heartaches of our own people. I am more concerned about the hardships and heartaches, the sufferings and privations of a million American mothers, who have, or soon will have, sons in this war. My heart goes out to them—silent, helpless, and hungry—hungry in heart, and many of them hungry in body.

My heart goes out to the anxious American fathers of these brave boys—fathers who had builded high hopes upon the future accomplishments of their sons in civil life; fathers many of them in strained circumstances; fathers who need the help and assistance of their sturdy sons.

My heart goes out to "the American boys who have been forced into sickness and death in a foreign land." My heart goes out to their distressed wives and to the helpless little ones, tugging at their heartstrings; to their bereft and needy homes wherever they may be.

I am willing to sustain our soldier boys and bountifully back them up with the resources of our country as long as they are across the seas or in the service here, but I am unwilling that they stay there except to vindicate American rights, uphold American honor, and secure American safety. We can not afford to fight the battles of foreign countries simply because we sympathize with them. We have objects of sympathy here. I sympathize with the struggling poor of our own country, many undernourished and underfed, who are finding it increasingly difficult to battle against the soaring cost of all the necessities of life. In considering our duty in this war we should not forget the duty we owe to our own people. Their welfare should be our first, if not our only, consideration. In fighting autocracy abroad, we should not enthrone it here. Congress should cease granting the President unlimited blanket authorities.

I am not frightened at the word pacifist. Christ was a pacifist. I am not alarmed because Prof. Robson says against the Government. I am not, I am for it to the core. I do want a speedy and honorable peace. Christ said unto his disciples; "Blessed are the peacemakers, for they shall be called the children of God."

Congressman Tells of Trip to Battle Front.

EXTENSION OF REMARKS

OF

HON. JOHN F. MILLER,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 19, 1918.

Mr. MILLER of Washington. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I include a patriotic speech made by my colleague, Mr. TIMBERLAKE, of Colorado, at Yuma, Colo., on January 2 and published in the Yuma Pioneer of that date.

The speech is as follows:

SPEECH OF HON. CHARLES B. TIMBERLAKE AT YUMA, COLO.

Ladies and gentlemen, friends of Yuma: It is gratifying, indeed, for me to look into such an audience here in the city of Yuma, that I have known all these years, since in the very early days I was one of you who filed upon a homestead in the northern part of this district in what is now Phillips County; at that time it was Weld County. I often came to Yuma. I find comparatively few, however, of the men and women who were with me here in that early day. In their stead I find others that have come and added their part to make this one of the grandest counties in eastern Colorado. I regret very much this afternoon that this hall is not sufficient to admit those who were anxious to hear relative to the things that I will bring to you. It was suggested that I talk to you outdoors. Had I felt it would have been safe for me to attempt it, I would gladly have done so, because I desire that all who wish have an opportunity to hear.

It is gratifying—and I take it as no special compliment to myself—that you are crowding this hall this afternoon to hear what I shall say. I take it, rather, to indicate the patriotic fervor of this people in Yuma County at this trying time of our existence, and I shall endeavor to make my remarks as short as possible to you here, in order that, should there be a few moments' time, I might direct some remarks to those who are on the outside and unable to hear.

I want to compliment Yuma County on its magnificent work which has been reported to me for the Red Cross, Young Men's Christian Association, liberty loan, and all the kindred organizations that go to strengthen the hands of this Government, that will bring comfort and aid to the boys who are fighting our battles for us. We who are away from the sound of battle are enjoying all the luxuries of life while many of our allies are making such sacrifices as I hope this people may never know. But I want to bring this word to you at the beginning: I hope that we all will sooner or later realize the necessity for us to make sacrifices. Our boys are going to the front; they may be called upon to make the supreme sacrifice. Let us sacrifice in order that we may have comforts taken to them which without it they will not have. Let us sacrifice until it hurts. You can pay two dollars or a dollar or five dollars to the Red Cross or Young Men's Christian Association; you will not feel that much. You really have not sacrificed much. But, my friends, let me bring this word to you: Sacrifice for these worthy causes until it really hurts. Then you will be a part of this great work upon which this country has entered.

I thank the chairman who in his introductory remarks spoke with reference to the work that I am engaged in. I hope I have in my service been acquainted, have known, the conditions largely of my people. I feel that I have sacrificed, I have suffered with you; I know your wants, I know your interests, and it has ever been my most earnest thought that I might labor for your interests and faithfully represent the kind of people that it would be a pleasure for anyone to represent.

Now, before commencing to visualize for you the scenes of the recent trip which I have made to the war zone, I want to bring you a few words relative to our part in this great struggle, and also of our allies, and a few words with reference to that foe which we have joined to meet in deadly combat. We face, my friends, the mightiest task ever confronting this Nation. The duty of loyal allegiance and faithful service even unto death is the duty of every American citizen. Certainly this is a day in which no American can claim that his time, his energy, or even his money, is his own. His Nation which he loves is in peril, and everyone of us will be called upon to bend our every effort for the success of that cause which we have espoused.

You ask what our allies are doing. The Belgian, French, and British forces are standing to-day a bulwark of defense against the marauding advance of the merciless Hun. I mention them in this order because, as you will recall, it was the gallant Belgian Army that first interposed its weak strength against the mighty and powerful approach of the German Army invading its territory. It was then endeavoring to protect against the invasion of its country that its treaty rights with the allies of Christian nations should not be violated. They were able, by supreme sacrifice and heroic service, to retard the approach of this mighty army until France could interpose its strength. These, going together, were enabled to only retard the advance through Belgium and France of that mighty host, awaiting the reinforcements of the then small British forces. I mention them in this order for this reason. One has only to listen to the repetition of the low estimates the Germans placed on American honor, on the American forces, which you read in the press daily, and if you were at the front you would hear frequent expressions of, to realize and unerringly forecast our own fate undefended by these forces I have mentioned, which must be rapidly reinforced by our own.

It is imperative that we very soon have a large army at the front. Behind these boys we are sending to the front, and their brave mothers and fathers here at home, we must stand in line of their defense, and upon this altar of their sacrifices must be willing to lay our lives, our property, and our sacred honor. We are in war to-day not because the Crown Prince of Austria was slain in Serbia, but we are in war to-day on account of the conviction in the German mind that might makes right, and that they are ordained by God to rule the world; also that the end, which is that German kultur shall rule the world, justifies the means, no matter how horrible. We do not presume to dictate to Germany how she shall be governed, but we do claim the right to say, "With this Government of yours we can make no peace; the war will continue until you have a Government with which we can deal with mutual confidence." When Germany possessed the power of dictating between peace and war throughout the world she chose war, and thrust war upon the civilized world, and she has prosecuted it in a manner violating all laws of humanity and civilization, disregarding most recklessly every agreement entered into and indorsed by them in The Hague convention, of which, of course, we all know they were one of the contracting parties. Their Government it was who presented many clauses for the consideration of this conference. It was Germany who suggested this clause, article 46, which I will read to you: "Family honor and right (please note the wording of this resolution), individual life and property, must be protected. Private property must not be confiscated." And how this has been violated in Belgium and France we have all heard and read; but, my friends, I will tell you this afternoon, it must be seen to strike horror. Article 28 of this peace convention has this clause: "The giving over to pillage of a town or place, even when taken by assault, is forbidden." Look to Bapaume, Rheims, and a thousand other beautiful thriving towns and cities of France totally annihilated willfully; after they had been partially spared by the open attack and had been occupied by the enemy, the civil population were driven before them and their homes throughout the city willfully and utterly destroyed, after all the private property contained within these villages and towns had been by order of the commanders confiscated for their own use. But of these I will endeavor to relate further.

I expect, my friends, that you wonder why I made this trip, why at this time of danger of travel on the ocean from the U-boat and the danger throughout the war zone that in company with other Congressmen I undertook this trip. The special session of Congress which convened on April 2 and closed October 6 was without doubt the most important in history, and dealt with subjects of more vital concern to our people than this country has ever witnessed. That it should fall to my lot to be a part of this Congress, there to represent you upon these important issues, was a responsibility, my friends, that I keenly felt. When the question arose of declaring war upon Germany and involving this country in that world conflict, strong men trembled in contemplation of its results on this people. After war had been declared party lines were very largely wiped out. As a Republican Member of Congress from Colorado I felt it my duty and in accordance with the sentiment of the patriotic citizens of the second district of Colorado that this should be true, that I should support the administration in every matter upon which depended the vigorous prosecution of this war to a successful and early issue. We felt that our Americanism came before our party affiliation. Millions of dollars were appropriated to carry on the war. We provided

for a means of raising an effective army, and that army was going to France. Many of our boys had gone and many more were soon to follow. So it was that the call of the front crept into our blood, and speaking for myself I want to say that it was not in any feeling of idle curiosity or in any spirit of bravado that I determined to take this journey, but it was in a sincere desire to know at first hand actual conditions that our boys that we were sending over there were to face. We could read in the press of conditions as they were published, but these were largely censored—how thorough this censorship was we learned better after arriving there—so that we felt to have that information would be valuable to us in our future service in Congress when questions pertaining to the safety and the welfare of our boys, both as to their moral and physical welfare, arose, we felt we would like to have it at first hand.

There were many Members of Congress who thought of making the trip. It was thought that if a goodly number went it would be possible for the Secretary of the Navy to furnish us safe conduct by a warship or something of that kind. When it was determined that this could not be done and we would have to stand the risk that all parties ran in crossing the ocean at this time, from U-boats, many of them determined not to take the hazard. Ten of us, however, decided to make the trip, and we started from New York Harbor on an American line steamer, the *St. Louis*, October 15, 1917. Our group in our immediate company was composed of 16 Congressmen and 4 newspaper men from different parts of this country, who were enabled to get partial passports, or passports giving partial privileges, similar to those we carried. I want to say that we carried special passports by reason of the fact that we were occupying the position we did, and on account of those passports we were taken to many quarters where newspaper men are not allowed. These men accompanied us, however, and saw much that we did, but were not permitted, however, to see much that was shown to us by representatives of the British and French forces.

As you go with me into the war zone I will try to confine my descriptions to such phases and aspects of life and affairs as are the results of altered conditions caused by the war. So this afternoon, my friends, your feast is to consist entirely of war bread. I hope this community, with others, has realized before this what war bread is, and I want to tell you a little later on why it is necessary and will be necessary for us to have more war-bread days. We will have to sacrifice more if our boys are to have the treatment that they deserve.

We realized further when we looked upon our boat that we were going to meet dangers. It was camouflaged. You have all heard that word. It is to create an illusion, a mingling of colors that will hide the object sought to be concealed by combining the colors upon a ship so intimately with the colors of the rainbow and water that its shape is not discernible from a distance to the watchful hawk eye of the submarine looking for American ships or ships of the allied countries to take toll from. We passed out of the New York Harbor and we began to realize even then that we were going into the danger zone, for after we rounded the horizon and struck out into the open ocean we knew not which way we were going, but we were on our way where danger lurked at every step. It took us eight days to cross the ocean. During that time there were no lights issuing from our ship throughout the entire journey. We went in the dark so that we would not give notice to our enemies. Going on board our ship we saw other evidence of war danger. It was manned by our gallant boys from the Navy, having three 6-inch guns and two 3-inch guns. A noble lot of boys were there in our defense. I want to say that I met there one boy from this town, from this county, a young Mr. Smiley, who has been with the Navy some time and advanced to the position of gunner, and he was one of those on the watch eight hours of each day or night during our entire voyage. We were glad that we did not encounter any submarines, but our boys were at their post every hour of the time. They had target practice during the day so that they would know that everything was working properly. There was the usual company of passengers aboard, among them 50 Red Cross nurses going over to lend help and assistance to our boys who were already there. They were a noble lot of women, in their uniforms, and while at this time of danger of travel on the ocean there were few other women aboard, these were braving the dangers to go where their services would be so welcomed by our boys. We were proud of them. After we had been over there to the hospitals and saw the work that they were doing we then realized more than ever that the work for them was large. There were Army units going across, there were Y. M. C. A. workers going across, there were no people going across, in fact, except those who had a part in the struggle; we had nearly 600 first-class passengers on board and every one of them almost was going over to take an active part. The members of our

company were going over to see the part they were doing, to bring home to our people, to encourage them, to stimulate them to greater efforts along these lines.

We had been told that our ship would be convoyed by American U-boat destroyers; that they would come up with us by the time we reached the danger zone, which is considered to be three days out from Liverpool. We arrived at that point; no destroyers were in sight. The passengers could not help but be a little nervous when we had recounted to our ears and pointed out to us the place where the *Lusitania* had been sunk and other places where vessels had been sunk, and stories told of the suffering which some of our ship's crew had been connected with. I didn't know but some of them were talking to keep up our courage. If they were, it did not have that effect; in fact it had a very depressing effect, and we got up more often in the night in the darkness to try on our new suits that we had taken with us. I must describe that suit. I have pictures here. We all availed ourselves of a nonshrinkable submarine suit, which is guaranteed to be buoyant enough so that a person cast into the waves will not sink and will be able to float until picked up. Now, we kept those suits very close to our cots after we had arrived in the danger zone, and, as I said, we got up often in the night to try them on, to see whether they fit or not, and we got to be quite expert in handling them. Timing myself, I think I made about as good time as anyone of our company in getting mine on. Forty-eight hours out of Liverpool, however, we were met by two American U-boat destroyers. We were informed of this about daylight, and we got up earlier that morning and watched their maneuvers, and it was a pleasant sight to watch. Seeing them go by us, our ship, which was going at 20 knots an hour, seemed to be standing still, and we were all greatly relieved to have them hovering about us, watching for the terrifying submarine. We ate a pretty fair breakfast that morning; our appetites had not been the best for the past two or three days, and if anybody thinks that we were not just a little bit scared they are mistaken, for I believe that anybody that goes through that danger zone and says that he does not feel nervous—is not a little bit scared—either has not got sense enough to know danger or he is telling a lie.

We landed at Liverpool without any untoward event occurring and were met by representatives of the American Embassy in London, and also representatives of the British Government, who showed us every courtesy. They had a special train waiting for us there to take us to London. We arrived there just in the dusk of evening. We have all heard of London as a city of lights, but London is not light these nights; it is a city of darkness. In our taxicabs to the hotel we could hardly tell when we were meeting another vehicle. The few lights used are heavily shaded from above so that no ray can ascend to the sky as notice to the dirigible or to the enemy aeroplane. We reached the Savoy Hotel, where accommodations had been provided, where our passports were taken in charge by the British Government, and asked what our pleasure was.

We had no commission from the United States for this journey we had undertaken; we went to the war zone in our individual capacity; we went in no official capacity, and yet had we carried a commission signed by the President of the United States we could not have been given greater consideration to see that which we desired to see. We informed the emissaries of the British Government what our desires were; we told them we were not there as sightseers; we only wanted to see those things directly connected with the war. They had been advised of our coming, and Parliament and all of the officials had planned many things for our entertainment and instruction, but we informed them that as soon as our passports could be arranged it was our desire to go to the fighting front in France, for we felt that there was where we would get the information that would be beneficial to us. They, however, told us of the very great amount of red tape that was necessary to get our transportation and passports throughout the army fronts, and that that could not be done for at least three days, so we gave ourselves over to examining things in London which were intimately connected with the war.

We were taken to the hospitals, and if I had time I would like to portray to you some of the scenes that we saw in these hospitals where the wounded are being cared for by the best medical attention the world affords, where wonderful miracles in bringing men back to normal conditions after very serious injury were being performed. We saw the Red Cross work, visited their huts, their hospitals, the hospital of the blind, where there were 2,000 being treated, men who had lost that which is almost as dear as life itself. They were blinded; they recognized that they had to finish the rest of their lives in darkness. They were being treated, and those who could not be restored were being taught useful occupations that would

enable them to occupy their minds and prepare them to enter into the activities of life again without being dependent. They were a cheerful lot. It was a wonderful sight to see the cheerfulness exhibited by these men. Many were engaged in song and whistling, others were sitting by their instructors, and it was really the most cheerful place I saw in London.

There is another hospital I want to describe, where men had lost their arms or their legs, one or both, where they were being treated with that same skill and care and nursing that we had witnessed in these other hospitals. The Red Cross workers were there. The titled ladies of London were there engaged in work of this kind, and in the ammunition factories thousands of English women, who prior to the breaking out of this war had never turned their hand to labor, even in household duties, were working, donning their overalls, their aprons, and uniforms, and engaging in everything that tended to bring comfort and relief to their soldiers. It was a wonderful revelation to us. Some of us had wondered whether or not England was really and wholeheartedly in this war, whether the people were interested and in earnest, or whether it was a war that was carried on by the leaders of that country and in which the people of the country were not interested or were not doing all within their power to carry on. Let me make this statement briefly. That was dispelled at once, for we found the whole British Empire, so far as we were able to judge by London, and that is representative of the rest of England, at work. They are willing to make any sacrifice that is necessary in order that they may win this war.

We visited the orthopedic hospital where there were those being treated who had lost their legs and arms. Artificial legs and arms were being fitted and the patients were being taught by experts how to use them, and without entering into a long description, I saw men that had both arms off engaged in occupations that they had engaged in prior to their loss. They are fitted with artificial arms so complete, so mechanically perfect, that they can grab with their hands any kind of implement. We saw them chopping wood, we saw them using garden tools, we saw them in every kind of occupation, saw them playing golf, and a good game, without any arms other than artificial arms. We saw the operating rooms, where a great many operations were being performed; some of the patients had been only two or three hours out of the operation; beside them, in many instances, sat their wives, mothers, and sisters, rejoicing they were back, although crippled.

One wife we questioned was holding the hand of her husband who had just had both limbs amputated. They were conversing together. Tears were running down her cheeks, although a happy look was on her countenance, and when we said to her, "Do you think your husband will ever again be able to take his place in the world?" she said, "That doesn't matter; I have got him back; and, although I never did any work before in my life until he went to war, since then I have learned to do many things, and I can work, and I can make a living for the family, and this is one of the happiest days of my life. I gave him willingly to his country; he has come back, he is wounded, he will never be the same, but I am supremely happy to have him back." We visited several other hospitals, but I must hasten.

One of the great privileges which we enjoyed was a visit to the House of Lords and the House of Commons. We wanted to know just how seriously these legislative bodies of Great Britain were taking this war. On the occasion of our visit they were declaring a vote of thanks to the people of Great Britain, and to the army and navy, for their loyalty and service. We heard Lloyd-George, in one of the most remarkable speeches I have ever listened to, praising the sacrifices made by the British people in this war, the gallant service of their army and of their navy. It was he who brought a new thought to me when he described their condition at the breaking out of the war.

I do not know whether any of you here sympathize with me with a feeling that I had during those early stages of the war that England, for whose benefit and for whose cause people had bled and suffered as the Belgian people had bled and suffered, was slow in going to their relief; but I heard Lloyd-George say that England was not a military nation except as to her navy, and that at the beginning of this war they had only 100,000 soldiers, all told. Many of these were in her insular possessions, as in our case, and less than 100,000 of the old guard were they able to send to Belgium and France, which were sent as soon as possible. I understand better the difficulties of her position. Five million gallant British soldiers are to-day with the expeditionary forces in France. Two million more are in training, as our boys are in training, to take their places and add to their forces whenever they have been sufficiently trained. Speaking of a new branch of the army, he mentioned the aeroplane, and his language in describing that was beautiful; while

I will only give a few sentences, it will show the esteem in which it is held. Speaking of the army of the air, he said: "The heavens are their battle ground; they are the cavalry of the clouds; and it is this army that is going to wield, after the United States has brought to bear on this line the many aeroplanes that it will be able to furnish from the provision that has been made by that Government, a very considerable part in the winning of this war."

Just one other thing. On Sunday we were invited by the King to visit Windsor Castle, the home of the King. It was opened to us on that Sunday, though it had not been open, many portions of it, for some time. It is beautifully situated on the bank of the Thames. I will not stop to go into detail on this subject. It was an interesting occasion. I do want to mention one thing. We attended divine services in St. George's Chapel, the King's chapel, listened to a beautiful Episcopal service, and at the close the old organ pealed forth the strains of the Star-Spangled Banner amid the acclaim of everyone present. That was the first time the "Star-Spangled Banner" had ever been sung in St. George's Chapel.

On the last evening before we were to leave England, our passports being arranged for us, we were given a dinner by the Lord High Chancellor of the House of Lords in one of the principal clubroom buildings of the city. At this dinner some of the most notable men of England were present—Lord Curzon, the President of the House of Lords, the Speaker of the House of Commons, the Archbishop of Canterbury, Mr. Balfour, and others; Gen. French and other military generals were present.

We were having a good time, and a program had been arranged for felicitations between representatives of that Government and our own Government, and we had anticipated having a good, social, friendly time together. We were about half through our dinner when an orderly came and whispered to Gen. French that an air raid was on in London. Now, we had wanted to have just that occur while we were there, if it had to occur; that is, provided we could see it from a safe distance. Pretty soon another orderly came in and whispered in the ear of another officer, whose name I do not now recall, and he retired. Immediately the high lord chancellor was called out, who was our host, and he was advised that the air raid was on and that further proceedings and the dinner would have to be dispensed with. It was hastily concluded. Our host said that our taxicabs were at the door and we had better make haste and get to our hotel; that they had underground passages for the guests, in which we would be comparatively safe. We went out and prepared to take our taxicabs, but they were not there. They had heard the alarm and had also sought cover. We started to walk to our hotel, 11 blocks distant.

Everybody was on the run—and England has had a good deal of practice in that direction lately—and I will tell you that we Members of the American Congress can not run with them. We have not had the practice. Before we had proceeded many blocks on our way up the Strand, which at that time of night is a sea of people, they were flying in every direction. The alarm was being given by the police, and those brave boys—I hope you have an organization here; I saw them everywhere there; and that is the Boy Scouts—were running about, not for their own safety, running and shouting at the top of their voices, "Take cover," and everybody was taking cover. We finally arrived at our hotel, but just before we had gotten within three blocks of the hotel we were the lone occupants of the Strand in London. We were just that far behind the rest of the city.

While in London we saw many evidences of the destruction caused by the German air raids. We were shown where large buildings had been destroyed, and one place where 29 women and children were killed in one busy thoroughfare just after dark one evening. This time no special damage was inflicted on account of the activity of the aeroplanes and antiaircraft guns. We had not yet seen the actual ravages of war, but we already felt its sinister influence. Like its murky fog, to-day the pall of war hangs over the city of London.

With these impressions upon us we left for the stirring scenes of the battle front, and though by the traveler, the return; soldier, the pulpit, and the press we have had our sympathies touched, our heartstrings torn, yet after our tour of investigation we feel we can safely say that not one-half part of the ravages of this war have been depicted nor one-tenth the tales of the suffering have been told. We were given a special train to Folkestone, to sail across the channel. We met there a thousand soldiers going back to the front. We conversed with them; we found not a single exception when they stated to us they were anxious to get back into the fray in Flanders. There was no weakness there; they were strong in their determination to win

this fight for the blessings of liberty and democracy for which they were fighting.

We were taken across the channel, and it was reassuring there to see again that we were being protected from the dangers that were around us. The aeroplanes hovered above us and the U-boat destroyers were around us. They have helped to carry 13,500,000 British soldiers over to France and back since the beginning of the war. Britain has lost through U-boats 2,700 soldiers. For us I want to bring this good cheer, that not one single American soldier has yet been lost being transported to the front.

We arrived in Paris early in the morning. Paris is wonderfully changed. That gay Paris is a city of sadness now. They are hardly attending theaters, they are hardly engaged in any of those things that make for gaiety and enjoyment. We had an amount of baggage, our train was six hours late, and the people who were to receive us had not arrived. We tried to get a taxicab to carry our baggage to the hotel. We were unable to get one. We tried to get red caps to carry our bags, for our baggage was heavy, and could get none. The young men are all in the army. We saw old men, women, girls instead, and discovered by their badges that they were engaged in that work. We, as Members of Congress of the United States, were too courteous to allow a woman, a gray-haired woman perhaps, or a stripling girl, to carry our heavy bags. We invited them, however, to walk with us, and when we arrived at our hotel we paid those women the fee which they charged, but we did not let them carry our baggage. We were met by representatives of Gen. Pershing, by representatives of Ambassador Sharp, and representatives of the French Government at the hotel, where the same process as to our passports had to be gone through before going to the front, getting permission, and making arrangements.

We did as we had in London, visited points of interest while waiting for our papers, and I would like to recount in a brief way some of the work that we saw in their magnificent hospitals by the Red Cross and our own countrymen. Permit me to say that they are doing the most wonderful work that any of you could imagine, and they need more of that work to supply the relief, and when our troops get over there in the quantity we are going to send them they will need still more. I bespeak for you that you will support them in every way possible in their effort to allay the suffering. We were taken to the munitions plants here also; we saw the work being done by women, very largely. There are some divisions that are presided over by men, but the women are doing a very large part of the work.

They had agreed to take us up in an aeroplane, and we had consented, provided they would not take us up more than 3 miles. But the day was dark and gloomy. We went out to the aviation field and examined their wonderful machinery, but the weather would not permit of our going up.

We visited the tomb of Napoleon, whom everybody admires. Had he not been obsessed with the desire to rule the world he would have been one of the greatest men of the world. As it is, France idolizes him, and he accomplished wonders for France. We were accorded a privilege there that is granted but rarely; we were allowed to go into the lower crypt of the tomb of Napoleon, and as I looked upon the scene and remembered the wonderful deeds he had accomplished I thought of Grey's Elegy, "The paths of glory lead but to the grave." From there we went to the obscure resting place of one of the earth's noblest, a man who ever fought for liberty, La Fayette. We laid upon his tomb, which is in the outskirts of Paris, in a walled-in graveyard, with his tomb a simple one at the far end, hard up against the stone wall, a beautiful floral wreath in commemoration of his service to this country and his devotion to liberty. And I think I can say that every Member of Congress came away from that tomb rededicating his life to the cause of liberty in memory of that which he had done.

There are so many things I would like to speak of, one especially, concerning the work of Dr. Ferron, the president of our own State university, who was sent to France by the Rockefeller Institute to investigate tuberculosis. The sanitary conditions since the war in the territory directly affected, where whole villages and towns have been destroyed and thousands of the inhabitants left homeless, have been very bad. The women and children and the old men have been compelled to live in crowded, ill-provided quarters, and tuberculosis is becoming wonderfully prevalent. He cited all of this in a two hours' talk concerning the work they were doing among the people, and it was here I learned of something that was to me very pathetic.

We were told that the Germans were relinquishing the children that had been taken in the territory occupied by the Germans, with their mothers, and in some cases their fathers—entire families—though in many cases they were separated, to engage in work for the German people. Now, there is one

reason assigned only, and that is quite strongly impressed upon me, that the German forces are probably getting short of their food supply and they are releasing these little ones, 5 to 7 years of age, none of them to exceed 11 years old, and sending them across the border. They are being cared for by the Red Cross, Young Men's Christian Association, and other philanthropic organizations. They are in an emaciated condition, uniformly, and, as Dr. Ferron says, almost 50 per cent of them have contracted tuberculosis. It was hinted by others, not by Dr. Ferron, and I do not wish to be understood as quoting him in this connection, that it was a well-established belief held by the people there that this tuberculosis had not all been contracted naturally—that much of it was inoculation. It is too horrible almost to believe, but the evidence brought forward was so strong that I can not help but say that much.

Taking you into this tragic war area, where the very soil is soaked with the blood of heroes, where every spot almost denotes a sacrifice and every hilltop a costly victory, I hope you will feel as we felt, that we were treading upon almost sacred ground. I have here a map which I hope some of you can see. These shaded lines mark the farthest advance of the German Army in 1914. The area between is the devastated country. The lines have since been somewhat changed in the Cambrai section, but this shows the line of battle practically as it is. The country from here to here is not so much devastated; here we saw things in comparatively the same condition as before the war. But for a distance of more than 500 miles the country is entirely devastated; there are no people living in that area. A few are coming back and trying to restore their small farms to a state of production, but this is uphill work.

France is helping in this. The Red Cross is expending a great deal of money helping the old fathers and mothers who want to get back to their homes, their own land, and rebuild and restore them. These cities that are marked are the larger places which have been absolutely destroyed by the Germans, many of them maliciously, willfully; not been destroyed in actual combat, but by willful destruction, by a systematic program of dynamiting after evacuation. Here is Paris. You will notice these light lines. In 1914 the German Army got within 19 miles of Paris, where was fought the greatest battle of all time, the Battle of the Marne, where the small forces of the gallant Belgians that were left, the brave French Army, and a small British army threw themselves against a very much larger, well-equipped, and well-trained army and prevented their further advance. It will go down in history as the greatest battle of all times. There wasn't the loss of life there has been in some others, but it was one of the most wonderful battles of all ages. We are told that in this advance the Germans had at one time 700 42-centimeter guns that had a range of more than 25 miles. The allied forces had no such weapons with which to meet the foe; neither were they prepared in ammunition, ordinary ordnance, in any way equal to the German forces which they met.

They had, however, a great commander, and when we asked a French officer how it happened, after he had recounted the odds against them, that they won that battle at the Marne, he said, "Only God and Gen. Joffre made it possible." There is a conviction in the minds of the French people that Divine Providence intervened, else the whole of France would have been undermined by the German Army had their way not been stopped there.

When it was stated that it was the intervention of Divine Providence that saved them at the Marne, it was asked why had not Providence intervened to the extent of making the victory decisive enough to have saved all of the later bloodshed and ended the war then, and as to that I hear this beautiful expression: That the time was not ripe; that while Providence was on their side, yet Providence was not going to intervene in their behalf until they had been called upon to make a sacrifice. No grave questions of that kind were solved without wonderful sacrifice on the part of those for whom Providence intervenes. So, then, it is up to us and it is up to all the allied countries to make wonderful sacrifices—make sacrifices until it really hurts.

I am not going into details with reference to the formation of the lines in this war. We have all heard about the great Hindenburg line, which was divided into five sections, with von Buelow, von Kluck, the Crown Prince, and several other German generals whose names I have not tried to remember in charge of the several divisions. They thought it would be an easy matter to surround the French. It is said so confident they were that the Kaiser had gone down to a town which they mentioned here to see the surrender of the French troops. But they had figured without their host. Gen. Joffre had given the command to retreat from time to time down through Belgium and the border country. They were not ready to make their

final stand; their ammunition and supplies had not arrived, and they retreated to avoid unavailing sacrifice of life until they got to that point on the River Marne, when he gave the order that they would not recede one foot farther, and there the supreme test for liberty would be made.

It is said that when that order was given that no retreat from that point was to be made that it was echoed from one division to another that the command of Gen. Joffre will be obeyed to the sacrifice of the last man. Here they took their stand, with only a force of about 750,000. You remember hearing that before the battle was raging it was understood it was to take place at a certain time, and Paris sent out her every man that could get a conveyance of any kind, and they went in by the thousands, taking with them any arms that they might have, in order to assist. There is a story that while they give all credit to God and Gen. Joffre for the success of this battle, Providence intervened in a very mysterious way. The Valley of the Marne is one of the finest valleys in France. Millions of gallons and bottles of wine and champagne had been made at that time from the preceding crop; they were stored in the storehouses all along the Marne River.

We saw the ruins of these; after they were robbed of their contents they were destroyed. But the night before the Battle of the Marne, being absolutely sure of success, the officers and their men engaged in drinking this wine and champagne; that it is said the German generals and privates were not themselves the next day; they saw double; they heard double; and when they heard of the force that was coming up to aid the division that was stationed there, and when the combined forces struck them, contrary to all their acts heretofore they fell back, and fell back, until they were in a panic; and they have been retreating more or less from that day to this.

We started from Paris with seven military automobiles for our party, provided by the French Government. Gen. Pershing sent Col. Parker to conduct our party. He is an American who has fought for three years in the French Army, and he participated in the Battle of the Marne. He talks French fluently, he knows all of this territory, and he was given in charge of our party. His chauffeur—just one thing I want to relate to show the devotion of the Frenchman to his country: At the time of the breaking out of the war his chauffeur was then the chef at the Waldorf-Astoria Hotel, in New York, making a salary of \$15,000 a year, and with the tips such a position affords at least \$10,000 more. He resigned his position and joined the French forces as a private drawing 5 francs a day. He is an example of the patriotism of the French people.

From Paris to the Marne much of the territory has been recovered. The roads have been rebuilt and the farms have been brought back to a state of cultivation. We saw old men and women and children doing the work. There are no boys. I saw men walking with two canes following a plow drawn by oxen. The horses are all gone—have all been needed for the army. This is a great beet-growing district, and the work is all done by hand. We saw the devotion of the French women all through our journey and the sacrifices they were making.

We visited Rheims, where that wonderful cathedral was practically destroyed. The old cardinal, who had never left there, told us of the horrors, the willful bombardment of that magnificent cathedral after they had evacuated the city. The city is almost destroyed. We went from there to Chalons and all of these places that are marked on the map, which I will not stop to mention. We went to Verdun; that is the fortified city of France which is still held by the French. Gen. Petain, in charge there, had learned a lesson at Antwerp and Liege, where the magnificent forts were destroyed by the powerful German guns. Here at Verdun, having profited by the previous disasters, he had removed the stationary guns of the fort and moved them up to vantage points, so that when the Germans put their fire upon this fort they were met by such a galling fire from the vantage points all around that the engagement was not fought by artillery. They saved the fort, and the engagement became a hand-to-hand battle. Nine hundred thousand German soldiers engaged in this battle and 750,000 allied forces; it was one of the bloodiest battles of the war.

We ate our lunch there with the commander. He told us something of the history of the fort. It was there that the great-grandsons of Charlemagne signed the treaty of the war a thousand years before. Verdun was really a watchword used by the Frenchmen going into battle over here. The fort is deeply excavated and is built in so strong a manner that although while we were there at lunch the bombs of the enemy were falling on the fortress they were practically harmless. Here is baked the white bread for about 500,000 allied troops. The soldiers of France are eating white bread to-day, and so are all of the soldiers. We did not see a piece of white bread in Europe, however, in any one of the hotels where we stayed,

except when we ate with the soldiers at the front. The people at home are sacrificing, willingly sacrificing, and they are eating war bread in order to save the white bread for the soldiers. We visited the bakeries where the bread is baked for our boys, white bread made from American flour. We visited our boys and ate with them.

I want to finish before I leave Verdun and give a statement that was made there by the commander when he spoke of the heroism of the soldiers. The French and British were outnumbered almost 3 to 2, and they fought hand to hand. The battle was fought in a wood, and there is hardly a stick left. He said, "As far as you can see you can see ground that is soaked with the blood of heroes; if they could be evenly distributed, the men who perished on all of the ground that you can see there would be at least five sacrifices on every square meter of ground that you behold." There was hardly a stick left of that heavy timber.

We next went to our own camps. I can not tell you where that is. Germany knows where our troops are located. The French troops and British troops know. They are quite a distance from the firing line. We saw them at their training; oh, we were proud of them. They were full of life and enthusiasm, and entered into their drilling and training with the best spirit you ever saw, and while we admire the French soldiers—and they have put 7,500,000 French soldiers into the field since the beginning of the war out of a population of only 39,000,000—I say when we compared the French soldier and the British soldier and the Belgian soldier, and they are all fine men, our boys who are in training over there were our admiration; they are the admiration of all our allies, and when they get into service they will give a good account of themselves.

Gen. Pershing took us through all his departments. The newspaper men were not allowed there. We were shown the information he had with reference to the location of every sector of the allied forces, and of all fortifications of the Germans. That is done by a system of map making from the aeroplanes. We saw there absolute information as to how the trenches and barbed-wire entanglements were located, shown from a photograph taken from 3 miles in the air. The barbed-wire entanglements showed clearly. But we must remember that while we have the information of our enemy they also have the same information of our lines. We saw our boys engaged in trench attacks, and were given this shell, which is one of the first 20 shells fired by the American soldiers in this war. You will remember the first raid occurred on our boys when they were simply training in the first-line trenches, but the Germans got wind of this and ran a barrage around a little section. A barrage is made by a well-directed fire of artillery which practically makes a curtain of shells around the men it is desired to isolate. It made it impossible for their comrades to come to their relief because it is a continuous fire. There was no chance for their comrades to come to their rescue for some minutes, and when the front-line forces rushed in for them three of our boys had been killed, several wounded, and a dozen taken prisoner. This is one of the first 20 shells fired and it was presented to us with the request that we carry it to the President of the United States, which we did. We were in a hotel in Paris when the word came that American boys had been wounded, with directions to send ambulances from the Military Red Cross Hospital No. 1.

But I must hasten on. We traveled for 2,000 miles along the deserted territory, which is 40 miles wide and 560 miles long, so that you can get some idea of the size of it. In that portion of France there is hardly a whole town left. Imagine a territory 40 miles wide and 560 miles long from this town which is absolutely torn to pieces in such a manner that it does not look as though it could ever be restored to agricultural uses.

The battle of the Marne covered a distance of practically 80 miles and a width of 8 to 10 miles. That country is torn up until it is upside down, and there are shell holes 60 feet deep. In one of them I found this gun, by the side of a body that had laid there since the battle. There was nothing to tell what nationality. Beside this was another body that could not be identified. I just saw the strap of this gun buried in the mud, and picked it up and pulled out the gun. It was impossible to get very much in the way of war souvenirs, for immediately the smoke of battle clears away the battle fields are salvaged by representatives of the army whose duty it is, and everything that can be used over is taken to the salvage camps. They are very particular about allowing anything out, and I had a hard time getting it through, but when I explained that I had picked it up myself and wished to bring it over with me, they allowed me to keep it.

Just to give you a little account of the wanton destruction that occurred in the agricultural communities: Not a wagon, not a vehicle, not a plow or implement of any kind was left

whole. They cut out the spokes of wheels, destroyed or damaged everything of an agricultural nature so badly that it is useless, so that when the allies came through nothing was left. The orchards were wantonly cut and chopped down and blown up. Why it was they wanted to bring that sorrow and suffering upon the civil population, who had no part in the war, is beyond the understanding. You can hardly believe that a civilized nation would engage in this kind of work. At Bapaume, in the path of the battle of the Somme, there is hardly a whole room in the town left. The people of the town, many of them, had gone before the advance of the German forces, but many could not go, and they were driven ahead of the German troops as they retired, or when it was more advantageous they were used at the back of the army, as a protection for the German soldiers, and many thousands were killed. Others were taken into captivity into their own territory, where they have been compelled to work, and their abuse and suffering can hardly be recounted. At Bapaume the Germans blew up every house except one, a building known as the city hall, but they left a 10-day time bomb planted under there. It was not discovered and troops were quartered there. Promptly on time the bomb exploded and 50 officers and a great many soldiers lost their lives on that occasion.

As we traveled in automobiles we had to travel by night without lights. We were never out of the sound of guns on either side; the shells were going over us and we underwent great danger at times, for almost every day we found where shells had fallen, where people were killed and wounded. Fortunately, we escaped any accident to our party. During all the trip we passed beneath camouflage of various kinds. The roads were also destroyed by the Germans, but they have been largely rebuilt for the hundreds of automobiles, trucks, ambulances, and traffic that are a part of the army. On either side of those roads, as is the custom in France, there had been two rows of magnificent trees; these trees were wantonly cut down, and left across the roads. I simply relate this to show the willful destruction of the country. We met more than 10,000 French troops that were being sent at that time to join the Italian forces, for that break had come at this time.

I want to speak of going back to Paris. We had received an invitation from the King of Belgium to visit his little country. There, my friends, that little strip 7 miles wide and 26 miles long, constitutes all that there is left of Belgium that is not now held by Germany. Germany is holding this and the devastated region in this territory was outlined to us when we accepted his invitation. We felt that we could not help but accept it because of the cordiality with which it was tendered. He wanted to express to us as representatives of the American people the appreciation of himself and his people for the wonderful aid that has been extended to his bereaved people by the United States, and he said, "Tell the people of the United States that Belgium will ever pray that the United States may never feel what her people have suffered," and requested us to take to the President the thanks of himself and his people. We visited him at his chateau and we conversed with him something like two hours.

I talked with him personally. I asked him with reference to the atrocities that had been reported as being committed upon his people. He said, "The half has never been told." We asked him whether the wholesale despoiling of little children by cutting off their hands was a fact, and I am glad to say that we could not get confirmation of that being done in a wholesale way. We got confirmation of this in some individual cases, but not in a wholesale way. But, my friends, we did get confirmation of indignities and atrocities and torture that have been committed on the civil population of Belgium and France that would be accepted in any court as conclusive.

We had been promised to be taken to the front-line trenches. We had seen second and third line trenches of the French and British sectors, but we had not yet seen actual conditions in the front-line trenches. We were taken there one morning just at daylight. We had tried to sleep in a little hotel in the district; the air raids had been violent and the hotel rocked with the reverberation of the cannonading that was proceeding during the night. Toward morning it ceased, and we were taken by the commander to the first-line trenches. We met the soldiers going out who had been on duty during the night. There are only some 163,000 Belgian soldiers left out of an army of about half a million. As we went in just at daylight, the troops were coming out of the trenches and marching back to their barracks. It was very muddy, and while they looked tired, their shoulders were square, their tread was even. We followed the third-line trenches for half a mile. We saw where the soldiers had to rest, passed on through barb-wire entanglements, and let me tell you this country is nothing but barb-wire entanglements, and you

would have to see them to realize what barb-wire entanglements were.

We followed our commander into the second-line trenches; followed that for half a mile or so. That was about a quarter of a mile from the first-line German trenches. We saw the conditions as they were; we saw the comfort stations, that are all along in convenient places; we saw the places where men could rest when opportunity afforded. We went into the first-line trenches. Then we were 90 feet—30 yards—from the first-line German trenches. At about that time, from the information that had gone out that something not ordinary was going on in our lines, they opened up their machine guns on us, the sharpshooters began to get active, and the bullets went whistling by. We kept low down in the trenches; they were about 6 feet high, but they had been shot away in places the night before. Over those places painted muslin was stretched or branches were laid to hide the holes, but I don't believe they would have stopped a bullet, and we got down on our knees.

We were wearing by the direction of the officer a helmet—a Belgian helmet—they wear that only in the first-line trenches. It is a very great protection against sharpshooters' bullets, machine-gun fire, and shrapnel. We followed that for a quarter of a mile, but the firing became more intense until our guide said that he absolutely refused to take us any farther. We had seen conditions there as they were, and we were willing not to go any farther. Just at that moment, not 20 feet from where I stood, a Belgian officer was struck and killed and three soldiers wounded, and so we retraced our steps out of the immediate danger zone.

I want to bring the people of the United States this message coming from Gen. Pershing: "Tell your people that we can win this war, and that we will win this war." That confidence is shared by everyone of our troops that is over there. They all express themselves as being anxious to get into it. They are not going to be put into the danger line until they are well trained and understand all that trench warfare means. Our allies are anxious for our boys to get into service, but they do not want to put them in until they are prepared. They want us to send a big army over there, but not until we can send supplies to take care of them, and also supplies for allies, because we must feed them also; they can not feed themselves.

I just want to say a few words before closing. After seeing what I did I came to this conclusion, as did every other man who accompanied us. I believe that we decided right when we decided to fight Germany somewhere in France rather than in America, on the North Sea rather than in New York Harbor. This battle for liberty was sure to come, and if we do not fight it there we will have, and our beloved land will be subject to, the devastation that France and Belgium have suffered. In 1776 our forefathers fought for independence, and we won it; in 1812 we fought for the freedom of the seas, and we won that; in 1861 we fought for the liberty of the slaves, and won that; and to-day our sons are fighting for the liberty of humanity and democracy, and we shall win that. When a lasting peace has been established, just as the veterans of Gettysburg in our own time came to rejoice in the unity of this Nation of ours, so 50 years hence after they have been tasting all the blessings of liberty under a free government the veterans of the Battles of Marne, the Somme, and Verdun will rejoice with us that the German Government is no more.

Monument to James Buchanan.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. GRIEST,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 13, 1918.

Mr. GRIEST. Mr. Speaker, I wish to correct certain misinformation that has been circulated among Members here. My excuse for doing so is that James Buchanan came to this House, where he served in five Congresses, from the district that I now represent, and throughout his long public service he maintained his home there, at Lancaster, Pa., and his remains now rest in a cemetery in that city.

The misinformation which I wish to correct is this: It is wholly untrue that Buchanan's grave is unmarked or overrun with weeds, or neglected in any way. On the contrary, his

resting place is handsomely and fittingly marked and the burial lot is scrupulously cared for.

In further refutation of the baseless reports that the community in which Buchanan lived and died holds his memory in desecration, permit me to say that in 1905 a city councilmanic body, composed almost exclusively of Republicans, and a Republican mayor, placed upon the statute books of the city an ordinance conferring upon a beautiful city park the name "Buchanan Park," and within a year or two a prominent street of the city was, by action of the city council, almost unanimously Republican, and by approval of a Republican mayor, renamed "Buchanan Avenue."

The old Buchanan homestead, to which I had the pleasure of escorting former President Taft, as well as the gentleman from Ohio, Mr. Fess, and the former Member from Ohio, ex-Gov. Willis, only a few weeks ago, stands just beyond the city limits. It was and is an exceptionally attractive, old-style, commodious country home. Several of its rooms are maintained by its present owner, Mr. George B. Willson, almost as Buchanan left them. This homestead is a mecca for visitors, and it is pointed to with pride by the people thereabouts, regardless of politics or party affiliations.

In this connection it is to be borne in mind that this county of Lancaster, which constitutes a congressional district, and which was the congressional district of James Buchanan, as well as, subsequently, of Thaddeus Stevens, has the most stalwart and the most steadfast of partisan Republican constituencies. It has never in a single election faltered in its devotion to the principles and candidates of the Republican Party, even when James Buchanan himself was a candidate for President.

But notwithstanding this devotion to political ideals that were not Buchanan's, the memory of him as a man and a citizen is revered and his integrity and ability are unquestioned in that community. It is undoubtedly the dominant sentiment there, as it is my own, that more than a half century after his retirement to private life there should be tolerance and charity for his policies that were mistaken, but which, it must now be admitted, attach no taint of treason to him, and which have since been settled forever by the arbitrament of battle; and is it not but fair and just that we who are against his school of politics should now unhesitatingly render credit to him for virtues and capabilities with which he was undoubtedly endowed and which achieved distinguished service for his country at home and in foreign lands?

I hope, Mr. Speaker, that the pending resolution may meet with approval, thereby enabling a devoted kinswoman, known and honored throughout the Nation, to embalm in bronze and marble, without cost to the Government, her rightful regard and affection for one who was the fifteenth President of the United States.

German Deception.

EXTENSION OF REMARKS

OF

HON. MARVIN JONES,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 21, 1918.

Mr. JONES of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith insert a copy of the statement, dated August 8, 1917, presented by me to the Foreign Affairs Committee in connection with House joint resolution No. 138:

AUGUST 8, 1917.

TO THE FOREIGN AFFAIRS COMMITTEE,
House of Representatives.

DEAR SIR: In presenting for your consideration House joint resolution No. 138 my sole and only purpose is, if possible, to end the deception which is being practiced by the German rulers upon the German people.

These rulers are trying to make the German people think that the United States and the allies are committed to the purpose of destroying the national existence of Germany and the dismemberment of that Empire, and that we are endeavoring to force Russia to fight for the same purpose. Of course, this is not true, but the deception is being practiced nevertheless.

Being on the side of the right, we can well afford to have our war aims and peace conditions stated. Germany will thus be forced to state her terms concretely. This she can not afford to do, as she can then no longer deceive. She is now practicing deception. She should be driven to the open.

We do not fear the light on all of our motives.

My plan is merely a suggestion, and I shall leave the matter with the committee.

Very respectfully,

MARVIN JONES.

Some War Questions and Answers.

EXTENSION OF REMARKS

OF

HON. FRANK L. GREENE,
OF VERMONT.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1918.

Mr. GREENE of Vermont. Mr. Speaker, I have particular pleasure in improving the opportunity given me to extend my remarks in the RECORD by printing an article from the pen of the gallant Vermont sailor, Rear Admiral Charles E. Clark, published in the Army and Navy Register of February 2, 1918, under the heading "Some war questions and answers." When the whole world is intently watching to see what may be the result of the desperate German drive, now anticipated on the western front of the war zone in Europe, these words from the hero of the Oregon, the tried and true commander who served his apprenticeship under Farragut at Mobile Bay and won new glory for the flag at Santiago, may bring some cheer to anxious American minds. Admiral Clark is a student of military science, and his judgment, ripening after over half a century of experience and observation, is well worth serious consideration at this time.

SOME WAR QUESTIONS AND ANSWERS.

TO THE EDITOR:

SIR: Here are a few facts concerning the comrades and foemen of our soldiers in Europe, presented in the form of answers to interrogatories from men in the ranks.

The writer would forestall criticism by stating that, while he has twice been engaged in the combined operations of our military-naval forces, he has never served with our Army in the field. He would further state that, having more than once been obliged to call in all his reserves of conviction and courage, he can deeply sympathize with the German-born American who loves the fatherland and with the drafted American who is troubled at the thought of battle. But to these everything is possible at freedom's call and in the pathway of duty.

Is the German naturally brave and humane?

Yes; but with Prussian theory and practice he has retrograded, both as a soldier and a man. The Belgian atrocities alone prove the one, the other may be demonstrated. But first it should be conceded that Prussia adopted her military system more for protection than conquest; she, being the smallest of the "great powers" and having very irregular boundaries and no naturally defensive barriers, was peculiarly exposed to invasion. With the full development, however, came great successes in war, and these, with an avowed willingness to increase the horrors of war when other nations sought to lessen them, made Germany the terror of her neighbors and the dread of all mankind.

But under Hohenzollern leadership the German soldier has been machined down until he can only fight well as a part of the machine. In the decisive battles of the three great wars at Auerstadt, in 1806—even at Worth in 1870 and at the Marne in 1914—he was fairly outfought by the Frenchman.

Why should Auerstadt be called a decisive battle?

Because it was there, rather than at Jena, that Prussia was conquered by France in a day. When Marshal Davoust found himself with only 27,000 Frenchmen opposed to 64,000 Prussians, a Hohenzollern king with his queen being present with royal guards and grenadiers, he sent earnest appeals for help, but Napoleon, believing that the main Prussian Army was in his front and that Bernadotte was near enough to reinforce Davoust, said, referring to the latter's glasses, "Oh, the marshal must see double," and left him unsupported. Davoust, to hasten Bernadotte, offered to serve under him, but not a soldier came. At first he had only Gudin's division of less than 10,000 on the plateau, and the odds were terrific—5 or 6 to 1—but those French heroes, there to win or die, formed square or deployed as the dense masses of cavalry and infantry came down. The marshal and general ran from square to square between fearful rushes, crying that Friant's men were climbing up and that Morand's surely would come. When all were up and had formed around the wasted bands, though the odds were still 2 or 3 to 1, the cry was: "Forward, brave Frenchmen, and sweep these Prussians from the field!"

This astounding victory was so much more brilliant than any ever won by Napoleon in person that he never challenged the Prussian misstatements about the forces engaged or the claim that pressure came from Jena, 12 or more miles away.

The fear-stricken Hohenzollern, flying from the field, could at least feel that he was not deserting his army as Frederick the Great, pride of the royal line and founder of the system, did his when it was winning a victory at Mollwitz. However recklessly Frederick may have fought on later fields, he never drew rein until he had put 20 miles between himself and that of Mollwitz. Any German, other than a Hohenzollern or Prussian Junker, who deserts in that way would probably be stood up and shot.

Why ought France to especially honor the men who fought at Worth?

Because there 37,000 Frenchmen, hardly a veteran of the Crimea amongst them and few from Magenta or Solferino, fought 80,000 veterans of the army that had lately conquered Austria and beaten the south Germans until they bent for the Prussian yoke. When the French, through sheer weight of numbers, were driven from the field, the exultant Hohenzollern king sent his message: "See what our Fritz has done." It was his father who fled from Auerstadt, so he must have been elated at finding that when the machine worked properly two Germans could contend with one Frenchman.

Unfortunately, the French people, who had no time to prepare for defense after overthrowing the government in which they had no confidence, did not know how intrepidly their little army had fought,

so lost heart and Worth became a fateful day for France. When Alsace and Lorraine are restored, a monument there should commemorate the heroism of her sons.

In the world-saving victory of the Marne the Frenchman again proved his superiority in the field. But the grateful nations (and generous France would have it so) should glorify England and Belgium as well. It was English bravery and Belgian sacrifice that made possible the great victory.

The German was a fearful danger only before the Marne. He alone of all the nations had every male trained or assigned, and so may have believed his first blow would be irresistible. But the French parry and return decided the war. Beaten in the supreme test of arms, he has had to retire to his trenches and there resort to the methods of intimidation, frightfulness, and treachery. Kipling says the cruel cobra threatened his undaunted enemy, telling him to "be afraid," but in his cold heart he was afraid.

Can the Italians point to instances equally inspiring and glorious?

Yes. There are thousands of Italians now living who heard the guns when their fathers, untrained and almost unarmed, fought the veteran legions of despotism. Milan, Venice, Rome, and Palermo proved that through the length and breadth of Italy the spirit that sent forth "the dauntless three" far back in the centuries still abides. At Milan when the people rose against the hated Teuton the population was less than 170,000. Old Radetsky, the greatest of Austrian soldiers since Eugene, with 16,000 troops and over 200 guns, held the citadel, the walls and squares, and even had his Tyrolean riflemen on the roof of the great cathedral; but the Milanese—and every man, woman, and child must have been instinct with generalship as well as superhuman courage—fought from street to street and housetop to housetop until he was driven out. Can any parallel to this be found in history?

C. E. CLARK,

Rear Admiral, United States Navy.

Enlistment of Ex-Convicts.

EXTENSION OF REMARKS

OF

HON. CARL HAYDEN,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 23, 1918.

Mr. HAYDEN. In accordance with the permission granted me, I desire to print the following letter in the CONGRESSIONAL RECORD:

BOARD OF PARDONS AND PAROLES FOR THE
STATE OF ARIZONA,
Florence, February 11, 1918.

HON. CARL HAYDEN,
Washington, D. C.

MY DEAR MR. HAYDEN: I write to you to suggest the repeal of the law prohibiting men from enlisting in the Army or Navy who have served a sentence in a penal institution. Such a law may have appeared all right in days when men's minds were much in the dark as to crime and its causes, but in this day there can be no excuse whatever for keeping such an abominable law on the statute books of our Nation.

Men in prison have a great spirit of patriotism within them when their country is menaced by an enemy from without. As a rule they are daring fellows, men alive with the spirit of adventure, "rarin to go," as the vernacular of the range would express it. Any of these fellows who have served a prison sentence who can pass the physical and psychiatric examination should be taken in either Army or Navy.

But a few days since a Canadian recruiting officer came to this institution and asked that three British subjects who were inmates of the Arizona State Prison be paroled to join the Canadian expeditionary service. The board of pardons and paroles made the recommendation and the three men were enlisted in the Canadian Army, where they are now in service. At the same time the board recommended a pardon for a young American who had seen service in the Philippines and who had an honorable discharge from the United States Army. The governor issued the proclamation of pardon. He traveled to Fort Riley for the purpose of reenlisting. I shall now let him tell the story of his rejection by The Adjutant General:

"KANSAS CITY, Mo., February 6, 1918.

"DEAR MR. SANDERS: I arrived at Fort Riley last Saturday. I saw my old colonel and he wired and wrote The Adjutant General of the Army, as did two other commissioned officers, recommending me for reenlistment. The Adjutant General refused to reenlist me. I came to Kansas City to-day. I leave at 6 p. m. for Toronto, Canada—going to join the British Army and not the Canadian. Will get equipped in Toronto, and go from there to the south of England for training. Will be in trenches for spring drive of Fritz's.

"Regards,

"BRINKLEY."

Why should we lose this well-trained man? He was a hospital attendant, much needed at this time in the service. A man who has passed through a modern prison is better fitted for military service than a man who comes from the ordinary walks of life, for he has undergone discipline and will willingly obey orders.

The forty-seventh annual meeting of the American Prison Association, held in New Orleans November 19 to 23, 1917, recommended to the American Congress the repeal of this obnoxious law prohibiting a man from enlisting who had served a penal sentence. Congress surely should take action. I hope you will make an effort to wipe this law from the Nation's statutes.

Very cordially, yours,

J. J. SANDERS,

Parole Clerk, Arizona State Prison.

Some days ago I referred Mr. SANDERS's letter to the War Department and received the following reply from The Adjutant General of the Army:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, February 20, 1918.

HON. CARL HAYDEN,
House of Representatives.

DEAR SIR: Acknowledging the receipt of your letter of the 16th instant, addressed to the Secretary of War, in which you inclosed one dated February 11, 1918, from Mr. J. J. Sanders, parole clerk, Arizona State Prison, Florence, Ariz., herewith returned, with respect to the enlistment in the Army of men who have served a sentence in a penal institution, and in response to your request to be advised as to what the law is on this subject and whether this department would favor the enactment of legislation which would permit such prisoners to enlist in the Army, I have the honor to inform you that section 1118, Revised Statutes, provides that "no person who has been convicted of a felony shall be enlisted or mustered into the military service." The question of legislation permitting such men to enlist has been repeatedly considered by this department, but owing to the fact that such enlistments would tend to lower the high standard which has been the desire of the department to maintain, enactment of such legislation is not considered desirable by the department.

Very sincerely, yours,

H. P. MCCAIN,
The Adjutant General.

An Awakened America.

EXTENSION OF REMARKS

OF

HON. THOMAS L. BLANTON,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 22, 1918.

Mr. BLANTON. Mr. Speaker, I appreciate the privilege accorded me through the unanimous consent of my colleagues (pp. 100, 1356) to now comment more in detail upon several questions of public concern.

Germany is now dealing with an awakened America. The rich lifeblood of this Nation is irrevocably pledged to the cause of liberty and is now pulsating patriotically behind the Stars and Stripes with but a single thought and purpose—to fight this momentous war to a successful conclusion—thus placing the seal of world-wide disapproval of all civilized peoples upon barbarously cruel militaristic Prussian autocracy. Then shall become possible through a league of nations the dawn of a world's permanent peace, which shall make it forever impossible in the future for one nation successfully to prosecute war against another.

Woe be unto the man who falters or exhibits disloyalty just now, who stands in the way of the just purposes of our country, or who wittingly or unwittingly gives aid and encouragement to our enemies! The temper and spirit of loyal Americans will no longer countenance it, and their patience is tried now almost beyond human endurance. It behooves all citizens, in whatever walk of life and in whatever department of service, to pull strenuously against the collar, shoulder to shoulder, unflinchingly and without complaint or murmur. The one who refuses or fails is an infamous slacker, vile and despicable.

This is no time for selfish or partisan criticisms. Our brave, stalwart boys have gone fearlessly from the firesides of each of our districts to the mobilizing camps and battle fronts of Europe; their precious lives are daily facing the horrible terrors of the bomb-laden sea and treacherous trenches, and we must unite in a concert of action to safeguard and guarantee to them every possible chance of return.

By every thought, word, and deed the incomparable President of the United States has amply demonstrated that he is worthy of our full confidence. And he has the absolute and unlimited confidence of each and every Member of this Congress. Then why hamper him with chattering criticisms, and why seek to clog his plans with proposed legislation that is antagonistic to his expressed wishes and purposes? I have stood behind him thus far, and I intend to continue so to do until the end. Until the termination of this war I intend to support only such measures as the President approves of, and I intend to vote against every measure disapproved of by him. As the Commander in Chief of our Army and Navy, the responsibility of this war primarily rests upon his shoulders, and I for one am going to vote to give him anything and everything he wants to win it.

I repeat that there is at last an awakened America. There was a time when some thinking people believed that the assassi-

nation in Serbia of the Crown Prince of Austria brought about this horrible conflict. Everyone knows now that it was but an incident used as an excuse by the Imperial German Government to begin a long-conceived and premeditated war for the ambitious conquest of the world, the careful and minute preparation for which had been secretly carried on for over a quarter of a century. On that eventful June 14, 1914, all nations of the world were at peace, one with another. With the exception of Germany, all countries earnestly sought to perfect plans whereby no cruel war should ever again blight the happiness of mankind. But while all others planned for a world peace autocratic Prussianism plotted deep-laid schemes for war—not a war that would benefit the people of any country, but a war of conquest, lust, rapine, murder, robbery, and crime, prosecuted merely to satisfy the selfish ambition of Hohenzollern nobility. We have at last learned the meaning of the following portions of the Prussian creed:

We Hohenzollerns take our crown from God alone. On me the spirit of God has descended. Who opposes me I shall crush to pieces. Nothing must be settled in this world without the intervention of the German Emperor.

Might is right, and is decided by war. Treaties are only a disguise to conceal other political aims. The German people are the chosen of God. War in itself is a good thing. The efforts directed toward the abolition of war must not only be termed foolish, but absolutely immoral. The peace of Europe is only a secondary matter for us. The sight of suffering does one good; the infliction of suffering does one more good. Weak nations have not the same right to live as powerful nations. The world has no longer need of little nationalities. We need to enlarge our colonial possessions; such territorial acquisitions we can only realize at the cost of other States.

Russia must no longer be our frontier. France must be so completely crushed that she will never again cross our path. Against England, our real enemy, we fight for booty, and to subdue her and break her influence forever. German should replace English as the world language. English is a bastard tongue and must be swept away. The Belgians should not be shot dead, but so left as to make impossible all hope of recovery. Treat the Belgian civil population with unrelenting severity and frightfulness. The civilization of mankind suffers every time a German becomes an American.

It has gradually but finally dawned upon us that while all other nations were dreaming of peace, prosperity, and pleasure, for over 30 years Germany had used the Empire's concentrated skill, genius, labor, and resources in preparing for this war, mobilizing an army of 5,000,000 trained soldiers, perfectly armed and equipped; a strengthened navy, reinforced by the powerful submarine, perfected to a marvelous degree of offensive efficiency; strategical positions and frontiers fortified and protected; adequate financial arrangements made throughout the world; stores of munitions, offensive and defensive, manufactured and housed; improved aircraft, with an army of trained aviators; food conserved; and inaugurated one of the most extensive and effective spy systems ever dreamed of before in history, which permeated the very life of the industrial and governmental organizations of every country.

No wonder that in its manifesto published a few years before the war, entitled "Universal Empire," the Pan Germanic League had authority for asserting:

Progressive effort will be carried on until our batteries can be unmasked without danger. Europe will then find herself confronted by a situation already prepared, even to the minutest details, and against which she will be powerless.

And Europe did awake confronted by just such a serious situation, and against which she would have been powerless, had it not been for our timely assistance opportunely given at the crucial moment.

There was a time when some Americans believed that the United States was thrust into this war by the influence of munition makers and high finance. But this is the belief of no patriotic and enlightened American now. It is true that such interests wanted war and did exert all possible influence in that direction, but it is equally true that all such influence was absolutely fruitless. Even after the German cruiser *Prinz Eitel Friedrich* on January 28, 1915, sunk the American merchantman *William P. Frye*, our President kept us out of war for over 26 months thereafter, to a time when not to have taken up arms against a murderously attacking enemy, in defense of our sacred rights ruthlessly ignored and arrogantly trampled upon, would have made German vassals of us all, and branded every American citizen as an infamous coward with a yellow streak down his back, void of all courage, honor, and character.

In addition to Germany's unforgivable affront to Europe—the despoliation of poor little Serbia, the devastation of and horrible world-extending crime against Belgium, with sacred treaties ignored, thousands of defenseless women murdered, thousands of chaste mothers and virgin daughters kept captive behind licentious German armies and forced to live lives worse than death, thousands of little children maimed, dismembered, and murdered, the horrible atrocities committed in France, England, and Italy, the barbarous destruction of the history-famed temples of art and science, the dastardly massacre of nearly a million

civilian Armenians by uncivilized Turks, the deportation of thousands of young girls to Turkish harems, the premeditated attacks upon the wounded and helpless, upon hospitals and invalid trains, upon Red Cross nurses and angels of mercy, bombing schools, mutilating 76 innocent children in one building, dropping poisoned candy out of aeroplanes that victims of tender years might eat and die, forcing captive women and children, weak and exhausted, under lash and starvation, to do manual labor 14 hours a day, marching Italian wives and children in front of German armies invading Italy, thus forcing the brave Italian soldiers to shoot their flesh and blood to save their country—this war-mad German demon gave an additional affront and purposed provocation to the United States.

Before we entered this war Germany had anarchistically renounced and violated every principle of international law, gradually built and established through the civilization of ages, had denied us the God-given right to sail upon the high seas, had violated treaties, had wantonly broken sacred promises, had deceived us in a hundred ways, had filled our country with murderous spies, had spent millions of dollars here in a pro-German propaganda, had maliciously sunk 19 American ships, and murdered in cold blood 225 American citizens, each one of whom had the right to demand protection of our flag, had engaged in outrageous intrigues in the very heart of our capital and financial and commercial centers, and altogether had sunk 1,276 merchant ships, of which 425 belonged to neutral countries not engaged in war, many of which were without warning attacked in the darkness of the night, and hundreds of men, women, and little children dumped into the cruel bowels of the ocean to an unknown watery grave. Disregarding demand after demand, and ultimatum after ultimatum, Germany persisted in doing the very things, the doing of which, we had assured her, meant war with our flag—one that has never yet known defeat, and never will. Germany's pernicious plans even embraced a hope of influencing the action of Congress through bribes, for the State Department has made public the telegram which in January, 1917, Ambassador von Bernstorff sent from Washington, wherein he stated:

I request authority to pay up to \$50,000, in order, as on former occasions, to influence Congress through the organization you know of, which can perhaps prevent war. I am beginning in the meantime to act accordingly.

Germany did not want America to take up arms until she had conquered Europe, and then could center her whole power against us. Indicating the intention of Germany with respect to the United States, the *Frankfurter Zeitung*, as mouthpiece of the Kaiser, had published the following:

After England and other countries have been conquered their navies will be taken over, and then we will sail on to America, overpower that country, and collect sufficient indemnities from their people to pay the entire cost of the war.

In the face of our forbearance for two and one-half years, and in reckless violation of her numerous promises, on January 31, 1917, Germany arrogantly notified us that on the next day she would close up the markets upon which our 6,500,000 farmers depended by sinking every ship that entered a zone 1,200 miles long by 1,000 miles wide, through which last year passed six-sevenths of our cotton products and seven-eighths of our beef products, all ships to be ruthlessly sunk without warning, day or night, regardless of ownership, flag, or the number of women and children on board, and that no lives would be saved. Such action acquiesced in by us would have ruined every farmer, stock raiser, and producer in America, and within 60 or 90 days would have forced England, France, and Italy upon their knees, begging mercy from a merciless tyrant, and left Germany free to center all of her forces against the United States in a conquest of subjugation.

We did not know then, but we knew shortly thereafter, that 12 days before this Germany had sent to her minister in Mexico the following infamous communication:

BERLIN, January 19, 1917.

On the 1st of February we intend to begin submarine warfare unrestricted. In spite of this it is our intention to endeavor to keep neutral the United States of America. If this attempt is not successful, we propose an alliance on the following basis with Mexico: That we shall make war together and together make peace. We shall give general financial support, and it is understood that Mexico is to reconquer the lost territory in New Mexico, Texas, and Arizona. The details are left to you for settlement.

You are instructed to inform the President of Mexico of the above in the strictest confidence as soon as it is certain there will be an outbreak of war with the United States, and suggest that the President of Mexico on his own initiative should communicate with Japan, suggesting adherence at once to this plan, at the same time offer to mediate between Germany and Japan.

Please call to the attention of the President of Mexico that the employment of ruthless submarine warfare now promises to compel England to make peace in a few months.

(Signed) ZIMMERMANN.

If our efficient Secret Service had not intercepted the above document and prevented its delivery, I shudder to think of its natural and probable consequences. For remember Carranza's recent cordial birthday greeting to the Kaiser. There was no alternative but for the President to call Congress together and to declare:

There is one choice we can not make, we are incapable of making: we will not choose the path of submission and suffer the most sacred rights of our Nation and our people to be ignored or violated. * * * Our object is to vindicate the principles of peace and justice in the life of the world as against selfish and autocratic power, and to set up amongst the really free and self-governed peoples of the world such a concert of purpose and action as will henceforth insure the observance of those principles.

The President had in mind the possible happening of just such a contingency when, in Topeka, on February 2, 1916, he said:

We are not going to invade any nation's right. But suppose, my fellow countrymen, some nation should invade our rights. What then? I have come here to tell you that the difficulties of our foreign policy * * * daily increase in number and intricacy and in danger, and I would be derelict in my duty to you if I did not deal with you in these matters with the utmost candor and tell you what it may be necessary to use the force of the United States to do.

And the next day at St. Louis the President stated:

And I am bound to tell you that the danger is constant and immediate.

In resenting Germany's attempted conquest of the world the following countries have engaged in war against her and have taken up arms in defense of their rights: Serbia, Russia, France, Belgium, England (embracing the British Empire), Montenegro, Japan, Italy, San Marino, Portugal, Roumania, United States, Cuba, Panama, Greece, Siam, Liberia, China, and Brazil, embracing a population of 1,370,225,000 people. Though not engaging in war, the following nations have broken off all relations with Germany, viz: Bolivia, Guatemala, Honduras, Nicaragua, Santo Domingo, Haiti, Chile, Costa Rica, Peru, Uruguay, and Ecuador, embracing a population of 21,870,000 people.

In historic and beloved Mount Vernon, the shrine at which all lovers of free people the world over worship, there are three swords used by Washington, the Father of his Country and the first President of this Republic. In his will he decreed: "These swords are bequeathed with the following injunction: Never unsheathe them to spill blood except in defense of this country or its rights, but when once unsheathed for such purpose, die rather than surrender them until that purpose has been accomplished." Our country has drawn its sword in a just and righteous cause, and will never sheathe it until we secure a peace that will last throughout ages. It must be a permanent peace, secured by a league of nations, whose police power to enforce same will be the only armaments permitted hereafter to be maintained.

In his message of January 8, 1918, the President made it very plain that—

We have no jealousy of German greatness, and there is nothing in our program that impairs it. We grudge her no achievement or distinction of learning or of pacific enterprise such as have made her record very bright and very enviable. We do not wish to injure her or to block in any way her legitimate influence or power. We do not wish to fight her either with arms or with hostile arrangements of trade if she is willing to associate herself with us and the other peace-loving nations of the world in covenants of justice and law and fair dealing. We wish her only to accept a place of equality among the peoples of the world—the new world in which we now live—instead of a place of mastery.

With such a deadly world conflict now engaging the universe, our people must stand solidly behind our Government. The President is confidently depending upon each Member of Congress to see to it that no disloyalty is permitted to exist in his district. Whenever the thin smoke appears we must see to it that the fire is promptly extinguished before the blaze bursts beyond control.

On August 25, 1917, at Comanche, Tex., Hon. Oscar Callaway (who until the last election was the Congressman from the Fort Worth-Comanche district) made a speech, and from the stenographic report of same, certified to be correct by Mr. W. H. Graham, reporting same at the instance of one of the departments of Government, I quote the following excerpts:

I come to you to reason with you about what our rights and duties are, not to break any law, not to evade any law, but to determine, if we don't like the law, how we can act with reference to it, and that it is our right as American sovereigns to repeal it, and to repeal every man that has had anything on earth to do with it. * * * Did you say in your ballots at the last election that you wanted to go into this war? Well, your Representatives put you in it. Did they represent you truly or did they misrepresent you? If they misrepresented you as American sovereigns, you have got only to abide your time in accordance with the laws and Constitution of this country until the time comes for you to act again, which will be at the next election, and you can repeal every law that is on the statute books with reference to this thing, and you can repeal every man that supported it. Twenty men in Congress with iron down their backs and brains in their heads could have stopped it last winter. They could have stopped it this spring. But what did the people of this country do? They slept, * * * and those who would drive us into this war put every man out of Congress that dared stand up and fight it, and put in their places men

pledged to support the President—it didn't matter where he went.

* * * You said at the last election, "Let's have a one-man government, and everybody stand by him." You have seen where he has gone to. Did he go in accordance to the commission you gave him? Did you commission him to put you in war with Germany?

Do him just like the law you don't like—abide by it until the time comes to repeal him. * * * You can not repeal the President for four years, but you can repeal every Congressman in two years.

How are you going to do that? You must go home from here, because you can't do it here. Have your schoolhouse meetings, have your precinct meetings, have your county meetings, have your district meetings, have your State meetings, and you people discuss among yourselves—discuss whether you want to do that thing or not, and how you want to do it. Be patient! Be cool! Be reasonable! Be certain that you are at all times strictly within the range of the law.

* * * Because they are watching to see if you do make a mistake. They are taking me down here to-day. Do you suppose these men (reporters) weren't sent here by somebody to take my speech for the purpose of getting me if they could? They want to take me up. They want to take up 10,000 citizens of Comanche County for violating the law.

* * * And you people can determine whether or not you want to carry this war on or don't want to carry it on, through your accredited Representatives that you send to Washington two years from now, or one year from now. If your sentiments are what I think they are, your Representatives in Washington will go to turning double somersaults.

Do you know what the President says we are in it for?—to make the world safe for democracy. Didn't he and every Representative take an oath to support the Constitution? Is there a word said in it about the world for democracy? * * * The world for democracy! You all can not know how contemptibly fraudulent that sounds to me.

* * * Besides misrepresenting you, didn't they usurp authority? * * * Every citizen in this country has been pinched. Everybody in this land knows whether he wants this or don't want it, and whether or not there has been a usurpation of authority, whether or not these people represented his views in putting him in.

* * * If you don't act in unison in this country you will be divided and bung.

Before the war ever started they have appropriated more than half of the tax values of this county. Should it go on two years at this rate, and assuming that Comanche County is about ordinary in her per capita wealth and population, they have appropriated and bonded every dollar's worth of property in the United States. Then talk to us about economizing at the table! Haven't they been sending somebody around to you to tell you that? Well, you determine whether you want to do it or not, but let me implore you. They are looking down here, or they would not send these men over here to-day. I would like for these men to tell this crowd—here is 10,000 American citizens assembled here—who sent you down here, and what are you here for? * * *

We are not acting by ourselves. I think that I have got a wire down here in my pocket from New York. No; this is from Indianapolis: "Delighted to hear you are coming. Peoples' council convention will be held at Minneapolis, Minn., and we will expect you to make a speech either on September 2 or 3." I have got letters from Utah, from the State of Washington, from North and South Dakota, from Missouri, from Florida, from Alabama, from Georgia, from Arizona, from California, and almost every State in the Union, and from every character of high-class citizens of the United States, ex-United States Senator. * * * Be cautious that you do not come in contact with Federal officials and these supercilious bigots that imagine that an American citizen never had any rights. * * * Work this problem out and send delegates to your county convention to act and be here to determine what you are going to do, and then reach for a lignum-vitæ club for these officers, loaded to scatter, and get everyone of them, from constable to President of the United States.

I have quoted the above in order to emphasize to my colleagues the great importance of thoroughly posting their constituents with first-hand information concerning the facts connected with this war. If a distinguished citizen who so lately has been a Member of Congress can display such ignorance of conditions and preach sentiments so pregnant with dissatisfaction to our own people and aid and encouragement to our enemies, what might we expect from that class of citizens found in every district less enlightened and less informed. The people in not a single one of my 58 counties would permit such a speech to be made within their border. I am authorized by the loyal citizens of Comanche County to assure the President and this Congress that Mr. Callaway's speech was indorsed only by a bunch of disgruntled Socialists, who had gathered from several counties for the advertised appointment, and that such is no part of the sentiment of the Democrats and Republicans of Comanche County. The Minneapolis convention did not meet, and said speech was never repeated in any of the States mentioned or elsewhere. In December I spoke in Comanche in behalf of our war policies, and every person in the courthouse stood and pledged allegiance to our flag and the plans of our President to win this war.

Under the head of "Petitions," on page 8609 of the RECORD for October 5, 1917, appear numerous petitions introduced by the gentleman from Illinois [Mr. MASON] in behalf of H. R. 5181—the effect of which would nullify the purposes of our draft law—among which, besides one signed by 100 citizens of Comanche County, and another by 98 citizens of Comanche County, appears "one from 20 citizens of Hon. THOMAS BLANTON'S district," and another "one from 16 citizens of Stephens County, Tex.," which is in my district. Upon investigation I find that every man from my district signing these petitions is a Socialist, and has been "cussing" the Government, whether Republican or Democratic, for years. I can assure the President and this Congress that each and everyone of my 58 counties, and also the counties apportioned to the new seventeenth district, are loyal to the core, and are standing solidly behind the

President in all of his plans and policies, and are going to insure the safety of our brave boys in service to the uttermost by not countenancing any disloyalty whatever.

During this crisis the people should have absolute confidence in their representatives and no person should make an unfounded charge that might destroy it. Usually, newspapers are both correct and fair. They should be, as they keep us in touch with the world, and we can not do without them. But I want to call attention to a few errors of late which have wrought much harm.

On October 31 Editor Son, in the Palo Pinto Star, in effect, told his readers that we had imposed an income tax on other people but had exempted ourselves, and that we were idling our time in four-hour-a-day sessions. The press everywhere was conveying this news. If true, the people justly felt outraged.

There is not a Member of this House who will not agree with me when I say that any Congressman who would vote a tax on the people and seek to escape by exempting himself is not worthy to sit here, but ought to be in the Federal penitentiary; and it is well known to the country now that not a single Member of this House so voted, and there is no clause in the tax law exempting Congressmen. But because a clause was so construed by the newspapers and published broadcast over the Nation, Congress promptly, after meeting in this second session, passed a bill stating specifically that no such construction was intended and that Congressmen were not exempt. Yet I have looked in vain in the columns of Editor Son's Star and many other newspapers for this correction. But to accentuate the error in large headlines on February 2 the daily newspapers stated that although exempted by law Internal-Revenue Commissioner Roper had ruled that Congressmen, nevertheless, would have to pay their tax—as if they were resisting its payment—while in truth and in fact what Commissioner Roper did rule was that Congressmen did not try to exempt themselves and that the tax law as passed contained no exemption; and the press of the country has never yet informed the public that there has never at any time been any inclination or attempt on the part of Congressmen to exempt themselves from paying the tax the same as everybody else.

In regard to the charge of idling away the time in four-hour-a-day sessions, I will state that when I came to Washington I was prejudiced against the noon convening hour. In my campaign speeches I had denounced this practice, calling attention to the fact that banks, schools, State departments, and even churches opened before noon; and I promised, if elected, that I would put in a full day's work and would vote for Congress to convene at 9 a. m., the same as all other business institutions. I did not, however, as my newspaper friends ridiculously charged me with, say that "I would make Congress open at 8 o'clock a. m.," though I did call attention to the fact that for eight years during the summer time I had opened my district court at 8:30 a. m. and had transacted a full day's work for the people. But I had been in Washington only a few days before I learned why it is to the best interests of our constituents for Congress to meet as it does; that all of the departments meet at 9 and close at 5; that if Congress met at 9, there would be no time whatever to transact business with the departments, to answer the voluminous mail which comes daily from our constituents, or to attend committee meetings, and that the work before the various committees is the most important work done by Members. Since coming to Washington I have worked every Sunday except four, have worked every night except six, and have put in from 12 to 14 hours' hard work a day. I am willing to admit that it is the uninformed on the subject who would favor Congress convening at an earlier hour.

Another friendly newspaper has asked editorially why Congressmen have not been as anxious to serve on the front as they have been to force others. I sincerely believe that there are few, if any, Congressmen who are not willing to serve on the front and would gladly enlist if the President desired it. Shortly after Congress passed the draft act I sent to the President the following communication:

WASHINGTON, D. C., May 22, 1917.

TO THE PRESIDENT OF THE UNITED STATES.

MY DEAR MR. PRESIDENT: If I can be used at the front I stand ready to serve my country. When the question was before the House I voted to increase the maximum age limit to 45, so that I would be included. I likewise voted to subject Members of Congress to the selective draft. In order that I would not be excluded. I am willing to waive my age and position.

My father enlisted as a Confederate soldier at the age of 16. My great-grandfather, William Walker, of Cumberland County, Va., had the privilege of fighting for his country in the Revolution. My mother's uncle, James Monroe Hill, was a veteran of San Jacinto. My oldest son is not 17, but will be ready to respond when the call of his country makes it necessary.

I stand ready to obey your orders should my services be needed and you should see fit to call on me.

With much respect, I remain,
Very sincerely, yours,

THOMAS L. BLANTON.

I received from the President the following reply:

THE WHITE HOUSE, Washington, May 23, 1917.

HON. THOMAS L. BLANTON,
House of Representatives.

MY DEAR MR. BLANTON: Your letter of May 22 does you great honor. I do not wonder that you feel as you do, and yet I want very earnestly to remind you that we are now engaged not merely in creating an Army but also in mobilizing a Nation to perform all its functions at the highest pitch of efficiency. Surely in such circumstances it is just as much a man's duty to stay at a post such as you have been assigned to by your constituents as it is for a man to volunteer for an army. I take that view of it with the greatest confidence.

Cordially and sincerely, yours,

WOODROW WILSON.

Other friendly newspapers have informed the people that by passing the zone postal-rate law we have done a great injury to the reading public, and petitions are flooding our offices to repeal it. Our Government has carried publications through the mails each year at an actual loss of \$70,000,000. Even with the zone system recently passed the Government will still sustain a substantial loss. It is well known that if these newspapers and magazines were forced to pay the cost of their carriage through the mails on an equality with everybody else we could easily go to a 1-cent basis for first-class letter mail and have a surplus left over every year. While the publisher received \$450,000 for the advertisements in the May, 1917, number of the Ladies' Home Journal, it cost our Government \$20,000 more to circulate that one issue than it received; and while one weekly issue of the Saturday Evening Post brings to the publisher \$310,000, yet the Government on that issue sustains an actual loss of \$15,000 each week, and the Government sustains an actual loss of \$4,000,000 each year under the old system for carrying through the mails the publications of the Curtis Publishing Co. alone. During the last fiscal year the Government lost \$1,516,388 in carrying the Collier's Weekly, \$451,044 in carrying the New York Times, and actually paid to the railroads \$80,000 more than it received for hauling the Outlook. No wonder they are howling when some of this subsidization and graft has been taken away from them. This loss has been paid by the people, who have been taxed in order that rich publishers may become multimillionaires.

Editor Cowan, in his San Saba Star, has complained that my drought-relief bill seeks to help only the stockman and has overlooked the poor farmer, when, as a matter of fact, it promises every possible relief to the farmer.

Before the special session adjourned I published in the Abilene Daily Reporter the following:

I am receiving daily numerous appeals from different portions of the district requesting aid from Congress. The claim is made by many that all credit is being withdrawn, and that without it being given by the Government it will be impossible to procure seed grain this fall. I have too much confidence in the character, ability, and resources of our splendid merchants and bankers to believe that they will long permit such an awful condition to exist.

I realize fully the distressing situation existing. I shudder to think of the many hardships which must be undergone this winter in our drought-stricken section. But the question is, Can we west Texans afford to ask Congress for aid? Can not we care for our own locally?

I have been told many times that the outside aid received by our country during the drought of 1886-87 was, after all, an injury rather than a lasting benefit; that many well-to-do people who did not need assistance were the first to clamor for their share of the distribution; and that for many years thereafter our section was severely criticized and condemned by northern and eastern papers.

There are other sections of the United States just now which likewise have been unfortunate, and were I to request aid for my district many other districts would insist on having it likewise, and before any district received aid worth mentioning an enormous appropriation with correspondingly increased taxes would be necessary. To advance to the needy one dollar would require the expenditure of about five.

Therefore, before requesting or permitting Government assistance, canvass the matter carefully, think it over seriously, and see if some way can not be found to handle the situation and our misfortunes locally, especially during war times.

The new food-survey bill we have just passed and which became a law August 10 contains the following:

"SEC. 3. That whenever the Secretary of Agriculture shall find that there is or may be a special need in any restricted area for seeds suitable for the production of food or feed crops, he is authorized to purchase or contract with persons to grow such seeds, to store them, and to furnish them to farmers for cash, at cost, including the expense of packing and transportation.

"SEC. 4. That the Secretary of Agriculture is authorized to cooperate with such State and local officials, and with such public and private agencies or persons as he finds necessary, and to make such rules and regulations as are necessary effectively to carry out the preceding section of this act."

An appropriation of \$2,500,000 has been furnished the Secretary of Agriculture to enable him to secure seed, which he will furnish at cost for cash. May I suggest that you merchants and bankers in each county thoroughly organize your county, ascertain exactly how many bushels of seed grain will be needed from the outside, and make early application to Secretary David F. Houston for same. Surely you can arrange to get the cash to buy it for the farmers at cost.

Very sincerely,

THOMAS L. BLANTON.

After the special session adjourned I went to Texas, and after driving several hundred miles over my district, I was absolutely astounded at the perilously serious situation existing, and from Reeves County I sent the following telegram both to Hon. W. G. McAdoo, Secretary of the Treasury, and Hon. Herbert C. Hoover, Food Administrator, viz:

HON. HERBERT C. HOOVER,
Washington, D. C.:

PECOS, TEX., November 7, 1917.

Have just inspected drought conditions from Fort Worth to El Paso. Situation west of Eastland County tragic in the extreme. Without seeing it is impossible to conceive of such awful conditions. Thousands of farms are bare as public roads. Thousands of farmers have been forced to leave country seeking temporary work to avoid starvation. Ranches are without both grass and water. In some places creeks have not run for over two years. Even immediate shipment of cattle will not prevent great loss. Cattle are weak and a large percentage are actually unable to withstand shipment and would die in transit, hence only salvation is concentrating and feeding on ranches throughout winter wherever there is available water. In isolated places stockmen are paying over \$60 for cake and \$22 for hulls. I deem Government assistance absolutely necessary for 56 out of 58 counties in my district. Beau McCutcheon, of Davis Mountains, has already spent \$45,000 pasturing alfalfa in irrigated district in effort to save cattle, paying \$3,000 for pasturing 20 acres 60 days, after first crop had been cut. I respectfully recommend and urge that substantial deposits be placed in all banks in west and southwest Texas, both National and State, thus relieving them from any unwarranted uneasiness their connections might entertain and enabling them under proper regulations to carry the drought-stricken people, and tide over this unusual crisis.

THOMAS L. BLANTON.

Both Mr. Hoover and Secretary McAdoo answered, promising all assistance possible.

I canceled many appointments to speak on our war policies, and immediately returned to Washington, and after conferring with the Agricultural Department, Attorney General Gregory, Food Administrator Hoover, and Secretary McAdoo I sent the following telegram to the press of my district, viz:

WASHINGTON, D. C., November 14, 1917.

SWEETWATER DAILY REPORTER.

Sweetwater, Tex.:

In conference with Food Administrator Hoover this morning, he advised that as long as price received by farmers for cottonseed did not exceed \$80, cake and meal should be sold under \$50; also that if such an agreement were not reached to-day at the Houston convention, that he expects ultimately, through the license system, to reduce the price of cake and meal below \$50; also that he hopes to secure a reduction of from twelve to five dollars freight rate on velvet beans, and hopes to be able to make available to stockmen other substitute concentrates at prices which through regular competition will materially lower the price of all seed; also that he is endeavoring to furnish all available stock cars to Texas cattlemen immediately.

In conference with Secretary McAdoo this morning, he assured me that he would go the limit permitted by law in assisting the drought-stricken section, and that if any national bank failed to obtain needed assistance from the Federal Reserve System or its regular connections, he would make deposits upon proper showing and compliance with the department regulations, and that any State bank by joining the Federal Reserve System would receive similar assistance.

Administrator Hoover, Secretary Houston, Secretary McAdoo, and Attorney General Gregory are all keenly alive to the Texas drought emergency and will cooperate in every possible way to afford the greatest assistance.

THOMAS L. BLANTON.

In the Houston convention that day, by agreement, the price of cake was reduced to \$53.50 f. o. b. cars at Houston and Galveston. All available cars were furnished Texas, and velvet beans and other substitute concentrates available were shipped to Texas. But after thoroughly canvassing the situation, I ascertained that Government deposits in Texas banks would furnish very little relief, for the Texas banks, being liable to the Government, after all would be forced to require bankable security before making loans, and what was most needed was assistance to the stockman to winter his stock, which was already mortgaged beyond its security value at banks, and assistance to the farmers, whose only security was their work to be performed in raising a crop, yet who did not have seed, house, feed, or means for their families to subsist on while making the crop. So in the present emergency, when food and feed means so much both to our own Nation and our allies, I thought that our Government could well afford to advance money to keep alive the cattle by taking a mortgage on them, and advance money against the farmer's labor by taking a mortgage on his crop, which, if made, would safely guarantee a return, and if a crop failure the farmer would lose his labor and the Government would lose its advancement. Hence I carefully prepared such a measure, which provided no gift or gratuity, but merely an advancement secured by mortgage on live stock of the stockman, and the crop to be planted by the farmer, and reimbursable to the Government; and as soon as the present session convened I introduced this bill, H. R. 6529, on December 3, 1917. Its passage would have saved the lives of thousands of cattle and would have prevented a single farm from lying idle during this year. But Hon. Clarence Owsley, our Texas representative in the Agricultural Department, disapproved of Texas accepting assistance from the Government, and our Texas committee who came to Washington deemed the depositing of funds in Texas banks

sufficient to tide over the emergency; hence it was impossible to pass the relief measure I proposed.

In speaking against the Candler amendment to the Agriculture bill, I took the position that we ought to save this \$121,160 proposed to be spent in small packages of garden seed; that we should take our names off of them and let them be sent out by the Agricultural Department to all parties alike applying for them, and not wasted by mailing them indiscriminately to many business men in cities who did not want them. I congratulate Congress upon defeating this amendment, and thereby saving at least this \$121,160. We should have saved also the other item of \$242,320. We have fully demonstrated the idea of an awakened America by recognizing the full worth and value of our farmers and farming industry, in that we have made more generous appropriations in the Agriculture bill recently passed for the welfare and benefit of farmers than ever before in the history of our country. We have made the following appropriations to enable the Secretary of Agriculture to accomplish the following, namely:

Five hundred thousand dollars for the eradication of the pink bollworm; \$1,000,000 for the eradication of foot-and-mouth and other contagious diseases of animals; \$60,000 to develop livestock production in cotton districts; \$48,300 to regulate nursery stock, exterminate plant diseases and insect pests and to regulate the movement of fruit, plants, and vegetables; \$113,580 to enforce the United States cotton-futures act; \$92,750 to fix definite grades of grain and grain sorghums; \$61,500 to diffuse useful information on distribution and marketing of farm products; \$28,280 to make studies of cooperation among farmers in matters of rural credits and of other forms of cooperation in rural communities; \$45,920 for investigating, demonstrating, and promoting the use of standards for different grades, qualities, and conditions of cotton, and for investigating the ginning, grading, stapling, baling, marking, compressing, and tare of cotton; \$57,920 to procure statistics relative to all kinds of live stock, prices of meats and storage, and to furnish information to guide producers, consumers, and distributors of same in its sale and purchase; \$48,800 to investigate manipulation of markets and prevent control of agricultural food products; \$113,000 to investigate and certify to shippers the condition of fruits, vegetables, and other perishable farm products at important central markets, such certificates to be prima facie evidence in court; \$196,660 for collecting and distributing telegraphic information relative to supply and market prices of fruits and vegetables; \$292,240 to establish a bureau of markets and diffusing useful information to farmers and stockmen; \$82,440 for instructing farmers as to the utilization of water in farm irrigation; \$98,760 for instruction to farmers on farm drainage; \$40,040 for instruction on road management; \$141,060 for instruction on road making, building, and maintenance; \$51,220 for investigating chemical and physical character of road materials; \$60,000 for conducting actual field experiments; \$650,140 for eradicating cotton-boll weevil; \$20,000 for improved methods of agricultural practice; \$394,820 for destroying wolves, coyotes, prairie dogs, and other animals injurious to agriculture and livestock industry; \$304,050 to eradicate and prevent spread of plant diseases and insect pests; \$83,380 for protection to orchards, vineyards, and nuts, \$9,600 of which shall be spent in protecting pecans from destroying insects; \$69,175 for exploration, chemical, and physical investigations of soil; \$40,000 for regulating shipment of poultry and eggs; \$242,320 for distribution of garden seed; \$143,180 for propagation, testing, and distribution of new and rare seeds; \$62,020 for investigations and maintaining plant-disease survey; \$75,935 for eradicating fruit and orchard diseases, \$8,000 of which shall be spent in eradicating diseases of pecans; \$87,800 for eradicating diseases of cotton, potatoes, truck, and forage crops; \$50,000 for eradicating diseases of wheat, oats, and barley; \$25,000 for eradicating diseases of corn; \$24,280 for breeding and physiological study of alkali-resistant and drought-resistant crops; \$160,000 for improvement of methods of crop production in semiarid or dry land conditions.

This recognition of the supreme importance of farming and the greatest maximum food production possible will be the greatest "back-to-the-farm" influence that could be exerted.

But we are condemned by organized labor because we passed the Borland amendment requiring the hundreds of employees in this department to work eight hours each day. I was raised on a farm, and my heart has always been in sympathetic touch with the laborer and his problems, but the fight organized labor is now making against this Borland amendment is ridiculously absurd and absolutely without defense. Why, only a few years ago labor was advocating an eight-hour workday, claiming that the employee, because of the rest and recreation it would afford, could render a very much better quality of service. Yet we find that thousands of Government clerks here in Washington are making double pay by accepting employment on a second shift for some private employer after leaving the Gov-

ernment office at 5 p. m. Hundreds of them do not know what hard work is. They work in good, comfortable offices, under unusually pleasant surroundings, receive good salaries, paid on the dot twice a month in cash; many drive their own automobiles, wear the best clothes tailored in Washington, are regular attendants on the best theaters, and altogether live in an atmosphere of wild extravagance. Each year they have 30 days' leave on full pay, 52 Sundays off, are allowed as many as 30 days' sick leave on doctor's certificate with full pay, are allowed every legal holiday and 12 half holidays on the Saturdays in summer, besides a half holiday on the days preceding Christmas and New Year, and on all of the special occasions and occurrences in Washington. Yet they are asking to be retired on a pension when reaching certain ages and howling because the Government expects eight hours' work on the days they do work. It is simply ridiculous. There are hundreds of other deserving people anxious for each one of their jobs, who would be glad to work eight hours a day.

Moreover, because Postmaster General Burleson made certain recommendations in the interest of efficiency certain employees are denouncing him. The employees at El Paso had the bad taste to send me a petition urging Congress to ask for his resignation. During this war I am in favor of making it a death-penalty crime for an employee of this Government to strike against the Government in this hour of peril.

In this connection I might add that we should do something at once for the underpaid rural free delivery and star-route carriers and the employees and postmasters in second, third, and fourth class offices. Many have not been making \$200 a year net for their service.

In conclusion, let me say that we all indorse what the President said in his message on February 11:

I would not be a true spokesman of the people of the United States if I did not say once more that we entered this war upon no small occasion, and that we can never turn back from a course chosen upon principle. Our resources are in part mobilized now, and we shall not pause until they are mobilized in their entirety. Our armies are rapidly going to the fighting front, and will go more and more rapidly. Our whole strength will be put into this war of emancipation—emancipation from the threat and attempted mastery of selfish groups of autocratic rulers—whatever the difficulties and present partial delays. We are indomitable in our power of independent action and can in no circumstances consent to live in a world governed by intrigue and force. We believe that our own desire for a new international order under which reason and justice and the common interests of mankind shall prevail is the desire of enlightened men everywhere.

The Memorial Statue to Ex-President James Buchanan.

EXTENSION OF REMARKS

OF

HON. ISAAC R. SHERWOOD,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 21, 1913.

The Clerk read as follows:

Resolved, etc., That the Chief of Engineers, United States Army, be, and he is hereby, authorized and directed to grant permission to the trustees designated in the will of Mrs. Harriet Lane Johnston for the erection of a memorial to James Buchanan, a former President of the United States, on public grounds of the United States in the city of Washington, D. C., in the southern portion of Meridian Hill Park, between Fifteenth, Sixteenth, W, and Euclid Streets NW.; Provided, That the design and location of said memorial and the plan for the treatment of the grounds connected with its site shall be approved by the Commission of Fine Arts, and that the United States shall be put to no expense in or by the erection of said memorial.

Mr. SHERWOOD. Mr. Speaker, it is claimed in this debate that James Buchanan, President from March 4, 1857, to March 4, 1861, was derelict of duty, when seven Southern States seceded from the Union during the last days of his administration. Looking backward to that perilous time the claim seems plausible. When Lincoln was inaugurated seven Southern States had seceded from the Union and had set up a separate government in Montgomery, Ala. But owing to President Buchanan's environment, it will be generally conceded that he was powerless to use force to coerce these seceding States, because he had no adequate force at his command. Even Lincoln, surrounded, as he was, by the ablest statesmen of his own party, made no move to coerce these seven seceded States until after an overt act, the attack on Fort Sumter, the exclusive defensive property of the United States.

It was that crash of cannon shot against the walls of Fort Sumter that called forth President Lincoln's bugle call to arms. One month and 12 days elapsed after Lincoln's inauguration before this overt act of war on Fort Sumter, during which

time Lincoln was powerless to coerce these seceding States, and he made no warlike attempt. And Lincoln's inability to cope with the impending crisis was apparent to every intelligent American citizen living at that desperate time. In fact, the leaders of the Republican Party were divided in opinion on the vital question of the coercion of a State. Horace Greeley, of the New York Tribune, the leading Republican editor of that day, and the then leading Republican in private life in the United States, advocated in his Tribune that the erring southern brothers be allowed to go in peace. Gov. Salmon P. Chase, of Ohio, a prominent candidate for President in the convention which nominated Lincoln and a leading statesman in the Republican Party, indorsed Horace Greeley's position to allow the seceding States to go in peace. In fact the Republican Party was divided on that issue.

It was the sound of hostile cannon in Charleston Harbor that aroused Lincoln and the whole North to arms. When cannon speak Nations think, and in the clash of great armies they sometimes think great thoughts.

Let us remember also that in the terrible crisis of impending war, President Lincoln in his call to arms on April 15, 1861, made the first duty of the 75,000 militia called into war service to recapture forts and public property of the United States.

I quote a paragraph from that memorable proclamation:

I deem it proper to say that the first service assigned to the forces hereby called forth will probably be to repossess the forts, places, and property which have been seized from the Union; and in every event the utmost care will be observed, consistently with the objects aforesaid, to avoid any devastation, any destruction of or interference with property, or any disturbance of peaceful citizens in any part of the country.

We were leading a dull and melancholy life previous to Lincoln's call to arms, but when the crisis came the finger of God dropped the plummet into the dead sea, and with the overflow came new hopes and new ambitions.

James Buchanan on the question of African slavery in the States was no more proslavery than the average Republican of that day. If we are to deny his statue a place in this National Capital because of his proclaimed opinions on the slavery question, when no demand is made for a dollar out of the Federal Treasury, what shall we do with at least one-quarter of the marble and bronze statues now in Statuary Hall in the Capitol, who, when living, were more proslavery than James Buchanan?

I will now proceed to verify the statement that President Buchanan was while President no more favorable to slavery in the States than the Republican Party.

The Republican national convention of 1860 was held at Chicago, Ill., May 16-18. Abraham Lincoln, of Illinois, was nominated for President and Hannibal Hamlin, of Maine, was nominated for Vice President.

The following plank, the crux of the whole matter, was unanimously adopted. I quote section 4:

That the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions, according to its own judgment exclusively, is essential to that balance of power on which the perfection and endurance of our political fabric depends, and we denounce the lawless invasion by armed force of the soil of any State or Territory, no matter under what pretext, as among the gravest of crimes.

It will be seen that the most vital plank in the Republican national platform, upon which Abraham Lincoln was elected President, was an absolutely proslavery platform. It not only declared the right of the States to absolutely control slavery, and denied the right of the General Government to interfere, but it also denounced the John Brown raid as amongst the gravest of crimes. You may search every utterance of James Buchanan, from the commencement of his career to the end of his first term as President on the 4th of March, 1861, and you will find nowhere such a declaration in favor of human slavery in the States as that adopted by the Republican national platform of 1860. Furthermore, you will not find in the utterances of Mr. Buchanan any denunciation of the John Brown raid as amongst the gravest of crimes.

We must judge public men not by the lights of the present time but in the time in which they lived and moved. Every public man from George Washington down to the present time has been influenced more or less by his environments. I did not agree with James Buchanan in 1860 or 1861. I quote this Republican national platform in order to show that I was at that time far in advance of the party to which I belonged on the vital question of human slavery. As the eloquent gentleman from Massachusetts [Mr. WALSH] has already quoted, I was a prophet of emancipation.

And now let me say something of James Buchanan as a man. I have some matter that I consider vital which has never appeared in print touching the character of this distinguished Pennsylvanian. It throws a light on his character not revealed in this debate.

In his youth James Buchanan's heart was won by the charms of the beautiful Miss Anna C. Coleman, who, like himself, resided in Lancaster, Pa. They were soon betrothed and were counted the handsomest couple in all the country around. Some time after the engagement had been announced Mr. Buchanan was obliged to go out of town on a business trip. On his return he stopped in to see a Mrs. William Jenkins, who was entertaining a Miss Gracie Hubley, daughter of Gen. Hubley, an officer of the Revolutionary War. A gossiping young woman told Miss Coleman of Mr. Buchanan's visit and thereby incurred her jealousy. On the spur of the moment she penned an angry note and released him from his engagement. A short time after this incident a party was arranged to go to Philadelphia to attend an opera. Miss Coleman was included in the invitation, and on arriving at Philadelphia, on a plea of indisposition, remained at the hotel. On their return from the opera Miss Coleman was found in her room cold in death. The sad fate of Miss Coleman broke James Buchanan's heart and he never married and never loved another woman.

A poem written by James Buchanan, which has never been printed, was found on the person of Miss Coleman, of Lancaster, on the 26th of August, 1819. James Buchanan wrote a note to the father of Miss Coleman, asking the privilege of attending the funeral. Here is the note, dated December 19, 1819:

I have lost the only earthly object of my affections, without whom life now presents to me a dreary blank. I have now one request to make, and for the love of God and of your dear departed daughter, whom I loved more than any other human being could love, deny me not.

This letter is signed James Buchanan, and is addressed to Robert Coleman. It was written to ask the privilege of gazing upon the form, then cold in death, of Anna C. Coleman. This privilege the father of Miss Coleman denied to James Buchanan. In fact, he never answered his letter.

Let me read an unpublished poem by James Buchanan, found on the person of Miss Coleman, the night of her suicide in Philadelphia:

And is my dream of faith and hope
Forever gone into the past?
And will the God for mercy cope
With all my sunken hopes at last?

It can not be that I shall meet
No more those eyes of light divine;
It can not be your memory sweet
Can ever part from me and mine.

Some other day I hope and pray
The shadows of this desperate hour
Shall vanish in a brighter day,
And truth and trust shall vent their power.

Some other day not far away,
As God is truth and I am true,
These ugly doubts shall fly away
And show I am not false to you;
Until that hour, dear heart, be true,
For here I pledge my all to you.

A man, either in public or private life, who could remain loyal and true to the love of a woman dead for 50 years—for James Buchanan lived 77 years—can have my vote for a monument, even if he did not earn it as a prophet of emancipation, when prophets of emancipation, like myself, were being mobbed.

During the second term of Grant's administration Horatio King, who was Postmaster General under James Buchanan, was head of a literary society which met at his house every Saturday evening. At that time Grace Greenwood; Mary Clemmer Ames; George Alfred Townsend; J. Q. Howard, of the Galaxy; Miss Boyle, the poetess; and Col. Don Piatt, of the Sunday Capitol, were among the usual visitors. It was at one of these receptions that I learned through Horatio King the story of James Buchanan's broken-hearted love affair with Miss Coleman.

Some of you practical statesmen on this floor may call James Buchanan's loyal love a weakness, but how many of you would have wept for half a century over the loss of your first love and remained single and loyal and true to the end? Probably not one.

Those who knew James Buchanan best during his lifetime know that this tragedy saddened all his life.

Let us not at this late hour malign the memory of a man who in his time was fully abreast with the public sentiment of his party and a majority of his country, whose social life was pure, and who ranked as a peer in intellectual development and culture with the leading statesmen of his generation.

In the gentleness of Christian charity, and as the only emancipation prophet of 1859 who was not mobbed and the only one now living, with malice toward none and with charity for all, I propose to vote for this resolution.

To Erect a Monument to James Buchanan in the City of Washington.

EXTENSION OF REMARKS

OF

HON. EDWARD E. ROBBINS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 20, 1918,

On the joint resolution (H. J. Res. 70) authorizing the erection on the public grounds in the city of Washington, D. C., of a statue of James Buchanan, a former President of the United States.

Mr. ROBBINS. Mr. Speaker, my efforts to address the House upon this resolution have been frustrated by the motion of the gentleman from Texas [Mr. SLAYDEN] demanding the previous question, and I now avail myself of the privilege granted me to make some further comment on the purpose of this resolution. The object of this resolution is to accept a gift, in the form of a memorial to James Buchanan, a former President of the United States, from his niece, Mrs. Harriet Lane Johnston, the cost of which will be between one hundred and one hundred and thirty thousand dollars, the same to be erected in Meridian Park, in the city of Washington, without any cost whatever to the United States Government.

During the debate on this resolution, when it was previously up for consideration on the 13th of February, opposition developed to the acceptance of this gift upon two grounds:

First. That the memory of President Buchanan should not be thus commemorated.

Second. It was a bad precedent for the Government to accept this gift in the form proposed.

The latter of these reasons needs no consideration whatever, because many of the monuments throughout the city of Washington have been gifts and others have been in part a gift and in part paid for by money appropriated by Congress. There is ample precedent for accepting this donated monument.

The first objection, from the manner in which it was urged, may be taken to in some manner reflect upon the fair name of the great State of Pennsylvania, which State presented Buchanan to the Nation, if some reply is not made thereto.

The career of James Buchanan is without a parallel in American public life. Born of poor and humble parentage in the mountains of Franklin County, Pa., April 23, 1791, he taught school and educated himself, in a large measure. He became a member of the Lancaster County (Pa.) bar and was elected to the Pennsylvania Legislature in 1814. He was a Member of Congress from 1820 to 1830 and became one of its most distinguished Members and was for years chairman of the great Judiciary Committee. From 1830 to 1834 he was minister to Russia. From 1834 to 1845 he was United States Senator from Pennsylvania. From 1845 to 1849 he was Secretary of State in the Cabinet of President Polk. From 1852 to 1854 he was minister to the Court of St. James at London, England, and in 1856 he was elected the fifteenth President of the United States from the State of Pennsylvania.

Thus for a period of 56 years, with the exception of two short breaks, James Buchanan was in public life, and during this time he filled offices from the lowest to the highest with signal credit, tact, and ability. What an inspiration this career must be to every young American. From a humble home in the mountains of Franklin County, called "Stony Batter," to the Presidency! What other nation affords such opportunity and shows such accomplishments in one of its citizens of lowly birth, who attained such distinction unaided except by his own talent, perseverance, determination, and industry?

During the Presidency of James Buchanan three important events occurred:

First. The Dred Scott decision, rendered March 6, 1857, two days after his inauguration. In this decision Chief Justice Taney said:

They—

Referring to the negroes—

had for more than a century before been regarded as so far inferior that they had no rights which the white man was bound to respect.

This decision precipitated the issue of slavery and made certain the War of the Rebellion.

Second. The Lincoln and Douglas debates in 1858, in which Mr. Lincoln spoke of slavery thus:

In my opinion it will not cease until a crisis shall have been reached and passed. "A house divided against itself can not stand." I believe the Government can not endure permanently half slave and half free.

I do not expect the Union to be dissolved—I can not expect the house to fall—but I do expect it will cease to be divided. It will become all one thing or all the other. Either the opponents of slavery will arrest the further spread of it and place it where the public mind shall rest in the belief that it is in course of ultimate extinction, or its advocates will push it forward till it shall become alike lawful in all the States, old as well as new, North as well as South.

This startling announcement challenged the attention of the North to the fact that slavery was an active and progressive institution that would not stop until the North had been subdued to its grasping power and insatiable greed.

Third. John Brown's raid, which occurred October 17, 1859, practically brought the country to understand that war was imminent and inevitable.

A mere recital of these stirring events in our history at once focuses the mind on the fact that James Buchanan's administration was a stormy one, and that it tested men of the finest fiber and called for heroic action. It is asserted that Buchanan failed to meet the great emergency thrust upon him by these startling events. In order to be fair to the memory of James Buchanan it is necessary to review briefly the historical occurrences that led up to the situation which confronted and surrounded him during the whole period of his occupancy of the presidential chair.

The struggling Colonies first were drawn together by the articles of association in 1774. This was a weak tie in that it did not restrict the individual rights of the Colonies who were parties to it. This tie was defined and in some degree strengthened by the Declaration of Independence in 1776. Again this bond was further strengthened, but to no such extent as to interfere with the individual liberty of the Colonies, by the Articles of Confederation made in 1778, and, realizing that even the tie thus formed was inadequate, the Constitution of 1787 was adopted, the first object of which was "to form a more perfect Union."

Thus it will be seen that the Colonies were drawn together as independent governments. The Central Government was, indeed, an impotent and weak institution.

Two schools of political thought immediately developed. The one sought to strengthen the Federal Government, of which Hamilton was the chief advocate, which only could be done by curtailing the powers of the individual State. The other struggled to maintain the independence of the State, and to in every way prevent the Federal Government, which was one of delegated powers, from growing in strength and in importance. The chief apostle of this theory was Thomas Jefferson.

An important factor in the development of these respective theories of political belief was the institution of slavery, which existed and grew strong in the South.

In 1820 the Missouri compromise, brought about chiefly by Henry Clay, provided for the admission of Missouri as a slave State from a part of the Louisiana Purchase, and contained a proviso that slavery should be prohibited from the remainder of the Louisiana Purchase territory north of the parallel of latitude designated as 36° 30', and even this the North would not agree to without the admission of Maine, with two free Senators, to offset the two new Members of the Senate from the slave State of Missouri. So confident was Clay that this finally settled the slavery dispute that he told the Missourians to "go home and prepare your State for gradual emancipation."

This compromise, however, proved futile, and in 1850 the Kansas-Nebraska bill was enacted by Congress, which organized the remainder of the territory included in the Louisiana Purchase into two Territories: Kansas to include all the region north of Missouri and Nebraska the balance; the southern boundary of Kansas to be the thirty-seventh parallel of latitude, and this act contained the provisos:

First. That the question of slavery should be left to the people to determine.

Second. That the question involving the title to the slaves should be left to the courts, out of which the Dred Scott decision grew later.

Third. That the fugitive slave laws should apply to these Territories.

This act was declared to be the repeal of the Missouri compromise. It caused a profound stir throughout the country; ruptured the old Whig Party, driving the southern members into the Democratic Party and the northern members organized the Republican Party.

This bill was signed by President Pierce. Mr. Buchanan was not concerned in it, although the gentleman from Nebraska [Mr. REAVIS] seemed to believe that he was in some ways subject to criticism for its enactment, although as a matter of fact it occurred during the only two years that President Buchanan was in private life.

In the light of these facts the student of our country's history can well understand the intense feeling that existed when James Buchanan was elected as the fifteenth President of the United States and inaugurated March 4, 1857.

There was in the United States a great party in the South and a large number of our people, both North and South, who believed that the Federal Government had no right to forcibly coerce a State to remain in the Union. Calhoun held to that doctrine, but Jackson quieted him by the threat of hanging. Webster by his overwhelming eloquence stayed this feeling. The States of Kentucky, Virginia, and Massachusetts at various times declared by resolutions their belief in it. James Buchanan believed it also, and his great misfortune was that he was President at the time when the falsity and political absurdity of this proposition as applied to the Union was finally exploded by the War of the Rebellion.

I am no partisan of James Buchanan. I inherit my republicanism from a family that denounced him along with others in power as his political advisers for their belief on this proposition, but I have been a student of the history of my country, and I think in all fairness the attainments of James Buchanan prior to the date of Mr. Lincoln's election are sufficiently great and the successes of his life are so uniformly preeminent that he is entitled as President of the United States to this public memorial in the capital city of our Nation.

His career, which was so conspicuously successful, left him a poor man, which is a tribute to his integrity and his honesty that ought not to pass without notice in these modern days. Indeed, how true are the words spoken of him by our great jurist, Judge Jeremiah S. Black, when he said:

The incorruptible statesman whose walk was upon the mountain ranges of the law.

The city of Washington is filled with monuments to our military heroes. Few, if any, civilians have been thus honored, yet "Peace hath her victories no less renowned than war."

The memory of James Buchanan, who was the fifteenth President of the United States, deserves this honor in the Capital of our Nation.

The Supreme Sacrifice.

EXTENSION OF REMARKS OF HON. FRANK CLARK, OF FLORIDA, IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 21, 1918.

Mr. CLARK of Florida. Mr. Speaker, under the leave to extend my remarks in the Record I am printing an article from the Evening Star, a daily newspaper published in my district at the city of Ocala, Fla. This article tells the story of the death of Second Lieut. Wiley H. Burford, of the Army of the United States in France. Young Burford died in battle, killed while gallantly fighting to "make the world safe for democracy." He came from the best blood of the South, his forbears being among the bravest of those who followed the fortunes of the ill-fated Stars and Bars. Not yet 25 years of age, when the call to arms was sounded this gallant young American volunteered his services to his country, and has made the supreme sacrifice on the altar of patriotism. Cut down at the very threshold of a most promising young manhood, Wiley Burford has set an example of patriotic devotion to duty and love of country worthy of the emulation of the youth of the land, and has added a new luster to the glorious courage of American manhood. A native Floridian, Florida shall ever cherish him as truly representative of her best.

WILEY BURFORD.

The iron of war for the first time really entered Ocala's soul late Saturday afternoon, when it became known that Mr. and Mrs. R. A. Burford had received a telegram from the War Department announcing the death of their son, Wiley, on the battle front in France. The dispatch was received about 4.30 p. m., and said:

WASHINGTON, February 16, 1918.

R. A. BURFORD, Ocala, Fla.:

Deeply regret to inform you that it is officially reported that Second Lieut. Wiley H. Burford, Field Artillery, died of a bullet wound February 14, 1918.

McCain, Adjutant General.

At the time the news came the sidewalks and stores around the public square were thronged with the usual Saturday afternoon crowd, rather larger and more lively than for months, for many of the high-school students and their guests from Gainesville had come downtown after the basket-ball game. The news went from lip to lip around

the business center almost as swiftly as fire follows a train of powder. It took the smile off every face, many women and girls broke into tears, and the men looked deeply concerned, for the brave young soldier, his parents, brothers, and sisters are all very dear to the people of our city.

Lieut. Burford is the first Ocala soldier in the American Army to fall in battle on the French front. He was a brave and skilled young officer, and his death is a loss to the Nation as well as to his family and friends.

Wiley Burford was the second son of Mr. and Mrs. R. A. Burford and was born in Ocala October 31, 1893. He passed his childhood and boyhood here and graduated from the Ocala High School. He then went to Princeton University, where he graduated with honors, class of 1916. He chose the profession of law, intending to practice with his able and honored father, and entered the law department of the University of Florida at Gainesville. He completed his junior course in law before the close of the term in order to enter the first officers' training camp at Fort McPherson.

At the University of Florida he was a member of the Florida debating team, which won against both South Carolina and Tennessee. He was a member of Kappa Alpha (No. IV) and won one of the prizes offered in the law college. He held memberships in the Serpents' Ribbon Society, the John Marshall Debating Society, and the Cooley Club. He was honored with the presidency of the junior law class and did honor to the place.

At Fort McPherson he received his commission as second lieutenant and was immediately sent to France. His first assignment in foreign service was in a field artillery school of instruction "somewhere in France." On completing this course with favorable recommendations for promotion, he was assigned for active duty with the Field Artillery, American Expeditionary Forces. The regiment to which he was attached is one in the Regular Army which had already been to the front; in fact, that particular battery had been the first to take up a position at the front, and the second to fire on the enemy.

At least 10 days must elapse before any detailed information will be available, but it is probable that he received his death wound in the fighting either of the 14th or of the preceding day or two, when it was reported that the American artillery was being used with good effect on the German lines. His career ended early, but even in that little time he made it worth while.

Lieut. Burford was one of the young men of whom this Nation can feel proud. A highly intelligent, clean-living, brave, and courageous young man, no one of his years held a higher place in the esteem of the people of his home city or of those who knew him elsewhere. He was a type of the officers of America's new Army. He did not want war and did not aspire to the life of a soldier. His inclinations and training were toward a life of peace and order. But he saw his duty, and he went to meet it. He was a volunteer, and he has laid down his young life for the greatest of causes. May his life and death be an inspiration for those whose feet are slow to enter the pathway of duty and honor.

He died for America; he died for France; he died for right and justice and the welfare of the whole world; that wrong may be rebuked and mercy and safety may abound. God give us millions like him.

In Fritz Greene Halleck's immortal poem, "Marco Bozzaris," are the following lines, which are peculiarly applicable to Lieut. Burford and all other men who lose their lives fighting against oppression:

"Come to the bridal chamber, Death;
Come to the mother when she feels
For the first time her first-born's breath;
Come when the blessed seals
That close the pestilence are broke
And crowded cities wall its stroke;
Come in consumption's ghastly form,
The earthquake shock, the lightning storm;
Come when the heart beats high and warm,
With banquet song and dance and wine—
And thou art terrible; the tear,
The groan, the knell, the pall, the bier,
And all we know, or dream, or fear,
Of agony are thine.

"But to the hero, when his sword
Has won the battle for the free,
Thy voice sounds like a prophet's word,
And in its hollow tones are heard
The thanks of millions yet to be.
Come when his task of fame is wrought;
Come with her laurel leaf, blood bought;
Come in her crowning hour—and then
Thy sunken eye's unearthly light
To him is welcome as the sight
Of sky and stars to prisoned men;
Thy grasp is welcome as the hand
Of brother in a foreign land."

A COMFORTING MESSAGE.

Mr. and Mrs. Burford received this morning the following comforting message from their oldest son, Lieut. Robert Allen Burford.

Lieut. Burford is in the Navy, and his message is not only a comfort to his parents but an inspiration to all other patriotic young men:

"PHILADELPHIA, Pa., February 17.

"Mr. and Mrs. R. A. BURFORD,
Ocala:

"DEAR MOTHER AND FATHER: We are heartbroken, and you have all our love and sympathy. I pray God that I may avenge his death. Change Wiley's star to gold in the service flag. Be comforted that he died a noble death, killed in action. We are proud of our poor, dear brother. With all our love.

"ROBERT."

Saturday morning and afternoon Mr. and Mrs. Burford received several letters from Wiley. Written at different times, they all came at once. They were bright and interesting letters describing the young officer's life in France and will be treasures to his loved ones as long as they live. His mother had finished reading the last of them but a few minutes before the arrival of the telegram that told of the death of her soldier son.

Mr. and Mrs. Burford are bearing up bravely under their great sorrow.

Sustaining Mr. Burford in his grief is his pride in his boys—one sleeping in a glorious grave; the others ready to do and dare all things for the same great cause. Mrs. Burford is for the time prostrated, for

it is a hard task for a mother to balance even the cause of the Nation against the life of a beloved child, but she too will in time emerge from the valley of sorrow and smile through her tears when she thinks of the brave young life laid on the altar of patriotism.

Miss Mary Burford and Mr. Sam Burford are expected home this afternoon or to-night. Miss Mary was visiting friends in Cincinnati when the sad news came to her. She started home, and on the way was joined by her brother Sam, in school in Atlanta, and preparing also to do his duty for his country.

The hearts of our people are full of sorrow for the dead and sympathy for the living, but this sad event has lifted us all nearer to a full conception of the great cause for which we must make sacrifices to win.

Federal Control of Railroad Transportation.

Let us provide for the protection of the public and the actual owners of the railroads and not merely for the protection of their exploiters.

EXTENSION OF REMARKS

OF

HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 28, 1918.

Mr. HELVERING. Mr. Speaker, we have heard much with regard to our plain duty to return the railroads of this country to their lawful owners as soon as our need for them for war purposes is at an end, and if the question at issue was one of withholding them from such lawful owners, I have no doubt that we could settle it with a minimum of debate. But, Mr. Speaker, in advancing that argument there is danger that we may confound, as we often have done before, the ostensible with the actual owners of these properties.

In arguing the case before the Senate committee one gentleman referred to the solicitude shown for the widows and for the orphans, for the savings banks and for the insurance companies, and he compared it with the action of the German armies in Belgium when they placed the old men and the women and the children of that unhappy country in the front rank, so that they would be the first to meet death in case the progress of the armies was interfered with.

The illustration is an apt one, for much of this solicitude expressed for an early return of the railroad properties to their owners is based by many without any thought of the real owners, but has concern only for the manipulators who have in the past utilized these properties for their own selfish ends and to the detriment of the public who have had to make use of the properties, and the detriment of the investors in the actual stocks and bonds of the railroad properties of the country.

I do not propose to enter into detail with regard to the criminal practices which resulted in the wreck of the Chicago & Alton Road, the Rock Island, the Frisco, and the New York, New Haven & Hartford. The history of the transactions are no doubt familiar to every Member of this body. But I refer to them merely to say that we will be derelict in our duty to-day to return these properties to their various managers before we have so legislated that such manipulation will be an impossibility in the days to come.

Oh, I know it will be said that the roads I have mentioned are the exception and not the rule, and that the majority of our great transportation systems are honestly and efficiently managed. I am prepared to admit all that, but it in no wise weakens the demand for legislation. We legislate against thieves while we believe that the great majority of the people are honest; we throw every possible safeguard around life and property, not because we are of the opinion that the majority aims at its destruction but because we recognize that we must guard against the criminal minority. And so it is that we should legislate, not with the intent to cripple honesty or efficiency but with the thought that there will still be eminent financiers who are prepared to resort to the methods which have brought ruin to so many splendid properties in the past.

The eminent financiers need no protection from us, for they have eminently proven their ability to look out for number one. But we should give thought to the real owners of the railroad properties—to the widows, the orphans, and the men and women who have so much at stake and who have so often been exploited by eminent financiers, who used them as pawns in their stock-manipulating games.

We should legislate to the end that these public utilities should be efficiently managed; to the end that dividends earned shall reach their real owners; to the end that extravagance shall be eliminated in expenditures; to the end that stocks and bonds

shall represent real value, and not water; and to the end that the users of these utilities shall be taxed only on real, and not upon artificial, investment.

Therefore I am opposed to setting a time for this Government to turn back the control. We need time to carefully consider the legislative needs and to thoroughly digest the various forms of control proposed. Just now the country is given up to consideration of matters which deal with the conduct of war and with the things needed to utilize the full strength of this Nation in the struggle in which we are engaged. But when peace comes we should be ready to give careful consideration as to what is needed to cure the evils in our railroad management, and we should enact the necessary legislation before we turn these roads back to private control.

For that reason I shall vote to leave the date of their turning back to be determined in the future. Each and every one of us knows that there was something lacking in the operation of these great properties prior to the war. There are those who are ready to assume that this was solely due to our prohibition of the pooling of resources, but with that view I am not wholly in accord. The trouble mainly was that while we had assumed the power to regulate rates we had paid no attention to the regulation of expenditures. We had permitted to manipulators the opportunity to work their sweet will and dissipate splendid properties, so that the men of small means were frozen out and the criminal profiteers waxed rich. I am wholly opposed to our ever returning to those conditions and therefore I shall vote to strike out the proposition to return these properties in a definite time and shall not be ready to vote for their return at any time until we have made it possible for them to be run in the interests of the general public and of their actual owners and not in the interests of the wreckers and of the stock jobbers.

Statuary and Art in Washington.

EXTENSION OF REMARKS

OF

HON. HENRY Z. OSBORNE,
OF CALIFORNIA,

Thursday, February 21, 1918.

Mr. OSBORNE. Mr. Speaker, under leave to extend my remarks in the RECORD I insert the following speech by Hon. ISAAC H. SHERWOOD, delivered in Music Hall, Washington, D. C., February 17, 1918:

STATUARY AND ART IN WASHINGTON.

The Capital of this Republic, the now great city of Washington, is the only original Capital around the world. It is the only Capital that was created and founded as a National Capital out of nature's earth and forest by organic law. It was only 48 days after the last act of ratification of our Constitution and before we had fairly lost sight of the royal standards of Great Britain that the first-born Congress of the thirteen original States decreed the wilderness on the eastern shore of the Potomac as the future seat of empire. St. Petersburg, late home of the Czar of all the Russians, came out of the swamps of the Neva by the decree of Peter the Great. It was a point of great military moment and afforded an outlook upon Europe, then chaotic. Versailles, once capital of France, sprang from a hunting lodge of Louis XIII.

Rome was a city for 600 years before she became an imperial capital and mistress of the world. Paris, London, Madrid, Vienna, and Berlin had all a long commercial life before crowned as capitals, but Washington City was the creation of national law—the conception of the men who first set the young Republic as a crown jewel in the great family of nations. George Washington selected the site.

How wisely and well he selected can be told in the spectacle of the finest Capitol building in the world and the most beautiful city on the Western Continent. When George Washington was a young man, in the employ of the Colonial Government, he surveyed the lands upon which the city of Washington now stands. Standing on Capitol Hill, overlooking the broad Potomac and the heights of Georgetown, he then remarked: "What a magnificent location for a government seat."

THE CROWN OF THE GREAT DOME.

What is this figure on the great dome that is supposed to be our ideal goddess? It was designed by Crawford in Rome in 1855. It is the figure of a female, with the right hand resting on the hilt of a sheathed sword, the left on a shield, and hold-

ing an olive wreath. On the head is a helmet with a crest of eagle quills. The drapery is gathered about the waist by a brooch bearing the letters "U. S."

It is the figure of a woman, the sword and shield of a soldier, and the Phrygian helmet of a pagan. Who conceived such an idealization to crown the National Capitol of a Republic? The history of this remarkable statue appears to be little understood, but it is full of interest, and every citizen ought to understand it. This great statue is not entirely the creation of Crawford. It is true he made the model, but it was by instruction. The first photograph of a model, sent home by Crawford in 1855 from Rome, was an entirely different creation. This was the figure of a woman, with a liberty cap on her head, blazed with 13 stars, representing the thirteen original States. The drapery was gathered about the waist by a belt bearing a star for all the States of the Union. Jefferson Davis was then Secretary of War, and he refused to accept this model because the liberty cap was symbolic of a freed slave. He claimed that a statue with the liberty cap on the dome of the Capitol for a people half free and half slave was a menace to the South. A correspondence ensued between Davis and Crawford, resulting finally in the present statue. The photograph of this statue was received by Secretary of War Davis early in January, 1856. This statue Davis accepted, as will be seen by the following letter addressed to Capt. Meigs, who was then in charge of the Capitol extension:

WAR DEPARTMENT,
Washington, January 15, 1856.

CAPT. M. C. MEIGS

(In charge of Capitol extension).

Washington City.

SIR: The second photograph of the statue with which it is proposed to crown the dome of the Capitol impresses me most favorably. Its general grace and power, striking at first view, has grown on me as I studied its details.

As to the cap, I can only say, without intending to press the objection formerly made, that it seems to me its history renders it inappropriate to a people who were born free and would not be enslaved. The language of art, like all living tongues, is subject to change; thus the bundle of rods, if no longer employed to suggest the functions of the Roman Lictor, may lose the symbolic character derived therefrom and be confined to the single signification drawn from its other source—the fable teaching the instructive lesson that in union there is strength. But the liberty cap has an established origin in its use, as the badge of the freed slave, and though it should have another emblematic meaning to-day, a recurrence to that origin may give to it in the future the same popular acceptance which it had in the past.

Why should not armed liberty wear a helmet? Her conflict being over, her cause triumphant, as shown by the other emblems of the statue, the visor would be up, so as to permit, as in the photograph, the display of a circle of stars expressive of endless existence and of heavenly birth. With these remarks, I leave the matter to the judgment of Mr. Crawford, and I need hardly say to you, who know my very high appreciation of him, that I certainly would not venture on a question of art to array my opinion against him.

Very respectfully, your obedient servant.

JEFFERSON DAVIS,
Secretary of War.

Jefferson Davis was a classical scholar, and this letter shows the high quality both of his rhetoric and his logic. Hence this statue was approved at that time.

It will be seen that this letter refers to the objections expressed in former correspondence. Mr. Davis repeats, in brief, his objections to the liberty cap, but why the stars representing the States were omitted does not appear in this letter.

It will now be seen that the present statue was intended to personate armed liberty. Mr. Davis says, "Why should not armed liberty wear a helmet?" We might ask with propriety, Why should armed liberty be personated by a woman? Women have stood in no battle lines for liberty since the dawn of the Christian era. If this statue is to personate armed liberty, it should represent a man with limbs of iron and nerves of steel, with face and breast gashed deep with the scars of many wars.

Mr. Davis's letter establishes the fact that we have no Goddess of Liberty on our National Capitol. We have the figure of a woman that symbolizes nothing either vital or symbolic in this hour.

Another question arises: Have we any such statue in this country as the Goddess of Liberty? If so, where did we borrow the idea? Certainly not from the classics. The Greeks had no Goddess of Liberty. The Libertas of the Greeks personated a freedman, or a slave who had been freed by his master or the State. The Libertas of the Romans was the representation of a mature matron in robes of pure white, holding a rod in one hand and a liberty cap in the other. This was in Rome a statue to the citizen who had liberated his slaves. Later it was worshiped as a mythological divinity. But in both Greece and Rome Libertas was an inferior goddess and belonged to the class of genii. After Cæsar's conquests in Spain a temple was dedicated to Libertas by the Roman Senate, and the statue set up in the Forum. But this statue personated conquest, aggression, and power, and not liberty.

Where is our Goddess of Liberty? She is not on the dome of our Capitol. She is not in New York Harbor. Bartholdi's statue is in action and not in repose. All classic statues, even to the warlike Mars, are in repose, and the statue at the gateway of commerce does not personate liberty in inheritance but "Liberty enlightening the world."

• In the winter of 1888 I talked with the Hon. S. S. Cox, of Ohio and New York, and Hon. HENRY CABOT LODGE, of Massachusetts, both students of the classics of Greece and Rome and both Congressmen, both writers and historians, and both thought the 194-foot-high figure on the great dome was the Goddess of Liberty. When I told Mr. Lodge it was not he expressed great surprise and asked me to investigate and report. That investigation developed the fact that neither the Greeks nor the Romans had any Goddess of Liberty. It was born in the first onset of the French Revolution. It was on the night of October 5, 1789, when there was a royal festival in the king's palace at Versailles, then the capital of France, when men and women were starving in Paris. The court was feasting, the people were starving, when over 8,000 desperate French women as a mob rushed out of Paris through the Elysian fields toward Versailles. They were female furies, with cannon, guns, pistols, and horses. It was the courtesans who ruled the court, and it was women—wild, fierce, and desperate—who led the French Revolution. Arriving at the palace in Versailles, a deputation of 12 women was selected to present their grievances to King Louis XVI. As the leader of this deputation, a very beautiful flower girl of 17, very lovely of form and feature, was selected. This girl, overcome by emotion, fainted in the presence of the king, but she won his heart, and the king promised relief. Then the girl was covered with flowers and proclaimed the "Goddess of Liberty." Did we not conceive our goddess from her? I believe we did.

It is time that we had a Goddess of Liberty or some personation, either American or classical, that represents some national idea. If classical, let us have a statue of Minerva. She was the patron of heroism among men; the agriculturist and the mechanic were under her care and the philosopher and orator sought her protection. She is the symbol of thought and the goddess of pure reason. But if we want a real Goddess of Liberty to personate a land, all free and forever to be free, let us employ an expert with a cold chisel to chisel that pagan helmet off the head of the statue on the dome and place instead the cap of liberty, with a tiara, if you please, of 48 stars, or bespangle it with jeweled gems from our mountains and our mines—something American, something to symbolize liberty, unity, and democracy.

THE MARBLE GROUPS FRONTING THE CAPITOL.

Only a short time ago I was much amused over the observations of a newly married pair from Fort Wayne, Ind., who came here to shed their honeymoon. They were gazing in awe and admiration at the senicollossal group of statuary on the east front of the Capitol by Persico, erected in 1846, representing the discovery of America. Columbus is personated holding at arm's length a small globe, on the top of which is cut "America." Beneath his ponderous legs crouches an awe-stricken Indian girl without a particle of drapery to shield her shapeliness from the gaze of mankind. It took five years to make the group, but it cost us only \$24,000. The ridiculous phase of this historic group was very pertinently illustrated by the observations of our young couple from Fort Wayne. I was not surprised when the young lady remarked, "I reckon that is Pocahontas and Capt. John Smith." "No, Flo," remarked the young man, "that is not a captain's uniform, and Pocahontas never appeared in that shape without something on. This chap has on tight pants, you see, and baseball sandals, and what's that he's got in his hands? That is probably a baseball. I tell you what I think this is, Flo; you know Washington has got a baseball team called the Senators, and I'll bet yer this represents the pitcher, as the champion of America, bossing the Goddess of Liberty, and that stone woman on the dome is the goddess."

The young lady smiled sweetly on the young man, in evident pride that he was so well up in the classics, and they walked over to view the other group just opposite. This group is intended to represent the "Sentiment of America." It is by Greenough, and was executed in 1842 and cost \$24,000. There are five figures—a hunter rescuing a naked white woman with a naked baby from a naked savage, while by the side of the woman is the faithful dog, appearing as if he did not know what all the racket is about. "What do you say that is, Charlie?" said our sweet-nineteen bride. Charlie gazed intently at the naked Indian, the nude woman, the undraped baby, and the indifferent dog, and then slowly said, "Flo, I just give that up." Flo and Charlie are no exceptions to the great run of tourists. Thousands of visitors and curiosity hunters

gaze daily upon these ridiculous groups of allegorical statuary, and no one appears to comprehend their significance.

A NAKED GEORGE WASHINGTON.

One of the most hideous pieces of art that mortal man ever beheld is the colossal statue of George Washington, by Greenough, ordered by Congress in 1832 for the Rotunda of the Capitol. It was made in Florence, Italy; was eight years in construction; is 12 feet high; weighs 12 tons; and cost \$44,000. In 1840 the U. S. frigate *Constitution* was dispatched to Florence, Italy, to bring this monstrous monstrosity to the United States. It was landed here in 1841, found to be too large for the Rotunda, and it stood in front of the Capitol for over half a century. It was removed from Capitol Hill, and I trust forever. This immense figure represents George Washington, naked to the waist, sitting in the chair of a Roman senator. The right hand is raised high above the head and points to heaven; the left hand holds a Roman short sword, with the handle presented. A mantle falls over the legs. There is a small figure of Columbus on the left side and of an Indian on the other. There is a Latin motto carved on the back of the chair and on the front of the pedestal in raised letters. We might excuse a sculptor who would set up for public admiration the nude figure of a gladiator or a prize fighter, but was it not a hideous thing to put up a naked George Washington in front of our National Capitol? Without going further into the observations of rural tourists, is it not an outrage on American art to have a statue of George Washington naked, sitting in the chair of a Roman senator, holding the sword of a Roman soldier, encompassed about with Roman symbols, and disfigured with a Latin motto? And yet this statue is a classic, patterned to commemorate pagan art and sculpture, the same as the proposed Greek temple to Abraham Lincoln.

THE MEMORIAL TO GEN. GRANT.

Go down Capitol Hill and look at the unsightly monstrosity—that marble memorial to Gen. Grant. We have just wasted a quarter of a million on that statue. Take a view of the pedestal in the center, surrounded by four African lions crouching, with desperate claws. At one end of this misfit in marble is a group in bronze, intended to represent four plunging, crouching, rearing artillery horses, pulling a 6-pounder cannon over an impossible road of stumps and mud, with the two leading horses, with forelegs high in air, over a precipice. A cruel, painful conception, and entirely inappropriate, as Gen. Grant never commanded a battery in war and never shotted a cannon. And the African lions—not even a product of America. Not an idea in it to remind us of Gen. Grant; not a suggestion of the remarkable career, both in war and peace, of the foremost man of all the world.

Look at the equestrian statue of Gen. Jackson in front of the White House. See the hero of New Orleans on an impossible war horse, a classic from Rome, if you please, patterned after the show riders of the Roman amphitheater, with their horses on their hind legs in the sawdust. Not thus sat Gen. Jackson in war's reeling fray, when the foam hung from the lips of his tired horse and his wet limbs were slashed with the bloody slime of the battle field.

THE GREAT WASHINGTON MONUMENT.

Take the Washington Monument, conceived and planned and originally built to the height of 152 feet by the contributions of patriotic citizens and societies. It is a splendid monument, the tallest and most impressive on the Western Continent. But how does that immense pile of white marble compare with Mount Vernon as a national shrine? Not at all. There is no sentiment, no patriotic inspiration, in the cold conceits of sculptured marble. The hundreds of thousands of visitors and excursionists to this National Capital take a far-away look at this cold marble pile and then go to Mount Vernon; and in the environment of the home of George Washington, in the association of George Washington with his historic mansion, and in the presence of his tomb Mount Vernon and not the Washington Monument has become our national shrine; and it will so remain long after the Washington Monument has crumbled into dust.

THE LINCOLN MEMORIALS.

We have hundreds of monuments dedicated to Abraham Lincoln. We have four in this National Capital. Under the great central dome stands, in white marble, Vinnie Ream's famous statue of Abraham Lincoln in the plain clothes of an American citizen. Only a few feet to the left is another statue—head and bust—also in marble, double heroic size. In Judiciary Square, on a raised pedestal, is a full-length statue of Lincoln, also in marble. In Lincoln Park stands the historic bronze statue of Lincoln unshackling the slave. So far as I know, none of the patriotic people of the United States were demanding more

multiplication of Lincoln statues in this city. The city is now full of statues and monuments that are silent and cold and stand for nothing but Grecian art and sculpture and remind us only of nations and civilizations that are dead.

And yet, four years ago, and over, Congress appropriated \$2,000,000 to build a magnificent Greek temple to honor the memory of Abraham Lincoln. This temple was located in a swamp, near a brewery, down on the Potomac River; and now the brewery is dried up and dead. Since that time Congress has appropriated almost \$600,000 more money to fill the swamp with dirt, in order to give the temple a foundation above the surface of the river. There is nothing in this Greek temple, however artistic, however ornate, however impressive, that even suggests to the critical observer either the character, or career, or mission of Abraham Lincoln. Lincoln was never a student of Greek art or Greek sculpture. A Greek temple would be an appropriate testimonial to a learned linguist of a national university who had worn out his life in teaching the literature of a dead language, or of a pagan civilization long since dead, but never for a great citizen of this Republic, who never saw the inside of a university in his school days, and who learned to read books at night by the light of a pine-knot fire. What should have been done with these millions, and what many Congressmen advocated and voted for at that time, was a Lincoln Highway to Gettysburg.

The most heroic incident in the life of Abraham Lincoln was his oration on the battle field of Gettysburg. It is conceded to be the leading classic in the heroic literature of the Civil War. Here was fought the most desperate, the most signal, and the most decisive battle of the entire four years' war. In July, 1914, the last sad remnants of two great armies—the blue and the gray—met in reunion on the battle field of Gettysburg—a continent-wide patriotic reunion to proclaim to all the world that this Nation is now one and inseparable. The Congress of the United States should have embraced this occasion to make that battle field a sacred national shrine. They should have built from this Capital a national highway, to be known for all time as the Lincoln Highway to Gettysburg. And on the spot where Lincoln stood when he delivered his memorial oration on that ever memorable day they should have erected a marble tablet, with every shining sentence of that immortal classic cut into the solid marble. Let us have a memorial to Abraham Lincoln with ideas in it—ideas of patriotic inspiration. Monuments have no sympathy, no emotion, no voice. Let us have tokens and symbols that are prescient with inspiration for the future of our country. The great present, with its growing zeal for humanity, with a culture deepened and broadened by science and enriched by all history, with its strong-winged soul of prophecy, hot with the blood beats of a realized brotherhood claims us, calls us, and holds us. Let us not stagger back into pagan darkness to study art and sculpture from nations and civilizations long since dead that knew neither chastity nor charity nor Christ. Give us something with life in it—American ideas vibrant with the full-throated voice of patriotic inspiration. Let us make a national shrine of Gettysburg and build a broad highway to this Capitol and hallow it for all time with the revered name of Lincoln.

Classification of Farmers Under the Questionnaire.

EXTENSION OF REMARKS

OF

HON. TOM D. McKEOWN,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 23, 1918.

Mr. McKEOWN. Mr. Speaker, under the leave extended to me to extend my remarks in the RECORD I include a letter addressed to the President in regard to the confusion existing among young farmers over their classification under the questionnaire, and the reply of the Provost Marshal General, to whom the letter was referred by the President:

FEBRUARY 5, 1918.

The PRESIDENT,

The White House, Washington, D. C.

SIR: From letters coming into my office from my district I am led to believe that a serious condition exists in the rural communities in reference to planting crops for the coming year. On account of the rearrangement of the draft regulations, I am told that there are a number of young men on the farm who do not understand when they are to be called and what their status is, and as a result there are no activities going on in farm work. I am told that the corn lands have

not been broken; that no preparation is being made to plant spring wheat or oats; and when asked why something is not being done, the invariable answer is, "Why pay out my money to buy seed and plant it, to be then called away and lose my crop?" And as a result of this condition the supply of foodstuffs will inevitably be less than last year.

From correspondence, I judge there is a great confusion among the agricultural class as to what they are to do. My attention has been called to some instances where widowed mothers are conducting farm operations with the labor of their sons and all of them are being classed without exemptions, and as a result they are having to give up their farms and the land will lie idle.

It seems that some definite rule could be promulgated by which these boys on the farm could know their status. The objection that a deferred status given to boys on the farm would result in every boy trying to get on the farm is not well taken, because the rule could fix the status of the boy by requiring that he shall have been engaged in actual employment on the farm for a certain definite number of months or years.

American people, as a whole, are patriotic and will be contented to use substitutes for flour and do without meats, but if the time ever comes when they shall become hungry, then the allies will have to look elsewhere for food.

I beg your pardon for intruding upon your valuable time, but in my humble judgment this is a most serious condition, which can not be corrected after the time has passed to plant. Unless crops are planted, there will be no need for harvesters.

With much respect, I am,

Most sincerely,

WAR DEPARTMENT,
OFFICE OF THE PROVOST MARSHAL GENERAL,
Washington, February 14, 1918.

HON. TOM D. McKEOWN,

House of Representatives.

MY DEAR MR. McKEOWN: I have the honor to acknowledge the receipt of your communication of February 5, addressed to the President, with reference to classification for military service of farmers, which has been referred to this office with a request for reply.

It is noted in your comprehensive letter that a serious condition exists in your State, due to the uncertainty of registrants engaged in farming knowing just when they will be called for military service.

It has been the earnest desire of this office that the recently promulgated regulations, providing a return of a questionnaire by each registrant, would eliminate the specific hardship pointed out in your letter, the uncertainty of the Government knowing the availability of registrants, and the uncertainty of registrants knowing when they will be needed.

On November 8 these new regulations, requiring the classification of all registrants in five classes arranged in the order of their availability for military service, were promulgated. These regulations are much more generous than were the old in the protection afforded to agriculture. By plain and explicit terms they require the segregation in Class II of laborers skilled in agriculture and usefully engaged in productive agricultural enterprises. Assistant managers of such enterprises are deferred in Class III and managers in Class IV.

Statistics to be found in the report of the Provost Marshal General to the Secretary of War, dated December 20, 1917, disclose that in 1917, 13,843,578 persons comprised the field of labor appurtenant to agriculture. Of this number only 205,731, or 1.48 per cent, of the entire field were determined by the boards to be liable to call for military service, and less than .0074 per cent of the labor supply appurtenant to agriculture was actually withdrawn therefrom by the first draft. The effect of that draft is thus shown to have been relatively insignificant, and the conclusion that the shortage in that labor supply is attributable in any substantial degree to the draft is thus shown in a most striking and conclusive way to be erroneous.

Under the new regulations and the intelligent classification of farm laborers, it can be reasonably well prophesied that the draft on agricultural labor will be well below 0.0036 per cent; that is to say, upon every draft of 500,000 men for the Army agriculture will be called upon to contribute only 0.0036 per cent of the labor contributory thereto. Furthermore, under the express terms of the new regulations, this 0.0036 per cent will be made up largely, if not entirely, of the classes of labor least profitable to agriculture; that is, of the classes of men who fail to show that the farms upon which they are engaged render more agricultural produce than is consumed upon them, or who fail to show that they are regularly engaged on any farm to an appreciable and dependable extent sufficient to establish their necessity thereto. It is submitted that such an inroad is relatively infinitesimal. Considering the sacrifices that must be made upon every industry in the Nation, this tax upon agricultural labor is so small that it can not be equitably argued that this burden should be transferred to some other industry.

The demands of the war upon productive industries of this Nation are unprecedented and have developed a scarcity of labor in almost every industry. Under the necessity for acceleration in agricultural production, the shortage in agricultural labor is accentuated, and there is no doubt that this labor shortage is disproportionately large in comparison with the shortage in some other fields. The labor supply appurtenant to any industry is subject to a variety of influences, but it is established that heavy inroads into the labor supply of agriculture have been made by the demands of war industries in which this Nation has been engaged since 1914.

Inflated prices for war material and unprecedented wage scales in the industries engaged in producing it drew a large supply of floating labor and no inconsiderable proportion of permanent labor away from farms and fields to factories engaged in the manufacture of instruments of war. From your own good State of Oklahoma have come similar complaints to this office from the old men, asserting that they are unable to obtain sufficient labor to maintain their industry, and they, too, charge the draft with this shortage. Certain industries in the East and elsewhere are inclined, through a superficial consideration, to blame the draft for the shortage of labor. Considering the sacrifices that must be made by every industry in the Nation in order to support this war, it can not be equitably argued that there is any real reason to change the classification of farm labor and impose an additional burden upon some other line or lines of industry in order to supply the demand.

The authority to determine the order of classification for these five classes described is vested in the local and district boards. These boards are made up of the highest type of men who could be procured in the various districts, and upon each district board one citizen has been

named whose chief concern is agriculture. These boards are chosen from the citizenship of the localities over which they have jurisdiction, and are necessarily directly and intimately affected by the spirit, the opinion, and the need of the mass of citizens who live in those districts. The aspect of so wide a vital and popular opinion is bound to reflect truthfully in the acts of administrative officers, whose duties are so gravely, directly, and powerfully touched with popular opinion. The conclusion is irresistible that the administration of the selective-service law has been very fair to agriculture, and no better plan has been suggested than the one in force.

The second draft has not been called, but when it is called it is reasonably certain now that only those registrants who have been placed in Class I will be called, and if the district boards have fairly and intelligently classified agricultural labor under the selective-service regulations approved by the President, only the unskilled and less useful farm laborers will be withdrawn from the industry of agriculture.

It is hoped that the wisdom of these regulations and the efficiency of their enforcement by the district boards will be reflected in the approval which the American people will give to the selection of our National Army.

Article by Henry Watterson.

EXTENSION OF REMARKS

OF

HON. FREDERICK H. GILLETT,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 1, 1918.

Mr. GILLETT. Mr. Speaker, a short time ago the gentleman from Oklahoma [Mr. FERRIS] printed in the RECORD an article by a distinguished Democratic editor. I ask unanimous consent to have printed in the RECORD part of an article in the Washington Post of last Sunday by one who, I think, would be generally considered as the greatest living Democratic editor, Henry Watterson, of Kentucky.

The article is as follows:

CALLING WILSON "CROMWELL." HENRY WATTERSON, ON SEVENTY-EIGHTH BIRTHDAY, ASKS HOW LONG IT WILL BE BEFORE PRESIDENT WILL CRY TO CONGRESS, "VARMINTS, GIT!"

The emotionalism which has loosed the theories of feminism has, led by the President and by the administration, started a kind of hysteria among the people.

The President is a most accomplished academician. He is strong with his pen. His war papers have been matchless. But it remains to be seen what comes of them. Success is the sole test in war. Meanwhile he asks a suspension of judgment—which, provisionally at least, seems not unreasonable—urging the granting of still more and greater power than the extraordinary powers already voted, which is open to challenge.

The claim set up in favor of every demand that it springs from military necessity, agreement required without question in the name of loyalty, sometimes puts a strain upon the most fervid spirit. Patriotic men, realizing that the President is our leader, want to give him all the support he needs, but thoughtful men, who have read history and know something of human nature, would reserve a certain jurisdiction to themselves. These, seeing how often the President has shifted foot in matters which seemed of pith and moment, would have him firmer to principles and less susceptible to impressions. They would hold him within his constitutional limitations. Assuredly they would not have him disregard, still less emasculate, the Congress.

BERATES RAGTIME PRESS.

Here again the helter-skelter, ragtime press comes in with its unthinking chatter. One may dismiss that great eastern journal whose editor, wielding the strongest pen since Horace Greeley, hies back and forth between the White House and his golden dome only to take orders, as the mere special pleader for presidential politics; the hit-or-miss organ of the administration. But here is a typical expression of the newspapers which, having no opinions, would deny them to all others. I find it in the Tennessean, of Nashville, and it reads as follows:

"Moses led the children of Israel 40 years in the wilderness because the Israelites had faith in Moses. When that faith waned for a moment Moses lost control of the Israelites, but when faith was restored the people followed their leader. When their faith waned calamity befell them. When they believed their leader, God smiled on them and they were cared for in that their every wish was granted.

OUT OF THE WILDERNESS.

"So must the American people place their faith in the Moses who is leading them out of the wilderness.

"He that is not for us is against us."

"Believe that Woodrow Wilson is our leader and that he knows the road to the promised land. Follow him with the faith of a child. Do his bidding in all things, and ours will be the victory."

"This is something worse than hero worship—it is fetish worship. After it servility could go no further, fatuous blind folly could offer no counsel more unpatriotic and unworthy. It reads almost treasonable. The writer forgets the free institutions of his country and proposes in lieu of them a cattle to Mexicanize the Government and Diazify the Presidency. Except that the words have many echoes and appear to be part of a cult organized, engineered, and disseminated from Washington, they would not be important.

There is only too much reason to believe them the incipient pronouncements of a dynastic scheme and propaganda looking to a third term in the White House for its present occupant, and, in default of this, for

the succession in the person of Son-in-law McAdoo, the Secretary of the Treasury and Director General of Railways, and by reason of these great posts at once the master spirit and conscience keeper of Wall Street. If the surmise be true, it is none too early for the people to begin to think about it, to consider just what it means and portends, and, incidentally, to refresh themselves at the fountains of what we call the American system.

Truly they have been wandering far away from the footprints of the fathers. The alleged exigencies of war justify anything, everything, to the average man of the street. He has seen the Constitution treated as "a scrap of paper" without the slightest protest. He has seen the people's representatives driven by the lash of a master they were too cowardly to defy. He has seen an underling of the Government command the industries of the country to stand still, and they obeyed him. He has seen an administration which made no preparation for war until it was upon us rush precipitately into a panic of drastic regulations as if we were in a state of siege.

So much for the individual man—how about the people at large and the two Houses at Washington?

Refused information touching matters of moment and concern, the Congress, exercising its constitutional function, has instituted committees of investigation to be told to disperse as if they were a series of mobs. At this rate—the people complying—how long shall it be before Cromwell goes down in the Capitol not to make a taking speech but to cry, "Git, you varmint, git!"

WITH NO ILL HUMOR.

I am saying nothing that I durst not say to the President face to face. Nor with the least malice or ill humor. His panegyrists often couple his name with that of Lincoln. I wish he had a little of Lincoln's humor, humanity, and common sense. One night Lincoln came out of the White House to take his carriage. It was raining cats and dogs. A sentry was pacing his rounds outside the portico, drenched to the bone. "Why don't you walk under shelter?" asked Mr. Lincoln. "I was ordered to walk here," replied the soldier. "Who ordered you?" asked Lincoln. "My captain," said the soldier. Lincoln looked quizzically. "That reminds me," said he, "that I am Commander in Chief of the Army and I order you to come in out of the wet." Mr. Wilson never forgets that he is Commander in Chief.

I would do the President no injustice. I would not add the weight of a feather to his awful responsibility. Surely I would not obstruct him in the work of winning the war to which I invoked him upon the going down of the *Lusitania*. But I reject, loathe, and spit upon the plea that, because of the war, the press should abdicate its duty to the people and the people should lie down to be trampled under the feet of the military. That is the road to despotism as odious as if it led to Potsdam.

STILL SERVANT OF THE PEOPLE.

That war involves autocracy I understand well enough, but in the field, not in the White House; over the international situation, not over our domestic affairs. The President, though technically Commander in Chief of the Army, is still the servant of the people, not the master of the people, and should hold himself to the Constitution and be held to it, not above it. Elsewise we have already a Diaz, and when the armies come home it will be they and not the people who govern.

Whoever wants to consider this disloyal and to call it so may accept in advance my scorn as a poor creature whose good opinion, if offered loud enough, would kill a dog. Whoever regards it as the pessimism of an old man has my invitation to try conclusions Marquis of Queensberry rules. But whoever believes that the stream has passed me by and that I can no longer keep up with the procession ought to see me swim.

One thing is quite certain, and it furnishes a conclusive answer to the plaint that there must be no criticism of the powers that be, and that is that the just scoring the President has received for his ungarded gayety with CHAMBERLAIN and his too close communion with himself has brought him out of his seclusion and into the open day, where he may be seen and known of all men—a leader and not a dictator. He may not get, and should not get, the new power he asks. He has power enough. His cue now is to give us results. On these, and these alone, his future rating will depend.

President Buchanan's Administration After the Election of President Lincoln.

EXTENSION OF REMARKS

OF

HON. HENRY J. STEELE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 20, 1918.

Mr. STEELE. Mr. Speaker, under the last will of Harriet Lane Johnston, niece of former President Buchanan, and mistress of the White House during his administration, the sum of \$100,000 was provided for the erection of a memorial to the former President. This legacy, with its accumulations, now amounts to approximately \$125,000. The pending joint resolution simply permits the erection of this memorial in the southern portion of Meridian Hill Park, in the city of Washington, provides that the design and exact location of the memorial shall be subject to the approval of the Commission of Fine Arts, and that the United States shall be put to no expense in the erection of the same. The designs for this memorial already submitted show a high degree of artistic excellence, and it will be a fine ornament to the park where it is intended to place it.

Under ordinary conditions no possible objection could be urged against the passage of this resolution. Partisan politics, however, with a few notable exceptions, have been injected into

this discussion, upon the alleged ground that in the closing days of Mr. Buchanan's administration he was unfaithful to the Union. The gentleman from Wisconsin [Mr. LENROTH] asserted: "You ask us to honor a man who came very near being a traitor to his country." The gentleman from Nebraska [Mr. REAVIS] stated that "as President he sought to destroy the Nation," while the gentleman from Massachusetts [Mr. WALSH], while admitting that he "put the stamp of disapproval upon impartial historians and political writers," asserted that "President Buchanan, during his term of office, skated near the edge of treason." No facts were given to sustain these assertions.

It is now almost 60 years since the close of Buchanan's administration. The three gentlemen named were not then born, so it follows that their assertions could have had no foundation of personal knowledge. On the contrary, the gentleman from Illinois [Mr. CANNON], now almost 82 years of age, asserted that "James Buchanan, as I read history, was a great man"; and the gentleman from Pennsylvania [Mr. MOORE], claiming that every criticism of the former President had been magnified, continued:

Read the sketches of James Buchanan, and you read of no ordinary man. You read of one who was patriotic in the beginning and who lived his long public career with honor until criticism came. He closed that distinguished career—the first man of all the people of the United States—without a recorded blemish, except as to his judgment or as individuals had their opinion of him and the acts he performed. If this be the standard by which we are to judge our public men 50 years after their death, it would apply with distressing force to many of our illustrious forefathers, from George Washington down to the present time.

These excerpts are all taken from the remarks of gentlemen on the other side of the aisle, for there is no division of sentiment as to the patriotism of Mr. Buchanan on this side of the aisle. All candid men will agree that accurate history can not be written which is based solely upon the mere opinions or prejudices of those who looked only upon one side of a heated controversy. All candid men will also agree that every public man has the right to ask that his record be tested by the circumstances and conditions of his own time and not by those of a wholly different time. No unprejudiced person who now examines the record of that time can doubt that the charges above cited do a great injustice to Mr. Buchanan. Perhaps this was inevitable, considering that a sectional war of great magnitude and attended with great bitterness followed immediately after his retirement from office, when a political party which had been in opposition to his administration came for the first time into the full control of the Government. Under our system of party government it was to have been expected that those who succeeded in power should have charged upon the outgoing administration that it had been remiss in its public duty, and that under the example of those high in the succeeding administration there should have grown up a popular belief that Mr. Buchanan either favored secession or failed in his duty to suppress it in its early stages. These charges found popular credence in times of feverish excitement, but in this calmer period men can look back into the past without prejudice or rancor. Approaching the subject in this open-minded way, nothing more than a proper examination of Mr. Buchanan's official acts is needed to vindicate his memory from these charges.

President Buchanan was born in 1791 near Mercersburg, Pa.; graduated from Dickinson College in 1809; and was called to the bar in 1812. In 1814 he enlisted as a volunteer in the second war with Great Britain and served until he was honorably discharged. He served two terms in the Pennsylvania Legislature, and in 1820 was elected a Representative in Congress, and for four succeeding terms. In 1831 he was sent by President Jackson as minister to Russia, where he concluded a commercial treaty, securing privileges to the United States in the Black and Baltic Seas. After his return to the United States in 1833 he was elected United States Senator from Pennsylvania, and was twice afterwards reelected. He left the Senate in 1845 to become Secretary of State to President Polk, in which capacity he had to deal with England in the North-West boundary dispute. In 1853 he was sent by President Pierce as minister to Great Britain, where he was mainly engaged upon Central American affairs. In 1859 President Van Buren tendered him the office of Attorney General of the United States, but he declined that offer, preferring to remain in the Senate. In 1856 he was nominated by the Democratic national convention at Cincinnati for President of the United States, and was elected, receiving 174 electoral votes to 114 for John C. Fremont, Republican, and 8 for Millard Fillmore, American. Of these electoral votes, 62 came from the five antislavery States of Pennsylvania, New Jersey, Indiana, Illinois, and California. The popular vote was: Buchanan, 1,839,169; Fremont, 1,341,264; Fillmore, 874,538. An analysis of this election foreshadowed the sectional division of the country bound

to follow, unless Mr. Buchanan should be able to suppress the feeling between the North and the South. For this reason his course as President, down to the time of the election of Mr. Lincoln, must be considered with reference to his responsibility to conduct public affairs so as to avoid any antagonism between the sections. After the election of Mr. Lincoln his administration must be judged by his duty as Executive in the most extraordinary crisis ever faced by the country. This discussion shall only consider his executive duty after the election of Mr. Lincoln, for the charges of disloyalty only relate to that period.

Mr. Buchanan's biographer was George Ticknor Curtis, an eminent American lawyer and historian, author of "Constitutional History of the United States." He was a native of Massachusetts, a graduate of Harvard, and brother of Benjamin R. Curtis, who wrote the dissenting opinion of the Supreme Court of the United States in the Dred Scott case.

On page 246 of volume 2 he refers to the so-called Covode investigation, as follows:

Among the lower, or rather the lowest, political tactics inculcation of a retiring administration has often been resorted to for promoting the success of the opposite party, and it seems not infrequently to have been the calculation that the effect produced would be in proportion to the grossness of the imputations. Mr. Buchanan could not hope to escape calumny. None of his predecessors, not even the most illustrious of them all, not even Washington himself, had escaped it. Scarcely any of them, however, had been made the object of this kind of attack by methods so base and by means so foul as those to which President Buchanan was now to be subjected. Before any of the troubles of secession arrived, before either of the political parties had made its nomination for the next presidential election, it was determined that an assault should be made upon him that would render him and his administration odious to the people of the country.

On March 5, 1860, Mr. Covode introduced a resolution for the appointment of a committee of investigation as to whether or not the President had corruptly sought to influence the action of Congress, and, second, "also to inquire into and investigate whether any officer or officers of the Government have, by combination or otherwise, prevented or defeated, or attempted to prevent or defeat, the execution of law or laws upon the statute book, and whether the President has failed or refused to compel the execution of any law thereof."

The committee sat with closed doors and heard the testimony of all those who were opposed to the President. The President had no knowledge of the proceedings except what appeared in the public press. No specific charges were made. The committee reported on the 16th of June following. Mr. Train, of Massachusetts, one of the committee, then reporting to the House a great mass of testimony which had been taken from all sorts of willing witnesses against the President, but without a single resolution accusing or censuring either him or any member of his Cabinet. This was, in one sense, as he has himself said, "a triumphant result for the President." But the movers of this resolution had attained their object in procuring and spreading before the country the means of traducing the President.

There was also an impression among the people of the North that Mr. Buchanan had permitted a distribution of the arms of the United States in the South in anticipation of the disruption of the Union at no distant day. Mr. Curtis, in discussing this charge, says as follows:

There never was a rational ground for such a belief. It is not true, as a matter of fact, that at any time before the nomination of Mr. Lincoln there was any transfer of arms to places in the Southern States to which any suspicion of an improper design ought to attach. It is not true that at any time after Mr. Lincoln's nomination and before his election there was any transfer of arms whatever from the northern arsenals of the United States into the Southern States.

The whole subject had undergone a thorough investigation by a committee of the House of Representatives in the winter of 1860-61 in consequence of the rumors which had been set afloat after the resignation of Secretary Floyd. The new Secretary of War, Mr. Holt, not waiting for the exercise of the power conferred on the committee to send for persons and papers, threw open all the records of the Ordnance Bureau. The resolution ordering the investigation was adopted on the 31st of December, 1860, and the committee were authorized to report in preference to all other business. The investigation of the congressional committee embraced four principal heads:

First. What arms had been sold.

Second. What arms had been distributed to the States.

Third. What arms had been sent for storage in southern arsenals of the United States.

Fourth. What ordnance had been transferred from northern arsenals of the United States to southern forts.

A full synopsis of this report will be found in Curtis's *Life of Buchanan*, volume 2, pages 414, 415, and 416, supporting his conclusion given above.

We now come to the election of Mr. Lincoln in November, 1860. At this election the vote of the Democratic Party was

divided between Stephen A. Douglas and John C. Breckinridge. Lincoln was the Republican candidate, and John Bell, of Tennessee, the Union candidate. Lincoln received 180 electoral votes; Douglas, 12; Breckinridge, 72; and Bell, 39. The popular vote was:

Lincoln, 1,866,352; Douglas, 1,375,157; Breckinridge, 845,763; Bell, 589,581.

The condition of affairs in the months of November and December imposed upon President Buchanan the duty of defining clearly and explicitly to Congress and to the country the powers which he possessed or did not possess for meeting the possible exigency of secession and to announce his policy. Preparatory to what he was about to say in his annual message to the Congress he required of Jeremiah S. Black, the Attorney General, an official opinion as to his constitutional powers under the circumstances. Black was intensely loyal to the Union and was considered one of the best constitutional lawyers in the country. Before he became Attorney General he had been chief justice of the Supreme Court of the State of Pennsylvania. Buchanan's views as to his proper policy at this time were best expressed in a special message to Congress under date of January 8, 1861, in which he said:

In my annual message I expressed the conviction which I have long deliberately held, and which recent reflection has only tended to deepen and confirm, that no State has a right by its own act to secede from the Union or throw off its Federal obligations at pleasure. I also declared my opinion to be that even if that right existed and should be exercised by any State of the Confederacy, the Executive Department of this Government had no authority under the Constitution to recognize its validity by acknowledging the independence of such State. This left me no alternative as the Chief Executive officer under the Constitution of the United States but to collect the public revenues and to protect the public property so far as this might be practicable under existing laws. This is still my purpose. My province is to execute and not to make the laws. It belongs to Congress exclusively to repeal, to modify, or to enlarge their provisions to meet exigencies as they occur. I possess no dispensing power.

I certainly had no right to make aggressive war upon any State, and I am perfectly satisfied that the Constitution has wisely withheld that power even from Congress. But the right and the duty to use military force defensively against those who resist the Federal officers in the execution of their legal functions and against those who assail the property of the Federal Government is clear and undeniable.

But the dangerous and hostile attitude of the States toward each other has already far transcended and cast in the shade the ordinary executive duties already provided for by law and has assumed such vast and alarming proportions as to place the subject entirely above and beyond executive control. The fact can not be disguised that we are in the midst of a great revolution. In all its various bearings, therefore, I commend the question to Congress as the only human tribunal under Providence possessing the power to meet the existing emergency. To them exclusively belongs the power to declare war or to authorize the employment of military force in all cases contemplated by the Constitution, and they alone possess the power to remove grievances which might lead to war and to secure peace and union in this distracted country. On them, and on them alone, rests the responsibility.

The Union is a sacred trust left by our Revolutionary fathers to their descendants, and never did any other people inherit so rich a legacy. It has rendered us prosperous in peace and triumphant in war. The national flag has floated in glory over every sea. Under its shadow American citizens have found protection and respect in all lands beneath the sun.

I, therefore, appeal through you to the people of the country to declare in their might that the Union shall and must be preserved by all constitutional means. I most earnestly recommend that you devote yourselves exclusively to the question how this can be accomplished in peace. All other questions, when compared with this, sink into insignificance. The present is no time for palliations. Action, prompt action, is required.

The recommendations of the President for prompt action by Congress resulted in entire failure on the part of that body to adopt any measures to prevent civil war. There were but two courses that Congress could pursue in this most extraordinary emergency. It must either preserve the Union by peaceful measures or it must provide the President and his successors with a military force requisite to secure the execution of the laws and the supremacy of the Constitution. It was plain that inaction would be a fatal policy.

On December 22, 1860, Mr. Crittenden, of Kentucky, whose name will be forever venerated for the patriotic part which he took through the proceedings of this Congress, submitted a joint resolution which became known as the "Crittenden compromise." It proposed certain amendments to the Constitution which would reconcile the conflicting aims of the North and South. Concerning his proposition, Mr. Crittenden said:

The sacrifice to be made for its preservation [the Union] is comparatively worthless. Peace and harmony and union in a great nation were never purchased at so cheap a rate as we now have it in our power to do. It is a scruple, only a scruple, of as little value as a barleycorn, that stands between us and peace and reconciliation and union, and we stand here pausing and hesitating about that little atom which is to be sacrificed.

The Senate considered this resolution on January 15, amended it, and on March 2 following defeated it. Thus there was an entire failure on the part of Congress to take action looking to an amicable settlement of the controversy.

The attitude of President Buchanan in the message above cited, denying his right to coerce a State, subjected him to severe criticism. On this subject Curtis says:

Among all the reproaches that have been cast upon President Buchanan, none have been more persistently repeated than that which has imputed to him "a temporizing policy"; and the doctrine on which he denied that the Federal Government could make aggressive war upon a State for the purpose of preventing her from seceding from the Union has been represented as the strongest proof of his want of the vigor necessary for the emergency.

Buchanan acted on the written opinion of Attorney General Black, whose loyalty and ability as a constitutional lawyer are beyond question. It is interesting, therefore, to read in an acknowledged northern authority, that of Willoughby on the Constitution, published 50 years after this message, the assertion that the supremacy of the national authority is never maintained by direct action against the member Commonwealth, but is exhibited in its authority to execute its will upon all persons subject to its jurisdiction. The learned author, in volume 1, page 86, in discussing this subject, continues, as follows:

Thus President Lincoln, in his first inaugural message, assumed the correct constitutional position when he declared that the Federal Government could not wage public war against a State, not because of lack of constitutional authority to maintain in every respect its supremacy, but because from the very nature of the Union a State qua State could not place itself in a position where coercion could be applied to it. After an argument tending to show the sovereign character of the Union, and that it was intended to be perpetual, he declared: "It follows from these views that no State upon its own motion can lawfully get out of the Union; that resolves and ordinances to that effect are legally void, and that acts of violence within any State or States against the authority of the United States are insurrectionary or revolutionary, according to circumstances." I therefore consider that, in view of the Constitution and the laws, the Union is unbroken, and to the extent of my ability I shall take care, as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the States. In doing this there needs to be no bloodshed or violence, and there shall be none unless it is forced upon the National authority. The power conferred upon me will be used to hold, occupy, and possess the property and places belonging to the Government, and to collect the duty and imposts; but beyond what may be necessary for these objects there will be no invasion, no using of forces against or among the people anywhere." In taking this position Lincoln had to treat the war when it began as merely an insurrection, in which the coercion and punishment were to be applied to individuals.

In further confirmation of this view, Prof. Willoughby points out that there was no declaration of war against the South, and after the struggle was over there was no treaty of peace with the Confederacy. The United States did not recognize that the Confederacy had or could have a stand as a possible power with which it might deal as with a foreign State. One after another, the surrender of his forces by each Confederate general was accepted as an act of war, and thus the Confederacy was left to collapse and disappear without any formal official act to mark its demise.

In December, 1860, Gen. Cass resigned as Secretary of State, and the President promptly appointed Judge Black to succeed him. Edwin M. Stanton became Attorney General in place of Judge Black. Stanton afterwards became the great Secretary of War under President Lincoln. In the early part of January, 1861, while the President was still considering measures proper to be adopted in regard to Fort Sumter, other changes in the Cabinet took place; among them, Gen. John A. Dix, of New York, was made Secretary of the Treasury. At that time the Cabinet, as a whole, was intensely loyal to the Union.

The character of the reorganized Cabinet is fully shown by a dispatch sent by Secretary Dix to a Treasury official at New Orleans that thrilled the northern heart:

"If anyone attempts to haul down the American flag, shoot him on the spot."

Such confidence had the country in the administration at this time that the States of New York, Massachusetts, and Maine, the governors and legislatures of which were Republican, tendered to the President their entire resources of men and money to uphold the authority of the Federal Government.

In an editorial on February 16 last, the Philadelphia Inquirer, the leading Republican newspaper of Philadelphia, discussing the Buchanan administration, said:

It must be said for him that when he saw the situation clearly he changed his Cabinet and put responsibilities in the hands of men of undoubted loyalty, and he delivered the Ship of State safe, if not sound, to his successor. There were many things he might have done, possibly would have done, had it not been that his term was expiring and the situation so delicate that he dared not make problems for his successor to solve, or raise issues prematurely. It must at least be said for him that nothing he did or left undone prejudiced the national cause when Lincoln was inaugurated.

In an article in the Saturday Evening Post of January 6, 1900, Col. A. K. McClure, chairman of the Pennsylvania Republican State Committee in 1860, and close personal friend of Mr. Lincoln's, speaking of Mr. Buchanan said:

He had an aggressively loyal Cabinet during the last few months of his administration, and when he retired, generally denounced by the loyal citizens of the country as a faithless executive, he earnestly supported the Government in every measure necessary to suppress the rebellion and prevent the dismemberment of the Republic. He died soon after the close of the war, a thoroughly honest and patriotic public servant, but widely misunderstood.

After Mr. Lincoln was elected he declined in a public way to discuss the policies of the incoming administration. In a speech delivered before the New York Legislature in February, 1861, he said:

I do not propose to enter in an explanation of any particular line of policy as to our present difficulties to be adopted by the incoming administration. I deem it just to you and myself and to all that I should see everything, that I should hear everything, that I should have every light that can be brought within my reach in order that when I do so speak I shall have enjoyed every opportunity to take correct and true grounds, and for this reason I don't propose to speak at this time of the policies of the Government. But when the time comes I shall speak as well as I am able for the good of the present and future of this country—for the good both of the North and South of this country, for the good of the one and the other and of all sections of the country.

In his first inaugural, delivered March 4, 1861, Lincoln said:

Apprehension seems to exist among the people of the southern States that by the accession of a Republican administration their property and their peace and personal security are to be endangered. There has never been any reasonable cause for such apprehension. Indeed, the most ample evidence to the contrary has all the while existed and been open to their inspection. It is found in nearly all the published speeches of him who now addresses you. I do but quote from one of these speeches when I declare that "I have no purpose directly or indirectly to interfere with the institution of slavery in the States where it exists." I believe I have no lawful right to do so, and I have no inclination so to do. Those who nominated and elected me did so with the full knowledge that I had made this and many similar declarations and had never recanted them.

He further declared in favor of the execution of the fugitive-slave law, and it must be said that this law was executed by him in just the same manner as during the Buchanan administration. "When," asked Stephen Douglas in a speech delivered at Springfield, Ill., on April 25, 1861, "was the fugitive-slave law executed with more fidelity than since the inauguration of the present incumbent of the presidential office?" Curtis, therefore, in his Life of Buchanan, says:

Little are the objectors aware that the policy of Mr. Lincoln's administration until after the attack on Fort Sumter was identical with that of Mr. Buchanan. Mr. Lincoln's policy was largely shaped by his Secretary of State, Mr. Seward, and there can be no better authority than Mr. Seward's in behalf of that policy.

In an official letter, dated April 10, 1861, addressed by Mr. Seward, as Secretary of State, to Mr. Charles Francis Adams, who had just gone abroad as United States minister to England, he said:

You will hardly be asked by reasonable statesmen abroad why has not the new administration already suppressed the revolution? Thirty-five days are a short period in which to repress chiefly by moral means a movement which is so active whilst disclosing itself throughout an empire. . . . He (President Lincoln) believes that the citizens of those States, as well as the citizens of other States, are too intelligent, considerate, and wise to follow the leaders to that destructive end (anarchy). For these reasons he would not be disposed to reject a cardinal dogma of theirs, namely, that the Federal Government can not coerce the seceding States to obedience by conquest, even although he were disposed to question that proposition. . . . But in fact the President willingly accepts it as true. Only an imperial and despotic government could subjugate thoroughly disaffected and revolutionary members of the States. This Federal republican country of ours is, of all forms of government, the very one which is most unfitted for such a labor. Happily, however, this is only an imaginary defect. The system has within itself adequate peaceful, conservative, and recuperative forces. Firmness on the part of the Government in maintaining and preserving the public institutions and property, and in executing the laws where authority can be exercised without waging war, combined with such measure of justice, moderation, and forbearance as will disarm reasoning opposition, will be sufficient to secure the public safety until returning reflection, concurring with the fearful experience of social evils, the inevitable fruits of faction, shall bring the recalcitrant members cheerfully 'into the family, which, after all, must prove their best and happiest, as it undeniably is, their most natural home.

He then goes on to show that the calling of a national convention by authority of Congress will remove all real obstacles to a reunion by revising the Constitution, and he adds:

Keeping that remedy steadily in view, the President on the one hand will not suffer the Federal authority to fall into abeyance nor will he on the other hand aggravate existing evils by attempts at coercion which must assume the form of direct war against any of the revolutionary States.

Mr. Curtis then says:

It is impossible for human ingenuity to draw a sensible distinction between the policy of President Lincoln as laid down by Mr. Seward just before the attack on Fort Sumter and the policy adopted and steadily pursued by President Buchanan, and it is to be hoped that the world will hereafter hear no more reproaches of President Buchanan because he denied the authority of the Federal Government to make active war upon a State to compel it to remain in the Union or because he proposed conciliatory measures looking to an amendment of the Constitution.

It may be added that the Crittenden compromise was on the same lines as this suggestion.

A few days after Seward wrote this letter to Adams, Fort Sumter was fired upon, and on April 19, 1861, Buchanan, in a letter to Gen. Dix, said:

The present administration had no alternative but to accept the war initiated by South Carolina or the Southern Confederacy. The North will sustain the administration almost to a man, and it ought to be sustained at all hazards.

No one knew Buchanan better or more intimately than Judge Black. No one has ever doubted Judge Black's ability, loyalty, or vigor as a member of Mr. Buchanan's Cabinet. No one could better give an authoritative account of Mr. Buchanan's character and conduct than he. He gave it as follows:

The proofs of his great ability and his eminent public services are found on every page of his country's history from 1830 to 1861. During all that long period he steadily, faithfully, and powerfully sustained the principles of free constitutional government. This Nation never had a truer friend nor its laws a defender who would more cheerfully have given his life to save them from violation. No man was ever slandered so brutally. His life was literally lied away. In the last months of his administration he devoted all the energies of his mind and body to the great duty of saving the Union, if possible, from dissolution and civil war. He knew all the dangers to which it was exposed, and it would therefore be vain to say that he was not alarmed for his country, but he showed no sign of unmanly fear on his own account. He met all his vast responsibilities as fairly as any Chief Magistrate we ever had. In no case did he shrink from or attempt to evade them. The accusation of timidity and indecision is most preposterous. His faults were all of another kind; his resolutions, once formed, were generally immovable to a degree that bordered on obstinacy. On every matter of great importance he deliberated cautiously, and sometimes tried the patience of his friends by refusing to act until he had made up an opinion which he could live and die by. These characteristics explain the fact that his whole political life, from the time he entered Congress until he retired from the Presidency—all his acts, speeches, and papers—have a consistency which belongs to those of no other American statesman. He never found it necessary to cross his own oath or go back upon his pledges.

The discussion in the House on the pending resolution brought forth the following comment from the Philadelphia Record on February 18 last:

What do the patriots who chatter about Mr. Buchanan's "timidity" and "vacillation" suppose Mr. Lincoln was doing between March 4 and April 15? Do they imagine that he was stamping on the new-born Confederacy, and that he was calling out the Northern loyalists to get their guns and put down secession? Mr. Lincoln's inaugural address was distinctly conciliatory, and he even offered to leave Federal offices at interior points unfilled until they could be filled without causing local anger and indignation. Mr. Buchanan was less accommodating than that. When the collector of the port of Charleston resigned, and it was evident that no other Southern man would accept the appointment, he nominated a citizen of Pennsylvania, but the Senate did not act on the nomination. Mr. Lincoln did not call for troops or reinforce the Southern forts, or make any move against the Confederate Government until Sumter was bombarded. He followed precisely the policy of Mr. Buchanan, and waited for the Confederates to fire the first shot.

During the debate on this resolution an attempt was made on the part of some to belittle the public services of Mr. Buchanan. No one can read his minority report as a member of the Committee on the Judiciary of this House on the question of the repeal of the twenty-fifth section of the judiciary act without being impressed with his great ability as a constitutional lawyer and his profound knowledge of our system of government. He took a prominent part in nearly all the great debates while he was a Member of the House and Senate. In a work published just before the death of Judge David J. Brewer, Justice of the Supreme Court of the United States, of which he was editor, entitled "The world's best orations," it was said:

Mr. Buchanan defined the policy which resulted in the Pacific Railroad and the enormous development of the trans-Mississippi West. In view of the railroad development of the Pacific coast and of the Atlantic cable to England, the Buchanan administration is, altogether aside from its bearing on the Civil War, one of the most revolutionary periods of our history.

In a letter dated September 17, 1856, addressed to B. F. Washington, Esq., chairman of the Democratic State Central Committee of California, Mr. Buchanan said:

I am decidedly favorable to the construction of the Pacific Railroad, and I derive the authority to do this from the constitutional power "to declare war" and the constitutional duty to "repel invasions." In my judgment, Congress possesses the same power to make appropriations for the construction of this road, strictly for the purpose of national defense, that they have to erect fortifications at the mouth of the harbor at San Francisco. Indeed, the necessity with a view to repel foreign invasion from California is as great in the one case as in the other.

This discussion has already been prolonged beyond my original intention. Those who desire to pursue the subject, I would refer to the address of Hon. W. U. Hensel, former attorney general of Pennsylvania, to be found in volume 12 of the works of James Buchanan, edited by John Bassett Moore. My chief desire has been to show by his official acts that the charges made against him that he "came very near being a traitor" and that he "sought to destroy the Nation" are entirely without foundation. From these acts it appears that the views of the Buchanan administration on the constitutional right of the Executive to coerce a seceding State or to make war on its

people were exactly those held by substantially all the great lawyers and statesmen of the country, including Abraham Lincoln; but there was no spoliation of the public Treasury, no apportionment of the Federal military equipment, nor dispersion of the Navy in the interest of any particular section; that his efforts were directed to maintain peace and prevent the dismemberment of the Union, and that Mr. Lincoln's utterances in his first inaugural against force invasion of Southern territory and resort to arms were just as emphatic for peace and conciliation as were those of Mr. Buchanan. I know that many people and a large number of historical writers have taken the view that Mr. Buchanan's administration failed where it ought to have succeeded, and that this was largely due to the weakness of the Executive head. My attempt has been to show that these views are not based upon historical facts, but are untrue unjust, and cruel. The "touchstone of historical truth" will show to all who approach the subject with an open mind that, as Judge Black stated, "no man was ever slandered so brutally."

The Interparliamentary Union.

EXTENSION OF REMARKS

OF

HON. FRED A. BRITTEN,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 27, 1918.

Mr. BRITTEN. Mr. Speaker, I ask unanimous consent to extend my remarks by inserting the record of a meeting of the American Group of the Interparliamentary Union held in Washington on February 24, which was presided over by the gentleman from Texas, Mr. SLAYDEN, and at which time officers for the ensuing year were elected.

[From the report of JAMES L. SLAYDEN, president of the American Group of the Interparliamentary Union, February 24, 1918.]

Amidst the welter of war and the foolish, futile efforts of the people of Russia, who have been, so to speak, untrained for freedom and democracy by centuries of oppression, with whose anguish we all sympathize, no matter what we think of their methods, it is good to see a ray of light penetrating the general gloom. Let us cultivate it; let us open a way to it until its effulgence shall spread over the face of the earth and expose all the dark places where evil lurks.

Nearly all thinking men agree that something radical must be done if we are to save civilization. We must find some way to end war and to prevent its recurrence. We must reverse the practices of statesmen and rulers. And it is an encouraging fact that nearly all really thoughtful people who give any consideration to these questions have reached practically the same conclusion.

Poincaré and Briand in France, Lloyd-George and Asquith and Lowndes in Great Britain, Quidde and Erzberger in Germany, and even Von Bethmann-Hollweg and Von Kuehlmann, are in agreement with Wilson as to the absolute necessity of relief from oppressive militarism.

How is that relief to be found? The Interparliamentary Union, your association, has pointed the way. For 30 years that union has urged the arbitration of international disputes. It inspired the first Hague conference, and the second one established a permanent arbitral court at the world's peace capital. For years it has been demanding a court to be presided over by professional judges learned in the law to settle justiciable controversies between States according to the rules of law and equity.

There are many reasons for believing that it will come and come soon. The world needs it. Suffering humanity demands it. It is one of the essential steps for the preservation of orderly society.

The union has also demanded the abolition of the right of capture of private property at sea, for it is opposed to piracy. It has advised the limitation of the right of blockade to fortified places and the restriction of contraband to arms and munitions of war.

For years one of the most important planks in its platforms has called for the "limitation of armaments to the lowest point consistent with domestic safety," for the abolition of secret diplomatic treaties, for freedom of the seas in commercial pursuits, and for equality of trade conditions. While men are enraged this last will be refused, but when reason is fully reestablished the wisdom and beneficence of the policy will be recognized.

These were the four great principles of international justice and fair play that headed Mr. Wilson's epoch-making address of January 8. The chancellor of the German Empire has said that he will accept them without reservation, as do the leading statesmen of other belligerent powers, both the friendly and unfriendly, if the newspapers report them accurately.

Lord Lansdowne, whose letter in the Daily Telegraph, of London, suggesting peace negotiations was so much misunderstood, or so deliberately misinterpreted, has just restated his views, from which statement I will quote a few words. He said:

"I think we may take upon ourselves to express an opinion as to the principles on which these questions should be dealt with. I accept wholeheartedly the suggestion of the prime minister that they should be settled on the basis of self-determination, or, in other words, to govern by the consent of the governed."

That from England is an encouraging reversal of history. It is an acceptance of an American policy and a long step toward justice in international relations. It tracks Mr. Wilson's two most recent speeches.

The general secretary of the Interparliamentary Union, Christian Lange, a former member of the Norwegian Parliament, has written me a long letter telling how earnestly the neutral groups of our union are studying these questions in preparation for the great conference that will come at the close of the war and urging us to do the same thing.

We and our colleagues in Europe are charged with legislative responsibility, ours is the obligation to labor for a lasting peace based on justice, and this association is the agency through which more than 3,000 national legislators will express themselves.

Our associates abroad are demanding a league of peace, and we must help them to it. We must join our members in Europe and Asia in an earnest study of these problems, and I or my successor will be glad to have your orders to express to them our sympathy in their distress and our pledge to help them make the world a better place to live in.

[Resolution adopted by the American Group of the Interparliamentary Union at its regular meeting, held in the city of Washington, Monday, February 24, 1918.]

Whereas it is increasingly evident that the civilization of the world is endangered by war; and

Whereas the Interparliamentary Union, an association of more than 3,300 members, representing 23 of the leading nations of the world, has, since its organization in 1888, steadfastly urged the adoption of arbitration as a substitute for war in the settlement of international disputes and the establishment of a permanent court wherein questions at issue between governments may be heard and determined according to the principles of law and equity, to the end that justice may be done and wars avoided; and

Whereas responsible heads of governments, belligerent and nonbelligerent alike, have agreed in principle to the program of the Interparliamentary Union for open treaties, for the reduction of armaments to "the lowest point consistent with domestic safety," and to a general arbitration treaty for the settlement of nonjusticiable disputes: Therefore be it

Resolved, That the American Group pledges its support to its colleagues of other parliaments in the effort to secure the adoption of all civilized governments to this program of reason and good will: Be it further

Resolved, That the American Group of the Interparliamentary Union gives its cordial approval to the recommendations of Habana, adopted by the American Institute of International Law at its second session, in the city of Habana, January 23, 1917, as a working basis for the society of nations to insure justice in international dealings and the maintenance of peace.

[The recommendations of Habana concerning international organization, adopted by the American Institute of International Law at its second session in the city of Habana, January 23, 1917.]

Whereas the independent existence of civilized nations and their solidarity of interests under the conditions of modern life has resulted in a society of nations; and

Whereas the safety of nations and the welfare of their peoples depend upon the application to them of principles of law and equity in their mutual relations as members of civilized society; and

Whereas the law of nations can best be formulated and stated by the nations assembled for this purpose in international conferences; and Whereas it is in the interest of the society of nations that international agreements be made effective by ratification and observance on all occasions, and that some agency of the society of nations be constituted to act for it during the intervals between such conferences; and

Whereas the principles of law and equity can best be ascertained and applied to the disputes between and among the nations by a court of justice accessible to all in the midst of the independent powers forming the society of civilized nations: Therefore,

The American Institute of International Law, at its second session, held in the city of Habana, in the Republic of Cuba, on the 23d day of January, 1917, adopts the following recommendations, to be known as its Recommendations of Habana:

I. The call of a third Hague conference, to which every country belonging to the society of nations shall be invited and in whose proceedings every such country shall participate.

II. A stated meeting of The Hague Peace Conference which, thus meeting at regular stated periods, will become a recommending if not a law-making body.

III. An agreement of the States forming the society of nations concerning the call and procedure of the conference, by which that institution shall become not only internationalized but in which no nation shall take as of right a preponderating part.

IV. The appointment of a committee to meet at regular intervals between the conferences, charged with the duty of procuring the ratification of the conventions and declarations and of calling attention to the conventions and declarations in order to insure their observance.

V. An understanding upon certain fundamental principles of international law, as set forth in the declaration of the rights and duties of nations adopted by the American Institute of International Law on January 6, 1916, which are themselves based upon decisions of English courts and of the Supreme Court of the United States.

VI. The creation of an international council of conciliation to consider, to discuss, and to report upon such questions of a nonjusticiable character as may be submitted to such council by an agreement of the powers for this purpose.

VII. The employment of good offices, mediation, and friendly composition for the settlement of disputes of a nonjusticiable nature.

VIII. The principle of arbitration in the settlement of disputes of a nonjusticiable nature; also of disputes of a justiciable nature which should be decided by a court of justice, but which have, through delay or mismanagement, assumed such political importance that the nations prefer to submit them to arbiters of their own choice, rather than to judges of a permanent judicial tribunal.

IX. The negotiation of a convention creating a judicial union of the nations along the lines of the Universal Postal Union of 1906, to which all civilized nations and self-governing dominions are parties, pledging the good faith of the contracting parties to submit their justiciable disputes—that is to say, their differences involving law or equity—to a permanent court of this union, whose decisions will bind not only the litigating nations but also all parties to its creation.

X. The creation of an enlightened public opinion in behalf of peaceable settlement in general, and in particular in behalf of the foregoing nine propositions, in order that, if agreed to, they may be put into practice and become effective, in response to the appeal to that greatest of sanctions, "a decent respect to the opinions of mankind."

Agriculture.

SPEECH

OF

HON. THOMAS L. RUBEY.

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 25, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 9054) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1919.

Mr. LEVER. Mr. Chairman, I yield 30 minutes to the gentleman from Missouri [Mr. RUBEY].

The CHAIRMAN. The gentleman from Missouri [Mr. RUBEY] is recognized for 30 minutes. [Applause.]

Mr. RUBEY. Mr. Chairman and gentleman of the committee, it is always more or less embarrassing to follow a distinguished speaker, and especially is that true to-day when I am called upon to follow the gentleman from Mississippi [Mr. CANDLER], who for 18 years has served in this House and who has been such a faithful and efficient Member and who has done so much for agriculture throughout the country in the great service he has rendered on the Committee on Agriculture, upon which we both serve. [Applause.]

I trust I may be pardoned if in what I shall say to-day I stick pretty close to the subject of agriculture. I may wander away from the subject now and then, because so many speeches have been made about the war and upon questions relating to the war that it is very difficult to make a speech without saying something about it. It is my intention, however, to talk to you almost entirely along the lines of agriculture.

AGRICULTURE, ITS IMPORTANCE, AND DIFFICULTIES CONFRONTING IT.

There never was a time in the history of our glorious Republic when agriculture was so important as it is to-day, and there never was a time when agriculture in this country faced problems and difficulties so serious as those which confront it at this very hour. These are the things that I want to talk to you about for a little while to-day.

The effects of the war in Europe, unprecedented and unparalleled in all history, are being felt in every land. Truly "the world is on fire" and the terrible results of that awful conflagration are permeating every nook and corner of the civilized world. In every country in the world the production of food, so essential to the welfare, the prosperity, and the very existence of the people, is becoming more and more difficult. In every warring nation the call to arms has decreased the number of those who produce, and at the same time has made necessary increased production in order that those who fight may be fed. Over here in this western world we have a vast empire. It extends from sea to sea. Our agricultural possibilities are almost beyond limit. To-day our allies—England, France, and Italy—are turning their eyes to America. Upon us they must depend for their foodstuff. Shall they look in vain? No; America will meet the test. We will furnish the food, and yet in order to do so we must overcome many difficulties and obstacles.

SCARCITY OF FARM LABOR.

In our own country this war has taken from the field of production hundreds of thousands of men. Increased activities in the manufacture of munitions and other war accessories call for vast numbers of employees, who have come, many of them, from the farms. The building of cantonments, the construction of ships, and all of the activities so necessary for the preparation and for the maintenance of a great war, have called for carpenters, mechanics, laboring men of all kinds. Then, there are those who have volunteered and gone into the Regular Army, who have entered the Navy, who have joined the Aviation Corps, the Marine Corps, and other organizations of both the Army and the Navy. There are a half million men who constitute the National Guard and another half million men who make up the National Army. All of these together have taken from the field of agriculture hundreds of thousands of the young, sturdy yeomanry of the country.

These were once producers. But recently they followed the plow, they tilled the soil, they cultivated, they harvested, they took care of the crops. Their earnest toil brought into our national granary millions upon millions of bushels of grain—the wheat, the corn, and the oats, and other cereals of the country. They added thousands of tons to our hay and our alfalfa and our other forage crops. They increased materially the food-

stuff of the land by the raising of live stock. To-day all that is changed. These hundreds of thousands of men are to-day consumers. Now they must be taken care of, clothed, sheltered, and fed.

Mr. FESS. Will the gentleman yield for an interruption?

Mr. RUBEY. Certainly; with pleasure I yield to the gentleman from Ohio.

Mr. FESS. I have three or four letters from persons of my own community who are setting forth the very seriousness of the situation the gentleman is now dealing with, and one of them happens to be the leader in the Red Cross movement at home, a large farmer. He says that the situation with him is so serious, in his inability to get labor on the farm, that though as patriotic as any man can be, he is afraid he is going to have to put the farm in grass because of inability to cultivate it, and he wanted to know, not from a sense of mischief or criticism, if there is any possible way to remedy this danger of lessening of production. Will the gentleman later on discuss that phase of it?

Mr. RUBEY. I expect to discuss that phase of the question and I shall suggest at least one remedy.

Mr. FESS. I do not want to interrupt the gentleman at this time, but I would like to have him deal with it later.

Mr. RUBEY. I thank the gentleman for his suggestion and I want to say here now, and I wish to emphasize it, that what the gentleman from Ohio says is absolutely true. The labor situation throughout the country with the American farmer is strongly against him and we do not all comprehend the seriousness of it. It is the greatest difficulty that confronts the farmer to-day. That is why I am speaking along these lines. I am not seeking to find fault. I am not complaining. I am merely stating facts. We must try if possible to find some remedy, and I trust we shall find it.

Mr. GRAHAM of Illinois. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from Missouri yield to the gentleman from Illinois?

Mr. RUBEY. If the gentleman will pardon me, I would prefer to complete my remarks and yield a little later.

We are in war—a war not of our own choosing—a war in the defense of our own national honor and for the perpetuation of our own liberty and independence. We must win that war. We shall win it [applause], but we require an army, navy, aviators, ships, equipment, foodstuff, and all that it takes to make up a great national fighting force.

FROM FARM TO TRAINING CAMPS AND TO THE INDUSTRIES.

No army was ever raised in this country which was not composed in large part of men from the farm, and in this war it will be the same. In addition to the brave men who have come forth from the farms to fight and who are now in training, there are tens of thousands who have responded to the call of the industries, industries which are absolutely essential to the proper conduct of the war.

Every man who joins the Army does not come from the farm; of course not. It is also true that every man who leaves the farm does not join the Army. Hundreds of thousands of men coming from the cities, towns, and villages join the Army; but remember, that whenever they go forth from that city or town or village they leave behind them a vacant position. They were working in a factory, a machine shop, in a bank, or in a mercantile establishment, occupying some lucrative place. They had a good position and left it, went into the Army, and immediately that vacant place became available.

Out yonder on the farm was some sturdy fellow, 35 or 40 years of age, beyond the draft age. He had grown tired of the humdrum of country life. Maybe he was seeking to get into the city in order that he might educate his children and give them advantages which they did not have in the country. He at once makes application for the vacant position and gets it. Thus it is that thousands of those places made vacant by boys who went forth from cities, towns, and villages to join the Army have been filled by men who, for their country's good, if not their own, should have remained upon the farm.

With increased demands made upon him day by day, and with the supply of labor constantly decreasing, the problem which confronts the American farmer is a serious one.

FARMERS WILL RESPOND TO THE CALL FOR PRODUCTION.

Farmers are patriotic. Last year appeals went forth urging them to raise large crops. They responded as one man. They worked early and late. Fields were plowed up and put into cultivation which had been lying idle for years. As a result of their hard, earnest toil and with a seasonable year, large crops were harvested. In 1918 the appeal to the farmers to raise large crops will be stronger than it was before. We shall need more food as this war goes on. With a large Army in

France, with millions in the training camps, with calls which are coming to send food to England, France, and Italy, and with our own ever-increasing class of consumers of food, it will be necessary to put forth every effort, till every available acre, and cultivate it with an intensity never before known in this country. The country can rely upon the farmer doing his duty and responding to the call for production to the very best of his ability.

With a shortage of at least a million men the problem of production becomes a critical one, and one which every possible effort should be put forth to solve. The War Department realizes this, and recognizes the importance of keeping the young men on the farm. Under the new regulations recently promulgated, it is believed that but very few will be selected when the second call is made.

EVERY AMERICAN SHOULD DO HIS BIT.

I want to say to-day, my friends, that this is an hour when America expects every man to do his duty. [Applause.] It is an hour when every patriotic American citizen desires and demands that every other American citizen shall be a patriot and do his full duty. [Applause.] Every man can not join the Army; every man has not the physical qualifications necessary to make him a soldier. There are other things that he can do, and in this great war in which we are now engaged there are so many things to be done, so many lines of work and labor, that every man in America who wants to find something to do can find it; and he ought to find it, he ought to get at it, and he ought to do it with all the enthusiasm that he can command. [Applause.]

I regret, my friends—and so do you—that here and there, scattered throughout this land of ours, there are men who to-day are doing nothing. You can find them in the large cities. You can find them in the smaller cities and towns. You can find them in the villages and in the hamlets—men, strong, able-bodied men, who will not work, who seemingly have no occupation. They "toil not, neither do they spin." They have not, apparently, that upon which they can subsist; it is often uncertain how they make a living.

There is still another class, a class of the well-to-do, men who are wealthy, who to-day are in idleness, who to-day are doing nothing. These men are all slackers, pure and simple. They have been slackers in times of peace, and to-day, when we are in this great war and when this country needs them, they are slackers more than ever. These men should be put to work. [Applause.]

A REMEDY FOR LABOR SHORTAGE SUGGESTED.

The gentleman from Ohio [Mr. Fess] a few moments ago asked me if I had a remedy. I want to suggest this—I do not know whether it is workable or not, but it seems to me that it is: I should like to see the Committee on Military Affairs draft a bill, prepare it carefully, put in all the provisions and safeguards necessary in order that injustice may not be done, and provide in that bill that every man in this country, every able-bodied man between the ages of 31 and 45, who is without an occupation who is not employed, shall be mustered into the United States Army. [Applause.] If you will do that, if you will pass a bill of that sort, these slackers will get to work. There is plenty for them to do in the factories, workshops, and upon the farms.

Mr. FESS. Mr. Chairman, will the gentleman yield now?

Mr. RUBEY. In just a moment, please. Pass a bill of that kind and the pool rooms and the bowling alleys will close their doors because of lack of patronage. Pass such a bill and there will be a dearth of loafers around the saloons and in the gambling dens. [Applause.] If you will do that, you may not add many men to the fighting force, but you will put to honest toil thousands and tens of thousands of strong, able-bodied men, and you will thereby do much to solve the labor shortage of the country. [Applause.]

Now I yield to the gentleman from Ohio.

Mr. FESS. I was going to say that in the discussion on the conscription law it was generally stated throughout the country that the loafers would be taken to the war and under training would likely come back stronger citizens and better men. I have heard that they are not being taken largely, not because the loafer is not fit, but because he does not pass the physical examination; he is defective in some respect.

In certain parts of our country there seems to be a good deal of criticism along that line, suggesting that the farmer boys are going while others who ought to go do not go. Is it not true that the farmers, as a rule, are stronger in health, and a larger proportion of them is taken, while, on the other hand, these that you and I thought might be called are not called, not because of any fault, but because they do not come up to the required standard?

Mr. RUBEY. There is no doubt something in what the gentleman says, that the loafers are not taken and that the men on the farm, used to out-of-door exercise, are stronger than the men in the cities. But the gentleman knows, and so do I, of many men, strong, able-bodied men, from 35 to 40 years of age, who are lying around the cities and towns doing absolutely nothing, and they have been that kind of men, following a do-nothing occupation all their lives.

Mr. FESS. I would like to be permitted a suggestion of a remedy that is being discussed in my section. That is, let these employment bureaus furnish the farmers with help from the cities. I have understood that farmers have stated they could not get effective service out of those people; that they could not get them to bed until 11 o'clock at night, and could not get them up in the morning, and they did not want to bother with them. What does the gentleman say about that remedy?

Mr. RUBEY. There is much truth in the objections cited by the gentleman. The city man does not always make a good farm hand. In fact, the best farm laborer is the one who has grown up on the farm, there is no doubt about that. Be that as it may, we must find a remedy for these unemployed men. If they will not go into the Army, we ought to find some way of forcing them into labor somewhere, and do it in a way and under such regulations and laws as will compel them to work. [Applause.]

Mr. FESS. I agree with the gentleman. Could an enlisted man be made effective on the farm? Could we resort to conscription on the farm?

Mr. FARR. That is being done in the West now, as I understand.

Mr. RUBEY. I suppose we could resort to conscription. I would not want to answer that from a legal standpoint.

Mr. FESS. I mean can they be made effective farmers?

Mr. RUBEY. I have no doubt about that at all.

Mr. FESS. There has been a suggestion in my State to take labor from State prisons.

Mr. RUBEY. We work them on the roads. I do not see why we could not work them on large farms. Of course, it would not be practical to send them out here and there on small farms, but upon a large farm, covering a large area, convicts from the penitentiary could be employed.

Mr. FESS. I am making these interruptions simply because it is really a serious problem with us, and our people are trying to find a way, and these features have been discussed.

Mr. HAMLIN. Will the gentleman yield on that line?

Mr. RUBEY. I yield to my colleague from Missouri.

Mr. HAMLIN. Does not the gentleman agree that in order to render effective service on a farm a man must have some experience in that line of work, just as in any other line of work?

Mr. RUBEY. Experience is very necessary and very desirable, but we can not always get experienced men. If I may I should like to call the gentleman's attention to what they are doing over in England. They have large Government farms over there, and they are taking the young women of England, uniforming them in khaki, training them, drilling them, teaching them to run tractors, and to handle different kinds of farm machinery, and, in brief, to do every kind of farm work. My information is that they are making of those women splendid farm laborers. The same thing could be done in America. I hope that it will never be necessary, but the boys from the cities and towns could be drilled and trained in farm labor. Of course, the farmer wants an experienced farm laborer if he can get him, but if he can not get a man of experience, he could take a boy and train him.

Mr. HAMLIN. That is true; but that does not fully answer my question. The farmers of my district tell me that the boys who loaf around town would be of very little use to them upon the farm. It might be possible, if you kept them at it long enough, that you could teach them. But here is the suggestion I want to make, if my colleague will pardon me just for a moment. Does not my colleague believe that the entire solution of this thing and the quick solution—and it ought to be quick, because I agree with him that the shortage of farm labor is a very serious thing—is to let the War Department, under some system of furloughing, at least during the crop season, furlough the farmer boys who know how to farm and let them go home to work for a certain time, and then let them report back when the work is over?

Mr. RUBEY. That would apply all right to the men who are in training camps. It would also apply to the men who go into the training camps under the next call. Of course, it could not apply and would not be practicable as to those who have gone across.

Mr. HAMLIN. Oh, certainly not; but there will always be boys in the training camps who could be furloughed.

Mr. RUBEY. Certainly; and I have understood—I do not know from what source—that there is now a feeling in the War Department that something of that sort should be done. I thank my colleague from Missouri [Mr. HAMLIN] for his questions and his suggestions.

CITY BOYS AS FARM HANDS—FURLONGHS.

The question of trying to utilize the boys from the cities upon the farm is a debatable one. I agree with him that, as a rule, the city boy does not make a good farm hand. That is especially true of the boys who come from the large cities—those who have been reared in the city and who know nothing at all of country life. That is not always true of the boys who come from the smaller cities and towns. If I may be pardoned for a personal illustration, after having spent a large part of my young life in a small town, in my seventeenth year I spent an entire summer upon a farm. I began early in March and worked continuously until the following September. I did my share of every kind of work that was to be done on the farm. During the harvesting season I worked on neighboring farms, kept up my part, and received the same wages as men who had worked on the farm all their lives. I think there are thousands of young men who can do as well, if not better, than I did.

I agree with my colleague that the farmer boys in the cantonments and training camps should be furloughed during the busy portions of the coming crop season, and it is my understanding that it will be done.

Mr. FARR. May I intervene here?

Mr. RUBEY. Just for a question.

Mr. FARR. Does the gentleman know that we are utilizing a large number of soldiers in the lumber districts of the Northwest? And in reference to his statement as to the utilization of women in labor in England, does he know that a naval expert in England stated that within one year the women of England would be able to build a dreadnaught?

Mr. RUBEY. I know that the women of England are working in almost every trade, but I did not know that they were becoming experts in the building of dreadnaughts; but I must continue, Mr. Chairman, because my time is limited, and many others want to speak upon this bill.

FARM LABOR AN OLD PROBLEM.

This is not a new question. The question of labor on the farm has been before us for years. Constantly there has been a stream of young men going from the country to the city.

The problem of farm labor is the most difficult one which confronts agriculture. It has been bad enough in times past, but to-day the farmers of America are up against a scarcity of farm labor never before known in the history of our Government. This condition is growing worse day by day, and he who solves the problem and finds a remedy will be hailed as a benefactor by his people.

In times past we have sought by legislation to improve farm conditions. We have attempted to make life on the farm more attractive and more remunerative, and thus to induce the boys to remain on the farm. The States and the National Government have spent millions of dollars establishing agricultural departments and agricultural schools and colleges, and have done much to promote agriculture, the greatest industry in our land.

When our country became involved in this war we realized that agriculture would become more important than ever before, and that this country would be called upon to furnish food supplies for a great fighting force and to contribute, as far as possible, food to our allies. Steps were at once taken by those in authority, both in the National Government and in the States, to encourage agriculture and arouse the farmers of the country to the great importance of increased cultivation.

LEGISLATION ENACTED TO STIMULATE AGRICULTURE.

Congress began at once the consideration of important legislation, the central ideas of which were to stimulate and encourage the farmer, give him aid wherever possible, and guarantee to him, as far as lay within our power, a reasonable and just compensation for his investment and his labor.

The first great measure enacted was the food-survey bill. This measure carried an appropriation of more than \$11,000,000, and was intended to aid and stimulate agriculture. Under its provisions the Secretary of Agriculture was authorized to cooperate with State and county authorities, appoint county farm agents and demonstrators, furnish seed at cost, and in many other ways to give practical and useful aid to the farmers of the country.

The second important agricultural measure considered and passed was the food-control bill. This measure, stimulating increased production and providing for the conservation and equitable distribution of food produced, was, in my humble judg-

ment, the most important war measure passed at the special session of Congress. By this act it was sought to give assurance to the farmer that if he put forth his energies and raised a large crop he would receive a fair and reasonable price for it. It relieved him from the grip of the price-fixing speculators and manipulators, and gave him in lieu thereof a Government guaranty that the very least he would receive for his crop would be a just and fair compensation for both his labor and his capital.

Mr. Chairman, agriculture is the greatest industry in the world, and it is the only industry, as far as I know, which has no voice in fixing the price at which its products shall be sold. The manufacturer of farm machinery says what that machinery shall sell for; the clothing manufacturer fixes the price of the clothing; the great shoe factories fix the prices at which their shoes shall be sold, and so with every other industry; but the farmer, upon whom all must rely for foodstuffs, toils early and late, through sunshine and rain, sows, reaps, takes his produce to market, and humbly asks, "What will you give me for it?" This is a condition that should be remedied.

We passed another bill a short time ago, just after Congress reconvened following the Christmas holidays. That measure authorized the Secretary of the Treasury to buy in each of the years 1918 and 1919, \$100,000,000 worth of bonds issued by the Federal Farm Loan Board. The passage of that act adds \$200,000,000 to the reserves of the Federal farm-loan banks and makes that amount available to the farmers of this country, and makes it possible for them to get loans at a low rate of interest for a long period of time. The passage of that act makes absolutely certain the success of the Federal farm-loan act which we passed in the last Congress.

We have done other things which I would like to talk about if I had time. This Congress will do more in the days to come. There are many important bills before our committee which will be reported and brought before the House. We are going to do everything we can to build up and benefit the agricultural industry of our country.

We often hear the Members on the floor boast of being the friend of the farmer. Every man on the floor of this House, whether he comes from the country or whether he comes from the city, ought to be the friend of the farmer, and he should be willing at all times to do everything in his power to build up agriculture throughout the length and breadth of the land, because everything depends upon the success of that industry.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. LEVER. I yield the gentleman from Missouri 10 additional minutes.

The CHAIRMAN. The gentleman from Missouri is recognized for 10 minutes.

Mr. ALMON. Will the gentleman yield?

Mr. RUBEY. Certainly; I yield to the gentleman from Alabama.

Mr. ALMON. The gentleman referred to a number of acts in the last Congress in the interest of the farmer, the first being the food-survey bill. Will the gentleman kindly enlighten the House as to the results and benefits that have grown out of it?

Mr. RUBEY. I would be glad to answer the gentleman if I had time, but I have only 10 minutes. I have some things I want to say, and I would like to finish my remarks. I will say, however, that the Agricultural Department has made excellent use of the appropriations we made. In a few weeks we expect to report another bill for the continuation of that work for another year, and at that time we shall discuss more fully everything that has been done and the benefits that have come from the food-survey bill.

Mr. FARR. Will the gentleman yield?

Mr. RUBEY. I yield to the gentleman from Pennsylvania.

Mr. FARR. Does the gentleman know of any organized effort for community use of tractors in order to relieve the shortage of farm labor?

Mr. RUBEY. No; I can not just at this moment cite specific instances, but such organizations are being perfected. It is good work, and is in line with community organizations for other agricultural development.

Mr. Chairman, when I began I announced that I was going to talk about agriculture. I trust that I will be pardoned if for a little while before I conclude I discuss some things relating to the war.

We are in war, fighting for the honor and the very existence of our great Republic. This war we must win. This war we shall win, but not without putting forth every energy, using every means in our power, and by being loyal, united, and determined. Every resource of this mighty Nation has been pledged. What are these resources? We must have an army.

Already preparations are well on their way. More than a million men, as brave, loyal, and true as ever took up arms in any country in the world in the defense of liberty and justice, are in the training camps, strenuously working, training, drilling, and fast getting ready for the call, when they shall go forth heroically to do and, if need be, to die for their country. Already we have sent across the sea something like 200,000 men, led by that gallant soldier, who comes from my own State of Missouri, Gen. Pershing. [Applause.] He is over there drilling and training his men and getting them ready for the battle line. I want to quote you some words that come directly to us to-day from him. Here is what Gen. Pershing says. It is a message from him to the mothers of American sons in the Army:

Our soldiers are sober. Our soldiers are clean. American mothers may rest assured that their sons are a credit to them and to the Nation.

[Applause.]

SOME THINGS ABSOLUTELY ESSENTIAL TO SUCCESS.

We must have, in addition to trained men, equipment, and the equipment we must have is entirely different from the sort of equipment used in the days gone by in the wars of the past. Jackson won the Battle of New Orleans with rifles loaded with leaden bullets made in the then Territory of Missouri, but in this gigantic struggle something more than that will be needed. In this war machinery is the important factor. Machine guns, field artillery, and great, death-dealing, armor-plated, bullet-proof tanks must be supplied in abundance to our men. It would be more than cruel to send our soldiers into the battle without every equipment and safety device known to modern warfare.

We must have an enlarged Navy, equipped with modern up-to-date guns, and especially is it necessary for us to have destroyers and fast-going vessels to convoy our transports and our merchant ships laden with men and food supplies.

We must have ships and ships and then we must have more ships. Upon these we are to carry across the sea the men, the arms, the munitions, and the vast stores of food and provisions of every kind absolutely essential to the well-being of our boys. The time was when we congratulated ourselves that we were 3,000 miles removed from Europe. We thought of the great Atlantic as being a safe defense and as an almost absolute insurance that we would not become involved in war. To-day, now that we are in war, the Atlantic, infested as it is with German submarines, is our greatest menace, and the question of transporting troops and supplies becomes the most difficult problem we have to solve.

We must have a large and efficient aviation force. Some one who has been to Europe said to me, "The Aviation Corps is going to play a great part in this war," and I believe it. This is a peculiar war. It is being fought on land and sea; it is going to be fought under the land and under the sea; and it is going to be fought largely in the air above both the land and the sea. We must prepare the strongest, best equipped, and largest aviation force that it is possible for us to prepare. [Applause.]

These are some of the things which must be done. Every energy of this Republic must be put forth to carry forward this work systematically and in unison.

We do not want an Army that is not trained; a trained army without arms, ammunition, and equipment would be useless; a trained army with arms, ammunition, and equipment would soon perish without food and clothing. We must have thoroughly trained men, arms, equipment, munitions, and an abundant supply of food and clothing, ships upon which to transport them, and destroyers and other vessels to protect both soldiers and supplies from the submarine. We must not send our men across the sea until they are properly trained and equipped, and we must not send them in greater numbers than we are certain we can supply them with food, clothing, and other necessities.

Gentlemen of the committee, let me appeal to you for just a moment as I conclude what I have to say to-day.

LET US HAVE UNITY OF ACTION DEVOID OF POLITICS.

We are face to face with a stupendous undertaking. Mistakes will be made. They can not be avoided. There will be criticism. Just and constructive criticism will be helpful in correcting mistakes and aid in avoiding their repetition in the future. But in this hour of our greatest peril, in this hour when our country is in war, a war more terrible and of greater consequences than any in which it has ever before been engaged, it behooves the people of America, from one end of it to the other, to stand up as one man, united and strong. It behooves you and me to stand together and do those things that will bring us more surely and more certainly to victory. [Applause.]

I see before me this big center aisle. For scores and scores of years it has separated the two great political parties. On my right to-day are seated the Democrats and on my left the Republicans. I would that the time could come, I hope that it has come, that while we are discussing bills and legislating upon those things that pertain to the winning of this war this center aisle may be forgotten.

I wish that it might become narrower and narrower until it would become only an imaginary line, and that the Members of this House on each side might stand shoulder to shoulder, united in the advocacy of those measures that stand for success and for victory in this great conflict. [Applause.] I love my country better than I love my party. I love my country better than I love myself. I will vote for any measure, I care not what it is, if it is proved to me that it will be for the benefit of my country and the bringing of victory to my land. [Applause.] I would do that no matter what effect it might have upon me individually or politically.

We are fighting in a great war, we are fighting for great principles. We are doing the things to-day that are for the benefit of those who are to come after us. We are fighting not only for the children of to-day, but we are fighting for the children of to-morrow. We are fighting for the independence and for the perpetuity of this great Government, and every man here and every man elsewhere throughout this land of ours should do his full duty to the Government at this time.

I want peace to come, and so do you, but we want the right kind of peace; we will have no other kind. [Applause.] We want that kind which means perpetual, never-ending peace. When we sign the treaty that is to bring happiness and prosperity once more to the people of our beloved country we want to know that we are to have a lasting peace, one that will be enduring for all time to come. We long for that "resplendent day" to come when it shall be proclaimed throughout this land of ours, throughout England, France, Italy, Russia, Austria, Germany, and throughout the world, "Glory to God in the highest, and on earth peace, good will toward men." [Applause.]

Tax on Congressmen's Salaries.

EXTENSION OF REMARKS

OF

HON. DUDLEY DOOLITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 1, 1918.

Mr. DOOLITTLE. Mr. Speaker, in view of the widespread misinformation that has been scattered throughout the country regarding the tax on Congressmen's salaries, I submit the following letter from the Internal-Revenue Commissioner. This is not news to us, but will enlighten people who have been misled into believing that we do not pay all taxes on our salaries:

TREASURY DEPARTMENT,
OFFICE OF COMMISSIONER OF INTERNAL REVENUE,
Washington, February 25, 1918.

HON. DUDLEY DOOLITTLE,
House of Representatives, Washington, D. C.

MY DEAR MR. DOOLITTLE: I have the honor to acknowledge the receipt of your letter of February 20, 1918, requesting to be advised as to whether or not this office considers Congressmen's salaries exempt from any of the taxes prescribed by Title II of the act of October 3, 1917.

In reply you are advised that it is the opinion of this office that it was not the intention of Congress to exempt the salaries of United States Senators and Representatives from the excess-profits tax, and it is held that the salaries of Members of Congress are subject to the provisions of Title II of the act of October 3, 1917, and should be included in the income to be reported by such Members for the purposes of the excess-profits tax as well as for the purposes of the income and the war-income taxes.

Sincerely, yours,

DANIEL C. ROPER, Commissioner.

Formal decision of the commissioner is appended to the letter, as follows:

TREASURY DEPARTMENT,
OFFICE OF COMMISSIONER OF INTERNAL REVENUE,
Washington, February 1, 1918.

SALARIES OF UNITED STATES SENATORS AND REPRESENTATIVES HELD TO BE SUBJECT TO EXCESS-PROFITS PROVISIONS OF THE ACT OF OCTOBER 3, 1917.

To collectors of internal revenue and others concerned:

In reply to numerous inquiries the Bureau of Internal Revenue is of the opinion that it was not the intention of Congress to exempt the salaries of United States Senators and Representatives from the excess-profits tax, and holds that the salaries of Members of Congress are subject to the provisions of Title II of the act of October 3, 1917, and are included in the income to be reported by such Members for the purposes of the excess-profits tax as well as for the purposes of the income and the war-income taxes.

DANIEL C. ROPER, Commissioner.

Federal Control of Railroads.

EXTENSION OF REMARKS
OF
HON. GEORGE EDMUND FOSS,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, February 28, 1918.

Mr. FOSS. Mr. Speaker, I wish to say a word on the fixing of rates. This bill provides that the President may, in his judgment, initiate rates, and then that the Interstate Commerce Commission shall, upon complaint, make investigation and grant full hearings upon the same and afterwards make report of its findings to the President, who shall take such action as he may deem best thereon. This provision gives the President first power to initiate rates and later to become the final arbiter of these rates, and so practically dispossesses the Interstate Commerce Commission of its present power to determine rates.

It is a question in my mind whether this is a wise provision. Are we not placing an additional burden upon the President of the United States, upon the man who is already now overburdened? And then, again, can any single individual, however great he may be, determine a rate that shall be fair and just unless he has the time to make a special investigation and study into the subject matter? The rate which any individual might fix would be more or less arbitrary for the time being and could not be done in a scientific manner.

The President would hardly feel at liberty to call upon the Interstate Commerce Commission to advise him, inasmuch as in this provision of the section the Interstate Commerce Commission might be called upon afterwards to pass upon the justice of the rate. Are we not, therefore, by this provision practically excluding the Interstate Commerce Commission from all power in connection with the fixing of rates, and is it wise to do so?

The Interstate Commerce Commission has been established for more than 30 years. It is to-day a body of able gentlemen who have made a thorough study and investigation of the whole subject and are to-day our ablest body of experts on railroad rates. Why should they be excluded at a time when their service ought to be in the greatest demand and their knowledge most eagerly sought? If the Interstate Commerce Commission is serviceable in time of peace, how much greater should it be serviceable in time of war. In a great crisis we want experts, men who have been trained in a special line of activity.

Then, again, the commission, which has been appointed by the President, as I think all of its members have, with the exception of two or three, might naturally feel some diffidence in passing upon rates recommended by the President, especially in view of the fact that he is afterwards to pass upon their own findings. If they were to be not only the appellate but the final arbiters, this part of the objection I urge would fail.

In the second place, in regard to that section of the bill limiting the time of Federal control and providing for the return of the railroads to their owners, I wish to remark:

I am heartily in favor of it, so far as limiting the time and making it definite. It is very important for the great financial world to know just when the railroads will assume their normal conditions. I am in favor, also, of making the time as short as possible under all circumstances, and would favor turning the railroads back at the end of a year, or even a year and a half, after the war has ceased. It seems to me that this is no more than right. The President has taken over the railroads under a war power given him by an act of Congress, and as soon as the war is over the purpose is at an end. I am not in sympathy with that idea that this Congress should use its war power as a stepping-stone to Government ownership of railroads. That would be manifestly unjust. The railroads should be restored to their owners, and then when the question of governmental ownership comes up, if it does, it should be considered de novo, as a separate and distinct proposition.

I am not discussing the question as to whether or not under the commerce clause of the Constitution or under the clause establishing post roads the Government has the constitutional power to take over the railroads in time of peace. When that subject is considered, it should be at a time when these roads have gone back to their owners, when the status quo has been established, and in times of peace, when careful thought and reflection can be given to the whole subject, and not at a time

like this, when we are more or less influenced by the circumstances of war.

I have no doubt but that there will be more or less of a changed condition regarding the regulation of railroads after this war. In the minds of some it was not private operation of railroads which has broken down, but the system of governmental regulation which failed. And it may be, as some think, then governmental ownership will be the remedy, but this subject is so large and broad that it ought not to be brought in here to confuse the present situation.

In this connection, I beg herewith to add an extract from the minority report on this bill:

Assuming that the railroads will have a changed status as a result of unified control under the Government and that the old order will not and ought not to be fully restored, but that some legislation will be necessary, we believe that one year or less will be sufficient within which to enact such legislation, when it is considered that a considerable time will elapse between the armistice and the final proclamation of peace. During this period, which may be a year or more, Congress can direct its attention to the preparation and passage of legislation which our experiences under Federal control and the financial readjustments render necessary. The Revolutionary War was not officially ended for two years after the surrender of Cornwallis; nor our Civil War for one year after Lee's surrender, and the Russo-Japanese commissioners sat for six months before the articles of the Treaty of Portsmouth were agreed upon. The pending war involves the world and those who sit around the peace table may have to remodel the maps of three continents and arrange the racial and political interests of many countries and hundreds of millions of people. Can they accomplish this stupendous task in six months, a year, or a longer time? We can not tell, but we are confident that during all these peace negotiations Congress can and will act. The questions of permanent Government control or of Government ownership are not questions to be decided in time of war, but should be left to that calmer judgment which a time of peace alone can afford.

But whether these suggestions are adopted or not by the House, I shall heartily support the measure. I am in favor of giving the President all power necessary to win this war, and I am in favor of calling to his assistance all those agencies of Government and of national resources which are necessary to this end. This is the paramount purpose of all this legislation.

Resources, Strength, and Losses of the Warring Nations.

EXTENSION OF REMARKS
OF
HON. FREDERICK C. HICKS,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, February 26, 1918.

Mr. HICKS. Mr. Speaker, having had many inquiries in relation to the resources and fighting strength of the nations at war, as well as to the numbers of killed and wounded, I give below a series of tables, some of which were published by the Bankers' Trust Co. of New York. Many of the estimates were compiled by the New York Times. Of course, definite figures as to the number of men now under arms, or of those killed and wounded, can not be ascertained, and at best are largely approximations:

Area, population, wealth, and debt, Aug. 1, 1917.

ALLIES.				
	Area square miles.	Population, 1914.	National wealth (000,000 omitted).	National debt (000,000 omitted).

¹ Not given.

To December 31, 1917, the estimated cost is placed at \$121,000,000,000.

Belgium with a population of 7,600,000 in 1914, with men of military age in proportion, has been all but annihilated and her army now does not exceed 150,000 soldiers. As soon as the call came from France England rushed over her regular army, the "contemptible little army" as the Kaiser in derision dubbed it, an expeditionary force of 160,000 men. It fought at Mons and at the first battle of Ypres. Its losses were appalling. In one engagement a division of 12,000 men and 400 officers came out with only 3,000 men and 50 officers. Then Great Britain began the raising of a mighty army, which on August 1 last, including troops from her overseas possessions, was estimated to number nearly 6,000,000 men. Since these tables were compiled, the casualties on both sides, the result of the terrific fighting of last summer and fall, have been appalling.

The total cost of the war to both sides on April 1, 1917, is given as \$98,500,000,000; and it is estimated that should the war continue until August 1, 1918, this amount will approach the staggering total of \$160,000,000,000, a sum larger than the national wealth of any nation in the world with the exception of the United States. To bring these expenditures to a comparison of figures, the cost of the war on August 1, 1917, was over three times the total deposits of all the banks in the United

States, seven times the annual value of our agricultural products, and fifteen times the value of our yearly foreign trade. For every month the war continues it means an expenditure of money greater than that expended during the entire Russo-Japanese War, which lasted 18 months. It means that the cost of the Franco-Prussian War is being spent every five weeks. It means that our Civil War, hitherto the greatest conflict in the history of the world and which lasted four years, is being duplicated in cost every 85 days.

To visualize \$98,500,000,000, that amount would construct 257 Panama Canals; it would build a railroad which would encircle the earth at the Equator 56 times; it would build such a vast number of standard steel ships that, placed bow to stern, they would make an unbroken floating bridge from New York to Liverpool and from New York to Panama; it would construct 2,042 stone highways of standard specifications across the United States; it would purchase 220,000,000 Ford automobiles; and, if laid out in \$1 bills placed end to end, it would make a chain of notes that would circle the globe 464 times and would make 48 bands of money between the earth and the moon. That stupendous sum represents a daily expenditure of \$138,240 for every day that has passed since the beginning of the Christian era, and, if distributed equally among the hordes of humanity, would give \$66 to every man, woman, and child upon the earth to-day. It would build 6,533 National Capitols at Washington, and, if laid out in \$1 bills, 621 years would be required to count it, the operation going forward at the rate of five bills per second.

History records no other war or combination of wars which offers a parallel in the expenditures of money to the present conflict. In fact, the total direct cost of the six greatest wars which occurred during the 125 years which preceded the present world war was \$21,000,000,000. One of these six wars lasted 21 years and another 4 years, yet this sum equals the cost of but 8 months' fighting at the present rate of expenditures.

The direct cost to the United States for the year 1917 is estimated at \$6,700,000,000, of which amount \$3,000,000,000 are loans to the entente allies. The amount of money appropriated by the last Congress for expenditures and authorizations was about \$18,000,000,000, which represents a daily gross cost of the war to the United States of \$49,000,000.

Reasons for Opposing Suffrage for Women.

EXTENSION OF REMARKS

OF

HON. BENJAMIN K. FOCHT,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 9, 1918.

Mr. FOCHT. Mr. Speaker, under leave to extend my remarks in the RECORD I submit the following letter, in which are embodied my reasons for voting against the Susan B. Anthony resolution proposing an amendment to the Constitution:

JANUARY 28, 1918.

EDWARD M. GREENE, Esq.,
Huntingdon, Pa.

DEAR MR. GREENE: Referring to my attitude on the woman-suffrage amendment resolution I beg to say that I felt constrained as a matter of public duty to vote against it. You will recall that the National Republican platform of 1916, on which I ran as a candidate for Congress, declared for State but not national suffrage. Furthermore, in 1915, Pennsylvania by referendum voted against the proposal, and in this contest each of the eight counties I then and now represent returned adverse majorities. Hence, altogether aside from any personal preference or prejudice with respect to the subject, or even that on account of the demands of the war the time might be regarded unpropitious for such an attending division of the people, my duty was clear. Without being recreant to my trust as a public servant, I could not do otherwise than vote against the resolution, since the sovereign will had been registered against it in every county I represent.

I have seen one or two newspaper criticisms of my vote against this proposed amendment of our Constitution, but not a word of protest has come from a single individual. I am hopeful that these newspapers misunderstand my position, since I can not conceive that any American believing in this kind of representative and responsive government, where public officials must either obey or betray, would counsel me to fling defiance at the people. It certainly can not be the fixed policy of these papers to denounce public servants for being responsive to the edict of the people and to commend their betrayal. Such policy does not mix well with conscience and duty, nor Americanism, and its ill logic is manifestly stupid, as well as deplorable, if not reprehensible.

I feel assured that you are in full accord with that great fundamental principle of our Government which actuated me in casting my vote against the suffrage proposal, which is for public servants to respond to the popular will when that will is recorded and known.

With assurance of my high personal regards, I beg to remain,

Sincerely, yours,

B. K. FOCHT.

Pension Legislation.

The facts shown in the claims for increase of pension show the urgent need of legislation to provide for the change in conditions.

EXTENSION OF REMARKS

OF

HON. GUY T. HELVERING.

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 1, 1918.

Mr. HELVERING. Mr. Speaker, on Friday, February 15, information was given to us on the floor of this House to the effect that the Committee on Invalid Pensions would consider legislation designed to bring relief to the needy veterans of the Civil War. Such legislation was reported out on Wednesday, February 27, and it is my hope that there will be no delay in consideration for the need must be apparent to all.

When the Congress passed the age-and-service act in 1912 it took a most commendable forward step in the direction of caring for the old soldiers. With that legislation I was in hearty accord, but I never did believe that it should be the last word or that we were thereby closing the doors against future action in case the need was urgent, and in my opinion that time has arrived.

During my term as Representative from the fifth district of Kansas we have passed some very commendable legislation, which in part provided for the debt we owe to the veterans and to their dependents. We increased the amount allowed to the widow of a soldier, first, from \$12 to \$20 per month and later to \$25 per month. We further recognized the debt owed to the many noble women who have become the wives of these veterans and who have helped to cheer their declining days, and we advanced the date under which they are eligible to secure a pensionable status. Furthermore, we have provided the means by which we have enabled the remarried widows to get the aid due to them as the result of their care for a departed veteran. It has been a pleasure to me to have been able to assist in the passage of the various legislative acts which have been referred to and I look upon that work with as much satisfaction as anything which I have been able to do in public life.

But, Mr. Speaker, while we have been paying attention to these matters of deferred justice we have permitted other delinquencies to go on unchecked, and it is to these I wish to pay attention.

Under the age-and-service act a soldier who served 90 days and is 62 years of age is entitled to receive \$13 per month. If he is married and is dependent upon his pension, he has \$13 per month out of which he has to provide for his family. But in case of his death the situation is changed, for in that event we will give to his widow \$25 per month. Surely the injustice in that can not be defended.

I have letters from old soldiers from all parts of the fifth district of Kansas who receive from \$15 to \$24 per month and find it impossible to provide a living for themselves and families. In 1861, when the war commenced, many of these were not more than 16 years of age, but they made the supreme sacrifice for country. Nearly 57 years have elapsed, and to-day they are helpless to provide for themselves, and in many instances they have been made so as the result of exceptional hardship encountered in war, hardships which can not be shown by medical testimony to the satisfaction of a bureau, but hardships, nevertheless, which have weakened the system to the extent that they are to-day helpless and have to look to this country of ours to deal with them in a spirit of justice which will lean in the direction of generosity. Shall they look in vain?

To-day we are engaged in the work of raising an immense Army, and we have legislated a rate of pay which is far in excess of what we have ever paid to the soldiers of America. We have gone beyond that and beyond anything which the world has seen in arranging for family allowances which are liberal and which will go far toward relieving some of the needless suffering of war. With all that I have been in hearty sympathy as I was with the insurance legislation enacted, but the unanimity of sentiment shown here in passing such legislation should impel us to show liberality in dealing with the veterans who served us so well when conditions were not so fortunate.

We can not afford to say that we will now insist on the terms of the bond and that these old soldiers went into the war content to serve for a small stipend and with no assurance of future relief. That may be the attitude of a shlylock, but this country can not and should not seek to maintain it. The very spirit which prompted us to deal liberally to-day with the soldiers called into service should prompt us to show equal liberality to the men who sacrificed so much for country in the past.

Mr. Speaker, it is almost needless for me to call attention to the changed conditions which have come as the result of the world war. The stipend which we granted to these old veterans in 1912 has decreased in purchasing power to an extent unforeseen, and we should strive to provide for that. The man who receives an income ranging from \$20 to \$35 per month to-day finds it impossible to secure with that sum the actual necessities, and when it happens, as is often the case, that this is the sole income of the pensioner and he has to support a wife as well as self, he is confronted with a situation which can be relieved only by action here.

That action should not be delayed. The need is urgent, and I would impress upon the committee the fact that every day of delay accentuates the misery. Let us deal liberally in the face of the existing conditions. Report to us a bill which will provide for a minimum pension of not less than \$30 per month, and I am confident that the overwhelming sentiment of this House will applaud your action.

Gentlemen, the soldiers who fought for the Union, the veterans to whom we owe a debt which never can be paid, are looking to you for immediate relief. Let it not be said that we are willing to ignore their appeal.

Armenia and Turkey.

SPEECH

OF

HON. EDWARD C. LITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 7, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration H. R. 9314, making appropriation for the Diplomatic and Consular Service.

Mr. LITTLE. Mr. Chairman, a quarter of a century has gone by since I lived in the Valley of the Nile, sailed through the Grecian Isles, sojourned among the hills of Palestine, and swam across the River Jordan. Then the Suez Canal was the key to world dominion. Cairo was the capital of world diplomacy and the storm center of world politics. From there Great Britain, France, Germany, Austria, Russia, and Turkey were maneuvering for position in the universal conflict now being waged. Most of the stars of statecraft, war, and prelacy, which illuminated the horizon of the Levant then, have been lost in the dark shadows of eternal night. The great world conflagration for which they so long watched with bated breath has finally come without their presence. If among the dying embers of the past I can breathe and kindle a little flame that may reflect some useful light upon the relations of the Turk, the Armenian and the Orient to this mighty cataclysm in which we are all involved, I shall feel that my service in this House has not been wholly in vain.

About the time I was appointed Khedive Tewfik died, and his son, the Prince Abbas Hilmi, a boy of twenty one or two, came from a school in Vienna to mount the throne established by his ancestor, Mohamet Ali, the greatest ruler outside Europe and America who has lived for 200 years. Supposing he inherited a kingdom that had existed for a century, the boy, short, stout, stubborn, and dignified, promptly clashed with Cromer, the English power behind the throne, and named as his Prime Minister Fakry Pasha, a tall, handsome Circassian (by virtue of a mother and grandmothers for several generations from Circassia). Cromer suggested a very pliant Egyptian friend of the English for the place, and the British Foreign Minister Roseberry cabled that he "would not be responsible" for what happened if their candidate was not selected. France and Russia declined to back the boy's plans and war was avoided. The young fellow was determined to be some measure of a king and threatened to commit suicide before he would accede to the English demands. Cromer "declined to accept the responsibility" of the revolutions and disturbances that might have followed among the Mohammedans, and they compromised on

Riaz Pasha. A little, slender old man, a devout Moslem, an ardent Egyptian, a sturdy patriot, he satisfied the Egyptians; an honest official, a sound business man, a capable executive, he satisfied Cromer. Eager, boyish in carriage, nervously counting the beads of his rosary, cautious, prudent, determined in his methods, his character stood like a rock concealed beneath the foam of his manners, which misled all who did not know him intimately.

With some pride I remember he always said when the young man from Kansas came in, "Here comes our friend." Boutros Pasha, the minister of finance, was a Coptic Christian, a descendant of the ancient Egyptians, a member of the church founded by Saint Mark in the sixtieth year of our Lord. Coldly logical in every thought and utterance, I heard him tell Harding, Cromer's substitute (afterward governor of Uganda and now, I believe, minister to Spain), that the English should desist from the pretense of allowing the Egyptians to rule and rule it themselves or get out. Carrying that to its legitimate conclusion when he became prime minister in after years, a fanatical Mohammedan and Egyptian patriot slipped a knife into him and killed him, just to demonstrate to the world that it takes a major premise and a minor premise and a premise of human nature to make a real syllogism, and ended the career of a very able man. The foreign minister, Tigrane Pasha, was an Armenian Christian, a cultured and accomplished diplomat whose resources and equipment compared favorably with those of any man in public life in Washington, and through him I first began to learn about the Armenian race from which he sprang. Yacoub Pasha Artin, the minister of education, was also an Armenian, a cultured, thoughtful student.

Ortega, a humorous Spaniard, was dean of the diplomatic corps. Austria-Hungary designated a courtly baron, and France a marquis, to uphold their dignities. Russia transferred a diplomat, Koyander, from a tempestuous service among the Balkan States to protect her interests. Germany was represented by Count von Leyden, soon as Ambassador to Japan, where he served when I came home through that empire from the Spanish-Filipino war in 1899, with the Twentieth Kansas Volunteers, to help plan her policies on the Pacific. An almost typical John Bull, the famous Sir Evelyn Baring, Baron Cromer, finally Earl of Cromer, was diplomatic agent and consul general of Great Britain to Egypt with the rank of minister resident, his title and rank the same as that of the representatives from the United States and all other countries. A sturdy man of sound common sense, his minor duties were the same as theirs, but his major task was that of England's greatest proconsul since Warren Hastings, to lay the heavy hand of Great Britain on the shoulder of Egypt whenever in his capable judgment the necessity seemed to arise.

The greatest Turk of those days and these was Mouktar Pasha Ghazi, a soldier, a scholar, and a gentleman, the hero of Kars, who fell into disfavor with the Sultan because of progressive views and was sent into courtly exile as high commissioner to Egypt, over which Turkey nominally had a very nominal suzerainty, and, as he said, he was there "a standing protest against English domination on the Nile." In after years, when Bulgaria had almost taken Constantinople, he was summoned from retirement by the general voice of his countrymen and the Sultan and made Grand Vizier of the Sublime Porte. Through more than 80 years of active life, in war and peace he has had the loyal admiration of his own people and the unbounded respect of Russians, Armenians, British, and all who have had the pleasure of knowing a man who is now a member of the Turkish Senate at the age of CANNON and SHERWOOD in this House. From the Sudan, a prisoner of State, came Zoubier Pasha, the greatest slave king and the mightiest ruler Central Africa ever knew, to live in a palace with a hundred servants and chafe at the restraint. Born at Smyrna, of the Armenian race, Nubar Pasha, the greatest statesman the Turkish Empire has known for a hundred years, had begun his career, in the early forties, as secretary to Mohamet Ali and to his successor and stepson, that military genius and "great barbarian" (as Nubar named him), Ibrahim Pasha, and had risen to be prime minister many times of the Mohammedan land of Egypt, the trusted advisor of all its rulers, and then was living in wealthy retirement, an interesting figure at the dinners and receptions of that proud capital. Afterwards the necessities of the times again made him the prime minister. A younger man, Sirdar, commander of the Egyptian Army, as yet only a major in the British Army, my neighbor and friend, with whom I often debated the respective merits of our countries, was training the Egyptian Army for the conquest of the Sudan, which conquest was to give him a seat in the House of Lords; was to make him the chief reliance

of the British Empire in its hour of greatest peril; and was to make for him a name that shall forever echo to the trump of fame, Knight, Pasha, Baron, Viscount, Earl, Knight of the Garter, and Field Marshal, Kitchener of Khartoum!

President Harrison first appointed as Cromer's colleague, Eugene Schuyler, before chargé d'affaires to Russia, minister to Greece, and the author of our standard work on diplomacy. When he died, President Harrison selected his college roommate at Miami years before, Hon. John A. Anderson, long a distinguished and powerful Representative in this House from Kansas, who died in Liverpool on his way home, among strangers, alone, except for Androus Melik, his second kavass, an honest, faithful, and loyal servant of this great Republic for many years and until now. Short as was his service, that great Kansan left his useful impress on the Egyptian foreign office. An oriental custom had long survived in Egypt of presenting to each minister as he appeared a handsomely caparisoned horse and expensive sword. For a number of years they had omitted the steed from the program. Mr. Anderson introduced the Kansas train of thought in the valley of the Nile when he said to the pasha who presented this weapon—

We appreciate your courtesy, but the United States does not need this sword. Return it to the Khedive of Egypt with my compliments and tell him to use it to protect his own country.

The Egyptian foreign minister told me that they had long desired to discontinue the idle ceremony, but hesitated at doing so on any given individual, and Mr. Anderson's republican simplicity made it possible for them to terminate the custom without offense, as they then did.

As this was the most important diplomatic office with which Kansas had ever been favored, our Senator Perkins suggested to the President that till the end of the unexpired term the post ought to be filled from Kansas. The appointment was tendered to a young lawyer but a very few years out of the State University, who was not an applicant for the responsibility, perhaps on the theory that President Harrison desired somebody who would live through the term. Suddenly transferred from the prairies, where he had been raised on the frontier, he found himself diplomatic representative of the greatest country on earth to the Court of the Pharaohs, the land of Joseph, and the people of the Arabian Knights. The map of the Orient unfolded to his eyes Rameses and Cromer, Saladin and Bonaparte, Moses and Mahomet Ali, and half earth's history made one mighty cavalcade as the Occident and the Orient came together.

The wealth and the culture of Europe and America gathered for a course of study or a season's holiday on the piazzas of Shepherds the Continental, the New, on the decks of the Nile dahabeas and Cook's steamers. America sent kings and queens, princes and princesses of her own to mingle with those from the principalities, kingdoms, and empires of our European ancestors. They came and went to and from Japan, China, India, Palestine, Athens, Constantinople, and Rome. There was Leiter, America's greatest merchant, who began sweeping out and kindling the fires in his own store; and Searles, who inherited the Hopkins share of the estate of the big four—Stanford, Crocker, Huntington, Hopkins. There was Mary Custis Lee, daughter of Robert E. Lee, granddaughter of Light Horse Harry Lee, and great-great-granddaughter of Martha Washington. There was Mary Leiter, a Chicago schoolgirl, soon to sit in regal splendor on the throne of the Great Mogul as Empress of India, a worthy successor of the one to whom was built the Taj Mahal. There came Nicholas Murray Butler, now president of Columbia; Crosby Noyes, dean of America's newspaper men; Stanford White, who built the Madison Square Garden and died in it; Richard Harding Davis, as high a type as America ever furnished to the world of a manly and gallant young gentleman, brilliant, talented, and famous. In the halcyon days of youth we climbed the Great Pyramid of Cheops together and on its lofty summit jostled the ghosts of Bonaparte's Forty Centuries as they listened to the echo of his guns and watched the charge of the Mamelukes. They philosophized when the Khedival Court made its trip to the Sultan and the Golden Horn. They stood with interest and awe before the mighty relics of the past, and observed in wonder and amazement the splendors of the Arabian Knights take the boards every time the sun went down as the English drum beat from the citadel on the Mokattam Hills and the weird call of the muezzin rose from the minaret of the Mosque of Mohamet Ali far up yonder above the great city of Cairo, while Watson, Ewing, McClanahan, and a noble company of American missionaries brought the message which they now carry as far up the Nile as the Sobat River and which some day all brave men pray may still forever the roar of battle. He would, indeed, be a dumb, inanimate, and trifling student of human affairs who

would not receive lasting impressions and draw lofty inspirations from such glowing and kindling pages.

Under this bill you should send ministers to Greece, Albania, Montenegro, Servia, Bulgaria, and Roumania each, instead of trying to have one man represent you to several warring nationalities. The Egyptian office has more serious responsibilities than two-thirds of those you maintain abroad, and your bill should be drawn accordingly. Why should Bulgaria and Servia be considered as one (diplomatically) here? Your State Department must not figure in terms of 1876.

TURKS AND BULGARS.

The Turkish Empire having lost Arabia and Egypt since the present war began now contains 540,000 square miles, 10,000 of which only are in Europe. At the close of the war with Bulgaria in 1913 a treaty was made by which most of this was ceded to Bulgaria, including Adrianople. There Austrian interference rendered it impossible for the Servians and Greeks to acquire any portion of Albania, and made it an independent country. That induced the Servians and Greeks to change somewhat their attitude toward the division of Macedonia and precipitated the fight between Bulgaria on the one side and Servia, Greece, and Roumania on the other. The Turk advantaged himself of that opportunity, broke the treaty, retook Adrianople and much territory given to the Bulgars. The result was that Bulgaria at the close of that war, after having done much of the fighting, really got less out of it than Roumania, Montenegro, Servia, or Greece. When the Sultan and Enver Pasha, then Enver Bey, retook Adrianople the Emperor of Germany wired his congratulations. You can understand, then, the kindly feeling that the Bulgarians naturally have toward Germany.

Their greatest interest is in Macedonia, where there is a divided opinion as to how much of that section the Greeks, the Serbians, or the Bulgarians should rule. An educated Bulgarian said to me, "We propose to have our people in Macedonia or lose all." Bulgaria had no friendly regard for our enemies. She would have preferred, probably, not to help them. She had good cause to hate them all. She simply went in there to get what she thought was her share of Macedonia. Forty years ago there was no Bulgaria. There is finer opportunity right now to organize an Armenian nation than there was 40 years ago to develop Bulgaria into a State. In 1863 Mr. Robert, of New York City, founded, at Constantinople, the Robert College, conducted by American missionary teachers. That has been the school where all of the great Bulgarians were educated. That nation rose to life by the aid and inspiration given in the school at Constantinople by American missionary teachers. Bulgaria is a product of American teaching. Their feeling is probably kindlier toward us than toward any others.

I think Congress showed good sense in not declaring war, for the present at least, upon Bulgaria. It is entirely possible that if Turkey were beaten it might very easily come about that a treaty could be made with Bulgaria by which she would drop out of this fight. In fact, that would be almost inevitable. There will have to be some sensible settlement there between her and Serbia and Greece, and perhaps the United States can have the confidence of all of them enough to help them somewhat, an attitude which Russia once maintained. There is a general feeling that Bulgaria may insist upon her rights under the treaty of 1913 and recover Adrianople, as she should. The Turk has been in Europe long enough anyway, has lost most of his European dominion, and there is a general feeling that the tail ought to go with the hide. There are only 10,000 square miles there, and it is too much trouble to make two bites of a cherry. Half of the people in European Turkey are Mohammedans and the other half Christians. If Bulgaria got most of that land, and Constantinople were made a free city for the benefit of all the world, it would be a very happy conclusion of the Mohammedan invasion of Europe.

The remainder of Turkey is where I now point on this map, through Asia Minor, Anatolia, Armenia, Syria, Palestine, and Mesopotamia. There, in a territory of 530,000 square miles, live 18,000,000 of people, three-fifths of whom are Moslems and about two-fifths Christians, with three or four hundred thousand Jews. Start from Egypt [pointing] and down here at Bagdad, run up through Mesopotamia, Palestine, Armenia, and Kurdistan, and over here to Anatolia and Asia Minor. This country to which I now point, Anatolia, is largely inhabited by Turks. If the Turkish Empire is driven out of Europe, they would control Anatolia. Those are their people.

The judicial and administrative situation in the Turkish Empire has always been a very singular one, that one unfamiliar with the conditions finds difficulty in grasping. The real law is the Koran, and under its strictest interpretation Christians are merely outlaws, outside the law without any particular rights.

This accounts in part for the carelessness in past years with regard to the lives of Greeks, Bulgarians, Servians, and Armenians. No other foreign nation would submit to such an attitude from any government, and they avoid it under capitularies which descended to the Sultan from the Byzantine Empire of some 500 years ago. The diplomatic or consular representative of America, of France, or Germany is the sole administrative and judicial authority over the people of his country in Turkey or Egypt. By his order they are arrested, and by his determination they are tried. There are many foreigners in that Empire and the power exercised in this manner is very considerable, or has been till now, when the Turks claim to have abrogated the capitularies as Japan did 19 years ago, the very day I happened to reach her shores. Forty-two years ago the Egyptian prime minister, Nubar Pasha, the Armenian statesman, secured from all the great powers a treaty which organized an international tribunal known as the Mixed Courts, which tries all civil cases between Egyptians and foreigners and between foreigners. This left to the foreign representatives the adjudication of all criminal matters, and Nubar did much to modernize Egypt.

Following the capitulatory plan, the Sultan has been accustomed to designate heads of the various respective churches known as the Patriarch, selected nominally at least by the various churches, who, after a fashion, took care of the affairs of their people, the Armenian Patriarch at Constantinople being the political head of his people. In 1878, when Beaconsfield and Bismarck held the great Berlin conference that was supposed to settle the destiny of Europe forever, Mugurditch Khirmian, long the Armenian Patriarch of Constantinople, with three others, appeared to represent the Armenian people at this congress of Berlin. They secured an agreement in that great treaty that the Armenians should hereafter have justice from the Turkish Government, an agreement guaranteed by all the great powers of Europe. This was never carried out by the Turks, was never sustained by the guarantors, and the continued persistence of the Armenians in demanding its enforcement had much to do with the terrible massacres to which they have been subjected since. They actually stood up for their rights under the law, just as an American would, something no Turk could endure from a Christian, and especially from an Armenian.

Though the Turks are a great military people, they have never inherited or acquired any capacity for civil government. They regard the Christians in their dominion as the followers of a military camp, subject to the discipline of its rules. The Province of Anatolia, just across from Constantinople, is the seat of their first settlement, the place where they first established their kingdom, and the home of most of the Turks. When they retire from their armed invasion of Europe at the close of this war, as they should, there will be left to them their own territory of Anatolia, inhabited by their own people, with its capital at Konia. Into that country their ancestors galloped, sword in hand, 600 year ago, and about it cluster all their traditions. There they would have an opportunity, unhampered by all the peculiar conditions of their larger dominion, for the natural development and growth of their race, which is the only way the Turkish question will ever be settled and the only way it should be settled.

SERBIANS AND CROATIANS.

The Serbians and Croats are practically the same people, except that the Croats are Roman Catholics and the Serbians have their own church, much like the Greek Catholic Church. The Croats just inland from Trieste have an excellent university of their own, and are entitled to grave consideration in any effort to do justice to the nationalities of the Balkans and neighboring territory. Montenegro is inhabited by men of the Serbian race, tongue, and religion, hardy Christian mountaineers, the only Christians south of Vienna who never were conquered by the invading Turks. Now their country is engulfed by the Austrian wave. Is there a Christian in America whose heart does not go out to them?

The gallant little kingdom of Serbia actually had Austria whipped till the German hosts came down like Cedron in flood and overwhelmed them. Chased out of their homes the splendid army withdrew, and are fighting their way back still a vigorous and powerful factor in the great war. The wreck and ruin of their land has left them undaunted. When justice triumphs they will be established with sufficient seaports on the Adriatic. There will never be quiet in the Balkans till Serbians, Croats, Montenegrins, and Bosnians are self-governing people, we hope one great nation, of the same blood and tongue between Hungary and the Adriatic. They are entitled to all the sympathy we feel and all the justice we demand for Belgium.

If France and England had thrown into Serbia with reasonable diligence the troops sent to Salonica, if Italy had flung across the Adriatic and through Albania and Montenegro the armies she hurled at the almost impregnable hills between her and Trieste, the allies would now hold Belgrade and probably be camped before Vienna. The conflict along the border of Belgium and France is simply a siege of France and Germany. In 1917 Nivelle, the greatest strategist the allies have developed, was stopped on the road to victory, and since then they have merely fought each other to a standstill, with no apparent possibility of a decision. Through Serbia lay the path to the conquest of Austria and a final victory over Germany. If that line had been held, Bulgaria would never have entered the war, and the greatest mistake made was in allowing Serbia to be vanquished. But there is yet an opening in the east.

THE OPPORTUNITY.

Since Nivelle, apparently the chief military genius the allies developed, was stopped on the way to a possible breaking through the German trenches, by the panicky exaggeration of his losses, there seems little probability of an early break in the line, unless Great Britain lands half a million men on the coast of Belgium, or the Germans attack Switzerland and compel America to throw a million men in there.

If the great British navy can not make a successful attack on the German coast, that would seem to demonstrate that the mines, torpedoes, and submarines have junked the battleships and they are of no utility but to observe each other. If this is the fact, there is no probability of a break anywhere on the western front or coast soon.

But if Turkey is beaten, Bulgaria would quit, we should be in touch with Roumania, and the Allies could defeat Austria. The British hold Bagdad and Jerusalem. The Russians fought their way into Asiatic Turkey, 160 miles, to Erzincan and beyond. They took Trebizond on the Black Sea and Van to the south. They to-day still hold all this, an Armenian country. Among them are 35,000 Armenian soldiers fighting for their homes. While the Russian army there is disintegrating, the Armenians at Tiflis are organizing another army corps of their own, and expecting to put 150,000 Armenians into the field to fight the Turks for Armenia. They will have the aid of the Christian Georgians, the people of the frosty Caucasus, whose capital is Tiflis. But they will need financial assistance from some great power.

Japan is a nation with small resources, too prudent to take great risks without the chance for great gains, but brave enough to venture much for a greater destiny for Nippon. The Rev. R. E. McLean, of Kansas City, Kans., a scholar, a Scotchman and a gentleman, who was for eight years a missionary in central China, speaks and reads Chinese, and is their friend, has expressed the opinion that Japan should be brought into this fight for the world's benefit, by some benefit to Japan. If she is given within reasonable limitations a free hand, we will soon see them facing the German advance toward Asia. With the Armenians and Georgians from Tiflis, and the British from Bagdad and Jerusalem moving with one aim, Turkey will crumble, Bulgaria make peace, Serbia rise from her ashes, and victory be within our grasp.

THE LAND OF ARMENIA.

When Noah stood on Ararat, the great plateau of Armenia lay all about him. To the northeast he could see the fertile and beautiful valley of Araxes running 150 miles to the salt waters of the Caspian Sea. To the southwest were the fountainheads of the Tigris and the Euphrates and the hills and valleys and the plateaus extending to the waters of the Mediterranean in the vicinity of Tyre and Sidon. To the northwest was the Black Sea, and later the famous city of Trebizond, while Persia lay to the southeast. When our Aryan ancestors left the roof of the world and entered Europe north of the Caspian, our Armenian cousins, for such they are, marched to the south of that sea and after a bit established themselves around Mount Ararat, where they have lived more than 3,000 years, and it is not quite 311 since John Smith landed at Jamestown.

At the present time Armenia is bounded on the west by Anatolia, the birthplace of the Turkish Empire, and we hope its final resting place. To the south lies Persia, Kurdistan, Mesopotamia, and Syria. The Turks have scattered many Kurds through the Armenian country and driven many Armenians into the surrounding divisions for centuries. Much of ancient Armenia is now a part of Russia, including Mount Ararat, Kars, Erivan, their share of the Araxes Valley, and Echmiadzin, the center of the Armenian nation. Between them and the Caucasus lived the Christian Georgians, their friends, allies, and neighbors now as often before, whose land runs far up into the Caucasus about their great capital of

Tiflis. A small portion of Armenia is now northwestern Persia. What will become of Persian and Russian Armenia in the approaching break-up, which seems inevitable, no man can prophesy. Triumphant Turks will want back Kars and Russian Armenia. Then woe to the conquered! In another generation the Armenian race will be as extinct as the dodo and the first Christian nation will disappear from off the earth. At Baku is the great oil district surrounded by 500,000 Tartars, friends of the Turks. Every man with a reasoning mind realizes Germany will strike straight for it through the port of Batoum. Shall we allow the Bolsheviks to abandon this great natural reservoir of oil and our Armenian cousins to Hun and Turk?

Armenia in Russia extends well up toward Tiflis, where there are 100,000 Armenians, six Armenian papers, and an Armenian college in the Georgian city. There are 2,000,000 living in Russia, 1,500,000 now, perhaps, live down here in Turkey, and 100,000 have a corner up here in Persia. They controlled at various times, in all about 500,000 square miles of territory, extending from the Caspian and Caucasus and Black Sea clear down here to the Mediterranean at the elbow where it turns south toward Egypt. The land is table-land and they grow there everything that will grow in the United States in the North or the South, because of the differences of climate. As we, they produce both wheat and cotton. They find copper, iron, gold, silver, and many minerals there. Here are all natural resources essential to a stable and important Christian nation. All our fruits are found there.

Their hope is that when their country is made a protectorate and given a decent representative government, so that a man can make a home and know that he can find his wife, child, and house; that he can work away from home without being decapitated; that railroads will be built from these harbors of Mersina, Alexandretta, up the Valley of the Euphrates to Erzerum, connecting with the Russian railroad to Tiflis, to Baku, an oil field city of 500,000, to the Caspian, to Batoum on the Black Sea and to European Russia. When that comes you will see a Californian development of an unsurveyed new country.

A land of magnificent mountains, great lakes, mighty rivers, what wonder that its people have been loyal to its soil, its history, and its religion through thousands of years, in spite of suffering, cruelty, oppression unmatched by the downfall of Poland or the woes of Ireland that so long in song and story have held the sympathetic eye of a Christian civilization. Let Khorene Nar Bey de Lusignan, their poet, educated among the scholars of their Venetian convent, descendant of their lost kings, speak for them a moment in the halls of the American Congress:

If a scepter of diamond, a glittering crown,
Were mine, at thy feet I would lay them both down,
Queen of queens, Armenia!

If a mantle of purple were given to me,
A mantle for kings, I would wrap it round thee,
Armenia, my mother!

If the fire of my youth and its sinews of steel
Could return, I would offer its rapture and zeal
All to thee, Armenia!

Had a lifetime of ages been granted to me,
I had given it gladly and freely to thee,
O my life, Armenia!

Were I offered the love of a maid lily fair,
I would choose thee alone for my joy and my care,
My one love, Armenia!

Were I given a crown of rich pearls, I should prize
Far more than their beauty, one tear from thine eyes,
O weeping Armenia!

If freedom unbounded were proffered to me,
I would choose still to share thy sublime slavery,
O my mother, Armenia!

Were I offered proud Europe, to take or refuse,
Thou alone, with thy griefs on thy head, would I choose,
My country, Armenia!

Might I choose from the world where my dwelling should be,
I would say, Still thy ruins are Eden to me,
My beloved Armenia!

Were I given a seraph's celestial lyre,
I would sing with my soul, to its chords of pure fire,
Thy dear name, Armenia!

THE ARMENIAN PEOPLE.

The 2,000,000 Russian Armenians are an efficient and contented factor in the life of Tiflis and the Caucasus, with fine farms, towns, schools, and cities, taking part in all its activities. Within the territory of Turkish Armenia, three years ago, over a million and a half Armenians lived. There is some little difference of opinion as to how many of them have been slain since then. I think it is a fair statement to make that at least 500,000 Armenians have been killed since 1915 in this country, to which I now point, by the Turks and Kurds. Their effort is to exter-

minate the Armenian race that they may possess their lands and stock and destroy the Christian Church there. We talk much about the tribulations to which Belgium has been subjected. I think I can safely state to the House that Armenia has suffered a thousand times as much as Belgium has endured. The Sultan has been killing off small nations much longer than the Kaiser. For hundreds of years this has gone on to a greater or less extent. To deflower the maids, to rape the matrons, to slay the young men, to butcher the old, to assemble them together in the Armenian churches and steal everything they have, to burn their furniture, to drive away such as are left from their homes is a most everyday occurrence in Armenia. Hundreds of thousands have so suffered since 1914. I would hesitate about making such a statement on the floor of this House if I were not absolutely satisfied of the correctness of my statement.

The Turks themselves, as you know, of course, came from up in Mongolia. They have learned nothing since they have been there that makes them capable of conducting a government. They came in as soldiers and conquerors and never have been anything else. With them the collection of taxes is an adventure and they can not govern anybody except by cutting them in two. That is the Turkish idea of administration. [Laughter.]

There is a German, named Lepsius, who has written a book, and I am going to quote from him on the theory that he is not an interested witness. I am very sure he has not misrepresented the matter. He says:

The manner in which men qualify for the Turkish prison in Armenia can be easily deduced from what has already been said. The possession of money, cattle, corn, land, a wife or daughter, or enemies is enough. We are shocked to read of the cruelty of brutal Kurds who ride to a village, attack the houses, drive off the sheep, seize all the portable property, dishonor the women, and return leisurely home, conscious of having done a good day's work. We call it a disgrace to civilization, and perhaps the qualification is correct. But bad as it sounds, it is a mercy compared with the Turkish methods, which rely upon the machinery of the law and the horrors of the prison. A man whom poverty, nay, hunger, prevents from paying imaginary arrears of taxes, who declines to give up his cow, or his buffalo as back's ease to the zaptehs, who beseeches them to spare the honor of his wife or his daughter, is thrown into one of these dungeons, where to recover leaves until he has been branded with the indelible stigma of the place.

I regret to say that much of the evidence upon this question is so scandalous, so degrading, so frightful that it is not of a character that ought to be spread upon the record in this assembly or stated here. Lepsius, the German, is a doctor of philosophy from the University of Berlin, and the book was translated by a Fellow of Oxford University, so I think this has been stated very mildly. I ask you to read the books on the Armenian massacres of 1893-95 and of the early years of this century.

Fifty-four villages in Bulgaria forty-odd years ago were ruined and everybody in them was destroyed; the massacres in Chios and the other Greek Isles some 90 years ago were awful, but hardly a circumstance to what has been done in Armenia. In 1915 thousands upon thousands of men were slain and thousands upon thousands of women were dishonored. Slaughter often began by the sound of a bugle, and ended each day by the same signal. Hundreds of thousands of Armenian men, women, and children, driven from their good homes, were hurried on foot, without provisions, for unknown destinations, in the hope of extermination. Many women sprang into the Euphrates to escape dishonor. Three thousand died in the burned church at Orfa in the massacre of a few years ago. Circumstances have been such in the last few years that hell would not have been a right good vestibule for Armenia. In hell they do not dishonor women. I do not think it is to the benefit of civilization to exterminate Armenians. I do not believe it is to the safety of that empire that the only race which has any capacity for administration and business should be completely wiped out or driven out. They can not build up business communities in that fashion. They can not develop a country by such methods. The rape of Belgium, the murder of Serbia, the collapse of Russia have appalled a world that would stand aghast if it knew the horrors of Christian life in Armenia. Vengeance is mine, saith the Lord.

The Armenians are a brilliant race. They have a proverb in the Orient that it takes two Jews to cheat a Greek, that it takes two Greeks to cheat an Armenian, so you can see that they must have some intelligence, as the proverb is well founded. The people themselves who live throughout this country of Armenia, which also extends up here right over to Russia and the Caucasus, are largely an agricultural people—farmers and stock people when they are allowed to farm—industrious, law-abiding, with schools and churches of their own maintained without any foreign aid. While at home they are largely engaged in farming, when they emigrate to foreign lands they advantage themselves

of every opportunity. For centuries they have been the chiefest financial advisers of the Sultan. Their rank as merchant princes and bankers is of the highest. A much greater portion of the business of the Turkish Empire is in their hands than that of the Turks or any others. Their application, their business judgment, their facility for the development of business enterprises constitute an absolute assurance that if the Christian world will take off their backs the Turks and Kurds, who outnumber them, or will loan them arms and equipment to meet on the level their enemies who are now assailed by the English from Bagdad and Jerusalem, they not only will achieve their independence of Turkish rule but will develop that admirable country till it is surpassed by none on the face of the earth in tranquillity and prosperity.

ARMENIAN SOLDIERS.

Since this war began down there the Armenians, I am reliably informed, have had about 150,000 soldiers in the Russian Army fighting upon our side. They did not go home like the Bolsheviks. They supplied in Armenia itself 35,000 of those people fighting in the Russian Army, some as volunteers, and although many of the Russian soldiers have retired, the Armenians in the army and the volunteers are still fighting the Turks. The Russians and the Armenians since this war began have penetrated over this border line to which I now point to beyond the great city of Trebizond, which they hold, 160 miles out here, 160 miles from the Russian line into Armenia, into Turkey, and they have taken the city of Van and this country here. The British hold farther to the south an immense territory as far as Bagdad and as far as Jerusalem, and the Turks are making no attempt to drive the Armenians and the Russians out. The situation is in status quo there. But ere long the Germans will insist on action. The Russians will leave the front and the Armenians will be compelled probably to fall back before superior numbers to Erzerum and the Russian border, where they will doubtless make their stand.

If all the Armenian soldiers who are in the Russian Army could be transferred to Armenia they would soon be at the gates of Constantinople. So you see this is a military consideration which is worthy of some thought. The military experts of Germany overran undefended Belgium without a pause, with their great military preparations, but at the Battle of the Marne, the first and only time they have been forced to fight on a level field in a battle of importance without trenches on either side, Joffre made a stand they could not drive. Foch broke through their center where the experts failed, and the French drove the Germans half a hundred miles before they stopped running, but when dug in, to have something to stand behind, the siege goes on and on. The allies have lost in Italy, in Serbia, below Constantinople, and finally in Russia after the Russians overran all the borders of Germany and Austria and penetrated 160 miles into Turkey. Our only advancing victories have been at Jerusalem and Bagdad. The Armenians, since the Russian deterioration, have organized an army corps at Tiflis of 50,000 under Nazarbekoff, an experienced Armenian general of the Russian Army. With the help of their Christian neighbors, the Georgians, they expect to increase those forces until they have 150,000 armed men on the Turkish border. Beyond the Caucasus, those people are left alone to fight it out with the Turk and his half-demoralized army. If they can put such an army in the field and maintain it, they will soon be at the throat of Constantinople, and, gentlemen of the House, along that journey lies the road to victory. The Armenians have always been admirable soldiers.

A Russian officer jostled Lazareff, an Armenian shoemaker, in the streets of Baku, and said, "Get out of the way, you dirty Armenian." Lazareff responded, "I will show you whether I am a dirty Armenian," enlisted at once in the Russian Army, fought his way to a general's baton and furnished half the military genius that won in 1878 for Russia against the Turks under the walls of Kars and Ezeroun.

Loris Melikoff was born an Armenian in Armenia in the last century and entered the Russian Army. Russia has produced no man in a hundred years that surpassed him as a soldier or a statesman. He commanded the army in which Lazareff served when the Turks were beaten in 1878, and his talents as a soldier made of him a lieutenant general, the conqueror of my friend Mouktar. He was as great in civil as in military life. Governor general of six Provinces, he established the trial by jury. As minister of the interior of Russia he began the advocacy of the taxation of inheritances and legislation for factory workers, which culminated in their formulation into laws. He was a great progressive statesman and a friend of the poor and oppressed, and finally he became, 37 years ago, the next man to the Czar and practically dictator of the Empire.

I have already told you of Nubar, who began his political career in the early forties as secretary to Mohamet Ali, the greatest ruler, outside of Europe and America, that has lived in three centuries. Born in Smyrna, an emigrant into Egypt, an Armenian among Arabs, a Christian among Mohammedans, by the splendor of his talents he rose to be a power under the great Ibrahim Pasha, the chief adviser to nearly every Khedive and many times prime minister of Egypt and its greatest authority in effect. As they have been generals, statesmen, ministers, and chieftains under the Turkish Empire, so they were under the Greek Empire before it. A thousand years ago and more, Armenians were sitting on the throne of the empire of the eastern world at Constantinople and ruling with success and distinction.

KHRIMIAN.

They have been as distinguished in art and literature as in war and statecraft. A quarter of a century ago this fall I called at the Ras-el-Tin Palace, whose steps are washed by the waters of the Mediterranean, to say farewell to the young monarch whose uncle is now Sultan of Egypt, and to whose government I had been accredited by my own. As I entered the palace, came forth a tall, long-bearded, powerful, and stately priest and his retinue. We sailed the next morning on the Austrian-Lloyd steamer for Trieste. This was Mugurditch Khrimian, Catholicos of the Armenian Church, en route with retinue of Armenian priests, Armenian notables, Armenian editors from Tiflis, for the monastery of Eghtmiadzin at the foot of Mount Ararat, where he passed his declining years as the head of the Armenian nation. There St. Gregory the Illuminator had established this religious center 16 centuries ago when he converted all the Armenians to Christianity and they become the first Christian nation in the world and entered upon the long course of martyrdom that has continued until now, and will continue, unless the greatest Christian Republic on earth comes to their rescue. Khrimian, by his support of his people's rights, had offended the old Sultan Abdul Hamid, who sent for him and said, "Father, have you ever made a pilgrimage to Jerusalem?" He answered, "Yes, your majesty, in my younger days." "Ah," said the courteous Sultan, "I thought you would like to go again in your old age." And he lived for years in agreeable exile at the Holy City. The Armenian people, which is a democratic people, rule their own church, and in 1892 they selected Khrimian, the most distinguished man of their race, the grandest man born in Turkey in many generations, and placed him at the head of their church and nation, with the confirmation of the Czar, and when I sailed with him he was en route for his future abode.

He was born in Armenia, and was the son of a trader. Like Lincoln, to whom he has been compared, he sprang from the lowliest place to the highest with the loving admiration of a people, by his own personal effort and sacrifice. He brought the first printing press into Armenia in 1865, became a teacher, author, poet, leader, and statesman. By universal acclaim he was the Great Armenian. He came out of the night to lead his people on the march toward their share of a Christian civilization. In the treaty of Berlin, he secured an agreement that the Armenians should be guaranteed their rights by the great nations of Europe, and Turkey agreed to it. All the trouble that has arisen since has been from the fact that Armenia expected the civilized nations of the world to compel Turkey to live up to its treaty obligations and treat Armenia somewhat decently, so that when a man had accumulated property he could keep it and when he had a wife he could retain her. He sought for his beloved country, for his ancient race, for his Christian people, the most oppressed and downtrodden in all the annals of time, the law and order, the security and safety, the education and the freedom which America enjoys. He really believed that life, liberty, and the pursuit of happiness is an Armenian's right. His lofty soul and his mighty heart rose to the stature of the Hebrew prophet in his memorial to the Armenian hero dead on the field of battle, where with prophetic foresight he said:

Oh, not for me will be a grave
With cross-marked stone to view.
I die upon the field of death;
My name will perish too.

My tomb, which my own hands have dug,
Will be a trench profound;
The graves of thousands of the dead
With mine will make a mound.

At Gabriel's trumpet, our mound shall stir,
And as in fresher guise
Eagles their plumage strong renew,
We to new life shall rise.

Wise men predict a golden age
When peace o'er earth shall breathe,
When kings shall all be reconciled,
And swear the sword to sheathe.

A dream! I do not credit it.
Christ's words come back to me,
That nation shall 'gainst nation rise,
Earth be a bloody sea.

O Jesus, Saviour bringing peace!
Our world you came and saw.
Men are insane; they have not yet
Mastered your gospel's law.

Christ comes a judge, and all earth's thrones
Before God's bar are set.
The judgment of the field of blood
Just God will not forget.

The CHAIRMAN. The time of the gentleman has expired.
Mr. COOPER of Wisconsin. Some time has just been surrendered, and I yield to the gentleman 10 minutes more.

Mr. PLATT. Will the gentleman yield?

Mr. LITTLE. Yes.

Mr. PLATT. I was reading in the New York Times, I think, or some other paper, a while ago that the Grand Duke Nicholas's army in Armenia was lost; that nothing had been heard from it since last July. Does the gentleman know whether it is true or not?

Mr. LITTLE. No; it is not. I have heard from it since July through people who were there. There is a gentleman in the gallery as I speak who was with 4,000 Armenian volunteers in the Russian Army from Erivan to Van and took part in the battle that won Van for Russia in 1915. For a month in April the Armenians fought the Turks alone and won at Van.

Mr. PLATT. And there is no doubt it is there?

Mr. LITTLE. Oh, no. As I said a moment ago, many of the Russians have gone home. But there are 35,000 Armenians holding that line, as well as Russians, 160 miles into Turkey now.

Mr. PLATT. With supplies? Are they being supported in the rear?

Mr. LITTLE. They must have something to eat. They stay there. I do not imagine they are as well fed as we are, but they do not get much anyway, any time.

Mr. AUSTIN. Will the gentleman state whether or not this persecution of the Armenians on the part of the Turks is solely based on religion?

Mr. LITTLE. The Turks say not, and I find that many of the good students say not. Primarily it springs from religion. Under the Koran, strictly interpreted, every Christian is an outlaw and can be killed at sight. This leaves them open to attack. Any Kurd can steal an Armenian's wife or kill an Armenian and go unpunished. The Armenian gets a little property together and Kurd raider or Turk tax gatherer seizes it. If they were Moslems, this would not happen. Often they are offered the opportunity to abandon their religion and retain—the men their lands and lives and the women their virtue—and decline. The Kurds know they can do as they please with the Christians.

The Kurds feel that way. There are a million and a half of Kurds down here [indicating]. I think when the war is finally over and we have distributed a little decency around the world, the way to treat the Kurds, who are Apache Indians in Europe, would be to disarm and segregate them and put them by themselves on a reservation. If you were to take about 50,000 German soldiers from Belgium and send them over there to police them, and then leave them, both would probably get what is coming to them. [Laughter.]

Mr. RAMSEYER. You speak of 2,000,000 of Armenians in Russian dominions.

Mr. LITTLE. Yes.

Mr. RAMSEYER. What treatment do they get from the Russians? Do they receive good treatment?

Mr. LITTLE. Oh, yes; generally. A Catholicos, who is head of the Armenian Church, was arbitrarily forced on them a few years ago by the Czar and they were not treated very well for a short time. But for a quarter of a century they have thrived and prospered in Russia. The Catholicos is highly respected by the Russians. When we put into port at Trieste the Austrians raised the American and Russian flags; the American, because a representative of our Nation happened to be on board, and the Russian because Khrimian held a rank as high as a prince would hold in Russia. As we sailed by Ulysses' island of Ithaca he presented me his photograph, which I have at home on my library table, and he wrote an Armenian verse under it for me.

Though my body should perish in the dust,
Though my spirit should ascend to the clouds,
My counterfeit will remain with you.

Of all the great men I have ever known, perhaps because of the peculiar situation of his race, none has appealed to me more touchingly than he. He was a great and wonderful man, last of the prophets and high priests of the east, and as worthy as any of the line. It was partly because of my recollection of him that I determined to address you to-day. He desired to speak to the

Christians of the west, and sometimes wished I might convey his message. The head of that church lives in Russia, with headquarters established at the foot of Mount Ararat. Under the Bolshevik government the Bolsheviks will perhaps be willing that the Armenians in Russia at the foot of the Caucasus shall become a part of this autonomous Armenia of which I speak. They have shown a considerable disposition to let everybody do as he pleases over there, and they may do so with the Armenians [laughter], or maybe turn them over to the Kurd and Turk—

Mr. TILSON. Mr. Chairman, will the gentleman yield?

Mr. LITTLE. Yes.

Mr. TILSON. The gentleman spoke a moment ago of the military capacity and value of this people. Will the gentleman devote some of his remarks to that point before he has finished?

Mr. LITTLE. Yes. Right there [indicating on map] is the extreme distance that the Russian Army has penetrated into Turkey—that green line. They have built a railroad since the war began from about Kars to Erzerum. The Russians have constructed the railroad to Erzerum. They hold the city of Van, taken in 1915. There the Armenians fought 20,000 Turks for one month.

The Armenians furnished 100,000 soldiers to the Russian Army in this war, of whom 10,000 are lost. Thirty-five thousand of these men are now fighting the Turks on the front that extends from Trebizond, by Erzincan, to Van. Back at Tiflis the Armenians are organizing an army corps and probably by this time have 10,000 men mobilized, all told, between the Caucasus and Erzincan in Russian and Turkish Armenia. There are now 3,000,000 Armenians, and they can readily increase this force to 150,000 Armenian soldiers to fight the Turks and in defense of their own line. There are a million and a half of Christian Georgians, whose capital is at Tiflis, a city of 250,000, of whom 100,000 are Armenians. The Georgians are affected by the same danger that menaces the Armenians, and since the Russian collapses are organizing and will put in the field 50,000 men. Here you will have an army of 200,000 at the Turkish front, led by Nazarbekoff, a veteran Armenian soldier of the Russian Army. They have a railroad from Tiflis to Ezeroum in Turkey and are much better situated to maintain their army in Armenia than are the Turks, who are farther from their source of supplies, which they must bring from the Euphrates and the seacoast through mountains in which there is no railroad. The Turks along that front can not be very strong. If they were they would be well on the road to Tiflis now because of the Russian disorganization. They must hold the front against the British at Jerusalem and Bagdad and they must hold the coast at Alexandretta and Smyrna against the British fleet. It is hardly likely that they can bring any great force to the Armenian front.

Such an Armenian Army, in my judgment, could not be prevented from taking Mosul on the Tigris. They were within 60 miles of it months ago. They would then join the British coming from Bagdad and push on to the coast at Alexandretta. This would result in the total destruction of the Turkish armies fighting the Arabs beyond the Dead Sea and holding the country in front of Jerusalem. Aleppo and Damascus would fall and the united armies would follow the railroad straight to Constantinople through Anatolia. If the military strategists thought better, this army of 200,000 could fight its way from Ezeroum and Erzincan direct down the valley of the Euphrates and on to Alexandretta with similar results. They might be taken directly west from Erzincan into Anatolia with similar results. Two hundred thousand such troops properly supported and maintained in the field would bring to pass the total destruction of the Turkish Empire in Asia. With the British armies they could present a force before Constantinople that would compel the Turks to sue for peace and abandon the cause of Germany.

Bulgaria is working solely for her own hand, and has no interest whatever in German success. The moment Turkey recedes from the central alliance Bulgaria will seek terms, which can be made with her. The Austrians can not maintain themselves in Serbia for two months after that. Then the allied armies will be prepared to invade Austria from Belgrade on the march to Berlin, as they should have done two or three years ago. What the Armenians need now is financial assistance, and this rich Government could not spend \$10,000,000 better than to maintain these troops and assist in raising them at Tiflis, Kars, and Erzerum. Along the western front the fight seems to be at a standstill. Russia has gone to the wall! What other plan have you to offer, gentlemen, to win this war? You have tendered us none yet. Where are your experts and their theories now? Military expediency and moral justice combine to call you. Armenia musters her troops for her last stand against the Moslem. Choose ye this day, Bezonian, which king ye will serve! Are you for the Cross

or the Crescent, for Christ or Mohammed? The Star that swung low over Bethlehem 19 centuries ago stands high above Christian Armenia now, and summons the mighty American Republic to the rallying place from which victory can be won for freedom, for democracy, for civilization, for Christianity, in this world war.

The people of the Caucasus as well as the Armenians are on your side, Christian people! At Baku on the Caspian, the scene of the great oil industry, are 80,000 Armenians, 120,000 Russians, and 300,000 Tartar Mohammedans, who can talk with the Turks in their own tongue. For months the Tartars in Baku have been spending money that came from Germany to purchase arms and prepare for the fight. They have paid the evaporating Russian soldiers as high as \$750 for a single rifle. The Hun, the Turk, and the Tartar may any day raise the German and Turkish flags on the borders of the Caspian. The Mohammedan is ready. Where is the Christian?

All this country [indicating] is Armenia. We have a peculiar interest in it because there are four great American schools there. The American missionary has founded at Beirut, in Syria, a university; at Harpoot, Marsovan, Aintab, Morasch, four colleges for Armenians and many smaller schools. Shall the American soldier fear to go where the American mission has carried the flag?

Mr. TILSON. It is the gentleman's idea that the British and our other allies will come up from Palestine or from Bagdad and strengthen this Armenian army that you refer to?

Mr. LITTLE. Yes. Here is Mosul, and here is Bagdad, on this map. The British have taken Bagdad. As I said, the Russians came at one time within 60 miles of Mosul. They are now 100 miles from Mosul. It should not be so very difficult for the English to take Mosul. They will drive the Turks out from there before long, and they will join the Armenians against the Turks up here. There is no great difficulty about their fighting their way down here [indicating]. The Armenians will meet them halfway if they are given half a chance.

Lord Eyrton said:

The Armenians are an oppressed and a noble nation, which has partaken of the proscription and bondage of the Jews and of the Greeks, without the sullenness of the former or the servility of the latter. This people has attained riches without usury, and all the honors that can be awarded to slavery without intrigue; but they have long occupied, nevertheless, a part of the house of bondage, who has lately multiplied her many mansions. It would be difficult, perhaps, to find the annals of a nation less stained with crimes than those of the Armenians, whose virtues have been those of peace and their vices those of compulsion. But whatever may have been their destiny—and it has been bitter—whatever it may be in future, their country must ever be one of the most interesting on the globe; and perhaps their language only requires to be more studied to become more attractive.

For five or six hundred years they have been an oppressed and downtrodden nation. No nation in the world has ever endured what the Armenians have endured, and the fact that they still remain where they have lived for so many centuries shows that they have a stability and patriotism such as is unparalleled in the annals of mankind. It seems if there is a thing on earth that ought to appeal to us in this great struggle it should be this. Belgium is not a circumstance in respect to what she has suffered compared to Armenia, and, so far as I am concerned, the moment Belgium was invaded I would have liked to have taken a regiment and started out on my own hook to help them. That is the way I felt about them. [Applause.]

Mr. PLATT. Mr. Chairman, will the gentleman yield?

Mr. LITTLE. Yes.

Mr. PLATT. I understand that eminent English military authorities have stated that it was a great mistake on the part of the British in not landing at Cyprus and establishing a base on the mainland at Alexandretta or elsewhere, and then going through Mesopotamia and Armenia without trying to take the Dardanelles. Is that true?

Mr. LITTLE. In my opinion Churchill's attack on the Dardanelles showed more ability than anything else the allies have tried except Nivelle. Leonard Wood told me it is what Napoleon would have done. But this would have been a much easier task—over less obstacles. Here is a railroad from Alexandretta up to Constantinople and down to the Euphrates and to Jerusalem, Damascus, and Arabia. I do not know why the English did not drop in there. An invasion in the rear of the Turks in Syria would demolish that army or force its retirement. You must remember that 80 years ago an Egyptian Mahomet Ali marched down here as far as Konia in Anatolia and beat the Turks, and if England, France, and Russia had only let him alone he would have conquered Turkey, captured Constantinople, dethroned the Sultan, and established his government and founded an Empire extending from Russia and Austria to the headwaters of the Nile. The old man tore his beard out by the roots when Europe forced him to relinquish the conquests of his

army under Ibrahim Pasha, and sign a treaty accepting a vice regal throne under the Turkish Empire for his family forever. There at Alexandretta was the strategical key to Asia Minor.

Europe has done nothing for Armenia or for any section in Turkey. In fact the Christian nations have made more trouble there than they have done them good, because they have held out the treaty of Berlin, a hollow mockery like that, to encourage those people, and then they have gone off and let the Turks kill them and dishonor them by thousands, and have done nothing for them. I said that the Government was right in refusing to declare war against Bulgaria as yet. There is hope there for a wise diplomacy; but as to Turkey, the situation is very different. Enver Pasha dragged his country into this war without any excuse whatever except sympathy with the German military autocracy and they will stand or fall together—as they should!

America is venturing billions of dollars and millions of lives on the result of this war. The Turks fight us, why should we not fight them? They are for everything which we are against and there will be neither peace nor democracy in the Orient unless they are beaten. If we do not declare war against Turkey and attack them, they will conquer Armenia and the Caucasus. The German flag will float over that mountain chain, the Black and the Caspian Seas, and dominate the world. Having come so far, fate insists that we must go farther in self-protection. Our flag could be high advanced, in no better cause, with no more intelligent purpose, with no higher honor, than on the plains of Mesopotamia and among the hills of Armenia and Palestine, to defend the doctrines of Jesus of Nazareth and destroy the military autocracies against which he declared war nineteen hundred years ago. [Applause.]

Mr. FAIRFIELD. What is the total population of the Armenians, both in Russia and on the other side of the line? As I understand, it is about three and one-half million people.

Mr. LITTLE. Approximately that now; over 4,000,000 before the last massacres began in 1915—

Mr. FAIRFIELD. What quality in the Armenians has made it impossible for them to unify and organize and develop a government as against the Turkish Empire?

Mr. LITTLE. They are not allowed to carry arms. Any Armenian found with a gun is killed, and about every other without a gun now. In former years they maintained government for centuries.

Mr. FAIRFIELD. They are wholly disarmed, are they?

Mr. LITTLE. Yes; and whenever they accumulate property it is the signal for assault by Kurds and Turks. For 400 years the Kurd and Turk have had the Armenian down, and they keep somebody sitting on his stomach to assure permanence in his position. Surrounded for centuries by his enemies, cut off from all the modern world, the wonder is the Armenian has lived at all. The Jews abandoned their native land generations ago, and many a nation has disappeared from history since the last Armenian king died 500 years gone by.

The Armenians have long had a hope that they could be given a representative government in Turkish Armenia under a protectorate established by the great Christian powers that would extend from the Mediterranean at Mersina and Alexandretta to the Russian border. The possible disintegration of Russia may leave Russian Armenia in a position where the great powers would determine that it should be placed under the same protectorate. They would then hope to build railroads from the Mediterranean to Ezeroum and connect with those to Tiflis and the Black and Caspian Seas. In such an event in a few months Armenia would be a part of the modern world, life would be safe, property secure, education assured, and religious freedom attained. Farms, villages, towns, and cities would thrive; schools, newspapers, and colleges would spring up, following the results already achieved by the work of the American missions. The world could make no better financial and moral investment than to promote the best development of Armenia. Boghos Pasha Nubar, son of the great Nubar of Egypt, is now the chief spokesman of the Armenian race. He formulated their plans for a protectorate and presented them to the great powers. Recent events have been a menace to the Armenians, so great that self-defense is their most immediate necessity. As I have said, with the Georgians they could put 200,000 men in the field to fight the Turks. They ask the allies now the means to arm, equip, and maintain the 200,000 soldiers. Their best protection would be the total defeat of the Turk, and they could not afford to pause till that was accomplished. Every touch of sympathy, every dictate of reason, every requirement of our own interest, every rule of common sense, demands that the allies comply with their wish for financial assistance and aid them to attain the realization of their highest hopes.

Years ago a young man of our race visited their country, a surveying engineer, sent by the British Government from

Cyprus. Then he went to Egypt to put that ancient kingdom again on its feet and set its face to the world, a result which he produced. Kitchener was a man of broad conceptions and thought in terms of universal purpose. He believed that the great English-speaking nations owed a duty to Egypt and Armenia, and was of that practical turn that forced him forward to the accomplishment of that duty. He told me once that when the English fleet went into the harbor of Alexandria to stop the riot and restore order by defeating the army of Arabi Pasha, they suggested the withdrawal of all foreign ships from that water before they should fire. The last to leave, said Kitchener, was an American ship of war, which circled past the entire English fleet as it sailed out with the bands playing and the signal flying, "I have a notion to go in with you." He believed that the world and its people was a bigger and better place than a ground for constant warfare between different peoples. Soon after I came home he wrote me, in his terse sentences, his views on that subject and his opinion that the two great nations should be a united power for good the world over, which he expressed in his direct and untrammelled way. He said:

SIRDARIEH, CAIRO, 25th March, 1891.

DEAR MR. LITTLE: Many thanks for your congratulations. I am afraid the House of Lords may crumble and go before I reach them.

I often look back with pleasure to our conversations and still look forward to the time when English-speaking races may be so drawn together by mutual interest that we shall just stop any nonsense going on anywhere.

I can not imagine why there should now be any feeling against Britishers in America. We ought to be the closest friends.

Yours, very truly,

HERBERT KITCHENER.

Gentlemen of the House, Kitchener sleeps forever, fittingly sepulchred, like the mighty chieftain he was, in the soundless depths of the boundless seas. He went to his death in the rude shock of war, under the shadow of the Arctic icebergs, his only requiem the roar of the surf as it beat upon the northern islands. Here on the records of the Congress of this western Republic, with whose achievements and possibilities he was always in sympathy, I write his message, snatched from the grasp of the icy ocean, urging us to the accomplishment of our highest duty in the Orient, where he sacrificed and strove and conquered for Christianity and civilization.

At every stage of this great struggle, sir, our enemies have had the jump on the allies. If they get it again in Siberia, in Armenia, what will happen to the book Fate keeps? You have a chance now to send the gallant soldiers of Japan on their way to Moscow to meet the Germans. You have the opportunity to put the Armenian on his feet with arms in his hand to fight for you. But, gentlemen, in 60 days the knell may have struck upon that golden opportunity. Shall democracy or autocracy rise to the occasion? All the men in Europe who were in the lead when the war began have practically disappeared from leadership. Anybody can get into this war, but they will be giants who fight it through and come out on top. Democracy must defeat autocracy before this conflict terminates, and where is there a better opportunity to set ourselves for the final thrust? Ten million dollars advanced to Tiflis, 100,000 more soldiers landed at Bagdad or Suez, a reasonably free hand to Japan, might turn the tide of war.

Once among the ruins of ancient Thebes, in the valley of the Nile, I visited the big statue of Memnon, the Egyptian god of music, who is said to have broken into song each morning as the sun arose, but he has sung no more for fifteen hundred years. As I rode a little farther down the valley, over a tiny adobe I read the title, "American Mission," where I found a native Egyptian, educated by American missionaries, teaching 18 Egyptian children. In compliment to the great Republic they sang for its representative, and with difficulty I understood their quaint and broken English, "Sweet land of libertee, of zee I zing." As I rode down the valley I saw Memnon, cold and silent. No longer at sunrise does he greet its advent with sacred music. For centuries he has been still and dumb. Their ancient civilization passed into the lost realms of time, their armies disbanded, their altars dismantled. Then I glanced back at the American mission and knew that though no longer the sun of the East touched the lips of Memnon into music, the sun of the West, shining across the broad Atlantic, had kissed and kindled the lips of Memnon's children into the song of liberty and civilization. The time has come when the American soldier may finish in the Orient the task that the American missionary began, and another Homer shall sing to a world at last at peace:

The resplendent sun high o'er the waters raised,
Through heaven's eternal brazen portals blazed;
And wide o'er earth diffused his promised ray,
To give to gods and men the golden day.

[Applause.]

Government Control of Railroads.

EXTENSION OF REMARKS

OF

HON. IRA G. HERSEY,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 28, 1918.

On the bill (H. R. 9685) to provide for the operation of transportation systems while under Federal control, for the just compensation of their owners, and for other purposes.

Mr. HERSEY. Mr. Speaker, in the discussion of this bill last Saturday I suggested that there was no necessity for this legislation, that the President under the present law had sufficient authority to direct freights and give preference to the transportation of food, fuel, and war materials, and that this was all that was needed in the war emergency, and now after four days' debate on the floor of the House the utter uselessness of this measure is still more apparent.

The administration has contended for not only Government control but Government operation and rate fixing by the President. The minority has fought well to protect the rights of the people against the great transportation systems, but the big railroads have won out in this contest. The only amendment the minority have succeeded in adopting is to place the crippled short-line roads in a position where they may possibly share, in a small way, in the financial benefits that are now coming to the big roads.

Under the guise of an alleged war emergency and influenced by the parrot talk to "stand by the President," the farmers, manufacturers, and shippers have lost the benefits of a non-partisan court to fix rates, and the big railroad lines are rejoicing that they are now safely under the shelter of Government protection, and that these great wealthy railroads are no longer to be controlled by the Government, but that the Government is to be controlled by these railroads.

The farmers, traders, manufacturers, and shippers have in State legislatures and in Congress made a strenuous fight to put railroad rate fixing in the hands of State and Federal commissions not connected with the railroads, and after a long, weary contest against wealth and power, they finally succeeded in establishing here at Washington the Interstate Commerce Commission, a nonpartisan body of experts in rate fixing, composed of nine members whose learning, fairness, and standing are on an equality with the Supreme Court of the United States, and who during their service have made a large body of valuable decisions that have become the law of the land. They have stood as a bulwark of defense between the people and the railroads. From rate raising by the railroads appeals have been made to the Interstate Commerce Commission, a court in which each farmer, manufacturer, and shipper could come at any time and have an impartial hearing.

This great bureau of government has grown to be one of the most important and valuable in the Nation. They have attempted the almost superhuman task of making a physical valuation of all the railroads in the country, and have a wonderful knowledge of the transportation lines in this Nation.

An idea of the importance of the Interstate Commerce Commission may be gleaned from their last report for the year ending October 31, 1917. That report shows that the expense to this Nation of this bureau for the past year was for salaries of the commissioners and their secretary, \$73,916; for employees, \$2,182,669; for rent, traveling and incidental expenses, \$1,101,213, making a total expense last year to this Government for the conduct of this great bureau of \$5,256,000.

The principal work of this great commission and bureau is to fix just and proper railroad rates between the people and the railroad companies, and it has done that work in a very effective and efficient manner.

The Interstate Commerce Commission will still exist. The expense of this commission to the Government will very likely increase during the war, but its great purpose and object has been taken away by this bill. It is now proposed by the administration to place this rate-fixing power absolutely in the hands of the President, from whose decision there is no appeal.

Of course, the President himself will not attempt to fix the rates for obvious reasons. First, he knows nothing about railroad rates; second, he will have no time, as Commander in Chief, to devote himself to an examination of railroad rates to satisfy himself what is right or wrong. He has already ap-

pointed a Director General of the Railroads, to wit, his son-in-law, Secretary of the Treasury, Mr. McAdoo.

Now, Mr. McAdoo, although a man of fine parts and a great and tireless worker, can not himself perform this stupendous task for the reason that his time is now taken, day and night, in the great work of his office in the conduct of the Treasury Department; in the sale of liberty bonds; in the establishing of a central bank, of which he is to be the head; of conducting the financial affairs of all the Federal systems of banks; and a multitude of other bureaus and commissions of which he is either a director or manager.

Who, then, will have the rate fixing? Who will stand between the railroads and the farmer, trader, manufacturer, and shipper? I answer, under this bill the big railroad heads will fix their own rates, from which there will be no appeal. To prove this it is only necessary to call to mind the events of the past few weeks. The illustrated papers have published recently a fine photograph of Director General McAdoo and his railroad cabinet. He sits at the head of a long table, and seated around this table are the presidents, attorneys, and managers of the great railroad systems of the Nation. This photograph is entitled "Director General McAdoo and his railroad cabinet during the war."

Director General McAdoo, knowing his inability to look after this rate fixing personally, has formed what is known as his railroad staff. The Official Bulletin of the administration is published daily in Washington under orders of the President. In its issue of February 7 last it says:

Director General McAdoo has announced the organization of his railroad staff, as follows:

Assistant to the Director General: Walter D. Hines, of New York City, is chairman of the board of the Atchison, Topeka & Santa Fe Railway. He is well known as a railroad attorney and a writer on railroad and economic questions. He represented his road before the Interstate Commerce Commission in the 5 per cent cases.

Mr. Hines summed up for the railroads in the celebrated cases before the Supreme Court of the United States which tested the validity of the Adamson eight-hour law. He also represented express companies and is conversant with practically all phases of railroad operation.

General counsel: John Barton Payne is the head of the law firm of Winston, Payne, Strawn & Shaw, of Chicago. For many years he has represented American railroads in cases before the courts and various regulatory bodies and is regarded as an expert in railroad and corporation law.

Director division of transportation: Carl R. Gray, of Baltimore, has been president of the Western Maryland Railroad for the last four years, previous to which he served as an executive on various other important railroads.

Director division of traffic: Edward Chambers, of Chicago, first vice president of the Atchison, Topeka & Santa Fe Railway, is widely known as one of the chief factors in the development of California. Entering the employ of the Santa Fe some 30 years ago, he has risen to a position of responsibility. He is credited with having done as much as any other individual in solving transcontinental traffic problems.

We find by reference to the report of the Interstate Commerce Commission that has hitherto fixed rates that they have an attorney and general counsel in no less a person than the distinguished lawyer and ex-governor of Missouri, the Hon. Joseph W. Folk, and they pay him a salary of \$10,000 per year as counsel for that commission.

The people will wonder why it was necessary, even in a war emergency, for the administration to turn away from the assistance of the Interstate Commerce Commission and its great attorney and place in this new cabinet the attorney of these great railroads. There is only one answer, and that is that in the absence of Mr. McAdoo, in his attendance upon his other and perhaps more pressing duties, his Assistant Director General, a well-known railroad attorney, may preside over the cabinet and another railroad attorney will represent his railroads as a member of the staff, surrounded by railroad presidents and vice presidents who with these attorneys will have the fixing of the rates from whose decisions there is no appeal.

The President, in his recent address to Congress, said of the railroads that when they were taken over by Director General McAdoo they "responded to the need promptly and generously." We can certainly see no reason why the railroads should not promptly respond, and in a generous manner, when they knew that they were to be represented by their own attorneys, presidents, and vice presidents in this new war-emergency railroad staff and cabinet and have the fixing of the rates on their own transportation lines, from whose decision there was to be no appeal.

It is everywhere conceded and admitted that as soon as this bill becomes a law rates will be raised on all the large transportation lines, so as to give Mr. McAdoo a large sum, called a "revolving fund," from which to build up the railroads, and with the \$500,000,000 appropriated in this bill will temporarily take care of the short-time notes, liens, and debts now due, and will pay the advanced wages to be given to the railroad employees of the country.

An end man in a minstrel show recently put the question to his partner: "How do you expect to make McAdoo President in 1920?" And the answer was, "They are going to railroad him in." Of course, this is only a hint that this new rate-fixing cabinet, composed of railroad presidents and their attorneys, and 1,700,000 railroad employees might be in sympathy with the nomination and election of Director General McAdoo to the Presidency in 1920.

The President, in his recent address to Congress in the matter of railroad operation, speaking of these railroad heads, further says that they have "performed their difficult duties with patriotic zeal." It is not hard to understand the "patriotic zeal" of this group of railway executives. It is very easy to be patriotic when it does not cost you anything.

The present war is calling for supreme sacrifice from the farmer, shipper, manufacturer, business man, trader, professional man, and from every walk of life, except from those who have Hog Island contracts with the Government and this favored group of railroad executives.

By this bill the administration has provided that the Government shall guarantee to these railroads during the time they are under Government operation the average of their annual income for the last three years. Why should the railroads worry? They have no responsibility. Their immediate indebtedness falling due will be taken care of by the \$500,000,000 and by an immediate raise in railroad rates. After the war they will again come into their own with new railroad equipment, debts paid, without any loss of revenue, and with only the expenditure on their part of "patriotic zeal."

The aged farmer has lost his boy from the farm, the trader has had his prices fixed by the Food Administration, the shipper will be crippled by higher railroad rates; only the big railroads will escape. Only these great executive transportation heads will be benefited financially by the war.

These big railroad systems will temporarily win an advantage, but the people will finally conquer. The farmers, manufacturers, and shippers along the middle Atlantic seaboard and the South will not suffer so much from the domination and control by the railroads, but the people of the great Middle West and northern New England will rise in their might and demand that the rights for which they and their fathers fought shall be again restored to them and that this shall be no longer a Government by and for great financial interests, but a Government controlled and regulated by just and wholesome laws.

Federal Control of Railroads.

EXTENSION OF REMARKS

OF

HON. EDWARD VOIGT,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 26, 1918.

Mr. VOIGT. Mr. Speaker, the bill (H. R. 9685) to provide for the operation of transportation systems while under Federal control, for the just compensation of their owners, and for other purposes, deals with a subject of tremendous proportions, and I therefore venture to express my views on it at some length.

The bill affects nearly all of the railroad systems of the country, and the value of the subject matter is the largest ever contained in a bill before Congress. We have in the United States somewhat over 250,000 miles of single track, the railroads represent an investment claimed to be between \$16,000,000,000 and \$18,000,000,000, and they give employment to 1,800,000 persons. The provisions of the bill, when enacted into law, will affect every man, woman, and child in the United States, and will play an important part in shaping our future attitude toward the railroads and other public carriers. I feel that Government control and operation of the properties of the carriers will in a large measure determine public sentiment in this country for or against more stringent Government control and for or against ownership and operation of the railroads by the people.

On August 29, 1916, before we entered the war, Congress passed a law which provides among other things that "the President, in time of war, is empowered through the Secretary of War to take possession and assume control of any system

or systems of transportation or any part thereof, and to utilize the same to the exclusion, as far as may be necessary, of all other traffic thereon for the transfer or transportation of troops, war material, and equipment, or for such other purposes connected with the emergency as may be needful or desirable." By virtue of this authority the President on December 28, 1917, took possession and control of the railroad systems and also certain systems of water transportation. The President in taking the step, pointed out that under the war conditions it was impossible to operate the railroads under private control as efficiently as they could be operated as a unit by the Government.

We were the only warring Nation that had not taken over the control and operation of its railroads. On January 4, 1918, the President addressed both Houses of Congress, announcing the step taken. In speaking of the so-called Railroads' War Board, which had endeavored up to this time to bring about unity of action among the carriers, he said:

If I have taken the task out of their hands, it has not been because of any dereliction or failure on their part but only because there were some things which the Government can do and private management can not. . . . It had become unmistakably plain that only under Government administration can the entire equipment of the several systems of transportation be fully and unreservedly thrown into a common service without injurious discrimination against particular properties. Only under Government administration can an absolutely unrestricted and unembarrassed common use be made of all tracks, terminals, terminal facilities, and equipment of every kind. Only under that authority can new terminals be constructed and developed without regard to the requirements or limitations of particular roads. But under Government administration all these things will be possible— not instantly, but as fast as practical difficulties, which can not be merely conjured away, give way before the new management. . . . It is necessary that the transportation of troops and of war materials, of food and of fuel, and of everything that is necessary for the full mobilization of the energies and resources of the country, should be first considered, but it is clearly in the public interest also that the ordinary activities and the normal industrial and commercial life of the country should be interfered with and dislocated as little as possible, and the public may rest assured that the interest and convenience of the private shipper will be as carefully served and safeguarded as it is possible to serve and safeguard it in the present extraordinary circumstances.

While the present authority of the Executive suffices for all purposes of administration, and while of course all private interests must for the present give way to the public necessity, it is, I am sure you will agree with me, right and necessary that the owners and creditors of the railways, the holders of their stocks and bonds, should receive from the Government an unqualified guaranty that their properties will be maintained throughout the period of Federal control in as good repair and as complete equipment as at present, and that the several roads will receive under Federal management such compensation as is equitable and just alike to their owners and to the general public. I would suggest the average net railway operating income of the three years ending June 30, 1917. I earnestly recommend that these guaranties be given by appropriate legislation, and given as promptly as circumstances permit.

The President appointed Hon. William G. McAdoo, Secretary of the Treasury, as Director General of the Railroads. In the proclamation taking control of the properties, dated December 28, 1917, he said:

The director shall, as soon as may be after assuming such possession and control, enter upon negotiations with the several companies looking to agreements for just and reasonable compensation for the possession, use, and control of their respective properties on the basis of an annual guaranteed compensation above accruing depreciation and the maintenance of their properties, equivalent, as nearly as may be, to the average of the net operating income thereof for the three-year period ending June 30, 1917; the results of such negotiations to be reported to me for such action as may be appropriate and lawful.

There can be no question but that the President acted wisely in taking over the railroads. The lack of efficiency resulting from the pursuit of selfish aims on the part of the managers of individual systems made it impossible to handle the greatly increased tonnage. It was expecting too much of human nature to assume that the private owners would handle the traffic solely with a view of giving the best possible service, and in entire disregard of their financial interests. If any criticism of the President's course can be offered, it is that he should have seized control before he did.

As the law of 1916 made no provision for compensation to the carriers for the use of their properties while under Federal control, it became necessary to pass legislation providing therefor, and to regulate other matters incidental to Federal control, and these things are sought to be accomplished by the bill above referred to.

I shall support this bill, although I am not satisfied with all of its provisions, and shall vote to modify it in the particulars specified in these remarks.

WHAT THE BILL PROPOSES TO DO.

The chief provisions of the bill are:

First. To give the President authority to make agreements with the railroads for payment for the use of the railroad properties during the period of operation by the Government. Such agreements or contracts shall provide that all railway income above the amount fixed by such agreements shall belong to the

United States; also that under the law of October 3, 1917, income taxes—war taxes—shall be paid by the railroads out of their own funds, but all other State and National taxes are to be allowed as part of operating income. Such agreements shall also provide that the Government shall maintain the properties taken over in good repair and shall allow for depreciation in order that the property of each carrier may be returned to it in substantially as complete equipment as it was in at the beginning of Federal control.

Second. That if the President can not agree on the compensation to be paid to any carrier he may pay such carrier 90 per cent of the estimated compensation and either the President or the carrier may then apply to a board of referees appointed by the Interstate Commerce Commission, who, after full hearing, shall decide what such compensation shall be. The President may then make a contract upon the basis of the report of the referees. If such agreement is not made, either the United States or the carrier may take the matter before the Court of Claims for final judgment.

Third. That the compensation agreed on by the President or fixed by the Court of Claims shall be increased by a reasonable rate of interest on the cost of additions, betterments, and extensions while under Federal control.

Fourth. That no carrier while under Federal control shall without the consent of the President declare or pay any dividend in excess of its regular rates during the three years ending June 30, 1917, and that where the dividends have been irregular or none have been paid they may be paid with the President's approval.

Fifth. The sum of \$500,000,000 is appropriated as a revolving fund, which, with any funds derived from operations to which the United States may be entitled, may be used to meet expenses of the Federal control and payment of compensation and to provide terminals, engines, cars, and general equipment. The President may also order a carrier to make additions, betterments, and extensions, to provide terminals, cars, and so forth, and may also loan money to such carrier from such fund. The President may also use this fund for the purchase, construction, and operation of canals, boats, barges, tugs, and other transportation facilities on the various waterways. Carriers may issue such notes, stocks, or bonds as may be approved by the President, and he may purchase such securities with money taken from such revolving fund.

Sixth. The President may exercise the Federal control through such agencies and employees as he may designate, fix salaries, and so forth.

Seventh. Except as is incompatible with Federal control, the carriers remain subject to all laws and liabilities and may sue and be sued, but no levy shall be made on any carrier's property under Federal control.

Eighth. Rail rates, fares, charges, classifications, and so forth, remain as they are and continue to be determined as hitherto until changed by the President. When the President considers it for the public interest, he may change rates, fares, charges, classifications, and so forth, by filing the change with the Interstate Commerce Commission. The commission upon complaint may investigate any change made by the President, "and shall make a report of its findings and recommendation concerning the same * * * to the President for such action as the President may deem required in the public interest."

Ninth. That Federal control shall continue during the war and for not to exceed two years after the President's proclamation of the exchange of ratifications of the treaty of peace; provided that the President may relinquish Federal control of any transportation system or part thereof prior to July 1, 1918, or may do so at any time by agreement.

Tenth. "This act is expressly declared to be emergency legislation to meet conditions growing out of war; and nothing herein is to be construed as expressing or prejudicing the future policy of the Federal Government concerning the ownership, control, or regulation of carriers or the method or basis of the capitalization thereof."

THE COMPENSATION PROPOSED.

The President is authorized by this bill to agree to pay the railroads for the use of their properties while under Federal control annually, and proportionately for any part of a year, "not exceeding an annual sum * * * equivalent, as nearly as may be, to its average annual operating income * * * for the three years ended June 30, 1917." All income in excess of such average shall belong to the Government. The railroads, out of the compensation paid them, must pay all war income but not the usual general taxes.

The agreements which the President is authorized to make "shall also contain adequate and appropriate provisions for

the maintenance, repair, renewals, and depreciation of the property * * * in order that the property of each carrier may be returned to it in substantially as good repair and in substantially as complete equipment as it was in at the beginning of Federal control * * *"

The President is allowed to deviate from the above rule of compensation in exceptional cases, where the road in question has not had a normal income for the three-year period, as in the case of reorganized roads, for instance.

It is my judgment that the compensation proposed is entirely too liberal. The year ending June 30, 1915, was one below the average for railroad earnings; but the two years ending, respectively, June 30, 1916 and 1917, were the best in history. The railroads made more money in these two years, by far, than they ever did, and the proposed average is overgenerous to them. It goes without saying that the roads are entitled to just, fair, and reasonable compensation, and I am willing they should have that, but nothing more.

It may be claimed that the carriers are entitled to this compensation because they earned it in the three prior years. To my mind, such an argument is fallacious. Suppose these years had been bad years, would it then be claimed that they constitute a just basis? We compel men to go into the Army at \$30 per month and we do not ask them, "How much did you earn before we drafted you?" We demand of them every sacrifice, even to laying down their lives on foreign soil. We are paying them a minimum rather than a maximum wage. It may be said that our soldiers are not serving for pay but out of patriotism; but the thought occurs, why should we not exact some patriotism from the railroads by compelling them to be content with a reasonable profit rather than to pay them the maximum?

The Government of this country has already asked the people to loan to it, I think, \$5,000,000,000; and between now and the 30th of June, as we were told, it is likely that it will ask our people to loan it the further incomprehensible sum of \$10,000,000,000. It asks them to give, from what they have, these incalculable amounts and to receive from it a promise that at the end of the period named in the bond they will accept the principal, and in the meantime will accept 4 per cent per annum; and the people loyally and gladly are coming to the rescue of the Government and are furnishing it credit in a way unknown to any other period of the Nation, and all they ask is 4 per cent. Yet in the midst of this loyal scene, in which the people of America are striving with each other in order to exhibit their loyalty and their desire to help in the time of stress and strain, in comes this bill, which declares that with a Government guarantee which makes the payment of the sum guaranteed as certain as the continuance of the Government itself, in the face of all these circumstances and perils and dangers, these same men who are staggering under the burden of loaning their Government money at 4 per cent shall guarantee to the stockholders of the railways of the United States from 10 to 20 per cent upon the par value of their securities. It is a monstrous proposal.

I am willing to intrust the President with the power to make contracts for compensation with the carriers, but I think that Congress should state definitely what the general rule of that compensation should be. It is feared by some that if the carriers are not treated liberally that they will take the matter into court, as they have a right to do. They might cause a vast amount of almost interminable litigation. But if a just and fair compensation is provided for them, will they do this? They would not dare to go in the face of public sentiment on this question. I have heard it argued that a court in passing on the question of compensation would probably be very largely guided by what the earning power of the roads had been immediately before the Government took control. I do not think so. The law on the subject is that they are entitled to a just, fair, and reasonable return on the value of their property devoted to the public use. They are not entitled to interest on their watered stocks and bonds, but only on actual investment.

It is generally assumed that a good share of the stocks of railroads consists of water. The investigations of the Interstate Commerce Commission thus far conducted relative to the valuation of railroads show that the railroads are overcapitalized. Unfortunately the valuation of the railroads of the country now being made by the commission will not be completed and available until about 1921. With those valuations known, Congress could act with greater certainty in fixing the compensation.

It is proposed to allow the roads the same money they have made in an extraordinarily prosperous period, to guarantee it to them, rain or shine; to take all risks of business off their hands and to keep their roadbeds, equipment, buildings, and so forth, in first-class condition. Should not some allowance be made for the absolute certainty of return guaranteed by the Government? That Wall Street thinks this is a good proposition is shown by the fact that when the President took over the roads and suggested this compensation, railroad stocks took a sensational jump. The following are quotations on some railroad stocks the day before the President announced the terms of Government control and the day the terms became known:

	Dec. 25.	Dec. 27.
Atlantic Coast Line	83 1/2	92
Atchison	78	87
Baltimore & Ohio	39 1/2	55
Chesapeake & Ohio	42 1/2	47
Great Northern	80 1/2	85
New York Central	63 1/2	71
Northern Pacific	76	85
Pennsylvania	42 1/2	45 1/2
Reading	67 1/2	70 1/2
Southern Pacific	77 1/2	84
St. Paul	36 1/2	48
St. Paul (pfd.)	63 1/2	81
Delaware & Hudson	92	100
Union Pacific	103 1/2	112

Now, what is meant by the term "annual railway operating income"? This phrase has a technical meaning, and according to the Interstate Commerce Commission it means the amount of money which remains of all operating earnings after deducting expenses of operation, maintenance, taxes, and similar items. In other words it is the profit of the carrier from operations, out of which must be paid interest on bonds and other indebtedness, and the balance then remaining is clear profit which may be carried to surplus account or paid out in dividends. It is apparent, therefore, that the Government under the form of contract proposed in the bill must pay all operating expenses; that is, must pay all wages, salaries, fuel, and all materials for repairs and replacements at the present high cost. If wages of railroad employees are raised, if materials cost double or treble what they did before the war, it makes no difference to the railroads—what is guaranteed to them is over and above all these items. The carriers are getting even more profit than they could possibly have earned in the next two or three years, because under private ownership the increased cost of labor and materials would have cut into their profits, and the Interstate Commerce Commission in all probability would not have allowed them to raise rates sufficiently to meet the added cost, in view of the profits being made.

Under the rules proposed in this bill it is estimated that the Government will guarantee the railroads an annual operating income of about \$950,000,000. My judgment is that it will greatly exceed this amount, for this reason: The great, powerful, and prosperous roads, earning large dividends and surplus, the continuation of which will be guaranteed, will gladly accept the proposition, whereas smaller roads will demand and insist on more or take their rights into court. Half of the railway mileage in this country carries about 75 per cent of the traffic and the other half, not so fortunate, carries the balance.

According to the Interstate Commerce Commission, the par value of all railway bonds on June 30, 1917, was \$10,021,730,075. The interest on these bonds is about \$400,000,000 per annum. On the same date, the par value of railroad stocks (with minor exceptions) was \$6,314,570,554. The proposed compensation would give a return of over 8 1/2 per cent on all railroad stocks, including all the water in all the stocks. Assuming the stocks to be 50 per cent water, it would mean a return of about 17 per cent on actual investment. I am not prepared to say that the water is 50 per cent, but I am satisfied it is a large fraction, and it would not surprise me if the investigations of the Interstate Commerce Commission should show it to be 50 per cent.

How will the proposed guaranty work out in actual practice? The Interstate Commerce Commission has prepared a table of railroads whose net income on stock during the three-year period has exceeded an average of 5 per cent. By net income is here meant profit after payment and deductions of all possible charges.

Here is an interesting bit of testimony given by Judge Prouty, for many years a member of the Interstate Commerce Commission, and who resigned in order to become director of valuation of all railroad properties in the United States. He testified (Hearings on bill, pp. 602-608) that the work of valuation had been completed only as to a few roads:

Mr. SWEET. I want to ask another question in this connection. What discrepancy is there between these valuations you have ascertained and the book valuations?

Mr. PROUTY. That depends entirely on the property.

Mr. SWEET. Could you answer that question in a general way?

Mr. PROUTY. It is very difficult to get an answer in a general way because it runs all the way from nothing to a good deal. In the case of the Kansas City Southern, which is perhaps the most significant property that we have valued, the capitalization was \$99,000,000. We found the cost of reproduction, including lands, a little over \$50,000,000. We found the cost of reproduction, less depreciation, about \$7,000,000 or \$8,000,000 less than that. We found the original cost—that is, the actual money put into the property—to be about \$47,000,000. In addition to that, I had a computation made showing the value of the stocks and bonds of the Kansas City Southern at the market value on the day of the valuation, and that the value was about \$60,000,000. And so we had a capitalization of \$99,000,000, a stock and bond valuation of \$60,000,000, cost of reproduction of \$50,000,000, and a cost of reproduction less depreciation about \$40,000,000.

Now, the other day I said to our people, "Tell me to-day how much the stocks and bonds of the Kansas City Southern are worth," and the report came back \$47,000,000. In the meantime these prices have gone up, so that the cost of reproduction would be to-day \$5,000,000, while the stock and bond value is \$13,000,000 less. That shows how these things can be juggled.

Mr. PARKER of New Jersey. You are talking about the stock and bond market value?

Mr. PROUTY. The stock and bond market value of the Kansas City Southern Railroad on the 1st of January, 1918, was about \$47,000,000. On June 30, 1914, it was \$60,000,000.

How will the proposed guaranty work out in actual practice? The Interstate Commerce Commission has prepared a table of railroads whose net income on stock during the three-year period has exceeded an average of 5 per cent. By net incomes is here meant profit after payment and deductions of all possible charges.

Here is the table; let it speak for itself:

Road.	Capital stock actually outstanding (average for the 3 years ended June 30, 1917).	Average net income for the 3 years ended June 30, 1917.	Average per cent of net income to capital stock.

The roads mentioned, which control about 140,000 miles of track and handle about 75 per cent of the traffic, are guaranteed an average net income of 11.27 per cent.

The truth is that the railway properties of the United States have been to a very considerable degree constructed or acquired out of excessively high rates exacted from the public. The railway theory has been that the public ought to contribute through rates for transportation, sums that are not only sufficient to make return upon the capital invested, but sufficient to build up and increase the properties, and the outcome of the theory is that the public, having contributed the capital, must again pay for the use of the property so acquired.

Great Britain took over the operation and control of her railroads in 1914, immediately after engaging in the war, and guaranteed them the net earnings of 1913. This means payment of interest of about 4 per cent on the bonded debt of the roads and dividends of about 3½ per cent. This arrangement is quite a contrast to what it is proposed to pay our American roads. I believe the railroads in the United States are entitled to a better return than this, but I am not in favor of paying them an exorbitant return on actual capital invested and abundant water in addition.

Now, I may justly be asked what compensation I would recommend for the use of the property of the carriers while under Federal control. My plan would be this: Pay each company which has earned a dividend a sufficient amount above all other amounts so that it will receive the amount of the dividend for the three-year average, but in no case over 7 per cent. In other words, run the properties, keep them in good condition, return them in at least equally good condition as when received, and pay the stockholders what the roads have earned for the three-year average, but in no case over 7 per cent. It seems to me that the railroad owners as patriotic citizens in this time of stress would and should accept such a return. If anything, it is more than fair. In cases where claim is made that the capital stock outstanding is less than the value of the equity represented by it I should pay the dividend on the equity, the same to be determined by arbitration by the Interstate Commerce Commission or by the courts. In cases where the conditions are unusual, as with recently reorganized roads, I should make an agreement which would be fair in view of all the circumstances. I have not calculated the exact saving over the plan proposed, but I am safe in saying it would save between \$125,000,000 and \$150,000,000 per year. Government control will continue at least for three or four years, and it will be seen what a vast sum could be saved during that period. As to roads which earn no dividends special arrangements would have to be made under the plan proposed by me as well as under the bill. Roads which have earned no dividends for the three-year average are not entitled to them as a matter of course, and it will be difficult to adjust their claims. It is probable that litigation will result in these cases, or at least there will be a resort to arbitration. While the President has not taken over all the railroads, especially not the so-called "short-line" roads, it seems to me inevitable that practically all of them, in fairness to them, must be taken over. If they are not taken over, they will in most cases lose business by having their traffic routed over the main roads, but there may be some cases where they would benefit.

ARBITRATION PROVISIONS, ETC.

The bill provides that in case the President is unable to agree with any carrier as to the amount of compensation, either he or the carrier may apply to the Interstate Commerce Commission for the appointment of a board of referees. The President and such carriers may then agree for compensation not in excess of that determined by the referees, and, failing to make such agreement, either party may bring the matter before the Court of Claims. In this court the findings of the board of referees is to be accepted as prima facie correct. These provisions are very desirable. They tend to avoid litigation, but the Government should not hesitate to go into court with any carrier making unreasonable demands, and political considerations should have no weight. The provision prohibiting the declaration or payment of any dividends not customarily paid is a wise one, as it tends to check speculation and manipulation.

THE REVOLVING FUND.

The bill provides for an appropriation for a revolving fund of \$500,000,000—that is, a fund from which and to which payments may be made whenever required—and also that any excess earnings over the return allowed the railroads shall belong to such fund. This fund is necessary to pay the expense of Federal control, to pay any deficit in the compensation allowed the carriers, and to provide additional rolling stock, terminals, and so forth.

This rolling stock will be used wherever war and national needs demand—precisely as the Pullman and other private car lines are now used on the lines of the various carriers as the needs of industry or the demands of the seasons require. The ultimate disposition of this rolling stock must await post-war legislation. This section contemplates that such rolling stock, although owned by the United States, will be used on the lines of the various railroads and the use charged for upon the books of the companies, so that at the expiration of Federal control the bookkeeping of each railroad company will reflect, as hitherto, the traffic which has moved over each road and the cost of operation.

The President may order any carrier to make additions and extensions. Such extensions may become necessary in connection with shipyards and camps. Any loss resulting from the building of such additions, which may be the case after Federal control ceases, is to be compensated for by the Government. The President is authorized to loan any carrier the moneys necessary to make such additions, and so forth, out of the revolving fund on such terms as he may determine. He may also use such fund for the operation of canals and the purchase and construction of boats, barges, and other craft. It is also provided that the President may purchase the securities of carriers and resell them. This power is necessary for the reason that during the war the Government requires vast sums, and the carriers are at a disadvantage in the money market in disposing of their securities. Thus far the Government has borrowed money on its bonds at 3½ and 4 per cent, which, of course, the carriers can not do. It is also wise to keep them out of competition with the Government in the money market. The maturing obligations of railroads for the next four years are estimated as follows:

1918	\$182,606,528
1919	188,213,052
1920	186,526,253
1921	440,905,523

While the above powers and the other powers conferred by the bill on the President stagger the imagination, they are powers that must be lodged somewhere. Personally, I should have preferred to vest all the powers conferred by this bill in the Interstate Commerce Commission, and I should also have preferred to invest it with the functions conferred on the Director General of Railroads, Mr. McAdoo.

THE POWER TO MAKE RATES.

The Interstate Commerce Commission is one of the greatest agencies of the Government. It stands as a protector between the people and the carriers. The Supreme Court held that the original act creating the commission, passed in 1887, did not give it power to fix rates and compel their observance; but the Hepburn Act, passed in 1906, empowered it to fix rates, charges, and classifications. While the commission has not been able to check all abuses on the part of the railroads, still it has done a wonderful work for the people of the United States. The commission is really a court which acts after full hearing and consideration. Take away the power to fix rates from this commission and it remains but a shadow. Now comes along this bill and proposes at one swoop to rob this commission of this important power, and to vest its arbitrary exercise in the President. The bill proposes that the President shall have the right, without hearing and without notice, to change rates by filing the same with the commission. True, the bill provides that, upon complaint, the Interstate Commerce Commission shall hold hearings concerning the fairness of any rate made by the Presi-

dent, and shall make findings and recommendations thereon, which shall be taken to be prima facie correct; but it is not permitted to make any binding order. Its power to make a binding rate is gone. It makes a recommendation to the President "for such action as the President may deem required in the public interest."

I can see no just reason whatever for vesting this power in the President, and I beg leave to say that if I were he I should make it known that I did not desire it. In taking over the railroads the President said, in substance, that nothing would be dislocated or disturbed unless absolutely necessary, and I am at a loss to comprehend why this power is necessary for the operation and control of the railroads. According to my view, the Government steps into the shoes of the private owners and operators of the roads for the purpose of operating the physical properties. The agency of the Government supervising that operation and control, the great Interstate Commerce Commission, should be left intact. The President is not an expert on railroad rates and classifications. He can not have and does not have the training and intricate knowledge possessed by the commission. He will, of course, have to rely on the knowledge and advice of others in fixing rates, and it is reasonable to assume that he will seek that advice from the commission. If that is so, why not leave the rate-making power with the commission? It is claimed that quick action may be necessary in changing rates. Can not the commission be trusted with taking any action the circumstances may require?

The making of railroad rates is a science, and sudden changes are liable to work disaster to industries and whole communities. A change in some rates of a fraction of a cent might seriously affect business. No word of complaint has been lodged against the commission; no claim of inefficiency or favoritism has been made. "No power, therefore, should be given by this bill to a single individual, not even to the President, to initiate rates as to commercial traffic, even though upon complaint a hearing may be had before the commission where the findings of the commission are to be merely advisory and not final." I agree with the minority of the committee reporting the bill when it says:

Increasing rates is equivalent to increasing taxation. Even under war pressure no one would have the temerity to support a measure which gave the Postmaster General a free hand to increase the postal rates, or to the Secretary of the Treasury to increase customs and internal-revenue duties or arbitrarily fix the interest rate on liberty bonds. The experience we have already had with the exercise of arbitrary power does not warrant enlargement. Nonproductive industries from a war standpoint could be promptly put out of business by an excessive increase of the rates on their products.

The matter of rates is commercial rather than military and should remain undisturbed, as far as possible, so that business enterprise may continue and profits created out of which the war can be financed. England has adopted this policy, and the war has so little interfered with her commercial rates that her industries are able to live and many of them to thrive.

Not even so versatile and able a man as Director General McAdoo could wisely exercise this tremendous power over rates without the counsel of his immediate advisers, and yet most of these have all their lives looked upon the question of what should be just and reasonable rates from the standpoint of the carriers. The order for increasing demurrage, effective January 31, was made without notice or hearing and, owing to widespread discontent and injury to the shipping interests, after nine days supplanted by another practically restoring original rates and average agreements. It is true that this original order was approved for filing by the Interstate Commerce Commission, but it acted pro forma, without notice or hearings.

The President in his proclamation assured the country that "nothing will be altered or disturbed which it is not necessary to disturb." Why not then leave the commission in the full exercise of its present powers as to rates, fares, charges, and classifications? Why subject transportation of commercial traffic to the control of another agency? The Director General and his advisors claim the right to take over not all, but only such railroads and systems of transportation as may be deemed necessary in the conduct of the war, and many short lines and even lines of considerable extent will not be taken over. If this be the case, the control over rates, etc., would only apply to such roads and systems as were taken over, and the others would remain under the jurisdiction of the Interstate Commerce Commission. There would thus be two distinct agencies operating. The result might lead to confusion and uncertainty.

Why not trust the wisdom and patriotism of the Interstate Commerce Commission in war as well as in peace to consider and determine all questions submitted to it. In the light of all the facts and circumstances of war emergency? We condemn the propaganda of recent years seeking to discredit the commission because of its refusal to grant all that the carriers demanded in the way of increase of rates. By painstaking effort and after extended hearings, every such demand has been thoroughly investigated and some increases allowed, amounting in the 15 per cent advance-rate cases to about \$100,000,000 per annum, and further increases can reasonably be expected. As the people pay the freight, why should we not insist upon proper notice and hearing and a final finding of the facts by the tribunal the people themselves have created, before adding to the people's burdens?

THE PERIOD OF GOVERNMENT OPERATION AND CONTROL.

Section 14 of the bill provides that Federal control shall continue for the period of the war, and for a reasonable time there-

after, which shall not exceed two years after the date of the proclamation by the President of the exchange of ratifications of the treaty of peace. Assuming that the war will last another year and assuming that it will probably take another year before the terms of peace can be agreed upon and ratifications of the treaty exchanged, it is apparent that Government operation and control may last for four years; if the war lasts longer than a year, the time will be accordingly extended.

With the changes introduced which Federal centralized control will make inevitable, and with the financial interest the Government will acquire in rolling stock and the financial operations of the roads, it will be impossible to turn them back to their private owners immediately upon the cessation of hostilities. Some time must be allowed for readjustment. As I have stated, I prefer to see the management of the roads vested in the Interstate Commerce Commission during the war, and especially during the period following the war. The opportunity to use the vast powers conferred on the President and Secretary McAdoo for political or other purposes will appear to anyone who will reflect but a moment, and the possibility to make use of such power should be removed. Think of the opportunity to influence, politically or otherwise, the owners of the roads—Wall Street, capitalists, insurance companies, banks, with their infinite ramifications—and then the power to control the wages and working conditions of almost 2,000,000 employees of the railroads! That should be made impossible.

Notwithstanding the fact that I should like to see these powers vested in a nonpartisan commission, I am not in favor of limiting the period of Government control and operation. I believe that a fair trial should be given a unified and central management of all the railroads of the country, or such major portion of them as will determine the feasibility or failure of Government ownership. I am sure that the people of this country will never wish to return to the system of operation existing before the war, with its inefficiency, its extravagance, its wastefulness, its fraud and corruption. For my part I should like to have the bill read that Federal control and operation shall continue until affirmative action is taken by Congress to abrogate it.

GOVERNMENT OWNERSHIP.

I favor the Government ownership and operation of the railroads, and ownership and operation by the people of all other enterprises, such as telephones, telegraphs, express lines, waterworks, gas works, and so forth, the carrying on of which is or should be a monopoly. In these enterprises competition is undesirable, and should not be permitted. I can not here go into my reasons for public ownership as fully as I should like, but I beg leave to state them in a general way. What is said of the railroads applies, in principle, to the other forms of natural monopoly as well. There is one vital distinction between these enterprises and the ordinary commercial enterprises, and it is this: There may be a large number of shoe manufacturers, grocers, and other business men conducting their business in each of two cities, for instance, with profit to themselves and the State and Nation at large, but there can not profitably be several lines of railroad connecting these two cities.

WASTEFUL COMPETITION.

It is now generally conceded that competition in railroading should not be permitted. This means that monopoly or sole right to operate in a given territory is the proper thing. The railroad managers in this country have, as a matter of fact, realized this, and in order to avoid competition they have consolidated. We have very few railroad companies in this country to-day compared with former times. The powerful roads have assimilated the weaker ones, until to-day we have a few large companies which own or dominate the rest. And among the big companies the losses from competition are avoided as much as possible by understandings and ownership of stocks and so-called interlocking directorates. A railroad trust which would control all the railroads of the country—and we are nearer to it to-day than ever—owned by private capital, would yield such tremendous power that it would be dangerous to the body politic. The logical step is now for Uncle Sam to swallow up the big companies that have swallowed all the rest. There are, of course, a great many small railway companies in this country, but they are not the ones who do the big business.

Prof. Parsons, in his book *Railways, Trusts, and the People*, says:

Consolidation under one control is demanded by economic law. Five thousand companies have dwindled to about 800, and these are mostly massed in six great systems with many interlocking interests. The law of industrial gravitation is still in vigorous operation, and the practical unity of the railroad system is inevitable. We have to choose between consolidated railroads in private hands and consolidated railroads in public hands. The economic reasons pointing to consolidation can only

be fully satisfied by consolidation under efficient public management. The savings of consolidation under private ownership will amount to hundreds of millions, as we have seen, and the further savings of consolidation under public ownership amount to hundreds of millions more.

Think of the energy and money wasted by running competing lines of railway between the same points. Each has its roadbeds, its engines, cars, stations, presidents, managers, engineers, and trainmen, and other salaried officials and employees galore. Think of all the passenger trains running on different lines between Chicago and New York alone. Under the present Government control more than half of these trains have been discontinued with no appreciable inconvenience to the public. If this can be done in war time, why not in time of peace?

Another illustration: One can get a train from Chicago to Milwaukee and vice versa on the Chicago & Northwestern line and the St. Paul line every hour or two. Why this duplication? Why not handle all this traffic over one road? Apply this illustration to similar conditions all over the country, and then figure up the saving. It would run into untold millions. Under public ownership we could do away with a vast number of high salaried officials and many minor officials and employees whose duty it is to advertise and procure business for their respective roads. The advertising expense of the roads, running into the millions every year, would fall away. If duplication and the wasted energy due to competition could be done away with, the saving to the people would, in the course of a lifetime, pay the entire cost of all the railroad property in the country. The efforts of the railroads have been in the past directed toward serving themselves rather than the public; that is, the public interest instead of being the primary concern has been secondary. This is really no reflection on the men who have built up our great railroad systems, but the fault is inherent in the system of private ownership. These men were obliged to work for the advantage of private capital, and many of them are entitled to great credit for the work accomplished by them.

Prof. Ripley, of Harvard University, in an article in the *Railway Gazette*, May 29, 1914, says this of the method of early railroad financing:

A knot of promoters planning an enterprise first formed a railroad corporation and authorized, let us say, capital stock to the amount of \$1,000,000. This consisted of 10,000 shares, par value \$100. This stock was issued to themselves part paid (\$10 per share), \$100,000 in all being temporarily borrowed for the purpose. A glowing prospectus then offered for sale two millions of bonds, with the proceeds of which the road was to be built. These bonds were sold at 80, with perhaps a bonus of stock thrown in, thus realizing \$1,600,000 in cash. From this the promoters reimbursed themselves for the \$100,000 already advanced by charging a 5 per cent commission for placing the loan. This left \$1,500,000 cash in the treasury of the railway corporation, as well as a controlling portion of its own capital stock. The next step was the organization by these same directors of a construction company, which built the road for an actual outlay of \$1,200,000. The railway directors now voted to pay their construction company \$1,500,000 in cash for this work, and in addition the remainder of the share capital of the road. A profit to themselves of \$300,000 plus the prospective value of the capital stock, which had cost them nothing, obviously resulted. If the enterprise were henceforth profitably operated, all well and good. If not, it might fail even to pay interest on its bonds. If bankruptcy ensued, a receiver, possibly representing the old stockholders rather than the bondholders, was appointed. In any event the promoters had realized 300 per cent on their first investment, itself borrowed, from the profits of the construction company. Moreover, they still controlled the railroad through its capital stock. Thus were the foundations of a number of large fortunes laid—enough, that is to say, to envelop American railroad construction in an atmosphere of disrepute by no means generally deserved.

SAVING ON THE INVESTMENT.

It goes without saying, of course, that if the Government acquires the railroads it will have to pay for them their reasonable value. The Government should scrupulously pay the owners every dollar to which they are entitled. The method of taking over the roads and paying for them is a mere matter of detail, once the main point of Government ownership is decided on. The total wealth of this country is estimated at about \$250,000,000,000, and it is claimed by many that the railroads are worth \$20,000,000,000, or 8 per cent of our entire national wealth. Such a gigantic organization under private ownership, with its power to influence the finances of the country, legislation, and even courts, should not be permitted, especially not in a Republic.

As already stated, it is proposed to pay the railroads, for interest and net income on total investment, about \$950,000,000 per year. Let us see what a saving could be effected in this one capital item alone under Government ownership. I believe that not over \$15,000,000,000 will pay for all the railroads in this country. The Government before the war could have raised this money by issuing its bonds at 3 per cent, but to be safe let us call it 4 per cent. That would mean an annual interest charge of \$600,000,000, or an annual saving over the above figure of \$350,000,000. The saving by cutting out useless duplication, salaries, advertising, receiverships, and countless other items is hard to estimate, but I feel safe in saying

it would be at least \$500,000,000 a year. These two items alone would pay the entire cost of the railroads in a few years.

GOVERNMENT OWNERSHIP IN OTHER COUNTRIES.

It is difficult to draw a comparison between railroad operations in this country and other countries on account of dissimilarity of conditions. The European countries are small, and the average haul is a third or a fourth the distance in this country. In most European countries old-age pensions, sick benefits, and so forth, for employees are included in cost of operations. On account of high value of real estate, rights of way cost many times more. On account of the short distance covered, rolling stock is smaller than with us. However, practically all European countries own part or all of their railroad properties. Statistics can be and are produced in every conceivable form to show the success or failure of Government ownership in these countries. In this country railway magnates find no difficulty in having statistics compiled which show that they are making no profit and face bankruptcy if rates are not raised. It has been truthfully said that figures do not lie, but they can be made to lie. There is no doubt whatever that the astounding military operations of Germany have been due in large part to her wonderfully organized railroad system. I quote the following from the *CONGRESSIONAL RECORD* of February 6, 1915, pages 3202 and 3203:

In India you can ride at two-fifths of a cent a mile. In Switzerland you can ride half a month for \$8.60 over all the steam, electric, and steamboat lines of Switzerland, or you can ride a whole year at a cost of 20 cents per day.

The following data is taken from Martin Johnson's book on Government ownership:

"The public system of Belgium will carry you one-half a month for about \$4.50; so also the public system of Hungary will carry you at \$2.70, which is one-tenth of the charge here. The public system of Italy will carry you 963 miles for \$7; the public system of Sweden 1,400 miles for \$8.55; and that of Russia about 2,000 miles for \$6. The Belgium system, furthermore, grants weekly tickets to workmen, good for 6 round trips or 12 rides, for distances and at rates as follows:

"Three miles, 19 cents; 6 miles, 24 cents; 12 miles, 29 cents; 24 miles, 39 cents; 31 miles, 43 cents; 62 miles, 61 cents.

"It will thus be seen that the Belgian laboring man can go to his work, 62 miles distant, or return for 5 cents, or a rate less than one-twelfth of a cent a mile."

These rates of travel promote the mobility of labor by enabling a man to go from his suburban place to the shops to work and in many other ways.

Prof. Frank Parsons says:

"After studying Government freight rates on the ground and comparing them with American rates for similar distances and shipments, I found that the German per ton-mile rates on local traffic are generally less than one-third of ours."

Local rates in Germany and America compared.

Items.	Miles.	Average rate per ton-mile.	
		American railroads.	German railways.

Is it not necessary to call a magician, a soothsayer, a wise man, to explain why the first four articles above fare so well on the trust-owned railroads of the United States?

AMERICAN RATES HIGHER THAN GERMAN.

They tell us American rates are lower than German rates. The facts prove the contrary. It is evidently unfair to compare German rates within the comparatively small area of Germany with rates in the United States at large, which contains an area so many times greater than Germany. By making a general average in which is included transcontinental hauls of trainload after trainload of lumber and coal and other commodities from one ocean to the other with the rate in Germany on small packages and large over the lesser area and the shorter haul, a lower rate per ton-mile may apparently be "figured" in this country by a good figurer, but in this discussion, in such imposing presence as is here assembled, it would be an insult to make any such comparison.

Railroad rates in the United States will not stand up under a fair comparison with German rates. It is conceded by all that the loading and unloading charges are the principal expense in freight transportation.

In Germany the average haul is 70.7 miles; in the United States the average haul is 244.05 miles. There is much more to be said for German rates as against American rates.

In Germany express is carried as regular freight. This is handled, of course, quite often and involves short local deliveries. Think of comparing the average rate per ton-mile on a carload of express packages hauled 100 miles and delivered at points along the line with a trainload of wheat or coal or lumber hauled 3,000 or more miles. In America we haul much more raw materials and mining products than in Germany, where more manufactured articles are hauled.

RATE COMPARISONS IN ENGLAND AND GERMANY.

England and Germany are similarly situated, and a comparison of rates in those two countries would be a test of private ownership and Government ownership under like conditions. The following comparisons are to the point: It costs \$5.72 to transport a ton of hardware from Birmingham to London, while the rate for the same class of goods over the same distance in Germany is about \$2.25. Cotton goods from Manchester to London cost per ton \$8.76; in Germany, the same distance, \$4.86 to \$5.60. General machinery from Leeds to Hull costs \$6.09; in Germany, over precisely the same distance, \$1.09 per ton.

OPERATION UNDER GOVERNMENT OWNERSHIP.

The fear has been frequently expressed that under Government ownership the railroads would be used for political purposes. That there might be danger of this there can be no question, but I believe that with proper legislation politics can be almost wholly eliminated. At any rate, the railroads have been in politics at all times in this country; they have corrupted legislatures and courts, and whole State governments have been under their influence. They have been driven out of politics largely by force of public opinion and by the creation of the Interstate Commerce Commission and State commissions. In view of the political record made by the railroads we should not fear politics under Government ownership. I should favor operation of the roads through a strictly nonpartisan body, like the Interstate Commerce Commission, and such other additional boards or commissions as the circumstances may require. We might even provide for State commissions under Federal authority, to operate certain portions of the whole system. In my home State we have had a railroad commission for some years which has been of untold benefit to the people, against which no charge of political influence or favoritism has ever been made, and which within the powers granted to it has discharged its duties fearlessly and impartially. The strictest civil-service rules should prevail in the Government operation, the employees should feel secure in their positions while properly performing their duties, promotion should be the result of meritorious service only, and means should be provided for a simple and speedy hearing of grievances of employees. I should favor a comprehensive system of insurance for the employees, to protect against financial distress in case of sickness and accident and to insure a competence for old age.

RAILROAD CORRUPTION AND FRAUDS.

In recent years the Interstate Commerce Commission made very thorough investigations into the financial operations of four railroad systems. The names of the companies, date, and number of reports are as follows:

The New York, New Haven & Hartford Railroad Co., Report No. 6569; date, July 11, 1914.

The Louisville & Nashville Railroad Co., Report No. 4788; date, February 9, 1915.

The Chicago, Rock Island & Pacific Railway Co., Report No. 6834; date, July 31, 1915.

The Cincinnati, Hamilton & Dayton Railroad Co. and the Pere Marquette Railroad Co., Report No. 6833; date, March 13, 1917.

The squandering of money, waste, fraud, falsification and destruction of records, and looting disclosed by these reports would appear to be beyond belief were it not for the fact that the facts are certified by the Interstate Commerce Commission after full examination and hearing. The commission says in regard to the New Haven Railroad:

Marked features and significant incidents in the loose, extravagant, and improvident administration of the finances of the New Haven as shown in this investigation are the Boston & Maine despoliment; the iniquity of the Westchester acquisition; the double price paid for the Rhode Island trolleys; the recklessness in the purchase of Connecticut and Massachusetts trolleys at prices exorbitantly in excess of their market value; the unwarranted expenditure of large amounts in "educating public opinion"; the disposition, without knowledge of the directors, of hundreds of thousands of dollars for in-vening public sentiment; the habitual payment of unitemized vouchers without any clear specification of details; the confusing interrelation of the principal company and its subsidiaries and consequent complication of accounts; the practice of financial legerdemain in issuing large blocks of New Haven stock for notes of the New England Navigation Co., and manipulating these securities back and forth; fictitious sales of New Haven stock to friendly parties with the design of boosting the stock and unloading on the public at the higher "market price"; the unlawful diversion of corporate funds to political organizations; the scattering of retainers to attorneys of five States, who rendered no itemized bills for services and who conducted no litigation to which the railroad was a party; extensive use of a paid lobby in matters as to which the directors claim to have no information; the attempt to control utter-

ances of the press by subsidizing reporters; payment of money and the profligate issue of free passes to legislators and their friends; the investment of \$400,000 in securities of a New England newspaper; the regular employment of political bosses in Rhode Island and other States, not for the purpose of having them perform any service, but to prevent them, as Mr. Mellen expressed it, from "becoming active on the other side"; the retention by John L. Billard of more than \$2,700,000 in a transaction in which he represented the New Haven and into which he invested not a dollar; the inability of Oakleigh Thorne to account for \$1,032,000 of the funds of the New Haven entrusted to him in carrying out the Westchester proposition; the story of Mr. Mellen as to the distribution of \$1,200,000 for corrupt purposes in bringing about amendments of the Westchester and Port Chester franchises; the domination of all the affairs of this railroad by Mr. Morgan and Mr. Mellen and the absolute subordination of other members of the board of directors to the will of these two; the unwarranted increase of the New Haven liabilities from \$93,000,000 in 1903 to \$417,000,000 in 1913; the increase in floating notes from nothing in 1903 to approximately \$40,000,000 in 1913; the indefensible standard of business ethics and the absence of financial acumen displayed by eminent financiers in directing the destinies of this railroad in its attempt to establish a monopoly of the transportation of New England. A combination of all these has resulted in the present deplorable situation in which the affairs of this railroad are involved.

The commission's report in regard to the Rock Island shows deliberate looting covering a period of years. In 1902 the stock of this company sold for \$200 a share, and in 1914 for about \$20 per share, when the looters put the road into receivership. The chairman of the executive committee received a salary of \$75,000 per year and a contract for a bonus of \$500,000 at the end of five years. After serving 10 months he quit his job and received his salary and a bonus of \$450,000. One western newspaper received \$44,066.05 for "advertising in editorial and news columns." The commission reports:

The aggregate losses sustained by the railway company in connection with the foregoing transactions may be summarized as follows:

Expenses of maintaining and housing holding companies, more than	\$290,000.00
Frisco deal, approximately	6,500,000.00
Alton deal, approximately	6,370,000.00
Trinity & Brazos Valley Railway deal, more than	4,500,000.00
Consolidated Indiana and Dering Coal Cos., at least	1,300,000.00
Contributions or gratuities to officers and directors, about	1,000,000.00
Vanner transaction	217,000.00
Miscellaneous and unexplained expenditures	72,523.45

These items show an aggregate loss to the railway company of more than \$20,000,000. In addition thereto it is to be noted that prior to June 30, 1914, the railway company paid to financial institutions, in connection with the issuance of bonds commissions aggregating more than \$1,600,000 and suffered discounts of more than \$17,700,000.

The commission says in its report on the Louisville & Nashville:

Before the Louisville & Nashville advised the commission that such of its records as were made prior to August 28, 1906, would not be submitted for inspection, schedules of most of the cost of road accounts had been drawn from the ledgers preparatory to completing the analysis of the accounts from information to be secured from the journals and other records of original entry. While a complete analysis of these accounts was prevented by the Louisville & Nashville, the preliminary analysis was sufficient to indicate that the cost of road account is heavily burdened with charges which do not represent actual construction cost. From such incomplete information it is concluded that at least \$16,000,000 shown in the cost of road accounts covers items which should not be charged as a part of the cost of this carrier's road, as follows:

Charges included in cost of road accounts but not expended for actual construction.

Discount on stock	\$1,440,018.00
Other expenses in connection with the sale of stock	32,671.48
Discount on bonds	2,192,742.57
Other expenses in connection with the sale of bonds	8,537.95
Interest and dividends	1,917,555.13
Amounts credited to profit and loss:	
For reasons not stated	\$2,640,000.00
To provide a surplus in order that a stock dividend of 100 per cent might be paid	6,300,000.00
To raise book value of stock above the actual cost of acquisition	1,422,784.00
To adjust difference between advances made for construction and par value of bonds received in settlement therefor	78,447.72
	10,441,231.72
	16,032,136.85

The above statement is illustrative of the character of charges which the carrier has included in its cost of road account. A full examination of the carrier's accounts might disclose conditions under which some of the above amounts could properly be charged to cost of road account, but it is also possible that other improper items would be found which would greatly augment the amount shown.

STOCK DIVIDENDS DECLARED.

As shown in the above table, a stock dividend of 100 per cent was declared by the Louisville & Nashville on October 6, 1880. According to a corporate history of this railroad, which was found in its office, 10 stock dividends were declared by this company between 1880 and 1891.

To make possible the stock dividend of 100 per cent declared on October 6, 1880, the amount of surplus was arbitrarily increased by raising the book value of certain assets. From the corporate history above referred to it appears that when this dividend was declared the book value of the carrier's property exceeded its capital-stock liability.

To meet this situation the assets of the company were revalued, and the board of directors voted that the book value of certain assets should be increased. Accordingly entries were made on the books of the company crediting the profit and loss account and correspondingly increasing the book value of the following assets in the amounts shown below to \$7,212,226.

The above-mentioned entries brought the profit and loss account to \$10,883,609, to which was charged the 100 per cent dividend of \$9,065,000.

The above facts illustrate the manner in which permanent improvements on the Louisville & Nashville have in the past to a large extent been made out of earnings and subsequently charged to the capital account. As the commission in its annual reports has previously pointed out, only by the fullest publicity and public supervision of stock and bond issues may such increasing of the capital accounts of carriers at the expense of the public be prevented.

In closing its report on the Pere Marquette, the commission says:

Nothing disclosed in the record before us is to be more regretted than the readiness of great banking institutions in our financial centers, to loan enormous sums of money upon exceedingly precarious security in aid of such schemes as have been devised in the wrecking of these railroads. Not only this, but the high officers of such institutions, while acting ostensibly as directors of the railroads, have in fact been little more than tools and dummies for the promoters. The trustees of other people's money seem to have had little compunction about violations of their trusts for the benefit of the promoters, and at their demand.

Can the like of what has befallen these two roads be made impossible hereafter? Perhaps not entirely, so long as financial circles continue complaisant toward financial exploitations which prove successful. But it will help if minority stockholders are more watchful of their interests and if bondholders assert their rights before their security fades away for lack of upkeep, purposely neglected in order to pay interest and dividends unearned. It would, in our opinion, render such exploitation more difficult if the issuance and marketing of all securities of common carriers were subject to Federal regulation. As to that, we renew the recommendations repeatedly made to the Congress in our annual reports. We also point to the lesson, here again taught, that access to correspondence files is indispensable for a thorough and accurate understanding of the motives and purposes which underlie the formal entries made in accounts and records.

Unwise management contributed to the downfall of these roads, but breach of trust by corporate officials, often for personal gain, was the main cause here, as in the records developed in other investigations. Consolidations and Combinations of Carriers, 12 I. C. C., 277; The New England Investigation, 27 I. C. C., 560; St. Louis & San Francisco Railroad Investigation, 29 I. C. C., 139; Financial Investigation of N. Y., N. H. & H. R. R. Co., 31 I. C. C., 32; Financial Transactions C. R. I. & P. Ry. Co., 36 I. C. C., 43. That downfall, with its deplorable consequences, can be traced only to betrayal within and not to compulsion from without. Neither rivalry, nor rate level, nor regulation, nor all combined, can be found on this record to have contributed in any appreciable degree to the disaster.

No mismanagement under Government ownership could possibly be worse than that disclosed by these reports. The possibility of such wholesale robberies, paid for by the people, should be stopped, and the only way to do it effectively is to have the people step in and take charge. The Supreme Court of the United States says, in volume 135 of its reports, page 657:

The question is no longer an open one as to whether a railroad is a public highway. It is because it is a public highway that it may be permitted to appropriate private property for a right of way on making compensation to the owner.

The court decisions are unanimous on this point.

If the people take over the railroads they will only repossess themselves of highways loaned to the railroad corporations. I have seen somewhere a statement to the effect that 2 per cent of the people of this country own 65 per cent of its wealth. Whether this is accurate or not, we do know that it approximates the truth. It is an unhealthy and abnormal condition, brought about to a large extent by railroad high finance, of which there have been countless instances like those referred to. Government ownership will go a long way toward genuine democracy—it is inevitable—and I hope we shall soon have it.

The Speaker's Birthday.

EXTENSION OF REMARKS

OF

HON. WILLIAM SCHLEY HOWARD,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 15, 1918.

Mr. HOWARD. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I desire to have printed an article written by the brilliant representative of the Atlanta Constitution, Mr. J. A. Holloman, upon the occasion of our distinguished and beloved Speaker's sixty-eighth birthday.

The little incident in the House of Representatives in which every Member, regardless of politics, arose and cheered CHAMP CLARK, the Speaker, illustrates forcibly the esteem in which that Democratic official is held, without regard to party lines.

It was the Speaker's birthday anniversary. He had reached the ripe old age of 68, and yet stood as stalwart as when, almost half a century before, he moved into the wild and woolly State of Missouri, tacked his law sign on the side door of a grocery store, and defended and prosecuted western transgressors.

Former Speaker CANNON, of Illinois, the oldest Member in years and in point of service in the House, made the speech of felicitation. "Uncle Joe" is 82 years old. He has served forty-odd years on the floor of this same legislative Hall. And to-day he is as alert, physically and mentally, as a man of 50. "Uncle Joe" CANNON, Republican, loved by everyone, stepped to the Speaker's desk and, in words beautiful in their rhetoric, forceful in their delivery, and sincere in their meaning, expressed the wish of himself and his colleagues on both sides of the Chamber that the Speaker should have many returns—happy, prosperous, contented returns—and declared that the Missourian had been as impartial as any man who ever wielded the gavel in the greatest lawmaking body on earth—as fair as he had been faithful.

And the 400 Solons shook the very roof of the old Capitol with their applause.

THE SPEAKERS OF THE PAST 30 YEARS.

Going back to thirty-odd years ago we find John G. Carlisle, Democrat, in the chair as Speaker; fair but exacting; of infinite powers, and exercised without an abuse of them, or the suspicion of an abuse.

And then came Thomas B. Reed, Republican, who has gone down in the history of Congresses as the greatest parliamentary dictator this country has ever known. But time has proven the wisdom of many of his rulings. Many of his "reforms," indeed, have subsequently been adopted in parliamentary usage not only in the House but in other great deliberative bodies in this country and in Europe.

Perhaps no man ever stood like a stone wall before a broadside of keener abuse than Reed, and yet he would not lose his temper, but he would tighten his grip. During all of his reign as "Czar," an appellation applied by the Democrats because it better expressed their opinion of his unyielding power, it is recorded of him that he never subordinated honor to politics. He was a partisan, he was stern, his rulings were law, his sarcasm biting, but his integrity was never questioned.

And then Charles F. Crisp, of Georgia—a Democrat. He accepted many of the Reed rules because of their justice. Mild mannered, learned, a parliamentarian of profound ability, a diplomat who could reconcile the differences of extremists, soften the sorrows of defeat, and hold in check the flush of victory, such a man was the Georgian who wielded as fair a gavel as ever called the House to order.

And then came CANNON—"Uncle Joe," of whom I have already spoken. Speaker CANNON ran the gantlet of the same criticisms that followed Reed, and deserved them perhaps no less. Partisan he was, of course, because in those days the tariff and other partisan questions occupied the floor. It was not war then. Our boys were in the schools and colleges and in the shops and on the farms—not bleeding and dying in far-off France to save a nation from autocracy and establish an everlasting liberty. Every fight on the floor was a partisan fight, and Speaker CANNON stood true to his party. Who could blame him? The esteem with which he is held by every man on both sides to-day expresses more eloquently than words the memories that are the legacies from JOSEPH CANNON's reign.

And now it's Speaker CLARK—as popular a man, as fair and as impartial as any who ever faced the solons of America's galaxy of Commonwealths.

Federal Control of Railroad Transportation.

EXTENSION OF REMARKS

OF

HON. S. D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 28, 1918.

Mr. FESS. Mr. Speaker, this railroad bill which gives complete governmental control over the roads for the period of the war and a definite time after peace is declared was inevitable and should not be resisted notwithstanding the grave possibilities it involves. We should not hesitate to do anything we are convinced is necessary to win the war. This is a necessary step. Under our present social, industrial, and governmental organization the railroads have become the most essential as well as vital single factor in our complex national life. Their uninterrupted is as imperative as the arteries are to the human system. This is true at any time but doubly so in the dangers of war. In peace time these great businesses, owned and operated by private companies, have long ago become so vitally articulated to our general welfare, as State and Nation, that the owners were compelled not only to regard the public convenience in their management and administration of these properties, but had to submit to public regulation of their own privately-owned property which by their own energy and brain they had brought to the present state of perfection. Years ago it was decreed that a possessor of property could not use it as he pleased if such use in any degree interfered with public interest. His private right of property gave him no absolute control of such property if by its employment the public's interest was not conserved. In other words, neither a man, a partnership, nor a corporation had the inherent right to do as he pleased with his own property. This right was made subject to the rights of the public.

The railroads, privately owned and therefore privately operated, soon took on a public character which ultimately became supreme. To-day as private property measured by ownership the railroads have become public property measured by service rendered. Since the latter must be respected, the public, through the Government, is and has been exercising such rigid regulation that it amounts to public or Government control.

Most of us remember not long ago the great contest over the constitutional issue growing out of this position. For more than 30 years private control has been lessening and public control increasing, until when the war broke out the owners of the roads still had authority to pay out the expenditures incident to running the roads, but little else. They could not finally determine the amount they could charge the public for service rendered. Rates were subject to regulation not only by the Nation but by the various States under certain conditions. The income, therefore, which was made up from the rates allowed to be collected, was not a matter to be fixed by the owners of the property, but under public control by a Government agency.

On the other hand, recent legislation, such as the Adamson law of 1916, showed that Congress assumed control over the outgo as well, as was determined by the matter of wages to be paid by the roads, when by law the roads were ordered to increase to the brotherhoods 20 per cent, which amounted to \$62,000,000, without regard to the contractual rights of parties to contract. The matter of creating obligations through the issue of stocks or bonds has also become a public function determined by the public control rather than by private ownership. If a road desires to borrow money to make improvements or to issue and sell stock for the same purpose, it must have the consent of the public to do so.

In less than a quarter of a century we have seen privately owned and operated enterprises pass completely under public supervision in everything save the title to the property. This control has assumed various phases and has expressed itself in numerous acts. During this period of increasing encroachment of the public over matters of private ownership which serve a public function and in the interest of the public welfare there have been enacted various regulatory statutes such as the anti-trust laws and the creation of the Interstate Commerce Commission with its numerous modifications and enlargements. The country's fears of monopolistic dangers forbade combinations even where competition was no longer possible. This sort of legislation forbade elimination of useless waste, but, on the contrary, continued duplication of organization and transportation facilities, and entailed great waste in useless overhead charges, and also in needless duplications of rail facilities. It was the price of lack of efficiency we were willing to pay in the interest of protection of the public against private greed. The policy of inhibitive regulation had another deleterious result by vitally interfering with needed improvements and additions to keep abreast of the demands of the times. Railway opinion declared that such improvements would entail an annual outlay of at least \$1,000,000,000. As a result, properties depreciated, securities became unstable, and the problem of financing the roads became the most serious. All this was felt in time of peace, which was aggravated by the Underwood bill of 1913. Then in 1914 the war came on and laid upon the transportation lines the heaviest burdens in the history of railroading, which increased until 1917, when our own country entered the vortex and quadrupled the demands, since these lines became at once the most essential in war work. Quite naturally these added burdens found the roads in an unprepared state to meet the requirements. Immediately the representative heads of the great lines displayed a splendid spirit of patriotic cooperation when they voluntarily came together and tendered to the Government all the resources of the various properties as well as the skill of management as represented by their executive heads. The one thing needful was the maximum use of all these properties for the one purpose of prosecution of the war. They recommended a pooling of their transportation facilities which would enable them to employ all the facilities of all the properties as one single system, but which also would necessitate either a repeal or suspension of regulatory laws. These laws had been enacted to protect the public in time of peace, now they must be suspended to protect the public in time of war. In due time the Congress had enacted a measure authorizing the President to utilize the roads for military purposes if necessity demanded it. The immediate occasion for this was the trouble on our Mexican border in 1916. Acting upon this authority the President later took over the roads and appointed the Secretary of the Treasury as Director General, with authority to run the roads. While there will be some doubt of the wisdom of this

step, it was taken and will not now be retraced, and necessary legislation to make the action effective must be enacted.

This bill now before us is the measure proposed to enable Government operation of the roads. Some such legislation is necessary and will pass with little opposition to the main proposition in either branch of Congress. The proposed measure, however, involves problems that were it not for war and its dangers the bill could not get favorable consideration in this body. The bill will be considered from many angles and urged from different grounds. It is clearly understood that the advocates of Government ownership and operation will seize upon the war to make this measure permanent. It opens the way as no other event for them to press their contention both in and out of Congress. While I admit this is not a necessary result of the legislation, I am fully convinced that the country is entering upon such a policy, notwithstanding the openly avowed intention of the proponents of the bill to the contrary, as announced recently. It is perfectly apparent that the public will not relinquish its controlling interest in the roads to the extent of returning the property to the owners without rigid Government regulation. Regulation long ago became the fixed policy of the Government. This regulation policy will grow rather than become less.

On the other hand, it is just as apparent that the roads can not prosper under the rigid regime in vogue in the preceding half dozen years, when necessary expenditures increased amazingly without the relief in increased rates, and during which, although demands for improvements and betterments were the greatest in railroad experience, the actual results were least. The properties are not under such conditions valuable investments, and securities will, as they did, become a drug on the market. This will induce the owners who feel themselves shorn of power to insure an additional revenue to meet increased expense over which they have no control to seek a way to unload, and the Government is the only shoulders broad enough to carry the burden. The danger is from sheer protection of their property holdings. The owners may seek the Government as a purchaser, and the public, whose interest is paramount, may be just as anxious to make the purchase in the realization of the value of uninterrupted transportation and the fear that such step may be essential for such purpose. In addition there is and has been a growing popular feeling in favor of Government ownership among that very large class of our electorate who do not have property holdings. This element makes up a very considerable proportion of our voters, to whom such appeals become convincing.

It can not escape the casual observer that the propertyless citizen, who at election has as much power as the heaviest property holder, feels a sense of considerable importance when a measure is presented to take over \$20,000,000,000 of property. His sense of ownership of the property on which he rides is acute and greatly intensified by the experience of having no property in his own title, and it means little to him to urge that the business will not be as efficient or economic under Government ownership. The burdens to him are vastly more than compensated by the mere belief that he has something to say about how the business shall be conducted. The sense of public ownership gives him a degree of self-respect which far outweighs all arguments of economy and efficiency. Like the old town meeting of New England, it is not the value of the suggestion of the townsman, but rather that degree of respectability that goes with his right to offer suggestions which is the real importance.

There is also a growing sentiment among the rank and file of the labor of the country that if the Government owns and operates the road they, by virtue of being an integral part of the Government as well as the chief factor in operation, will exert greater influence and power over the properties which they work. Whatever be the basis for such belief, it will not be overlooked that the railroads under Government control will become the football of politics and politicians.

There is also a general growing sentiment among the populace that the railroads are mines for great profiteers to exploit, and as such they are enterprises of great profit, which does not belong to the owners of the properties, but should go to the public. Any close observer of public opinion on public questions must have noted the foregoing trend and its sources.

The railway management of the country long ago discerned this growing conviction in the public mind and set out to counteract the prejudice against private ownership by inducing the public to become investors of the securities, and thus become part owners of the railroad properties, so that to-day properties like the Pennsylvania Co. are held by over 100,000 holders of securities.

While this will help to allay the trend it will not cure. Whatever else we may believe on such matters as the rapidly growing paternalism in our country, the day is long past when a great public utility like the transportation business can be operated for and by private profit without governmental regulation. The same fact is true in the case of telegraph and telephone lines. Whatever be the strength of the contention for it, none of these utilities will be allowed to be run without public regulation if not entire control over the properties. In the case of transportation the interested parties are numerous and powerful. The owners of the property are powerful from the force of law which is designed to protect title and possession of property, one of the very purposes of law and government. This principle is fundamental and has stood as the very bulwark in every well-regulated government. On the other hand, the shipper is powerful, not only because of his numerical strength, but of his close articulation to the public at large, and also because assurance of his rights in transportation is clearly a public benefit which must be respected, even though it interferes with private privilege. Then, again, the labor is powerful and has the backing of the public good, since regulations which would result in inefficiency in operation would primarily cripple the public, to say nothing about labor itself, which through the Government demands certain rulings on behalf of the public, whether indorsed by the owners or not, such as regulation of hours of continuous labor, conditions under which the labor is performed, and so forth, all of which is primarily for the public, not for the labor as a class.

In other words, Government regulation is here to stay. Our great concern now should be to avoid the steps under the stress of war which will ultimately and inevitably lead from Government regulation and control, which is now our fixed policy, to Government ownership and operation as a definite policy. The war found the Nation hamstrung in its transportation facilities, due to inhibitive legislation which had been called forth in the interest of the public in its contest with private exactions not warranted and which had been the result of years of regulation to avoid public injury. Much of this legislation was due to an effort to reconcile Government control over privately owned property administered in the interest of the owners but not to the injury of the public. It was the old question of attempted reconciliation between authority in Government and liberty in the citizen. All must admit that this effort to protect the public prevented the railway management from rendering its best service to the public. It is a case of willingness to sacrifice a degree of efficiency from unrestrained management in the interest of the public. There is a possibility of high degree of efficiency at the expense of the public, which must pay the bills in the end. When the war came these obstructive laws in the interest of the public were in the way. The jealousy of the public for protection of the many against the few, bred out of the fear of private greed, forbade the repeal of these laws at the very moment when their operation was more or less hurtful. With their continuance maximum efficiency in transportation was defeated. The only step left as a war measure in time of war in the minds of those in authority was to take over the control and operation of the roads by the Government. The control became at once supreme, but the operation was provided through cooperation of both the Government and the railway managers, both of whom are now bending all energy to insure maximum results.

This measure, therefore, as a means to make effective under Government supervision the maximum ability of the railroad facilities should be speedily enacted into law and must be considered as purely a war measure, to end when the emergency has passed. This consideration demands that certain specific provisions should be written into the law. We must proceed on the basis of temporary operation unless we mean to launch out into a permanent policy of Government ownership. In that case it makes small difference what we do. But if, as herein proposed by the proponents, we plan against permanent ownership, we must not break down the only distinctive rate-making power which is the chief regulatory agency of the Government, and which has been the result of 30 years of investigations and reports covering every phase of the question as it relates itself to the owners, on the one side, and the public on the other. The bill, unless it proposes to launch out on an entirely new governmental policy of permanent operation, should retain the rate-making power where it is now lodged. The contention that the roads have not had a square deal in matters of rates, a statement with which I have had some sympathy, is not sufficient to eliminate this Government agency. It is easy to understand why the railway management favors this emasculation. Whatever be the justice of their position, the proposal in this measure

to place the rate-fixing power into the hands of the President involves such revolutionary possibilities that the country should know what this item may lead to. It immediately raises the question whether we are ready to retain this function a business based on grounds removed from political bias or make it a political function to be fixed by the head of a political party. The rate-fixing function is the one item of control in this measure that is serious. The man who holds that power, if unlimited in its use, will be able, should he see fit to use it, to exercise such influence never contemplated in a country of law. The one important item not only for the sake of efficiency in service, but for security against abuse of such power, is such step as will prevent its ever being used as a political club. It should be for that reason, if no other, lodged in the agency free from political or party bias, the Interstate Commerce Commission. While this commission may have felt the pulse of popular clamor against the railroads in the past, no man who knows will ever charge that it has ever been biased by partisan motives. This has been a distinguishing feature which has commended it to the country. The power of rate making in the hands of the head of a party leading his followers in a campaign is too dangerous to be considered with equanimity for a moment, especially when that party leader has demonstrated in his public utterances and acts his rigid adherence to party control even in time of war.

Properties which are valued at nearly \$20,000,000,000, employing nearly 2,000,000 men affiliated with 30,000,000 people or one-fifth of our population, held by one man who, under the rate-making power, is given such a strangle hold, would in the midst of a campaign give the head of a party, if he cared to employ it, such power that it must cause Jefferson and Jackson to become restless in their graves. It would be entertaining, at least, to read the utterances of both of these men on the bank question in the light of this proposal. We need not go further back, if we wish to observe political maneuvering and the dangers imminent in the turmoil of political campaigns, than to scenes here in the Capital in connection with the "national humiliation" in the Adamson law legislation in August of 1916 for evidence of what might be undertaken to insure desirable political results by interested parties when Congress was told to prevent a Nation-wide paralysis by a strike it was necessary for it to increase wages 20 per cent by a certain day. In the light of such performances it certainly would be wisdom to avoid making it possible for the rate-fixing power ever to become the mere option of the party leader, to whom this combined power could say, "Do this or do not do that, or we will paralyze the country."

The other item of this bill of most importance is to definitely announce the policy of the Government to turn back the property at a fixed time, thereby announcing the measure as a war measure rather than a permanent policy of Government ownership. The time may not be of the essence, so it becomes definite. Personally I favor the shorter rather than the longer time. While I have my fears very definitely defined that our step now is leading direct to Government ownership as well as operation, and it matters little what we assert as a policy, yet I feel convinced that we should leave nothing undone to assure against that consummation. Government operation is so bunglesome and wasteful, as is apparent to every observer who cares to see the facts as they are, that we should here be cautious in what we do to educate public opinion in the real facts touching such a policy.

There is no doubt that the current of public opinion to-day is running strongly in favor of Government ownership. This in spite of the most palpable blunders, the result of incompetence and lack of coordination of Government agencies as reflected in the recent numerous priority rulings of the Government which inevitably congested all the arteries of traffic and gave an alleged basis for the bunglesome and wasteful order of heedless Mondays, a groping in the dark to find a way to disentangle the unfortunate situation which ought never to have arisen and can be accounted for only on the basis of uncoordinated Government agencies that would not have been possible save in such a Government as our own, where the stock reply to all protest against useless waste is, "Well, what of it? The Government is doing it. It costs you nothing." It is but a suggestion of what we may expect when the great business of the Nation, involving one-fifth of our population, is under the operation of men who have never had any experience in the lines in which they are called to direct, and are chosen by popular vote to represent the most influential group, rather than for a degree of efficient service. The wastefulness so apparent in all war work under the direction of the Government, which would not be tolerated for a moment by any private concern, nor by this Government, if done under contract

with a responsible private concern, is excused with an apology and the ready-made explanation that it can not be avoided. This is another and additional reason for our taking only such steps as are necessary to return the roads to the owners under proper governmental regulation when the war is over.

The rapid breaking down of properties, the collapse of securities, and the inability to secure funds, on the one hand, and the amounting of expenditures on the other, will lead the owners in the last resort to look to the Government for relief. The general trend of the public mind for the past 10 years has been in the same direction. To all argument that our present experience points to the wastefulness of Government operation will be offered the counterargument that the conditions were abnormal and must not be taken as conclusive against such policy. I am firmly convinced that this step taken because we have no other recourse will be difficult to retrace. We must therefore at this time fix the date at which time the step shall be retraced; otherwise this temporary policy becomes permanent. Even the fixing of the date can not insure us against such permanent policy, but it is at least one step against it.

I shall therefore vote for the measure as a war necessity, since under our present inability to utilize the fullest capacity of fair facilities we must take this step of control and operation. But I do it with a keen sense of the long step it will be toward a policy which has greater impetus in the country than most of us are willing to admit. In the light of local political influence as reflected in legislation on rivers and harbors and public buildings measures, it would not be amiss for this Congress in this war time when revolutionary measures are necessary to guard well against unnecessary steps which seek to place billions of property as a political football, which means not only deterioration of the properties to the hurt of the public, but an agency of political influence in a campaign that produces a shock when merely contemplated.

Mr. Speaker, this Congress will do anything that will appear necessary to win the war. It will not permit adherence to any theory or theories to interfere with that one supreme purpose. The most complete utilization of transportation facilities under private control, handicapped by inhibitive regulations, is impossible; hence this step of complete Government control. The necessity of stabilizing rail securities entails a possible outlay in launching out into the field of purchase and sale of securities. The imperative necessity of maintaining the properties at a high standard will entail a mammoth outlay, which must of necessity come from the proceeds of the business, and naturally must be laid on the public, for whom, in the main, the roads will be run while under Government control. This will necessitate an additional obligation to insure the owners a reasonable income on the investment and a return of property after the war ends in as good condition as when taken over.

I will not hesitate to vote these obligations as the legislative duty of the hour which public interest demands in transportation facilities.

But while we do this the emergency of war must not be embraced as a sufficient reason for us to embark upon a governmental policy fraught with possibilities too grave to contemplate with equanimity. If we in this House launch out on a dangerous experiment of Executive rate making, it will be hoped that a correction will be made in another body.

Furloughs to Soldiers.

EXTENSION OF REMARKS

OF

HON. PAT HARRISON,

OF MISSISSIPPI.

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 8, 1918.

Mr. HARRISON of Mississippi. Mr. Speaker, it was unfortunate that objection was made this morning to the consideration of this bill. It was that objection that prompted the gentleman from Mississippi [Mr. CANDLER], the gentleman from Oklahoma [Mr. FERRIS], and the gentleman from New York [Mr. LUNN], at the instance of the chairman of the Military Affairs Committee, to appear before the Committee on Rules at noon to-day and request a rule to make in order consideration of this bill. The Committee on Rules, I am glad to say, immediately and unanimously ordered a rule to be reported making the bill in order.

Whether that action influenced the opposition to be withdrawn I can not say, but we are all now agreed that this legislation is both necessary and urgent.

Thousands of loyal fathers and mothers throughout the Nation cheerfully and without a whimper bade their farmer-soldier boys good-by and Godspeed, believing that labor to fill their places on the farm could be obtained. The scarcity of labor, however, in many sections has greatly hampered and retarded farming operations throughout the country. One of the primary objects of the selective-draft law was to raise an adequate Army in a fair and equitable manner without disorganizing the various industries necessary to prosecute the war. A year's experience in the war certainly should impress every citizen with the fact that to win it every industry must be employed to the limit of its capacity. The situation with respect to farm labor is virtually the same throughout the country. In my own State and other Southern States the planting season is at hand, and if the farms are to be utilized this year the work must be begun now. There is a scarcity of labor unprecedented in the history of my State. This is due to many causes. The wages of labor have reached such a high figure that it is impossible for the farmer of ordinary means to employ labor to work his farm. Furthermore, it is not to be had, and if the foodstuffs so essential to the success of our Army and the armies of our allies is produced labor must be obtainable.

There are many young men in the Army whose experience and training peculiarly fit them for the work of the farm. If furloughs could be granted so that during the planting and harvest seasons they could be permitted to return to their homes and assist their families in making some foodstuffs, without disorganizing the Army, it should be done.

I do not share in the view that some of my colleagues apparently take, that in case this bill passes every farmer boy in the Army will make application for a furlough. The number, in my opinion, that will make applications for furloughs will be appreciably small and in nearly all instances will be based on conditions that actually exist and make their presence on the farm necessary. I know there are in my State many fathers who are unable to work, and unless they obtain the services of their boys for a short period their farms will remain idle and they will be unable to raise a crop this year. The consequence will be that not only will the family suffer but the cause of the allies will likewise suffer. I am very much in favor of the purposes of this bill, and I earnestly hope it will pass immediately, without a dissenting vote.

Washington's Birthday.

EXTENSION OF REMARKS

OF

HON. M. CLYDE KELLY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 6, 1918.

Mr. KELLY of Pennsylvania. Mr. Speaker, in accordance with the permission of the House, I am presenting below the address delivered by Hon. W. FRANK JAMES, of Michigan, before the Pittsburgh Commercial Club at its Washington's Birthday celebration, February 22, 1918. Representative JAMES also delivered the address in part at a number of patriotic gatherings in Pittsburgh and Harrisburg, Pa., on February 21 and 23, among them being meetings of Shriners, Independent Order of Odd Fellows, McKeesport Patriotic Boosters, Pittsburgh Swedish Lutheran Church, Wilmerding Methodist Church, and Alricks Association, of Harrisburg:

ADDRESS OF HON. W. FRANK JAMES.

Mr. Chairman, fellow Americans, I count it a great honor to be present on such an auspicious occasion in the district represented by my friend Congressman KELLY.

A man is not a good councilman who is only interested in seeing how many feet of water mains he can get laid in his ward. He is only a good councilman when he is big enough to look at everything from the viewpoint of the welfare of the people of the entire city.

A man is not a good Congressman who looks at every proposition as to how it will affect "his" district or how it will affect his "political future."

A man is only a good Congressman when he looks at everything from a national point of view and who tries his best as

an American Congressman to vote as an American for the best interests of all the people of America. From the first day he entered Congress CLYDE KELLY has looked at everything from a national point of view.

These are no days to play "petty party politics." My district is a strong Republican district, as my majority of over 10,000 over the fusion Democrat and Progressive candidate would indicate, but there are no more loyal supporters of the war and the administration than these same Republicans. The last Republican State convention by a unanimous vote pledged absolute loyalty to the Government in the prosecution of the war.

We are all forgetting up there that we are Republicans or Democrats or Progressives, and will continue to forget until this war shall have ended in a glorious victory of liberty over Prussian militarism. I know that the people of the thirtieth Pennsylvania—the same as the twelfth Michigan—are not so much interested these days in party labels as they are in sturdy Americanism.

Lincoln once said that "this country can not exist as half slave and half free." Neither can this country exist as half pro-German and half American.

Some people in political life who think it is "good politics" to cater to the pro-German vote will be badly mistaken when they receive the verdict of the American people on election day.

You are to be congratulated in knowing that your Congressman, CLYDE KELLY, has stood foursquare on every proposition that came up and voted as the good, sturdy American that he is.

By common consent Washington is regarded as not only the Father of his Country but also as the world's apostle of liberty.

The War of the Revolution, the same as this great war, was a war that involved the interests and the liberties of mankind.

England's violation of our sacred rights then resulted in the stirring of the eagle's nest. To-day the violation of not only our sacred rights, but the deliberate, cruel, and repeated murder of our innocent men, women, and children has resulted in another stirring of the eagle's nest, and now as then, dark as things may seem and hard as the task may be, right will in the long end defeat and crush might.

Some of us would have had the eagle stir long before he did.

The words used by Washington at the time when things looked the darkest for the cause of American Independence apply exactly to our cause to-day.

Our cause is noble. It is the cause of mankind, and the danger to it is to be apprehended from ourselves. Shall we slumber and sleep, then, while we should be punishing those miscreants who have brought these troubles upon us and who are aiming to continue us in them; while we should be stirring to fill our battalions?

I trust the goodness of our cause and the exertions of the people and Divine protection will give us that honorable peace for which we are contending.

The Father of his Country also evidently believed that Congress should investigate anything in the Army or the country that deserved investigation, because we find him saying—

and that they [the people] would instruct them [Congress] to go into a thorough investigation of the causes that have produced so many disagreeable effects in the Army and in the country; in a word, that public abuses should be corrected.

Were Washington alive to-day he would look with contempt upon those citizens, birth or choice, who seem to prefer some other land to this land.

Citizens by birth or choice, of a common country, this country has a right to concentrate your affections.

Some people in this land seem to think that because they are native born that they have special privilege to be disloyal and treasonable. Being born here does not give anyone any special privilege to be treasonable or disloyal; on the contrary, it makes the act the more damnable and outrageous. Contrast Washington, whose name is honored in every land, with that of Benedict Arnold, the traitor.

Both were native born. One we look up to as a patriot and our ideal American, while we only remember the other—that lowest of all men, the man who tried to betray his country to the enemy—as a traitor.

Were Washington alive to-day he would agree with us that this war can not stop now; it can only end when the war is settled in the right way—the absolute destruction of Prussian militarism.

He was not one of those who believed in peace at any price. They had this kind of gentry in '76, the same as they had them in '61, and the same as we have them now. They had them in high places then as we have them now.

They talked "peace, peace, peace" then, as we have them now, when every man ought to know that there can be no peace except that of a peace with honor.

If some of these peace-at-any-price men had had their way then, instead of this being a Republic they would have had

Washington and his brave band down on their knees kissing the hands of King George III and praying for peace with dishonor.

Later, in '61, if the peace-at-any-price men had had their way they would have had the martyr Lincoln and his brave soldiers kissing the cheek of Jeff Davis and his followers and asking them to take all of this great Republic as a gift.

If the peace-at-any-price men had their way now, we would allow the Kaiser and his tools to keep their ill-gotten gains and allow their bloody hands to grasp for more.

If the peace-at-any-price men had had their way, they would have kept this land in such a defenseless position that when the Kaiser had defeated the allies he could inflict the same violations and murders on our women and children as he did on bleeding Belgium and heroic France.

When it looked in the Revolutionary War as if some kind of a peace might come—and when some of the men who claimed to be close to him were willing to accept dishonorable terms of peace—Washington stated that no peace could come unless it was an honorable peace.

Examine his words, and see how they fit exactly to-day:

There is nothing which will so soon produce a speedy and honorable peace as a state of preparation for war; and we must either do this or lay our account to patch up an inglorious peace after all the blood, toll, and treasure we have spent. This has been my uniform opinion, a doctrine I have endeavored, amidst the universal expectation of an approaching peace, to inculcate, and which I am sure the event will justify. . . . There is nothing so likely to produce peace as to be well prepared to meet the enemy.

To discerning men nothing can be more evident than that a peace on the principles of dependence, however limited, after what has happened, would be, to the last degree, dishonorable and ruinous.

When we hear men talking about peace, peace, peace, we might well refer them to these words of the Father of his Country

Some of our people need a little more of what Washington described as "the spirit of '76":

Men, the hour is fast approaching on which the honor and the success of the Army and the safety of our bleeding country will depend. Remember that you are free men, fighting for the blessings of liberty, that slavery will be your portion, and that of your children, if you do not acquit yourselves like men.

What would Washington say to the German-American?

If Washington were with us to-day and he were asked by a German-American if he should fight for his adopted country or remain neutral, he would tell him there was no being neutral in a fight between your land and the enemy—that you were either for this land, heart and soul, or you were against it, a traitor, and should receive the punishment of a traitor—back to the wall.

He would say now as he said in 1775:

Unhappy it is to reflect that a brother's sword has been sheathed in a brother's breast, and that the once happy and peaceful plains are either to be drenched with blood or inhabited by slaves.

Sad alternative! But can a virtuous man hesitate in his choice?

When I hear men complain of our food regulations, fuel regulations, and other regulations, I can not help but think of the sufferings of the heroes at Valley Forge and their attitude.

Let us see what the brave commander says they had to put up with:

To see men, without clothes to cover their nakedness, without blankets to lie on, without shoes (for the want of which their marches might be traced by the blood of their feet), and almost as often without provisions as with them, marching through frost and snow, and at Christmas taking up their winter quarters within a day's march of the enemy; without a house or hut to cover them till they could be built; and submitting without a murmur, is a proof of patience and obedience which, in my opinion, can scarce be paralleled.

Oh, for a little more of the spirit of Valley Forge.

What would Washington do with spies?

They were "men" in those old Revolutionary days. When I read of spies going around the country, being caught red-handed in every kind of damnable deed, and see that the only punishment is being sentenced to three square meals a day and sleep in a feather bed—safe from bullets and hunger—until the war is over, I can not help thinking what would Washington do with these scoundrels. Seeing that old Israel Putnam was one of his right-hand men, I can imagine that he thought the same as "Old Put."

When he found a spy, he wrote this letter:

Sir: Nathan Palmer, a lieutenant in your King's service, was taken in my camp as a spy; he was tried as a spy; he was condemned as a spy; and he shall be hanged as a spy.

ISRAEL PUTNAM.

P. S.—He is hanged.

God give us a few more Putnams in these times of trouble.

These are no times to speak mildly but the days to let the disloyal and the traitors know what we think of them and what they stand for.

Old Ben Franklin, the same as his friend Washington, was not the man to speak mildly when the occasion demanded strong language.

He wrote the following letter to a former friend:

You are a member of Parliament and one of that majority which has doomed my country to destruction. You have begun to burn our towns and murder our people. * * * Look upon your hands! They are stained with the blood of your relations. * * * You and I were long friends. You are now my enemy and I am yours.

B. FRANKLIN.

Oh, for a few more Franklins instead of some of our pussy-footers—our peace-at-any-price men and pacifists—traitors, all of them.

The peace-at-any-price men have been laying great stress on what Washington is supposed to have said about "entangling alliances," and so forth. Now, let us see what Washington really said:

If we remain one people * * * the time is not far off * * * when belligerent nations * * * will not lightly hazard the giving us provocation; when we may choose peace or war, as our interest, guided by justice, shall counsel. * * * It is our policy to steer clear of permanent alliances with any portion of the foreign world; so far, I mean, as we are at liberty to do it; for let me not be understood as capable of patronizing infidelity to existing contracts. * * * Taking care always to keep ourselves, by suitable establishments, in a respectable defensive posture, we may safely trust ourselves to temporary alliances for extraordinary emergencies. * * * Nothing short of self-respect and that justice which is essential to a national character ought to involve us in war.

If defending ourselves against violation of our women and maiming of our children; drowning of innocent men, women, and children; defending ourselves against a nation violating every rule of honorable warfare and every law of civilization is not what Washington called "extraordinary emergencies," then will our peace-at-any-price men tell us what they would consider "extraordinary emergencies?"

Washington was not only the "Father of his Country," but he was the "Father of Conscription" and also the "Father of Preparedness."

As I said in my speech in the House of Representatives when the draft bill was up, Washington wrote a strong letter to the Continental Congress in favor of what he called a "preemptory draft":

Experience has shown that a preemptory draft will be the only effectual one [plan]. * * * Had we formed a permanent army in the beginning * * * we never should have had to retreat with a handful of men across the Delaware in 1776, trembling for the fate of America, which nothing but the infatuation of the enemy could have saved; we should not have remained all the succeeding winter at their mercy; * * * we should not have been under the necessity of fighting at Brandywine with an unequal number of raw troops; and afterwards of seeing Philadelphia fall a prey to a victorious army; we should not have been at Valley Forge with less than half the force of the enemy, destitute of everything, in a situation neither to resist nor to retire; * * * had we kept a permanent army on foot the enemy could have had nothing to hope for, and would in all probability have listened to terms long ago.

No man ever believed in preparedness more strongly than did Washington. Time after time he urged upon the Continental Congress and upon the people the necessity of real preparedness.

To be prepared for war is one of the most effective means of preserving peace.

A free people ought not only to be armed but disciplined. The United States ought not to indulge a persuasion that, contrary to the order of human events, they will forever keep at a distance those painful appeals to arms with which the history of every nation abounds. There is a rank due the United States among nations which will be withheld, if not absolutely lost, by the reputation of weakness. If we desire to avoid insult, we must be able to repel it.

If we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war.

It has been, very properly, the policy of our Government to cultivate peace. But, in contemplating the possibility of our being driven to unqualified war, it will be wise to anticipate that frequently the most effectual way to defend is to attack.

If we had adopted the ideas of the Father of his Country on the draft and on preparedness we would not be in war to-day. We would have had eight or ten million men, free men, capable of being thrown into immediate conflict, and I leave it to you if an army of 8,000,000 men—free men—fighting for the rights of a free people would not be large enough force to compel all nations to respect all of our rights.

We had an idea because we had over 100,000,000 people in this country that no nation dare attack us. We were living in a fool's paradise. China is the only nation that would hesitate to insult us.

Half-civilized Mexico dared to ravish our women, kill our men, and spit on our flag.

Do you know that it is reported that in the late troubles in Mexico, 1 German, no Frenchmen, 1 Briton, 20 to 30 Japanese, 300 Chinese, and about 500 Americans have been killed? How have the mighty fallen when a greasy Mexican thinks it is safer to violate an American woman or kill an American citizen than it is to kill a pig-tailed Chinese washee-washee?

We have been drifting into the war for nearly three years. We stood insult after insult, and finally we woke to the fact

that, whether we wanted war or not, war was to be forced upon us.

Personally, I would have voted for war against the Imperial Government of Germany when helpless men, women, and children went to a watery grave when a submarine sank the *Lusitania* without warning.

I am one of those Americans who believe that wherever an American goes lawfully, and observing the law—whether on land or on sea—"there the flag goes with him and there it must ever go." It was for this reason that I voted to table the notorious McLemore resolution in the Sixty-fourth Congress.

In ancient times the proudest boast was, "I am a Roman citizen," and these words were the only protection needed. I want to see the flag of this country held in such high esteem that the words, "I am an American citizen" will be sufficient to protect an American in any part of the world—civilized or uncivilized.

For nearly 100 years no one disputed the rights of American citizens to sail to any part of the seven seas in safety.

On January 31 last the Imperial German Government informed the President that, commencing on the very next day, submarines had been given orders to sink our boats on sight.

We were allowed, I believe, the slight concession of being allowed one boat—boat to be selected by Germany—to sail from one of our ports—port also to be selected by Germany—to sail to some port in Europe—port also to be selected by Germany—provided further that the cargo should be selected by Germany, and that in addition the boat should be painted like a barber's pole.

This would have meant hauling down the American flag on all seas and made us, in effect, a vassal nation of Germany. Some cowards—or traitors—some in high places and some in low, were willing to submit to this disgraceful proposition, but thank God the great majority of our people were unwilling to see the American flag furled in disgrace, and the American Congress voted for a declaration of war.

For what are we fighting?

Some people who would rather have this country a province than a free country stand around on our street corners and ask the question, "For what are we fighting?"

We are fighting so that the United States shall not become another ravished Belgium.

We are fighting so that no country can ever again repudiate every rule of honorable warfare and every law of civilization and exist.

We are fighting so that all who read may know that wherever an American goes lawfully—whether on land or on sea—the flag protects him against insult and death, and his women against violation.

We are fighting to serve notice on every nation that any act of terrorism will not prevent us from maintaining our rights on land and on sea.

We are fighting so that in the future no man will dream of world empire—no man will dream of making the peoples of all nations his unwilling subjects.

We are fighting so that in the future no nation will dare create dissension in America, to blow up our factories and disrupt our industries.

We are fighting so that in the future no nation will dare sink hospital ships, bombard helpless women and children, and drown helpless men, women, and children.

We are fighting because we believe that either Prussian militarism or world liberty must die.

We are fighting to save the honor of your home and my home.

We are fighting to make your mother, your sisters, your wife, your children safe from the fiendish attacks that have decimated Belgium and France and are to-day starving the innocent women and children of France as well as Belgium.

These are the things for which we are fighting, and yet there are men—God save the mark—who have been honored beyond their deserts by American citizens, who rise up in high places, and have the audacity to ask, "For what are we fighting?"

If you don't know why we are fighting,

Let the sea out there explain;

There is a place in the Atlantic

That will never lose its stain;

And a liner on the bottom,

With a great hole in its gut.

Where the eels are munching babies' bones

And nameless horrors glut.

If you want to know why we are fighting,

France will point you to the west,

Where the bayonets of Germany

Are hacking at her breast;

Where a thousand lovely villages

Are marked with blood and flame,

And the gentlest of her lassies,

Soiled and broken, walk in shame.

If you want to know why we are fighting,
Belgium has a tale to tell:
How the Kaiser's cultured legions
Came to do the work of hell.
Let her herds of homeless starvelings,
Let her maltreated children show,
Look upon her desolation,
Ask her women—and you'll know.

A nation misunderstands the American people when they think that acts of terrorism will frighten us into cries for early peace; it only makes us the more determined to win.

In the *Hamburger Nachrichten* some time ago Maj. Gen. von Disfurth said as follows:

No object whatever can be served by taking notice of the accusations of barbarity leveled against Germany by her foreign critics. We owe no explanations to anyone. Whatever act is committed by our troops for the purpose of discouraging, defeating, and destroying the enemy is a brave act and fully justified. Germany stands as the supreme arbiter of her own methods. War is war.

They call us barbarians. What of it? We scorn them and their abuse. For my part, I hope that in this war we have merited the title of "barbarians." Let neutral nations and our enemies cease their empty chatter, which may well be compared to the twitter of birds. Our troops must achieve victory. What else matters?

Sinking vessels containing helpless women and children without warning did not drive nations into cries for peace, but it did drive nations that would otherwise have remained neutral into the war on the side of the allies.

It was only a day or so ago that Secretary Daniels was so confident that with our assistance the allies were overcoming the submarine situation that he said, "The war against the U-boats is being won."

As if to mock him, a few hours afterwards a submarine blew up the *Tuscania*, carrying 2,172 of our soldiers. If reports are true, between two and three hundred have lost their lives.

The news has more interest to my district than to the average district, because on board were some of our boys.

War 3,000 miles away is bad enough, but when it takes your sons and your brothers, then you realize even more part of the price we are going to pay for liberty in this great war.

"The price that is paid for freedom only the parents know."

The boys who died by the sinking of the *Tuscania* are heroes the same as if they died on the battle fields of France.

Acts of terrorism like sinking hospital ships, drowning helpless men, women, and children, bombarding helpless women and children, did not drive nations into cries for peace, but it did drive nations that might otherwise have remained neutral into the war on the side of the allies.

The drowning of our brave boys on the *Tuscania* will not drive us into cries for an early and dishonorable peace, but it will make us the more determined to win and to absolutely crush Prussian militarism.

Dark as things may seem and hard as the task may be, right in the long end will crush might.

As I said a few minutes ago, "The price that is paid for freedom only the parents know."

A few days ago I received a letter from a friend of mine, George A. Newett, who had not heard from his son for some time, and naturally, like all parents, knew that this meant his son was either in France or on the way there.

He sent me a little poem, which showed the "ache" in his heart:

The price that's paid for freedom only the parents know;
The money, in comparison, is merely a worthless dross;
No billions can repay for the loss of those who go,
And who now may be on the way across.

We cheer as we see the boys go marching down the street
To fight for humanity and their country's fame;
Fighting the fight for which there is no retreat,
But there's an ache in our heart just the same.

Seeing his son is on the *Tuscania*, those of us who are fathers can realize the ache there is in that father's heart.

If his son has died, like all good Americans he will steel himself and be the more determined to win; if the son is saved, he will, with us, sympathize with the relatives of the boys who died in the service of their country.

The boys who died when the *Maine* was blown up we honor as much as those who died at Gettysburg.

The boys who died on the *Tuscania* will be honored by us as much as if they had died on the blood-stained field of France.

We must win this war if it takes 50 years, because we are in the right—Germany is wrong and must lose.

To use the words of Lincoln:

They shall not have died in vain, for they have died so that government of the people, for the people, and by the people shall not perish from the earth.

Several years ago one Kuepper, postmaster in the Prussian town of Wirmelkirchen, was charged with embezzling \$7,000.

Kuepper dies in this country, and under the laws of Germany the King sued Kuepper's administrator in the State of Missouri.

The opening declaration read as follows:

The plaintiff states that he is absolute monarch of the Kingdom of Prussia, and as King thereof is the sole government of that country; that he is unrestrained by any constitution or law; and that his will, expressed in due form, is the only legal power there known to exist as law.

How does that sound to any red-blooded American? And yet there are Americans—skin-deep only—who would be willing to make it possible for the Kaiser to say about this country: "The plaintiff states that he is the absolute monarch of the Province of German America—formerly known as the United States—and as ruler thereof is the sole government of that Province; that he is unrestrained by any constitution or law; and that his will expressed in due form is the only legal power in such Province of German America—formerly United States—known to exist as law."

In the *Deutsche Tages Zeitung* some time ago you could read the following advertisement:

For exchange: Fifty Polish workpeople—20 men, 30 girls—for exchange for an equal number of other workpeople.

The baldness of the advertisement aroused the Vorwaerts—Socialist—to say:

Here are 50 people offered for exchange as if they were cattle. It is evident these human beings have as little to say concerning their disposition as would a herd of cattle.

We fought the battles of 1861 to free the colored people from slavery, and supposed that that settled slavery for all time, and yet the pacifist and the pro-German—traitors both—would make it possible for us to read:

For exchange: Fifty American workpeople—20 men, 30 girls—for an equal number of Canadian or other workpeople.

We fought the Revolutionary War for our own freedom; we fought Great Britain a second time, in 1812, for our rights on the seas; in 1861 we fought for the preservation of the Union and the freedom of the slaves; in 1898 we fought to free Cuba; and to-day we are fighting for the freedom of all the people of the world as well as for our own rights. As the Hon. Sam Gompers well said:

No war, not even our own Revolution, was more justified.

We must win if it takes 50 years. Germany is wrong and must lose.

Our boys have gone marching proudly away to fight, and if need be die, for the land we all love so well.

Their patriotism can best be expressed by the words of the famous Francis Marion in the darkest days of the Revolutionary War.

I consider my life but a moment, but to fill that moment with duty is my all. To guard my country is my greatest duty. I am resolved that while I live my country shall not be enslaved.

Thousands of our boys are now in the trenches. Some have been killed and many more will shed their blood before we win.

I heard a distinguished orator say some time ago that, now our boys were in the trenches, if he heard anyone talk about "why are we fighting" or make any disloyal remarks at all, he would "report him." So will I, but—I'll knock his darn block off first.

And, by the way, now we are having wheatless days, and heatless days, and meatless days, and workless days, and payless days, and churchless days, all of which are being observed by millions of loyal Americans, why not establish seditionless days, to be observed 7 days in the week and 24 hours in the day by pro-Germans and traitorous Americans who ought to be in heatless and meatless and wheatless prisons?

If this country is worth living in, my friends, it is worth dying for, and if the time ever comes when the youth of our Nation are not willing to die for their country if need be, then comes the time when the United States will cease to exist.

It is better to die for the flag,
For its red and its white and its blue,
Than to hang back and to shirk and to lag,
And let the flag sink out of view.

It is better to give up this life,
In the heat and thick of the strife,
Than to live out your days 'neath a sky
Where Old Glory shall no more fly.

Peace is a wonderful thing, but there is a vast difference between peace with honor and peace at any price.

There is no good American who does not believe in peace and who will not strive for peace until such a time as peace shall cease to be a virtue and become abject cowardice.

Inability of self-defense is a perpetual invitation to assault. I do not believe in the militarism of the great powers of Europe, but better that even than the abject spectacle of a mighty China before a tiny Japan—one prepared and the other clamoring for peace at any price.

In these days that try men's souls let us pray to God that President Wilson shall speak the words befitting each occasion, speak them firmly and with the assurance that he has the sentiments and faith of every patriotic American behind him.

These are no days for British-Americans, German-Americans, Irish-Americans, or any other kind of a hyphenated American. We only want the kind of Americans who are proud that Old Glory is our standard.

We hate no other nation; we have no envy of any other nation; we have no desire for a quarrel with any other nation. We only insist upon our divine right to life, liberty, and the pursuit of happiness.

I am not one of those who believe that Germany is nearly beaten. On the contrary, I am firmly of the opinion that if we had not entered the war when we did the allies would be defeated.

We alone of all the nations are financially able to pay an indemnity, and the central powers would collect from us billions upon billions of dollars.

Let us not deceive ourselves. It is no little "skirmish" in which we are engaged, but a war to the death with the greatest military nation of all times. Either Prussian militarism must be defeated or the greatest Republic of all times will be a vassal of Prussia.

Let us not deceive ourselves into thinking that we will not have to send a large force to France. Lucky, indeed, we will be if we do not have to send four or five million men to France.

Standing on the street corners stating we "never have been licked and never will be" will not win this war. This is no "talkfest," but the greatest war of this or any other time. Let us hope that "young America" will wake to the realization that this war is a real war before it is too late.

Standing on the street corners telling how much "you love your country" is not patriotism. All talk and no action is not patriotism. When a man says, "I love my country but I can not fight," that is not patriotism; that is the cry of the weakling and the coward. But when a man says, "I love my country and I am ready to fight and, if need be, die for it," that is patriotism.

No one but a most arrant coward would say that we could do our share by merely loaning money to the allies. Were we to do that and that alone, we would be just as contemptible as the man who, too cowardly to fight for his country, hired a substitute.

This is a man's war, and we must do a man's part. Poor, plucky, brave France is bleeding to death. Are we going to forget that were it not for France there would be no United States? Are we going to forget Le Grasse, Rochambeau, and the immortal Lafayette? I can not believe that we are not willing to pay the debt of love and gratitude we owe France.

Some people say, "Why should we send our boys to the trenches of France?" The answer is easy. Our liberty is just as much at stake as the liberty of France. We are sending an American Army to France to fight for the liberty of America and the democracy of America.

It is better to keep the "hell" over there—the raping, burning, and destruction of all kinds—than it is to wait until too late and then have the "hell" over here later. If our allies with our assistance can not defeat the central powers now, of what avail would our feeble efforts be a little later? Now is the time to strike, and to strike hard.

You have all heard how Thompson's fool colt swam across the river to get a drink. But, say, that bone-headed quadruped had more horse sense than the individual who asks, "Why should we send our boys to France?"

That fool colt was a college professor to the pacifist who says, "We shall fight only in defense of our homes, only on our own soil, and only when our country is invaded."

Dr. Hillis, who has recently returned from France, told a little story at Detroit the other day that gives one reason why we should keep the "hell" over there.

He relates part of a conversation between one French and two British officers:

"Six days more," said one of the British officers, "six more eternities, and I am going back to old England for a while and see my wife and four little children."

"Two months more," said the other British officer, "and I will have seven days to visit with my dear old mother."

And then, turning to the French officer, one of them said, "And when do you go home, comrade?"

The French officer replied: "I do not go home. You do not understand, my friends. Your England has not been invaded; my France has. My village has been invaded—yes; torn up by the roots. My home is gone. My daughter, my little, little girl, and my wife will both have babies by German officers within two or three months."

The British officers fled and ran out into the cold and the rain to get away from the awful look of despair and the suffering on the face of their French comrade.

"And there are not one or two of such cases," said Dr. Hillis to an audience that was weeping and sighing beneath the crushing story, "there are half a million registered little children, the children of women whom the Germans have captured and whom they have forced to serve for weeks and months."

And is there now anyone who asks, "Why should we send our boys to France?" No; not unless that traitor wishes the same things to happen to our mothers, our wives, and sisters, and daughters.

On March 16, 1916, in a letter to his wife to be, one Johann Wenger said, in part, as follows:

I have also bayoneted a good number of women. During the Battle of Budonwiller I did away with four women and seven young girls in five minutes. The captain had told me to shoot these French sows, but I preferred to run my bayonet through them.

Does any miserable coward now ask, "Why should we send our boys to France?" No, unless he wants other Johann Wengers to write to their wives to be. "I have also bayoneted a good number of women. During the Battle of Pittsburgh I did away with four women and seven young girls in five minutes. My captain had told me to shoot these American sows, but I preferred to run my bayonet through them."

When the central powers captured Roumania respectable girls were first violated by German officers, then stripped stark naked and kicked out into the streets.

Many Belgium and French girls have been stripped naked and then tied to trees to satisfy the lust of any soldier who wished.

Does any miserable traitor now ask, "Why should we send our boys to France?" No, unless he wants to see our sisters, our wives, and our mothers tied to trees the same as they were in Belgium and France.

William the Second, and last, I hope, said on December 19, 1914:

Remember that you are the chosen people. I am the instrument of the Almighty. I am His sword—His agent. Woe and death to all those who oppose my will! Woe and death to all those who do not believe in my mission! Woe and death to the cowards!

Need we now ask, "Why should we send our boys to France?" Some time ago the Kaiser also used these words:

All my life I have been under the influence of five men—Julius Caesar, Alexander the Great, Theodoric the Second, Frederick the Great, and Napoleon. These five men had their dream of world empire. They failed. I, too, have a dream of world empire. I shall succeed. When this war is over I will stand for no nonsense from the United States.

I agree that the Kaiser has been under the influence of five individuals but he has the wrong names. Judging from his record I would say that his models have been Nero, Judas Iscariot, Attila the Hun, Benedict Arnold, and Satan.

Does one need to ask, "Why should we send our boys to France?"

Seeing that we are at war, we expect absolute loyalty from all native-born Americans as well as those adopted Americans who swore a solemn oath that they renounced all other lands for this land. Being born here does not give anyone any especial privilege to be disloyal or treasonable. On the contrary it only makes the act the more outrageous and damnable. Benedict Arnold was a native born, but I do not remember any monuments being erected to his memory, neither have I heard of anyone boasting of the fact that he is a descendant of Benedict Arnold.

Every man living in the United States may just as well understand now as a little later that no matter where he was born or from where his ancestors came, that he can not wear the American flag on his sleeve and the flag of another country across his heart.

Most of the people here—or their ancestors—came here to avoid oppression or to better their condition. Any time they do not like this country, or our policies, they are free to go, but so long as they are here we expect from them absolute loyalty. We expect them to shed their blood with ours for the preservation of these United States.

America has been compelled to go to war because a great nation did not heed our command to cease killing American men, women, and children. We were very patient about it; many of us would have gone to war long before.

Now that we have gone to war, we say to every man living here:

"Are you an American citizen or a subject of some foreign government?"

"Are you with us or against us?" If against us, "Here's your hat; what's your hurry?"

You can not call yourself an American and be against American policy and preach and plan and conspire against our well-being.

It is a show-down, and the lines are going to be drawn tighter and tighter from now on. You are either with us or against us; there is no being "neutral" in this war.

Some people seem to think that we ought to be satisfied if they are "neutral" in this fight. Why, you can not be neutral in a fight between your country and the enemy.

You are either with it heart and soul or you are against it—a traitor.

Quit talking and writing rank treason
While under Old Glory you stand.
Or break with us fairly and squarely,
And Go with your heart in your hand.
We honor a gallant opponent.
Respect a conviction sincere.
But damned be the man with two faces,
Let him get the blazes out of here!

As I told a man from Philadelphia some time ago who wrote me complaining of my vote on increasing the Army:

It occurs to me, sir, that you do not like this country. You seem to want to neither fight for it yourself nor to allow anyone else to fight for it. If your own Congressman is too busy to get you a passport to the country that you seem to prefer to this, I will gladly secure the same for you.

We have decided by an overwhelming vote that wherever an American goes "lawfully and observing the law, there the flag goes with him, and there it must ever go."

Of course some native Americans, in whom the blood of their forefathers who fought at Bunker Hill, the Alamo, Chickamauga, Gettysburg, and Santiago has begun to run so thin that it shows a lemon tinge, do not agree with this splendid American policy.

Neither will some of our adopted Americans, whose only patriotic thrills come on pay day, when they are paid off in good American money according to the American wage scale, or on election day, when they help to swell the majority at some close election precinct.

But, thank God, out of our more than 100,000,000 people there are few, very few, of these, else there were no United States.

It is not only the duty of every American citizen to be loyal and patriotic himself, but it is his duty to instill the same patriotism in his children. Let us consider it is just as much our duty to teach our children to love their country as it is our duty to teach them to love their God.

Let me quote to you that little poem We Talk of the Flag, by E. A. Guest:

"Tell me about the flag," he said,
As I was putting him to bed,
"And why men wave their hats and cheer
Whenever it is drawing near."
And so we stopped undressing then
To talk about the time when men
Were facing cannon shot and shell
To serve the flag we love so well.
I told him of the men who died
In frozen wood and countryside
Long years ago in battles grim
To keep a flag like that for him,
I told him all about the stars,
The spotless white and crimson bars,
And what they dreamed of and they sought
As bitterly they bled and fought.

"Let no one tell you as you grow
That nothing to the flag you owe.
Let no one whisper that it means
But pleasant days and peaceful scenes,
And merely calls to mind a land
Where wealth abounds on every hand,
Because no more that flag will fly
When men for it refuse to die.

"And it may be," said I, "that you
Must some day serve that banner, too;
And then if such a day should come
That sounds again the stirring drum
And blows once more the martial life,
Be not a slave to peaceful life.
As they were men, you be a man
And give that flag the best you can.

And while we honor those who fought in 1861 and 1898, and while we cheer those who are to fight for us now, let us not forget that the mother is entitled to all honor and respect as well. While her part is a "silent" part, it is a very important part in the play after all. As my friend Guest says:

You may boast men's deeds of glory, you may tell their courage great,
But to die is easier service than alone to sit and wait;
And I hail the little mother with the tear-stained face and grave
Who has given the flag a soldier—she's the bravest of the brave,
And the banner we are proud of, with its red and blue and white,
Is a lasting tribute holy to all mothers' love of right.

And we owe just as much honor and respect to the wife who has to stay home and raise her boys to be manly men like the father. Hers is as heroic a part as the part of her "man" who does the fighting:

I only pray that while he is away
You guard and guide him day by day.
And give me strength to tend his little ones
Until he comes
On land or sea,
Wherever he may be,
God bless my man for me.

Talk about love of country and love of the flag—why, my friends, you can no more love your flag or your country too much than you can give too much love to the mother who bore you.

No honor for our country can be too deep; no love can be too pure; no patriotism can be too true and too steadfast.

No one who has not enlisted to follow the colors can appreciate the love of the soldier for the flag:

Love of the flag? Well, what do they know of it?
What do the men of their kind ever know of it,
Who stand on their legs when the colors go by
And yelp with the others and never know why?
What do they know who dodge all the wars
And don't know the colors except at bazaars?

If you want to love the flag with a love beyond all understanding, a love as strong as the love of a mother for her child, enlist and march behind it, and then you will know what "love of the flag" means.

It is said that when the French Army was in full retreat from Moscow, and when the French soldiers, frozen by the cold and exhausted by hunger, dropped by the hundreds along the wayside, they would rise up as Napoleon went by, and cry out, "Long live the Emperor!" and then drop back in the snow as their winding sheet. What was it the French soldier cheered as Napoleon passed by? Was it the man who had crossed the bridge at Lodi? Was it he who had annihilated the Russians at Austerlitz; or was it the man who had crossed the Alps and won the lost Battle of Marengo? Ah, no; they cheered because they saw in that gray coat and that cocked hat, the visions of the vine-covered cottage on the banks of the Seine or the Loire—the gray-haired father, the yearning eyes of the mother, the little brothers and sisters, and all the delights of home.

So to-day when we see the American soldier going by, carrying the red, white, and blue of Old Glory, we cheer. And what do we cheer? Not an aggregation of khaki-clad men, but we cheer because we see in the Stars and Stripes the vision of a reunited country of the Blue and the Gray that knows no North or no South; we cheer because we see in that flag the vision of a great race formed by the melting of former Germans, former Irish, former Scandinavians, former Austrians, former British, former French, former Italians into one great American race; a race that knows no other land than this land; a race that knows no other flag but the Stars and Stripes; and a race that knows no other motto than "United we stand, divided we fall."

In conclusion, let us not think that the boys in blue and in khaki are the only ones who must do their "bit." Everyone of us has a duty to perform now and every hour until this war is ended.

Let us all adopt this motto:

I must not for one hour forget
Unto the Stars and Stripes my debt.
'Twas spotless on my day of birth,
And when at last I quit this earth
Old Glory still must spotless be
For all who follow after me.

At some post where my work will fit
I must with courage do my bit;
And in some way I want to feel
That I am doing service real.
Some portion of myself I'd give
That freedom and the flag may live.

Alien Slackers Not Wanted in Our Army,
